I am sympathetic with the plight of taxpayers who do not know whether the foreign tax they pay is creditable or not. This issue ought to be addressed administratively, by regulation or ruling, or, if necessary, by legislation. Because the issue deals with a tax benefit to be enjoyed by U.S. taxpayers that is granted unilaterally, requiring no action by the foreign country, I believe that the granting of a credit for an otherwise clearly uncreditable foreign tax or levy is an inappropriate subject for the typical tax treaty.

Particularly where, as in the Moroccan and Israeli "forced loan" situations, the foreign levy deemed creditable against U.S. tax is quite distinct from an income, war profits, or excess profits tax (or a tax assessed in lieu of such a tax), the treaty process appears to interfere with a clear legislative decision. If it is concluded, in any instance, that the treaty process is an appropriate forum for designating a foreign levy creditable against U.S. tax, I trust, at the least, that the negotiators will recognize that the decision that a foreign levy is creditable, while a benefit to U.S. taxpayers, is a detriment to the U.S. Treasury and should be regarded as a significant U.S. concession.

DISCRIMINATION

It is unfortunate whenever a tax treaty, particularly one with a developed country, fails to resolve tax discrimination problems between the treaty partners. The dispute with Canada over C–58, Canada's indirect tax discrimination against U.S. broadcasters, is exactly the sort of dispute it was hoped the new Canadian treaty would resolve. I am disappointed that the new treaty, at the insistence of the Canadians, ignores this dispute. In weighing whether you will favorably report the Canadian treaty, we hope you will include the need for a prompt resolution of this dispute in your calculus of benefits versus detriments.

COMPETENT AUTHORITY DISCRETION

Consistent with preserving the Senate's right to advise and consent regarding tax treaty measures, your committee may wish to develop specific standards to circumscribe the power delegated to the IRS under several treaties to expand taxing jurisdiction by adjusting amounts expressed in currency and by resolving disputes outside the scope of a treaty. The Finance Committee would be happy to work with you in the development of such standards if you desire.

It is also important that Congress and the General Accounting Office not be precluded from access to mutual agreement case files in the possession of the competent authority. Your report, I understand, will make this point clear.

TAX HAVENS

The Treasury's decision to withdraw from consideration the treaties with the British Virgin Islands and with Cyprus is to be applauded. Until satisfactorily strict anti-treaty shopping provisions, similar to the one in the Jamaican protocol, are included in those treaties, their progress through the ratification process will be justifiably difficult.

In conclusion, I wish again to reiterate my thanks for your solicitation of Finance Committee views. Your attentiveness to the concerns of the Finance Committee and the cooperation your staff has shown in accommodating our efforts are essential first steps at improving the coordination of the tax treaty and the tax legislation processes. I would be pleased to have you include this letter in the record of your committee's hearing on September 24, and I look forward to working with you further on this matter.

Sincerely,

BOB DOLE, *Chairman.*

U.S. SENATE,
Washington, D.C., October 26, 1981.

Hon. CHARLES PERCY,
Hon. CHARLES MATHIAS,
Committee on Foreign Relations, Dirksen Senate Office Building, Washington, D.C.

DEAR CHUCK AND MAC: Thank you very much for soliciting the comments of members of the Senate Finance Committee on the tax treaties pending before the Committee on Foreign Relations. Your consideration of our views is greatly appreciated.

At the outset, I'd like to support the views stated in the letter to you from Senator Dole. He has eloquently expressed many of my concerns.

There are two issues of particular concern to me: first, the apparent override in many of the treaties of the Foreign Investment in Real Property Tax Act (FIRPTA); second, the failure to authorize the General Accounting Office's access to information received under the treaties.

As a member of the House, I was actively involved in the passage of FIRPTA. Adherence to the provisions of FIRPTA is a very important issue to me and the 2.8 million Iowans I represent. Our intention in enacting FIRPTA was to treat the capital gains recognition of foreigners and United States citizens similarly. In passing that legislation, Congress expected our treaty negotiations to honor the provisions of FIRPTA in new tax treaties. Technical changes negotiated in the Canadian, Argentine, Egyptian and Philippine treaties run contrary to that intent. These are serious precedents which undermine the spirit of FIRPTA. While Canada and the United States enjoy a special relationship, this does not seem a compelling reason to ignore all of the guidance set forth in the legislation. With respect to other treaties, I can see no reason at all to deviate from FIRPTA. I believe the treaties should be made consistent with FIRPTA, and I strongly recommend you report these out with a reservation that the treaties conform to FIRPTA.

My second difficulty with these treaties is their failure to expressly state that the appropriate Congressional committees, and the General Accounting Office, as their agent, have appropriate access to information exchanged under the treaties. As you are aware, the IRS has taken the position that the secrecy clause in most existing treaties denies GAO access to mutual agreement casefiles. Treasury has indicated that future treaties would specifically provide for GAO access, but most of the treaties before your committee would not do so. I respectfully request that you take whatever steps are necessary to insure that we do have access to tax information exchanged under these treaties within the boundaries of Internal Revenue Code Section 6103. As Chairman of the Subcommittee on Oversight of the Internal Revenue Service, I believe that the inclusion of this provision is very important if Congress is to effectively oversee the administration of the treaties.

Thank you for your consideration of my concern and suggestions.

Sincerely,

CHARLES E. GRASSLEY,
U.S. Senator.

Mr. PERCY. Mr. President, specifically, we have taken account of the concerns expressed on some of the provisions in these agreements by recommending appropriate amendments, reservations, understandings, and report language. These are incorporated in the proposed resolutions of ratification pending before the Senate. Most of them are quite technical and none is expected to present serious problems for the other countries concerned.

Finally, Mr. President, we have sought to establish a broader understanding with the Department of Treasury regarding the process of negotiating future tax treaties, and in particular the timing and nature of consultations with the Foreign Relations Committee and the tax-writing committees. We expect by an exchange of letters with Treasury Secretary Regan to clarify that process in the near future. Already our consultations have been productive and informative and I anticipate no difficulty in regularizing this process.

In addition to the correspondence already referred to, I ask unanimous consent to have printed in the RECORD a brief summary of the various amendments, reservations, and understandings

included in the proposed resolutions of ratification of each of the tax treaties.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUMMARY OF PROPOSED CONDITIONS IN TAX TREATIES

All eight of the resolutions of ratification reported by the Committee on the tax treaties contain an understanding regarding Congressional access to the information exchanged under the treaty. The understanding makes clear that the General Accounting Office, the Senate Finance Committee, the House Ways and Means Committee and the Joint Committee on Taxation will be afforded access for the exercise of their oversight responsibilities.

In addition to that understanding, the following resolutions of ratification contain further conditions:

BANGLADESH

An understanding to make clear that U.S. shipping operations would be afforded "most-favored nation" treatment by Bangladesh.

EGYPT

A reservation making clear that the treaty will not supercede the U.S. Foreign Investment in Real Property Taxation Act of 1980.

MALTA

An amendment to correct a technical error concerning the so-called "second withholding tax."

MOROCCO

A reservation making clear that U.S. foreign tax credits granted under the treaty for loans which U.S. businesses are required to make shall not be granted after 1988. This "sunset provision" would parallel a similar provision in the Protocol with Israel.

Mr. PERCY. Mr. President, I recommend that the Senate give its advice and consent to all of the treaties under consideration.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

EXECUTIVE SESSION

TREATIES

The PRESIDING OFFICER. Under the previous order, the hour of 11:30 having arrived, the Senate will now go into executive session to conduct one rollcall vote to count as nine rollcall votes on the resolutions of ratification to nine treaties, Executive Calendar Nos. 11 through 19, which the clerk will state.

The legislative clerk read as follows:

Treaty Doc. No. 97-20, an Agreement extending for 8 months provisions of the Treaty of Friendship and Cooperation with Spain; Ex. Y, 96-2, a Tax Convention with the People's Republic of Bangladesh; Ex. U, 96-2, a Tax Convention with the Arab Republic of Egypt; Treaty Doc. No. 97-1, a Tax Convention with the Federal Republic of Germany; Ex. C, 94-2, a Tax Convention with the State of Israel; Ex. M, 96-2, a Protocol amending the 1975 Tax Convention with Israel; Ex. F, 96-2, an Income Tax Treaty with the Republic of Malta; Ex. H, 95-2, a Tax Convention with the Kingdom of Morocco; and Ex. Z, 96-2, a Protocol amending the 1971 Tax Convention with the Kingdom of Norway.

The PRESIDING OFFICER. The question is on agreeing to the resolutions of ratification.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Massachusetts (Mr. KENNEDY) is necessarily absent.

I also announce that the Senator from Vermont (Mr. LEAHY) is absent because of illness.

The PRESIDING OFFICER (Mr. KASTEN). Are there other Senators in the Chamber desiring to vote?

The yeas and nays resulted—yeas 97, nays 0, as follows:

[Rollcall Vote No. 384—Treaty Doc. No. 97-20,
385—Ex. Y—96-2,
386—Ex. U—96-2,
387—Treaty Doc. No. 97-1,
388—Ex. C—94-2,
389—Ex. M—96-2,
390—Ex. E—96-2,
391—Ex. H—95-2, and
392—Ex. Z—96-2]

NOT VOTING—3

Goldwater	Kennedy	Leahy

The PRESIDING OFFICER. Two-thirds of the Senators present and voting having voted in the affirmative, the resolutions of ratification are agreed to.

The resolutions of ratification agreed to are as follows:

RESOLUTIONS OF RATIFICATION

AGREEMENT EXTENDING FOR 8 MONTHS PROVISIONS OF THE TREATY OF FRIENDSHIP AND COOPERATION WITH SPAIN

Resolved, (two-thirds of the Senators present concurring therein). That the Senate advise and consent to the ratification of the Agreement Extending for Eight Months Provisions of the Treaty of Friendship and Cooperation with Spain, effected by an exchange of notes at Madrid on September 4, 1981.

TAX CONVENTION WITH THE PEOPLE'S REPUBLIC OF BANGLADESH

Resolved, (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Convention with the People's Republic of Bangladesh for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, signed at Dacca on October 6, 1980 (Ex. Y, 96th Cong., 2d session), subject to the following:

(1) understanding that if the Government of Bangladesh agrees in treaties or other agreements with other countries to reductions in a tax at source on profits from the operation of ships in international traffic, the Government of Bangladesh agrees to reopen negotiations with the United States with a view to the conclusion of a protocol which would extend to residents of the United States deriving such profits the same treatment granted to residents of such other countries.

(2) understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

TAX CONVENTION WITH THE ARAB REPUBLIC OF EGYPT

Resolved, (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Convention with the Arab Republic of Egypt for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, signed at Cairo on August 24, 1980 (Ex. U. 96th Cong., 2nd session), subject to the following:

(1) understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

(2) reservation that notwithstanding the provisions of paragraph (3) of Article 7 of the convention (which relates to the taxation of gains from the alienation of shares of a corporation or of an interest in a partnership, estate, or trust, the property of which consists, directly or indirectly, principally of real property situated in one of the countries), gain derived by a resident of a Contracting State, from the alienation or other disposition of an interest in a corporation, or an interest in a partnership, trust, or estate, which has an interest in real property located in the other Contracting State, or the assets of which are considered under the domestic law of that other Contracting State to consist, in whole or in part, of real property, or an interest therein, in that other State, may be taxed by that other State to the extent provided for by its domestic law. In addition, gain derived by a corporation which is a resident of a Contracting State upon the distribution (including a distribution in liquidation or otherwise) of an interest in real property (as determined under the domestic law of the other Contracting State) may be taxed by that other Contracting State to the extent provided for by its domestic law.

TAX CONVENTION WITH THE FEDERAL REPUBLIC OF GERMANY

Resolved, (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Tax Convention with the Federal Republic of Germany, signed at Bonn on December 3, 1980 (Treaty Document 97-1), subject to the understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities subject only to the limitations and procedures of the Internal Revenue Code.

TAX CONVENTION WITH THE STATE OF ISRAEL

Resolved, (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Convention signed at Washington on November 20, 1975, between the Government of the United States of America and the Government of the State of Israel with Respect to Taxes on Income (Ex. C, 94th Cong., 2nd session), subject to the understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

PROTOCOL AMENDING THE 1975 TAX CONVENTION WITH ISRAEL

Resolved, (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Protocol Amending the Income Tax Convention with Israel (Ex. M, 96th Cong., 2nd session), subject to the understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this protocol where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

INCOME TAX TREATY WITH THE REPUBLIC OF MALTA

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Treaty with the Republic of Malta with Respect to Taxes on Income, signed at Valletta on March 21, 1980, subject to the following:

(1) amendment to paragraph 5(c) of Article 10 of the Treaty, so as to read as follows:

"(c) the dividends are paid out of profits attributable to one or more permanent establishments of such company in that State, provided that the gross income of the company attributable to such permanent establishment constituted at least 50 percent of the company's gross income from all sources."

(2) understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

TAX CONVENTION WITH THE KINGDOM OF MOROCCO

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Tax Convention with the Kingdom of Morocco, signed at Rabat on August 1, 1977, together with a related exchange of notes (Ex. H, 95th Cong., 2nd session), subject to the following:

(1) reservation that foreign tax credits shall not be allowed after January 1, 1988, for loans which U.S. taxpayers are required to make to the Government of the Kingdom of Morocco.

(2) understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

PROTOCOL AMENDING THE 1971 TAX CONVENTION WITH THE KINGDOM OF NORWAY

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Protocol Amending the Tax Convention with the Kingdom of Norway (signed at Oslo on December 3, 1971), which Protocol was signed at Oslo on September 19, 1980 (Ex. Z, 96th Cong., 2nd session), subject to the understanding that appropriate Congressional committees and the General Accounting Office shall be afforded access to the information exchanged under this treaty where such access is necessary to carry out their oversight responsibilities, subject only to the limitations and procedures of the Internal Revenue Code.

(Later the following occurred:)

Mr. BAKER. Mr. President, it has been brought to my attention that there was not a motion to reconsider or a tabling motion with respect thereto after the resolutions of ratification were adopted on the treaties. I now move, as in executive session, to reconsider the vote by which the resolutions of ratification were adopted.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

LEGISLATIVE SESSION

DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES APPROPRIATIONS, 1982

The PRESIDING OFFICER. Under the previous order, the Senate will now return to legislative session and resume consideration of H.R. 4169, which the clerk will state by title.

The assistant legislative clerk read as follows:

A bill (H.R. 4169) making appropriations for the Departments of Commerce, Justice, and State, the Judiciary, and related agencies for the fiscal year ending September 30, 1982, and for other purposes.

VOTE—AMENDMENT NO. 633

The PRESIDING OFFICER. Under the previous order, without intervening motion, appeal, or debate, the Senate will now proceed to vote on amendment No. 633 of the Senator from North Carolina (Mr. HELMS). The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) and the Senator from Texas (Mr. TOWER) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Massachusetts (Mr. KENNEDY) is necessarily absent.

I also announce that the Senator from Vermont (Mr. LEAHY) is absent because of illness.

The PRESIDING OFFICER. Are there any other Senators who wish to vote?

The result was announced—yeas 58, nays 38, as follows:

[Rollcall Vote No. 393 Leg.]

YEAS—58

Abdnor	D'Amato	Hatch
Andrews	DeConcini	Hawkins
Armstrong	Denton	Hayakawa

Glenn	Moynihan	

NOT VOTING—4

Goldwater	Leahy	Tower
Kennedy		

So Mr. HELMS' amendment (No. 633) was agreed to.

Mr. HELMS. I move to reconsider the vote by which the amendment was agreed to, Mr. President.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from Connecticut is recognized.

Mr. WEICKER. Mr. President, as I indicated, because of the actions taken by the Senate, there certainly is much to discuss in a constitutional respect. I think it should be pointed out that which is the duty of the committee—that is, the appropriate funding of the Departments of State, Justice, Commerce, the Judiciary, and related agencies—has been attended to both by the subcommittee and by the full committee and by action here, on the floor of the U.S. Senate.

Our work is done. I know of no other amendments that affect the job that we were given to do as a subcommittee, that the ranking member and the chairman were given to do. Apparently, there is not enough business in the Committee on the Judiciary. Instead, they feel that whatever legislation is needed has to be achieved within the scope of the Committee on Appropriations.

Mr. President, nobody on the outside is doing a number on the Senate; we are doing a number on ourselves.

Mr. THURMOND. Will the Senator yield?

Mr. WEICKER. I yield to the distinguished Senator from South Carolina.

Mr. THURMOND. Since the Senator mentioned not enough work to do in the Judiciary, I just want to mention that we have plenty of work to do in the Judiciary. We are very busily engaged in our nine subcommittees, turning out a lot of bills and legislation. However, any Senator has a right to bring up anything on the floor that he wants to. I am sure the Senator understood that the bill he referred to and now the amendment are the will of the Senate.

Mr. WEICKER. I say to my good friend from South Carolina that I do not understand how it is that he and some of his conferees here on the Senate floor have managed to take the appropriations process and so convolute it

that we cannot get any business done. If, indeed, the good Senator from South Carolina wants to change the laws of this Nation as they apply to busing, as they apply to abortion, as they apply to prayer in schools, may I suggest that there is an appropriate procedure which has been used for hundreds of years, namely the authorizing process. Legislation of that kind would come through his committee and could be brought up here, on the Senate floor, to be voted on. But that is not done. Apparently, that process and the constitutional amending process take too long for the Senator from South Carolina.

So, instead, we shall go ahead and take the appropriations process, which is meant to deal with dollars—not general policy but dollars—and use it as a vehicle to circumvent the Constitution of the United States and to circumvent the regular legislative process.

I say to the Senator, I am delighted that he raised this issue, because I have not seen anything on the floor of the Senate coming out of the Senator's committee relating to any of these matters. All of a sudden, it is a sort of ad hoc situation, where members of his committee come out here and try to slap this stuff on appropriations bills.

Mr. THURMOND. Will the Senator yield?

Mr. WEICKER. I think if, indeed, there is criticism by the American people as to what Congress is doing with the spending of their money, do not blame the President, do not blame the House, let us blame the fact that the appropriations process has been brought to a dead halt by this type of social legislation.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. WEICKER. Sure, I yield, Mr. President.

Mr. THURMOND. Mr. President, I just want to say to the distinguished Senator from Connecticut that any Senator has a right under the rules to bring up these matters and if a Senator does bring it up, I am sure that the Senator from Connecticut cannot object. If a Senator does bring it up, I am sure Senators can object. If enough Senators vote for a measure, that is the will of the Senate, and that is what has been done here. The majority has voted to have voluntary prayer in schools.

If there is any obstruction here, it is on the part of the Senator from Connecticut, not on the part of the Senator from North Carolina or the Senator from South Carolina.

Mr. WEICKER. I say to the Senator that we did our best in the committee to make sure these issues would not come up, believing, rather, that they should properly come forth from the committee of the Senator from South Carolina, but they are not here through his committee. I look forward to such legislation being presented to the U.S. Senate.

Obviously, I am going to be in opposition, but I have no complaints coming if I lose on that matter. That is another story entirely. What worries me is the utilization and abuse of the appropriations process.

Admittedly, this did not start with the Senator from North Carolina or the Senator from South Carolina. It started many years ago. But it has reached epidemic proportions, to the point that no appropriations bill can now clear the floor.

The net result is that we are going from continuing resolution to continuing resolution. I have been informed by the leader that he intends to bring up the Department of Justice authorization bill, and we will have a lot to discuss on that matter. We will have many votes and try to resolve those issue. But at least nothing else is being harmed in that process. What is being harmed right now is the functioning of the entire Government.

Do I realize that everybody is within their rights? Everybody is certainly within their rights. Anybody can do whatever they want on the Senate floor. That does not mean it necessarily leads to the most expeditious handling of our Government.

Mr. HELMS. Mr. President, will the Senator yield?

Mr. WEICKER. I yield.

Mr. HELMS. I thank my friend from Connecticut.

I say this in the kindest and most affectionate way to my distinguished friend: I think the complaints about legislating on appropriation bills depends on whose ox is being gored. Did the Senator not have authorization language on the appropriation bill with reference to the Legal Services Corporation?

Mr. WEICKER. Only in response to the fact that the House had placed that language on the bill. The restrictions had been placed on by the House, and we had to respond to it. The restrictions placed on it were not the restrictions of the Senator from Connecticut. Given the choice between a dozen restrictions and four restrictions, we opted for four restrictions. None of the restrictions was recommended by the Senator from Connecticut.

Mr. HELMS. Nonetheless, the Senator did have authorization language on an appropriations bill.

Mr. WEICKER. No. That language was actually the language of the distinguished Senator from Florida (Mr. CHILES).

Mr. HELMS. Who was listed as the sponsor of it?

Mr. WEICKER. It is a committee bill. There is nothing I can do, as the chairman of the committee, when these matters are on there.

Mr. HELMS. How about the legislation itself?

Mr. WEICKER. I did not offer it. I might add that it is an Appropriations Committee bill, voted by the full Appropriations Committee. The language the Senator refers to was voted by the full Appropriations Committee. I am obliged, when I come out here, as the chairman, to represent the position of the committee. I say to the Senator now that my position in the committee was no restrictions. Then we had the House position, which was articulated by the Senator from North Carolina, which had many restrictions, and then we had the midway point, which was the position of the Senator from Florida, which was four or five restrictions, whatever it was. My position was zero restrictions.

Mr. HELMS. In any case, the Senator did support authorization language, for whatever purpose.

Let me say this, if my friend from Connecticut will yield further: I think the U.S. Senate should legislate in any way it can in the best interests of the American people.

The Senator may not agree on this issue or that issue. But I do not hold any reverence for the concept around here that we must not have legislation here or legislation there because it might inconvenience the appropriations process, or whatever. I think we need to do what the majority of the Senate decides is in the best interests of the American people.

I say again that the Senator may disagree. The Senator very frequently refers to one measure or another or one amendment or another as unconstitutional. Well, that is his view of it. But I was puzzled the other day when he repeatedly said that this prayer amendment that came from the House, as he has stated, was unconstitutional. I imagine that he is talking about the Bill of Rights and the first amendment.

I call the Senator's attention to the fact that the Bill of Rights was not adopted for the purpose of locking in the authorities and powers of the Federal Government. It was to reserve powers and rights to the States, and that is what the House said with its amendment, and that is the reason I pressed for it.

I thank the Senator for yielding.

Mr. WEICKER. In response to the Senator, I say that I have no problem with the legislating that is going on. I do not fault it until it reaches the point where it totally obviates the entire process.

Since I have been on the committee—certainly in the last several years—these types of amendments have been put on appropriations bills. That is plenty of time, it seems to me, for the Judiciary Committee, now that it is under the astute leadership of the distinguished Senator from South Carolina, to get its act together and get the legislation on the floor.

In the past, those of us on this side of the aisle could blame the Democrats for not proposing legislation. Now we have no one to blame but ourselves.

There is nothing to prevent any of these matters being presented by the Judiciary Committee, by the committee bringing its bills to the floor. I see no bills on the floor. We are going to use either appropriations bills or authorization bills to do a job that is better done in a more orderly way.

I say to the Senator that I am not a nitpicker. Frankly, I realize that there are going to be extraordinary occasions which demand that the appropriations process be used for legislative ends.

But when it happens time in and time out, day in and day out, on every occasion, clearly, then, somebody is not doing their job.

Our job is done. The Senator from South Carolina and the Senator from Connecticut and the members of the Appriations Subcommittee have done our

job. Now it has all gone for naught, while we sit here hung up on a couple of points which should have stood on their own feet, as a matter of their own debate, as a matter of their own legislation. This bill is going onto a continuing resolution. All this time will have been lost and nobody regrets it more than I do.

Perhaps what we should do is that the next time we have an agriculture bill here, we should spend our time discussing extraneous matters to tack onto it. I do not think that is the way matters should be handled.

I fully understand that nothing is going to change from what I say, but I just think it important to point out—and this is where I started my comments—that these very important agencies of Government are not getting the legislative treatment they deserve in terms of their appropriations. That cannot be laid at the door of the Senator from South Carolina or the Senator from Connecticut, who have managed this appropriations process for close on to 6 months.

Mr. HELMS. Let me ask the Senator this, if he will yield.

Mr. WEICKER. I yield.

Mr. HELMS. Why does the Senator not go to third reading now, instead of belaboring the subject?

Mr. WEICKER. Because what has happened is that, using this bill as a vehicle, and without any hearings on the matter, without any committee deliberation, without any subcommittee deliberation, we just tack on a few words effecting an attempted, enormous constitutional change.

Let me say this, that it is very easy for me to say, just as the Senator alluded to, let us let the courts handle this hot potato, and let the President handle this hot potato.

The Senator knows what happens. The courts handle it, and then Senators like the Senator from North Carolina do not like what the courts say and accuse the courts of legislating.

Too often, over the past several decades people have passed the buck right out of this Chamber and right out of the White House into the Supreme Court.

I am not going to do that. I am not going to do that, as far as I am concerned, whether it is the independence of the judiciary as it relates to effective remedies against discrimination, or whether it relates to the rights of women in the sense of abortions, or whether it is the matter of the first amendment and freedom of religion.

The Senator from North Carolina can send one signal. I am going to send another.

I admire him. Let me say this to the Senator. There is no questioning where he stands on these issues. There is no questioning where I stand on these issues.

The Senator from North Carolina is not passing the buck.

Mr. HELMS. I thank the Senator.

Mr. WEICKER. But I am not going to go ahead and pass the buck either.

That is the reason why the lines are now being drawn. I realize that politically the neck of the Senator from North Carolina is on the line and then all of a sudden my neck goes on the line.

Really, the resolution of this debate probably will not take place in this Chamber today. Rather, it will come when the Senator from North Carolina and I have to face our constituents on the record that we have established. But our constituents will be probably more fortunate than any others in the country. They will not have to find us wandering around in some fog.

We are right out there and probably the best thing I can say now is thank God for the Senator from North Carolina that he is not running in Connecticut and thank God for me that I am not running in North Carolia.

Mr. HELMS. I thank the Senator.

Mr. WEICKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. WEICKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 650

(Subsequently numbered amendment No. 634.)

(Purpose: To express the sense of the Senate that academic exchange programs should not be reduced)

Mr. WEICKER. Mr. President, I intend to offer an amendment, but prior to sending it to the desk I shall read it:

SEC. 509. The Senate finds that:

(a) The budget amendments requested by the President would cause a fifty-six percent reduction in important international academic and cultural exchange programs in which the United States participates;

(b) The reductions would drastically reduce the Fulbright Program and cause the elimination of the Humphrey Fellowship Program;

(c) The reductions in these programs would deny thousands of students and scholars the opportunity to study in the United States and to enhance their knowledge of our people and government;

(d) The reductions would deny foreign students and scholars exposure to the rich culture of the United States and advantages of our democratic government;

(e) The result of these reductions will be an increased disparity between the number of Soviet sponsored academic exchanges and the number of exchanges sponsored by the United States;

(f) The United States will be relinquishing the educational exchanges as an aspect of our foreign policy and good will to others;

(g) These educational exchange programs constitute "a weapon of ideas" which if effectively used by the United States Government can be a deterrent to the spread of totalitarian influence.

Therefore, it is the sense of the Senate that the academic and cultural exchange programs sponsored by the United States should not be reduced and that the President of the United States, in conjunction with the Congress of the United States, should establish a program for increasing United States participation in academic exchange programs.

Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

Th assistant legislative clerk read as follows:

The Senator from Connecticut (Mr. WEICKER) proposes an unprinted amendment numbered 650.

Mr. WEICKER. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill add the following new section:

SEC. 509. The Senate finds that:

(a) The budget amendments requested by the President would cause a fifty-six percent reduction in important international academic and cultural exchange programs in which the United States participates;

(b) The reductions would drastically reduce the Fulbright Program and cause the elimination of the Humphrey Fellowship Program;

(c) The reductions in these programs would deny thousands of students and scholars the opportunity to study in the United States and to enhance their knowledge of our people and government;

(d) The reductions would deny foreign students and scholars exposure to the rich culture of the United States and advantages of our democratic government;

(e) The result of these reductions will be an increased disparity between the number of Soviet sponsored academic exchanges and the number of exchanges sponsored by the United States;

(f) The United States will be relinquishing the educational exchanges as an aspect of our foreign policy and good will to others;

(g) These educational exchange programs constitute "a weapon of ideas" which if effectively used by the United States Government can be a deterrent to the spread of totalitarian influence.

Therefore, it is the sense of the Senate that the academic and cultural exchange programs sponsored by the United States should not be reduced and that the President of the United States, in conjunction with the Congress of the United States, should establish a program for increasing United States participation in academic exchange programs.

Mr. HOLLINGS. Mr. President, I think the amendment is most timely. We have just observed and listened to the President before the National Press Club deliver his all-important message relative to arms control and international peace.

It is quite significant in President Reagan's talk that much of the considerate and deliberate conclusions that he reached were reached with regard of the peoples of Western Europe.

I think that highlights the need for strong and effective cultural and educational exchange programs. We can take a position but unless it is understood, appreciated, and supported by our allies and the peoples of the world generally, then the best of the defense appropriations, or the best of the defense policies and programs will die aborning because of a lack of that understanding and support.

I happen to think that the President's talk was right on target. I thought it was one of the most eloquent he has ever delivered, and I think it is a message right straight down the line for a balanced program of mutuality of arms reductions, one that is verifiable, and that is the kind that I have yearned to support.

So I welcome President Reagan's talk.

The amendment that the Senator from Connecticut has now submitted just fits right in. There are so many, many things by way of budgeteering that really amount to a budget savings rather than a budget cut. I think that became significant in the recent Stockman article where he catalogs all the different programs and comes up with the conclusion that we just cannot do everything in spending cuts unless we are willing to cut into the heart of needed programs.

One of the real investments is the educational and cultural exchange of the Fulbright scholarship and Humphrey scholarship programs.

Over the years they have given us in large measure the stability that we enjoy today in world peace. I think to have cut this back as has been requested is incongruous with what President Reagan presented this morning in that address before the National Press Club.

On the contrary, rather than heeding the President's September budget revision, and cutting some $50 million, the committee has increased the educational and cultural exchanges by $9 billion. It might appear as a $9 billion increase momentarily here in State, Justice, Commerce, but in the long run it is a saving under the 050 function providing for defense. Since I have to deal with them all on the defense side, I look upon this as in reality a spending cut on defense and affords us to step down in the arms race.

So this is a long-range view, this is the investment, this is a true responsibility in the functioning of an appropriate government. I commend the Senator from Connecticut for his leadership in this particular score. It is a tried and true program, and I urge the Senate to include the admonition that the amendment provides.

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. WEICKER. I thank my distinguished colleague from South Carolina for his very perceptive and astute remarks.

Mr. President, in a memorandum from the U.S. International Communication Agency as to the detailed impact of the 12 percent across-the-board fiscal year 1982 cut, let me read that section which applies to exchanges:

3. EXCHANGES (—$44.4 MILLION)

As indicated above, the major portion of the FY 1982 cut will be applied to grant-funded exchange programs in order to preserve essential Agency core-program operations. Specifically, the academic program will be cut by 53 percent ($25,600,000); the International Visitor program, by 58 percent ($11,500,000); and Private Sector programs, by 70 percent ($5,400,000). Library and book programs, support to American schools overseas, and program direction will also be reduced by $1,900,000.

The full impact of cuts of this magnitude, applied to institutions and individuals after the fiscal year has begun, is not possible to gauge at this time. The private organizations that perform the detailed exchange work for the Agency would be severely damaged. Some, in all probability, would not survive.

a. *Academic programs:* A 53 percent cut in funds available for the Fulbright academic program will eliminate support for all but programs administered by Binational Commissions and programs with those countries, primarily in East Europe, with which the United States has bilateral agreements. Even binational commission programs will face reductions of some magnitude. We will retain active programs in only 59 of the 120 countries in which we now operate.

This cut will increase tremendously the ever-widening disparity between the number of academic scholarships awarded by the Soviet Union and the United States Governments, particularly in Third World countries. As a direct result of these cuts, the number of academic program grantees will be reduced by at least 40 percent. In addition, host country contributions to the program, currently at $9 million, are expected to fall off sharply in response to the diminished American commitment, leading to a further significant decrease in the number of scholars exchanged. Important diplomatic relationships and goodwill built up over three decades will be damaged.

Mr. President, I ask unanimous consent that the full text of this memorandum be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

U.S. INTERNATIONAL COMMUNICATION AGENCY—DETAILED IMPACT OF 12-PERCENT ACROSS-THE-BOARD FISCAL YEAR 1982 CUT

[The recently transmitted budget amendment reduced USICA's fiscal year 1982 estimates by $67,400,000 as follows]

	Fiscal year 1982 estimate	House appropriation bill	Amendment	Amended estimate
Salaries and expenses	$453,286	$448,286	—$54,394	$398,892
Salaries and expenses (special foreign currency)	10,352	9,800	—1,242	9,110
East-West center	16,880	16,500	—2,026	14,854
Radio construction	80,884	25,000	—9,706	71,178
Total	561,402	499,586	—67,368	494,034

The International Communication Agency, the U.S. Government's most vital weapon in the arsenal of ideas, plays a strategic role in America's security. This "weapon of ideas" must be used effectively so that the alternative, military weapons, are not put to use. In this context, following a USICA presentation to the President and the NSC on August 17, 1981, the President directed the Agency to proceed immediately with "Project Truth," a program to counter the extensive propaganda and disinformation campaign of the Soviet Union. Notwithstanding this and other important Agency national security responsibilities, the present budget emergency requires the Agency to reduce its activities in FY 1982.

Over the last 15 years, USICA's funds have decreased by 30 percent in constant dollars. Even more damaging has been the decline in staff, our most critical resource, which has dropped by 35 percent from 11,604 to an authorized level of 7,513, over the same period. In the long term we do not believe that the Agency can, at the currently planned 1982 level, effectively carry out its enhanced national security role. Thus, in this present budget situation we have prioritized Agency programs to preserve to the maximum extent possible our staff resources and our basic program mechanisms, particularly the Voice of America, our field presence overseas, the Wireless File, and other support for the field. In the brief period of time available to consider resource alternatives, we have applied the reductions so that the Agency's basic structure is not permanently affected.

Therefore, as an emergency measure, we have allocated a major share of the reduction to the exchange program on the assumption that a significant part of this very valuable grant program can be deferred for a year or two and be rebuilt more readily than our more staff intensive programs. We regret the circumstances that necessitate this action, but feel it is preferable to a generalized cut back of many already weakened programs.

Even with this approach other programs are also affected adversely. We have applied reductions to field operations, principally to cut back on library operations and some smaller posts so that fixed costs can be reduced. Other reductions have been applied to planned technology improvements and transmission back-up systems and program support activities of the Voice of America. A substantial cut has been made in film and television programs, exhibits, and performing arts presentations.

Unfortunately, our accumulated reductions, which will now take USICA below $500 million, have been in inverse relationship to the resources that the Soviets have been spending on the weapons of ideas, now in excess of $2 billion per year. The pending amendment cuts heavily into our operating resources at a time when USICA's role has become more compelling.

Prior to the transmission of the September budget amendment, the House had passed the FY 1982 appropriations bill, reducing USICA's request by $61.8 million. As noted on the chart on page one, the House applied most of the cut, $55.9 million, to the Radio Construction account inasmuch as those funds will not be required until FY 1983.

The specific program cuts and their impact by program element follow:

Salaries and Expenses (including Special Foreign Currency) ($—55.6 million; —87 positions).

1. Overseas Missions ($—3.4 million; —73 positions):

A total reduction of $3.384,000 and 73 positions will be applied to our overseas missions as follows:

Area	Positions	Funds
East Asia and Pacific	4	$ 325,000
Africa	19	1,017,000
N. Africa, Near E. and S. Asia	15	1,080,000
American Republics	18	605,000
Europe	17	357,000
Total	73	3,384,000

As a result of these cuts, we will close: (1) four country programs in Iraq, Mauritania, Benin, and Rwanda; (2) six branch posts in Chile, Ecuador, Venezuela, Colombia, and Brazil; and (3) the reading room in Auckland, New Zealand, the American center and library in Stockholm, Sweden, and six minimum distribution outlets in Africa. In total, 73 positions will be eliminated. Taken together, these and other program reductions in our overseas missions will further weaken our efforts to reach the successor generation and will curtail our operations in developing nations of the third world, a group that the Administration is very concerned about.

2. Voice of America (—$1.8 million):

The Voice of America's staff and program broadcast schedule will be maintained intact. However, VOA will be required to eliminate its high-frequency signal transmissions which presently back up the satellite circuits that feed programming to VOA's overseas transmitters. Subsequently, should a disruption in the satellite circuit occur.

VOA literally would be off the air to major geographic regions of the world until the satellite circuits could be restored or until VOA could reactivate the high-frequency transmissions from one of its U.S.-based stations. Such disruptions could be critical to U.S. national interests in times of any international crisis or major world event. In addition, VOA will have to make major resource cuts in its central news and feature operations which service all of VOA's English and foreign-language broadcast operations. Program quality will suffer.

3. Exchange (—$44.4 million):

As indicated above, the major portion of the FY 1982 cut will be applied to grant-funded exchange programs in order to preserve essential Agency core-program operations. Specifically, the academic program will be cut by 53 percent ($25,600,000); the International Visitor program, by 58 percent ($11,500,000); and Private Sector programs, by 70 percent ($5,400,000). Library and book programs, support to American schools overseas, and program direction will also be reduced by $1,900,000.

The full impact of cuts of this magnitude, applied to institutions and individuals after the fiscal year has begun, is not possible to gauge at this time. The private organizations that perform the detailed exchange work for the Agency would be severely damaged. Some in all probability, would not survive.

a. Academic programs: A 53 percent cut in funds available for the Fulbright academic program will eliminate support for all but programs administered by Binational Commissions and programs with those countries, primarily in East Europe, with which the United States has bilateral agreements. Even binational commission programs will face reductions of some magnitude. We will retain active programs in only 59 of the 120 countries in which we now operate.

This cut will increase tremendously the ever-widening disparity between the number of academic scholarships awarded by the Soviet Union and the United States Governments, particularly in Third World countries. As a direct result of these cuts, the number of academic program grantees will be reduced by at least 40 percent. In addition, host country contributions to the program, currently at $9 million, are expected to fall off sharply in response to the diminished American commitment, leading to a further significant decrease in the number of scholars exchanged. Important diplomatic relationships and goodwill built up over three decades will be damaged.

This reduction in funds will eliminate the International Student Exchange (Georgetown) Project and the Humphrey Fellowship Program. Programs in 27 private organizations with many long term relationships will be dissolved. Funding for six major program agencies will be eliminated. This could cause as many as five of these agencies to close, with major impact on parent organizations such as the American Council on Education and the Institute of International Education. All Student Support Services to the more than 300,000 foreign students in the United States without U.S. Government financial support (such as counseling, orientation, and other programs to enrich their U.S. experience) will be terminated. The American Studies Program will be reduced to minimal materials support to Fulbright Commissions. Assistance to overseas schools will be drastically reduced with severe impact on the effectiveness of these schools as showcases of American educational philosophy and practice.

b. *International Visitor Program:* The number of funded International Visitor program grantees will be halved from 1,500 to 750. In past decades, this program has been instrumental in introducing 33 current heads of state and government and many leaders in other fields to the United States in the formative stages of their careers. Programs in some 75 countries will be eliminated entirely and reduced substantially in the remaining 45. This will necessitate the elimination of support to 13 private agencies that arrange programs for individual grantees. We believe that three of these agencies will probably be forced to close.

Program support to the 1,600 visitors who travelled to the United States last year on non-U.S. Government funds will be eliminated entirely.

A network of some 750,000 volunteer, private sector, locally financed "citizen diplomats" in every part of the nation and nearly 100 U.S. communities has developed over three decades to assist the people who come under the auspices of our International Visitor program. Their programming and hospitality assistance make this a combined citizen-government effort, a contribution-inkind that has been estimated at $15.5 million per annum. Without our catalytic role for these organizations and with the curtailment of visitor inflow, these volunteer organizations will begin to dissolve and will not be available again for future IV programming.

c. *Private Sector Program:* The Private Sector Program's commitments under existing bilateral agreements and executive orders to such organizations as the National Committee on U.S.-China Relations, Asia Society, and the Council on Scholarly Communication with the PRC, will be reduced to 50 percent of the current level with significant implications on the ability of these organizations to achieve their objectives.

Core private sector programs, such as Operations Crossroads Africa, American Council of Young Political Leaders, and Council on International Programs who play a significant role in promoting citizen-to-citizen exchanges, will be reduced from half to two-thirds with support for some of the organizations being completely terminated.

Overall, people-to-people exchanges will be reduced from 2,000 to less than 600. The Agency has made a general nation-wide solicitation of private non-profit organizations to participate in new projects and exchange initiatives which support U.S. foreign policy goals and objectives. All funds for these initiatives will be eliminated. USICA Private Sector grants provide "seed money" for these organizations to obtain private support, estimated by these organizations at a 5 to 10 fold effect.

4. Program and Management Support (—$3.4 million, —14 positions):

Exhibits, fine and performing arts, films acquired to support our posts, and TV programs, reduced heavily in March, will be cut back again. Our in-house audiovisual production now is limited to videotape products covering current events and subjects relevant to the support of worldwide U.S. foreign policy interests and goals, with emphasis on the following USICA global themes: U.S. political and security policies, the U.S. economy and the world economic system, solving the energy problem, America in a changing world, and the arts, humanities, and sciences in America.

The added cuts will significantly curtail this effort and will totally eliminate those dealing with American political and social values and products in support of USICA's cultural presentation program. Other cuts will eliminate fine arts exhibitions or performing arts tours in 30 countries and delay the showing of a major exhibition on the American Theatre.

In addition, efforts to update the Agency's technological base with text-editing, minicomputers, word processors and other advanced computer and communication technology will be curtailed or deferred.

These cuts will deprive both our Washington operations and field posts of valuable program and management support and make their tasks more difficult.

In addition to the specific program cuts outlined above, we will apply net built-in savings of $2.6 million to the overall $55.6 million Salaries and Expenses cut. These savings derive from international exchange rate gains, partially offset by added inflationary costs and other mandatory requirements for Agency activities.

East-West Center (—$2.0 million):

Support to the East-West Center in Hawaii will be cut by over $2.0 million. This would force substantial retrenchment within this valuable center of multi-national education, study and research. Specifically, the cut will result in substantial decreases in research efforts, dissemination efforts through the Asian/Pacific region, numbers of participants involved in our programs (cut 300 participants) and in financial contributions from the governments of Asia and Pacific Islands. More broadly, the reduction will weaken our effort to strengthen relations and understanding with the influential people of Asia and Pacific at the time when it is to the national interest to build and strengthen these cooperative relationships with the United States.

Radio Construction (—$9.7 million):

The FY 1982 construction requirements for the Botswana and Sri Lanka facilities, for which equipment valued at $5.7 million has been procured, can be accommodated within the amendment cut of $9.7 million since these funds will not be required until FY 1983.

Mr. WEICKER. I think the New York Times phrased it very well when they said "The U.S. is about to launch a policy of unilateral disarmament in the worldwide contest of ideas," unilateral disarmament in the worldwide contest of ideas.

Let me give a specific, concrete example of what I am talking about. About a year-and-a-half ago I had occasion to visit the Island of Cuba. I hear a great deal of consternation expressed by members of this administration, indeed Members on the floor of the U.S. Senate, as to the Cuban troops in Ethiopia and in Angola.

While I certainly do not advocate looking upon that with favor, I want to point out that that is nowhere near the danger that we face from the activity that I am about ready to describe.

It is my feeling that Africa is going to swallow up those Cuban troops just like they swallowed up the colonial troops of Europe, and like they swallowed up the Chinese and anybody else who goes there; they will not last very long.

However, in the visit to Cuba I had occasion to visit what is now called the Isle of Youth, formerly the Isle of Pines.

On that island sit about 60 senior high school complexes. Many of them are devoted to students from foreign nations. The one I visited had 600 Namibian students, 600 young people getting their education courtesy of the Soviet Union and Cuba.

Namibians have as their native language English, so there is no language barrier with Americans. Indeed, the language barrier is greater for them being in Cuba. Those Namibians are not here getting their education in the United States. They are in Cuba and they are going back to that emerging nation and they are going to become the leaders of

Namibia, the business leaders, the educational leaders, the scientific leaders, the political leaders, the military leaders, with an education courtesy of the Soviet Union and Cuba.

I asked the question in our subcommittee: how many Namibians have we had here in the United States of America, the United States with its University of South Carolina, with its Yale University, its Princeton University, its University of Southern California, its Georgetown, its George Washington University, its University of Maryland, Brown University, Duke, right on down the list?

How many have we had here in the past year? Two. Now do not worry that the main threat is being posed by those troops. You worry about those 600 students and, mind you, that was one of many complexes, others being devoted to other nations.

It is a great term the New York Times used "unilateral disarmament in the worldwide contest of ideas."

Here is the great thing that the United States has to offer the world: our educational complexes, systems, and personnel. We have just decided to withdraw from the field while at the same time we say that we want to be the No. 1 in power in this world. That makes as much sense as saying, "We are going to be the No. 1 in this world insofar as our preeminence, our power, but we are going to cut education 25 percent, we are going to cut science 25 percent."

May I remind my colleagues that the United States is not going to outman the Soviet Union. That is a biological impossibility. We are going to continue our preeminence, by what comes from up here, our minds, our quest for technology, our mastery of technology, our quest for science, our mastery of science.

So this business that we can leave education in the international sense or we can leave education in the domestic sense is sheer suicide for this small nation, which has thrived and grown great because of its ideas.

That is why we want to emphasize all of this in this appropriation bill, to reaffirm—I might add we did everything we could in a monetary sense. I might say—my good friend from Texas (Mr. TOWER), chairman of the Armed Services Committee I will leave the hardware to you and I will take care of the ideas.

Mr. HOLLINGS. Mr. President, the distinguished Senator from Connecticut, as I say, is right on target. Less than a year ago I had an opportunity to visit in Panama. I was checking and reporting on the operation of the Panama Canal under the new treaty, and I was impressed by one singular factor. I had the opportunity to talk at length with Gabriel Lewis, a former ambassador. In Panama they were not asking for money; they needed jobs. They were talking about putting some 20,000 high school graduates out, and they needed jobs at the other end of the line.

More than anything else that impressed me was exactly what the Senator from Connecticut is talking about. Ambassador Lewis said, "You have reduced your cultural and exchange programs," and I recalled that Omar Torrijos studied and trained with our American military. He said, "More than that, hundreds of Panamanians, the young, bright high school graduates, are being taken over into Cuba and they are being trained there and being sent back. If you do not step up your programs like that, you will lose your influence in Panama and throughout the world." Here is a leader who has cast his lot with the United States in that particular treaty, and now he has got the obligation, the feeling, and the apprehension that it will work. One of the ways to make certain that it works is for them to continue on, as they have tried to do, toward free elections in a free society. Yet he sees it being eroded by the Cuban operation described by the Senator from Connecticut.

I think the keynote of it all is that the man of peace of this decade, Anwar Sadat, was involved in the exchange program. I think that, more or less, describes the thrust of this amendment better than anything I could add.

I thank the distinguished Senator, and Mr. President, I ask unanimous consent to place in the RECORD a listing supplied by the International Communications Agency of the current heads of state and cabinet ministers who are alumni of the educational and cultural exchange programs. I am advised that the 33 heads of state indicated in the listing is current but that the number of cabinet ministers may not be exactly correct, but 378 is a good representation of the impact of the exchange program.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CURRENT HEADS OF STATE AND CABINET MINISTERS ALUMNI OF ECA PROGRAMS

Total Heads of State: 33.
Total Cabinet Ministers: 378.

AREA OF AFRICA

(6 Heads of State, 82 Cabinet Ministers)

Botswana—Chief of State and Head of State Q. K. Masire, IV 1971—Cabinet Ministers: 8.
Burundi—Cabinet Minister: 1.
Cameroon—Cabinet Ministers: 4.
Central African Republic—Cabinet Ministers: 2.
Gabon—Cabinet Ministers: 2.
Ghana—Cabinet Ministers: 2.
Guinea-Bissau—Cabinet Ministers: 5.
Kenya—President Daniel T. Arapmoi, IV 1969—Cabinet Ministers: 5.
Lestho—Cabinet Minister: 1.
Liberia—Cabinet Ministers: 2.
Madagascar—Chief of State Didier Ratsiraka, IV 1973.
Malawi—Cabinet Ministers: 3.
Mali—Cabinet Ministers: 3.
Mauritius—Head of State Sir Bayandranah Burrenchobay, IV 1969—Cabinet Ministers: 7.
Republic of the Congo—Cabinet Minister: 1.
Rwanda—Cabinet Minister: 1.
Seychelles—President France Albert René, IV 1960.
Sierra Leone—Cabinet Ministers: 7.
Somalia—Cabinet Minister: 1.
South Africa—Cabinet Ministers: 2.
Uganda—Cabinet Minister: 1.
Upper Volta—Cabinet Ministers: 4.
Zaire—Cabinet Ministers: 10.
Zambia—Cabinet Ministers: 9.
Tanzania—President Julius Nyerere, IV 1960.

AREA OF AMERICAN REPUBLICS

(6 Heads of State, 58 Cabinet Ministers)

Argentina—Cabinet Ministers: 4.
Barbados—Prime Minister Tom Adams, IV 1973—Cabinet Ministers: 8.
Bolivia—Cabinet Ministers: 2.
Brazil—Cabinet Ministers: 3.
Chile—Cabinet Ministers: 2.
Colombia—President Julio Cesar Turbay Ayala, Vol. Vis. 1977—Cabinet Ministers: 6.
Costa Rica—Cabinet Ministers: 3.
Dominican Republic—Vice President Jacobo Majlute, IV 1976—Cabinet Ministers: 3.
Ecuador—Cabinet Ministers: 2.
El Salvador—Cabinet Ministers (Governing Junta): 2.
Guyana—Prime Minister Ptolemy Reid, IV 1966—Cabinet Ministers: 2.
Honduras—Cabinet Ministers: 5.
Nicaragua—Member of JRN Moises Hassan Morales, Academic 1968, Cabinet Ministers: 6.
Paraguay—Cabinet Minister: 1.
Peru—Cabinet Ministers: 2.
Surinam—Cabinet Minister: 1.
Trinidad—Cabinet Minister: 1.
Venezuela—President Dr. Luis "Herrera' Campins, IV 1967.

AREA OF EAST ASIA

(5 Heads of States, 50 Cabinet Ministers)

Australia—Prime Minister J. M. Fraser, IV 1964, Cabinet Ministers: 7.
Burma—Cabinet Minister: 1.
China—Cabinet Minister: 1.
Fiji—Head of State (Government-General Ratu Sir George Cakobau, IV 1963, Head of Government (Prime Minister Ratu Sir Kamisese Mara, IV 1964, Cabinet Ministers: 2.
Hong Kong—Cabinet Ministers: 2.
Indonesia—Cabinet Ministers: 3.
Japan—Cabinet Ministers: 3.
Korea—Prime Minister Dr. Nam Duck-Woo, Academic 1975, Cabinet Ministers: 2.
Malaysia—Cabinet Ministers: 9.
New Guinea—Cabinet Ministers: 2.
New Zealand—Prime Minister Robert D. Muldoon, IV 1965, Cabinet Ministers: 3.
Philippines—Cabinet Ministers: 5.
Singapore—Cabinet Ministers: 3.
Thailand—Cabinet Ministers: 4.

AREA OF NEAR EAST ASIA

(3 Heads of State, 48 Cabinet Ministers)

Bahrain—Cabinet Ministers: 4.
Bangladesh—Cabinet Ministers: 2.
Egypt—Cabinet Minister: 1.
India—Prime Minister Indira Ghandi, IV 1960, Cabinet Ministers: 2.
Israel—Cabinet Ministers: 2.

CAIRO, ILL. WEATHER STATION

● Mr. PERCY. Mr. President, under the account for the National Oceanic and Atmospheric Administration, the Appropriations Committee has provided $1,231,000 to maintain 20 fully operational National Weather Service stations. The Cairo, Ill. weather station, however, was not included among those the committee recommended to be maintained.

Cairo, Ill. is the southern most point in Illinois. Lying at the confluence of the Mississippi and Ohio Rivers, the city is fully levied because of the threat of floods. Floods can occur swiftly in this low-lying area and prompt and accurate local forecasts are depended on by the community, particularly by barge lines, farmers, and other local interests concerned with the level of the river. While the Weather Service contends that forecasts from St. Louis or Louisville and Memphis would substitute for local forecasts initiated at Cairo, the unique topography of the area suggests a need for locally generated forecasts. Cairo is in "tornado country" and the spring rains endanger Cairo to weather hazards.

I wish to ask the distinguished Senator from Connecticut, Mr. WEICKER, whether he could respond to the special case of Cairo and direct the National Weather Service to reevaluate the Cairo case before making any judgment to close the local weather station? Such a study seems appropriate given the precarious position of Cairo and we want to make certain it is justified before acting.

Mr. WEICKER. Yes. I understand the special needs of Cairo at the confluence of these great rivers, the Mississippi and Ohio; and would agree to direct the National Weather Service to conduct a suitable review before making any decision to close down the local station in Cairo.

Mr. PERCY. I appreciate this accommodation by the Senator from Connecticut and thank him very much indeed.●

● Mr. DOMENICI. Mr. President, H.R. 4169 as reported by the Appropriations Committee provides new budget authority of $8.6 billion for fiscal year 1982.

With possible later requirements for October 1981 pay raise and the administration's requested increase for the Immigration and Naturalization Service (INS), the reported bill is exactly at the Commerce-State-Justice Subcommittee's budget authority allocation under the first budget resolution and above the subcommittee's outlay allocation by $0.3 billion. I would like to commend the subcommittee for restraining the credit side of the budget.

The credit limitations in the reported bill are $1.8 billion, 21 percent below the credit budget assumptions of the first budget resolution. This reduction will result in lower budget outlays in the current and future years. I would also like to commend the subcommittee for keeping the funding levels provided in this bill consistent with the authorization levels of the Omnibus Reconciliation Act.

The Senate bill is $0.1 billion in budget authority below and $0.2 billion in outlays above the House-passed bill, with possible later requirements taken into account.

It exceeds the President's September budget request by $0.9 billion in budget authority and $0.7 billion in outlays.

The President's September budget request for programs and activities funded in this bill, with later requirements, represents roughly an 11-percent reduction in budget authority and an 8-percent reduction in outlays from his March budget request. The Senate-reported bill is about 1 percent in budget authority and outlays below the levels requested by the administration in March.

The bill provides increases of $0.1 billion for international programs, $0.1 billion for NOAA, $0.2 billion for EDA, $0.2 billion for the Legal Services Corporation, and $0.1 billion for juvenile justice grants over the levels requested by the President in September.

Mr. President, I ask that a table showing the relationship of the reported bill, together with possible later requirements, to the congressional budget and the President's budget requests be printed in the RECORD.

The table follows:

Commerce, Justice, State and the Judiciary Subcommittee

[In billions of dollars]

	Fiscal year 1982	
	BA	O
Outlays from prior-year budget authority and other actions completed	---	3.2
H.R. 4169, as reported in Senate	8.6	6.8
Possible later requirements:		
October 1981 pay raise	0.1	0.1
Immigration and Naturalization Service	0.1	0.05
Total for Commerce, Justice, State and the Judiciary Subcommittee	8.8	10.2
First Budget Resolution level	8.8	9.9
House level	8.9	10.0
President's March request	8.9	10.3
President's September request[1]	7.9	9.5
Commerce, Justice, State and the Judiciary Subcommittee compared to:		
First Budget Resolution level	---	+0.3
House level	−0.1	+0.2
President's March request	−0.1	−0.1
President's September request	+0.9	+0.7

[1] Adjusted to reflect President's September request for the Legal Services Corporation rather than the Corporation's budget request.●

SECOND CONTINUING APPROPRIATIONS, 1982

The PRESIDING OFFICER. Under the previous order, the hour of 1 p.m. having arrived, the Senate will now proceed to the consideration of House Joint Resolution 357, which the clerk will state by title.

The legislative clerk read as follows:

A joint resolution (H.J. Res. 357) making further continuing appropriations for the fiscal year 1982, and for other purposes.

The Senate proceeded to consider the joint resolution which had been reported from the Committee on Appropriations with amendments.

Mr. WEICKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. DENTON). Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, what is the pending business before the Senate?

The PRESIDING OFFICER. The continuing resolution, House Joint Resolution 357.

Mr. HATFIELD. Mr. President, I bring before the Senate today a further continuing resolution for fiscal year 1982. Before we get into the details of the proposal before the Senate, I would like to insure that all Members understand the conditions which have brought us to this point.

The appropriations process this year has been forced to endure an unprecedented number of delays and major budget revisions. The process was set back 2 months at the beginning of the year while the committee awaited President Reagan's revisions to President Carter's budget requests. Then, just as appropriations bills began moving in the Senate, President Reagan, responding to worsening economic conditions, asked the committee to halt action on these bills in order that we might consider a new round of budget reduction proposals. These new proposals were received by the Appropriations Committee on

September 30, the day before the beginning of fiscal year 1982.

When action on 1982 bills was suspended, the Senate Committee on Appropriations had reported three bills for Senate action. The President's recommendations were carefully considered, regardless of the status of a particular appropriation bill in the legislative process.

We have even reexamined the conference report on HUD-Independent agencies, which was approved by the House of Representatives, and in this resolution are proposing an additional $2 billion in savings for these programs.

With the committee's action yesterday in reporting the Defense appropriation bill, all regular appropriation bills have been reported for Senate action. Eight of the thirteen bills have passed the Senate, leaving five awaiting floor action. Conference reports on five bills have been filed.

Mr. President, let me now quickly identify how each remaining appropriation bill is treated in House Joint Resolution 357. The continuing resolution as recommended by the committee provides funding for each of the 12 regular appropriations bills not yet enacted into law.

As everyone knows, the appropriations bill on legislative matters was enacted into law, passing both the Houses, the conference, and then the President signed the bill. So we have 12 remaining bills now.

The formula adopted by the committee is based on the position of each of these bills relative to final congressional consideration. For instance—those bills which have completed conference committee consideration are referenced into the resolution at that level. These measures are Agriculture, Transportation, District of Columbia, Interior, and the Housing and Urban Development appropriations bills.

Each one of these bills has moved through the House, through the Senate, and have completed the conference work in each instance and those conference reports are on file.

Levels for those bills which have either been passed or reported in the House but which have not been acted upon by the full Senate have been set at the lower of the House or Senate reported or passed level. These measures are: Department of Defense, military construction, Labor-HHS-Education, and the Treasury-Postal Service appropriations bills.

Finally, Mr. President, the committee recommends that in the case of bills which have been acted upon by the Senate but which have not yet completed conference action, that these measures be incorporated into the continuing resolution at the Senate-passed rate. It is the committee's view that this formulation preserves to the maximum extent possible, not only the prerogatives of the Senate, but perhaps more importantly, the need to hold down spending for activities where congressional action is not near completion. These bills are energy-water, foreign operations, Commerce-State-Justice, and the Judiciary.

The continuing resolution as reported would set spending at a level very close to the President's September request. Newly created budget authority amounts to $432.5 billion, only $0.8 billion above the President. Estimated outlays are $417.4 billion, $2.2 billion above the President.

Let me repeat, Mr. President, that as far as budget authority is concerned, the continuing resolution as presented here on the floor by the Senate Appropriations Committee is $800 million above the President, whereas in the outlays, the estimated outlays, which is a floating situation as it goes through the annual budget year, are $2.2 billion above the President.

House Joint Resolution 357 should be viewed as a stopgap funding measure despite its September 30 expiration date. It remains the firm intention of the committee to press ahead with Senate action on regular appropriation bills.

Mr. President, I received full assurance from the majority leader and I understand, through the majority leader, from the minority leader as well that they will continue to give special priority to appropriations bills or conference reports once we get this continuing resolution.

I hope that Senate action on the remaining five bills could be completed in the next 2 or 3 weeks. Upon enactment of a regular appropriation bill, the continuing resolution provisions pertaining to that bill are superseded.

In other words, Mr. President, once we have passed an appropriations measure that has moved its way through the House and the Senate and receives the signature of the President, that drops out of the continuing resolution. That supersedes whatever the continuing resolution may have indicated.

Thus, although programs are protected under this resolution for a full year, the Senate will have the opportunity to seek further savings in appropriated programs through the normal legislative process.

I have to underscore this, Mr. President, because in no way does it infringe upon the normal procedures of the Senate to modify any appropriation bill that comes to the floor from the committee. Amendments subtracting, amendments adding, or whatever, the will of the Senate will be worked on each of these appropriations bills. No one's rights are being foreclosed by this continuing resolution.

Mr. President, before I yield to Senator PROXMIRE, who is the very distinguished ranking member of the committee and, I must say, has been so cooperative, as have all members of the committee—I do not think we could have moved to this point without the guidance and support of members on both sides. I would not make any comparisons in any way except to say that I do not believe, in the modern history of the Appropriations Committee, has so much been accomplished in so brief a period of time under very adverse circumstances. I think that is a record we can be immensely proud of. Over the past decade, appropriations, largely driven by the uncontrollable items within them, have risen an average of 17 percent per year. Although action this year is not complete, based on Senate action on these bills for fiscal year 1982, appropriations will rise only 2 percent as against the normal decade average of 17 percent a year. And this 2 percent figure takes into account the huge defense increase reported to the Senate yesterday.

Let me say, Mr. President, that defense committee bill is $8 billion over the President's request and $11.4 billion over the House bill. But in spite of that huge defense bill, we have still, overall, only a 2-percent increase, which is a remarkable record. I hope the Members will keep these figures in mind as we proceed to the consideration of this resolution.

Mr. President, what I have said about the Members, I should also have to apply to the very extraordinary work done by the staff. I suggest that probably there is no committee staff that has had to function so many hours out of the 24-hour period as the staff on the Committee on Appropriations. That is not only in terms of the long sessions that we have held and the markups and all of the things that go into that kind of external procedure, but then the many hours that go into the paperwork that must be compiled and put together in great detail. The staff on both sides have been, really, extraordinary in their commitment and their dedication.

Of course, I cannot pay too high tribute to my good friend from Wisconsin (Mr. PROXMIRE) for his very noble efforts and constant and tenacious cooperation that he has displayed from the very beginning in this very difficult task.

Mr. PROXMIRE. Mr. President, it is a real pleasure to work with the distinguished Senator from Oregon. He is an outstanding Senator and knows how much I respect him. We do disagree, I think, on one or two important issues in this continuing resolution, to my deep regret, but that does not in any way diminish my great admiration for his ability and the remarkably fine way he has handled that committee. It is by far the biggest committee in the Senate, 29 members. It is a very difficult committee to handle under any circumstances, but this year has been as bad as any year one can imagine, because we have had a change in administrations and their views on cutting spending. This administration cut it very dramatically and want to cut it further, and that has interrupted the committee work very seriously.

Mr. President, I must add that I agree wholeheartedly with the chairman's remarks on the staff. I am very proud of the minority staff, and he has a first-class operation in the staff of the majority of the committee.

Mr. President, we have before us today in the continuing resolution a measure of historic proportions which, in my estimation, would bring about a radical shift in power from the legislative to the executive branch, House Joint Resolution 357, which is intended to continue the operations of the Federal Government until we complete action on regular appropriations bills, would be effective through the end of the current fis-

cal year—September 30, 1982—and would incorporate all but 1 of the 13 regular appropriations bills with which we normally deal.

Mr. President, we have never done that before, never come close to doing anything like that, deliberately planning that we will have a continuing resolution not lasting 30 days, not lasting 45 days, but lasting 10½ months, for the entire year.

What this basically means is that we are attempting to handle funding for the entire Federal Government for the remainder of the fiscal year in a 26-page resolution covering hundreds of departments, bureaus, and agencies and thousands of individual programs. And we are working under an almost unendurable time pressure—we have to complete action on the resolution by midnight on Friday or the entire Government comes to a screeching halt.

There is no way that this body, which many have called the greatest deliberative body in the world—some rather jokingly. Some people still think that we can aspire to that, but I wonder, particularly when we have this kind of situation.

How can we deliberatively and thoughtfully and responsibly process a resolution of this magnitude with any hope of dealing rationally and reasonably with the hundreds of issues that normally rise as we handle individual appropriations bills?

Mr. President, it is often said that the President's authority and power is the power of the sword. He is Commander in Chief of the Army, Navy, and Air Force. The Congress power is the power of the purse. It is embodied in our appropriations actions and we embody all of it in one bill, bring it forward, and say have done with it by midnight Friday. Mr. President, I think we cannot possibly do justice to this process under these circumstances.

In fact, Mr. President, it is almost impossible to determine where this resolution stands in relationship to the President's budget. We are told by the staff that the resolution exceeds the President's September requests by a mere $800 million in budget authority and $2.2 billion in outlays. The Office of Management and Budget claims that the outlay increase is closer to $10 billion. I am inclined to agree with the Office of Management and Budget.

For example, the resolution references the House or Senate passed versions of the Labor-HHS-Education bill, whichever is lower. By doing so, the resolution seriously understates the true cost of the programs covered by this legislation. In point of fact, although the House is $2.1 billion below the Senate for the medicaid, aid to families with dependent children, and guaranteed student loan programs, all of this $2.1 billion and probably more will be required unless the basic law is changed. Thus in this one area the resolution understates costs by $2.1 billion. That is only one of the areas where it understates cost.

Mr. President, the difficulty of determining whether or not this resolution goes most of the way toward meeting the President's September budget reductions or, in fact, is a budget-busting engine of inflation, would be reason enough to be skeptical about the prospect of making the resolution effective for the entire fiscal year. But even more important, by sending the resolution to the President with a September 30 expiration date attached, we are abdicating our responsibility to deal carefully and thoughtfully with the President's budget.

It is true that the resolution incorporates by reference conference reports on many if not most of the regular appropriations bills. To the extent that this is the case, the resolution does preserve congressional prerogatives. However, there are two notable exceptions that account for almost two-thirds of all the spending covered by this continuing resolution. These exceptions are the Labor-HHS-Education and Defense appropriations bills. This covers all spending, and we have not had a chance on the floor to discuss this at all—not 1 day, not 1 hour, not 1 minute.

The resolution incorporates these pieces of legislation at the lower of the House or Senate levels. Furthermore, the resolution states that if either bill has been reported by November 20, it shall be deemed as having passed the Senate.

What does this language mean? It means that we are incorporating in the resolution the Defense and Labor-HHS bills before this body has even had a chance to deal with these pieces of legislation individually. The Defense bill, I point out, is by far the biggest appropriation bill in the history of this Republic—$208 billion in that one appropriation bill.

We are wrapping up all the days and weeks of debate that normally occur when these bills come to the floor, all the dozens of amendments, all the colloquies and criticisms, all the close questioning and careful examination, in 12 to 18 hours of debate at the very most. It means we are helter-skelter pushing these extraordinarily complex pieces of legislation through the Congress from committee through conference in about 3 working days.

Mr. President, I have a great deal of faith in the deliberations of the Appropriations Committee. But I have been on that committee for 20 years, and I have been in this body too long to presume that 29 Senators should or could make the final decisions on all of the vital programs funded through the Defense and Labor-HHS bills. Full and fair debate on the floor of this body is essential if we are to arrive at a balanced judgment regarding issues as diverse as the B–1 bomber and the basic education opportunity grant program. Yet, this is exactly what we will not be doing by passing a resolution that puts into place for a full year the Defense and Labor-HHS bills before these individual pieces of legislation have been considered on the Senate floor.

It may be argued that although the continuing resolution is effective through September 30, 1982, we can pass the Labor-HHS and Defense bills in the interim and they will then no longer be covered by the legislation we enact today. But let us look at what immense power this resolution gives to the President. It means that even if we have the will and ability to pass separate bills, the President has only to veto the bills to continue in place the levels provided for in the continuing resolution. This veto would then have to be overridden by two-thirds of the House and Senate—a difficult task under any circumstances, but a near impossibility as long as the programs are maintained in place through the continuing resolution. Furthermore, I frankly doubt that Congress will be able to resist the temptation to forget these bills once they are incorporated in a full year continuing resolution.

Finally, by wrapping 12 regular appropriations bills into the continuing resolution, we are giving the President a golden opportunity to veto just one piece of legislation and press for an across-the-board cut touching virtually every Federal discretionary program as an amendment to the resolution. This would be an attractive alternative to many.

In fact, I would like to hold down spending any way I possibly can. If it is the only way we can exercise restraint, I might be compelled to support such a proposal. But this approach would do a great injustice to the appropriations process. It would take a meat ax approach to the workings of the entire Government, it would ride roughshod over the prerogatives of the Congress, and it would send a signal to the American people that Congress was incapable of making the tough, hard, individual choices that are the hallmark of a responsible legislative process.

Mr. President, there is one way out of this legislative morass. It is a very simple one. We should extend the continuing resolution only through mid-December and get on with the task of dealing with appropriations bills through the normal legislative process. Six appropriations bills have been approved by conference thus far. A seventh—the legislative bill—is in place for the remainder of the year.

It is ironic that the one measure that affects our operations we have taken care of. We have passed it. But all the other appropriation bills will be dealt with in what I think is, unfortunately, a cavalier manner.

Most of the other bills have passed at least one House of the Congress. We can complete the normal appropriations process by mid-December. We should complete the normal appropriations process by mid-December. And we abdicate a great deal of our power and authority if we do not recognize the facts by terminating this continuing resolution in mid-December and getting on with our business. I will vigorously support all efforts made to change the effective date of the resolution and restore our sense of duty and responsibility.

EXTRAORDINARILY BAD PRECEDENT IN THIS BILL

Mr. President, this is important, and I wish to spell out why I think the date of September 30, 1982, which takes us through the entire fiscal year on a continuing resolution, is such a mistake.

The provisions in the continuing resolution setting September 30, 1982,

as the expiration date sets a very bad precedent and should be both noted and objected to.

President Carter sent his fiscal year 1982 budget to us last January 15. Two months later, in March, understandably, President Reagan sent us his revisions, which he should have.

But only a few weeks ago, in September, just as the appropriations bills were moving at an expedited pace, the President asked us to hold our actions because of changing economic conditions and new proposals which he wished to make.

These proposals were not received until September 30, the day before the new fiscal year began.

Now we are being asked to continue funding the Government under a continuing resolution which would extend for the entire fiscal year.

That is indeed a radical departure from responsible action. It is fraught with danger.

First, and foremost, it reduces the incentive for Congress to actually get down to work and pass specific appropriations for specific line items, programs, and agencies.

Second, it puts a powerful weapon in the hands of the President. He is in a position to veto and, under the existing party divisions in Congress, especially the Senate, to have the veto of any new appropriations bill upheld. The provisions of the continuing resolution in area after area, could thus become the law for the entire year.

Third, in view of the control of the Senate by his own party and the discipline they have shown so far this year, a decision by the Senate leadership not to come forward with additional appropriations bills could also insure that the provisions of the continuing resolution would last all year.

A RADICAL CHANGE IN THE DIVISION OF POWERS

What is being proposed could turn out to be Government by continuing resolution, and that is very bad indeed.

First of all, it is a weak-kneed, cowardly, pusillanimous abdication by Congress of its Constitutional prerogatives.

Under the Constitution, "All legislative powers * * * shall be vested in the Congress."

Under the Constitution, "No money shall be drawn from the Treasury but in consequence of Appropriations made by Law."

Under the Constitution, "Congress shall have power to pay the debts and provide for the common Defense and general Welfare of the United States."

Every single issue affecting the Budget—the power of the purse strings, the power over the debt, the power over taxes, and the power over monetary policy—lies with Congress.

So we are not only abdicating our responsibilities by giving the President and the executive branch massive authority over the details of the budget until September 30, 1982, but also, we affect by a terrible precedent and practice the basic document of our country.

We are changing the balance and division of power and authority given by the Constitution to the Congress and the Executive.

We affect in a drastic way the relationships set out by the Constitution of two of the three independent branches of the Government.

It is one thing for us to pass a stop-gap measure of a week or so. It is quite another for Congress to essentially delegate massive control over spending, the budget, and the purse strings of the Government to the executive branch for an entire fiscal year.

And by using the power of the veto over future appropriations bills or by party decisions to block further appropriations bills in the Senate, congressional power over the purse strings could wither, atrophy, and even die.

What is being proposed in this continuing resolution has far reaching, radical, and dramatic potential effects and consequences.

The Senate and the House of Representatives should stop and consider before making such a massive grant of power to the Executive in the area of the budget and the Government's purse strings which is a constitutional prerogative of the legislative branch.

It is one thing for an Executive to usurp power. But it is even worse for the legislative branch to give up or delegate its authority mindlessly and without a struggle.

The President has not asked for this. As far as we know he does not want it. There is no indication the President wants us to give this for an entire year. We are handing it to him.

We should consider the unprecedented consequences of our actions before putting the stamp of approval on this resolution and its radical provisions.

Mr. President, I thank my friend from Oregon and yield the floor.

Mr. HATFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an explanatory statement of the Committee on Appropriations on House Joint Resolution 357 as reported, with amendments.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXPLANATORY STATEMENT OF THE COMMITTEE ON APPROPRIATIONS ON H.J. RES. 357 AS REPORTED, WITH AMENDMENTS

The appropriations process this year has been forced to endure an unprecedented number of delays and major budget revisions. The process was set back 2 months at the beginning of the year while the Committee awaited President Reagan's revisions to President Carter's budget requests.

Then, just as appropriations bills began moving in the Senate, President Reagan, responding to worsening economic conditions, asked the Committee to halt action on these bills in order that we might consider a new round of budget reduction proposals.

These new proposals were received by the Appropriations Committee on September 30, the day before the beginning of fiscal year 1982.

When action on 1982 bills was suspended, the Senate Committee on Appropriations had reported three bills for Senate action.

The President's recommendations were carefully considered, regardless of the status of a particular appropriation bill in the legislative process.

For example, a conference report on the bill to provide appropriations for the Department of Housing and Urban Development and Independent Agencies had been adopted in the House.

Yet the Senate Appropriations Committee has, in H.J. Res. 357, made further reductions in programs covered in that bill amounting to almost $2 billion.

Total Committee reductions since receipt of the President's September message amount to over $5 billion in budget authority and over $2 billion in outlays.

The continuing resolution as reported would set spending at a level very close to the President's September request. Newly created budget authority amounts to $432.5 billion, only $.8 billion above the President's. Estimated outlays are $417.4 billion, $2.2 billion above the President's.

With the Committee's action on November 17 ordering the defense appropriations bill reported, Committee action on all regular 1982 appropriations bills has been completed. Eight of the thirteen bills have passed the Senate, leaving five awaiting floor action. Conference reports on five bills have been filed.

H.J. Res. 357 should be viewed as a stop-gap funding measure despite its September 30, 1982 expiration date. It remains the firm intention of the Committee to press ahead with Senate action on regular appropriation bills. Upon enactment of a regular appropriation bill, the continuing resolution provisions pertaining to that bill are superseded. Thus, although programs are protected under this resolution for a full year, the Senate will have the opportunity to seek further savings in appropriated programs through the normal legislative process.

SECTION-BY-SECTION ANALYSIS

Section 101(a) provides continuing authority for four appropriations bills—Defense, Military Construction, Labor, Health and Human Services, and Education, and Related Agencies, Treasury, Postal Service, and General Government. Under this section, where an amount which would be made available or authority which would be granted under appropriation bills passed by the two Houses are different, the lesser amount and the more restrictive authority applies.

However, where an item is included in only one version of an act, the project or activity shall be continued under the authority granted by the one House, but at a rate for operations equal to the equivalent to the lower of the current rate or the rate as adopted by the one House. For the purposes of this joint resolution, an act reported to a House but not yet passed shall be deemed passed.

Section 101(b) provides continuing authority for Foreign Assistance programs under the authority and at the rate as adopted by the Senate on November 17. Programs for foreign assistance are in the third year of being funded by continuing resolutions. The Committee is deeply concerned with this situation, especially given the fact that the base for the current continuing resolution is based on essentially fisal year 1979 budget levels, directives, and policy.

It is, therefore, recommending a level of funding and policy based on S. 1802, the Foreign Assistance Appropriations legislation originated by the Senate. The Committee feels this unusual action is required in order to give the administration the tools necessary to carry out an effective foreign assistance program.

The funding levels provided by this action, except for the Export-Import Bank, are well within the President's September revised budget request.

Section 101(c) provides continuing authority for activities funded in the District of Columbia Appropriation Act under the authority and at the rate provided in the conference report and joint explanatory state-

ment of the committee on conference filed in the House on November 12.

Section 101(d) provides continuing authority for activities included in the Energy and Water Development Appropriation Act as provided by passed on the Senate on November 5.

Section 101(e) provides continuing authority for activities provided for in the Department of Transportation Appropriation Act as reflected in House Report 97–331.

Section 101(f). Since the adoption on September 11, 1981, of the HUD-Independent Agencies Appropriations Conference Report (H.R. 4034) by the House, the President announced his second round of budget reductions. The adoption of these recommendations would result in numerous changes in the conference agreement. In fact, most of the administration's proposals have been incorporated in the Senate amendment. At the same time that the Committee recommends these changes, it notes that the terms and conditions, including specific earmarkings, contained in the conference agreement and the Statement of Managers (H. Rept. 97–222), still represent the legislative history and intent. The Committee expects the agencies funded through H.R. 4034 to act accordingly.

The highlights of some of the more significant changes being proposed in the conference agreement follow.

TITLE I—DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

TITLE I—DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Annual contributions

The conference agreement provided $17,939,370,000 in budget authority and $916,233,800 in contract authority for assisted housing. The amended conference agreement would reduce budget authority to $17,373,528,040 and reduce contract authority to $885,735,427. However, the new and existing housing mix would be essentially the same as contained in the conference agreement, rather than the September request.

Housing for the Elderly or Handicapped Fund

(Limitation on Direct Loans)

The conference agreement provided a loan limitation of $830,848,000 for the section 202 housing program for the elderly or handicapped program. While the administration's proposal would reduce the loan limitation to $728,746,000, the amended conference agreement would retain funding at $830,848,000.

In March, the request by the administration was $830,848,000 which was the same as that available in fiscal year 1980 and fiscal year 1981. Due to inflation, however, the number of units would decrease from 18,000 in fiscal year 1981 to 17,200 under the March level. The 12-percent reduction proposed by the administration would further reduce the number of units to 15,100.

Data compiled in August 1979, indicated that the potential eligibility for section 202 of individuals 62 years or older is over 9.3 million. In fact, during fiscal year 1981, HUD received over 1,200 applications totaling $33 billion for approximately 75,000 units.

Payments for operation of low-income Housing projects

The conference agreement provided $1,204,600,000 for the operation of low-income housing projects. As proposed by the administration, the amended conference agreement would reduce funding to $1,060,048,000 If this amount proves unsatisfactory, the Committee will consider providing a supplemental appropriations at a later date. In addition, the Committee notes that the $148,000,000 supplemental for fiscal year 1981 operating subsidies has been maintained in the amended conference agreement.

Temporary mortgage assistance program

The conference agreement deleted language proposed by the Senate which would have provided $75,960,000 for the temporary mortgage assistance program. The amended conference agreement would reinstate the language proposed by the Senate, thereby permitting possible savings in the FHA fund during fiscal year 1982.

Community planning and development

The conference agreement provided $3,666,000,000 for community development block grants. The amended conference agreement would reduce funding to $3,450,000,000. The conference agreement also provided $500,000,000 for urban development action grants. the amended conference agreement would reduce funding to $440,000,000.

TITLE II—INDEPENDENT AGENCIES

Environmental Protection Agency

The conference agreement provided $583,747,000 for EPA's salaries and expenses. As proposed by the administration, the amended conference agreement would reduce funding to $512,837,000. The conference agreement also provided $421,840,500 for EPA's abatement, control and compliance. The amended conference agreement would reduce funding to $377,194,200.

Although the administration has proposed reducing the funds available for the hazardous substance response trust fund by $24,000,000, the level recommended by the Committee retains the original conference agreement of $200,000,000.

Currently, EPA estimates that between 10,000 to 15,000 sites will require specialized assessments or investigations to determine if a significant public health problem exists and 1,000 to 2,000 of these sites may prove to be major health or environmental problems.

The 12-percent reduction proposed by the administration could reduce the number of sites where immediate removal action is planned from 125 to 110; reduce site inspections from 1,500 to 1,000; and reduce site investigations from 300 to 200.

National Aeronautics and Space Administration

The conference agreement provided $4,973,100,000 for NASA's research and development. While the administration has proposed reducing funding to $4,591,900,000, the amended conference agreement provides $4,791,900,000.

The proposed 12-percent cut by the administration of $311 million comes on top of the March reduction of $603.5 million. Cuts of this magnitude would fundamentally change the character of NASA through the elimination of the space science and applications programs.

In providing an additional $200,000,000 above the administration's proposal, the amended conference agreement would continue to provide $70,000,000 for programs earmarked in the original conference agreement (House Report 97–222, page 9). The remaining $130,000,000 would go for aeronautics, space sciences, space and terrestrial applications and space technology.

In addition, the conference agreement provided $1,114,300,000 for NASA's research and program management. While the administration has proposed reducing funding to $1,083,300,0000, the amended conference agreement provides $1,099,300,000.

Federal Emergency Management Agency

The conference agreement provided $134,789,000 for State and local assistance. As proposed by the administration, the amended conference agreement would reduce funding to $122,134,320. In addition, the conference agreement also provided $65,456,000 for emergency planning and assistance. As proposed by the administration, the amended conference agreement would reduce funding to $60,087,440.

However, in accepting the administration's recommendation, the Committee did not agree that FEMA's fire research effort at NBS should be terminated and, therefore, directs that FEMA make $4,000,000 available for this effort as envisioned in the March budget revisions.

National Science Foundation

The conference agreement provided $1,040,000,000 for NSF's research and related activities. The administration has proposed reducing funding to $897,688,000, a 12-percent reduction from the March request of $1,020,100,000.

The amended conference agreement would provide $950,000,000. Providing $52,300,000 over the administration's proposal, would result in the awarding of 9,446 grants or an increase of 457 grants over the requested level and a decrease of 879 grants below the March level. This level of funding would maintain NSF's research and related activities at slightly above the fiscal year 1981 level.

In addition, the conference agreement provided $27,450,000 for science education and engineering activities. The administration has proposed reducing funding to $8,712,000, a 12-percent reduction from the March request of $9,900,000.

The amended conference agreement would reduce funding to $20,000,000. Providing $11,288,000 above the administration's proposal, would result in the awarding of 2,222 grants or an increase of 1,206 over the requested level and an increase of 1,106 grants above the March level.

Veterans Administration

The conference agreement provided $12,881,600,000 for compensation and pensions. As proposed by the administration, the amended conference agreement would increase funds to $13,824,000,000. This increase, which usually is transmitted as a supplemental, covers the full year costs of the activities under this account.

The conference agreement also provided $1,638,300,000 for readjustment benefits. As proposed by the administration, the amended conference agreement would increase funds to the expected full year costs of this account.

In addition, the conference agreement provided $6,966,418,000 for medical care. Although the administration has proposed reducing funding to $6,669,491,000, the amended conference agreement would retain funding at $6,966,418,000.

Furthermore, the conference agreement provided $659,512,000 for the VA's general operating expenses. The administration has proposed reducing funding to $603,728,000. The amended conference agreement, however, would retain funding at $659,512,000. If the proposed reduction were taken, the results would be to reduce payments to State approval agencies; consolidate regional offices; and close the St. Paul data processing center.

Finally, the conference agreement provided $434,603,000 for the construction of major projects. As proposed by the administration, the amended conference agreement would reduce funding to $378,338,000.

National Institute of Building Sciences

The conference agreement provided $1,500,000 for the salaries and expenses of the National Institute of Building Sciences, rather than $500,000 as proposed by the administration and the House. While the administration has proposed a 12-percent reduction from the March request of $500,000, the amended conference agreement would retain funding at $1,500,000.

A final $1,500,000 appropriated in fiscal year 1982 will save administrative costs for

the Institute, the executive branch and the Congress. In addition, with a final appropriations of $1,500,000, the Institute will have adequate resources to achieve permanent funding.

General Services Administration

Consumer Information Center

The conference agreement provided $1,344,000 for the Consumer Information Center, as proposed by the Senate, rather than $1,314,000 as proposed by the House and the administration. The additional $30,000 would be used to conduct a study to determine the feasibility of charging customers a handling fee on free publications. While the administration has proposed a 12-percent reduction from the March request level, the amended conference agreement would retain funding at $1,344,000.

Neighborhood Reinvestment Corporation

Payment to the Neighborhood Reinvestment Corporation

The conference agreement provided $14,450,000 for payments to the Neighborhood Reinvestment Corporation, rather than $14,950,000 as proposed by the Senate and the administration. While the administration proposed a 12-percent reduction from the March request of $14,950,000, the amended conference agreement would retain funding at $14,450,000.

A further reduction of $1,294,000 would result in the elimination of 10 new neighborhood programs as well as 4 new NHS program starts with an estimated reduction of $40,000,000 in private investments. In addition, there would be a reduction in training and assistance which help maintain the effectiveness of existing programs.

Consumer Product Safety Commission

The conference agreement provided $32,983,000 for the salaries and expenses of the Consumer Product Safety Commission. While the administration has proposed reducing funding to $29,025,000, the amended conference agreement will retain funding at $32,983,000.

The January budget request was for $44 million and 880 FTE. The March request reduced CPSC's budget to $32,983,000 and 697 FTE. A further 12-percent reduction as proposed in September would leave only 219 FTE.

Section 101(g) provides continuing authority for programs covered by the Department of the Interior and Related Agencies Appropriation Act as specified in House Report 97–315, the conference report and joint explanatory statement of the committee on conference.

Section 101(h) provides continuing authority for programs covered by the Agriculture, Rural Development and Related Agencies Appropriation Act as specified in House Report 97–313, the conference report and joint explanatory statement of the committee on conference.

Section 101(i) provides continuing authority for operation, improvement, transfer, and closure of Public Health Service hospitals and clinics at a rate not in excess and under the conditions specified in the budget estimate transmitted November 9, 1981.

Section 101(j) extends the pay cap provisions of section 305 (a), (b), and (d) of H.R. 4120, the Legislative Branch Appropriation Act, 1982 through September 30, 1982.

Section 101(k) provides continuing authority for programs covered by the Departments of Commerce, Justice, and State, the Judiciary and Related Agencies Appropriation Act, at the rate specified in H.R. 4169, as reported by the Senate (S. Rept. No. 97–265), and as amended by the Senate through November 16, 1981. The Committee amendment also provides that these funds shall be available under the authority and conditions in the 1981 Appropriation Act for these agencies. Thus, the restrictions on spending authority that exist under current law will continue to apply.

Section 102 provides that authority granted under this resolution shall be available until September 30, 1982, or enactment into law of the regular appropriation bill for a department or agency, whichever first occurs.

Sections 103 through 106 are standard provisions designed to insure fiscal integrity.

Section 107 of the reported continuing resolution provides $20,790,000 for a health professions teaching facility grant to assist in the establishment of the Institute for Advanced Biomedical Research at the University of Oregon Health Sciences Center, School of Medicine, Portland, Oreg.

The Institute will provide teaching/research laboratories and classrooms to accommodate teaching faculty and students in basic and clinical sciences programs. The facility is required in response to the need for containing the rising costs of health care by learning, and through research, to prevent or cure human diseases. In addition, the facility is intended to support staff members, students, and programs that will serve as models for the next generation of physicians, nurses, and dentists thereby enhancing the quality of clinical practice in the Pacific Northwest.

The project will further enable the Health Sciences Center to engage in programs relating to brain science, immunology, genetica, cancer, and other biomedical disciplines that would afford access to new therapeutic drugs and measures essential for patient care.

The Committee has recommended a new section 108 which provides an aggregate appropriation of $869,240,000 for the Postal Service under this joint resolution, within which $230,000,000 shall go for so-called public service subsidy activities and the balance of $639,240,000 shall be available for so-called revenue foregone subsidy activities, including $20,000,000 specifically earmarked for second- and fourth-class mailers.

This provision will help to offset the significant postal rate increase that would otherwise affect these classes of matters. At the same time, the Committee has proposed an offsetting reduction of $20,000,000 in the public service subsidy to cover this add-on for second- and fourth-class revenue foregone subsidies.

New section 109 preserves the prerogatives of the House and Senate Committees on Appropriations and, indeed the Congress itself, to decide how appropriated funds will be expended. This new section will allow both the House and Senate time to review the proposed reorganization of the Bureau of Alcohol, Tobacco and Firearms and, if necessary, to disapprove such reorganization.

Section 110 provides a 2-percent transfer authority amendment between Treasury appropriations enabling the Department to move up to 2 percent of appropriated funds from one account to another. In view of the rigid fiscal restraints placed on the Department under the revised fiscal year 1982 budget, the Committee felt that this transfer authority was essential to allow the Secretary to sustain his critical Treasury functions.

The Committee has approved language in the bill (sec. 111) which permits the initiation of a number of Federal building fund projects which were approved by the Committee on September 15, the date on which the Treasury, Postal Service appropriation bill was originally marked up.

Without the language, these critical building projects could not get started since they are currently not contained in the House-passed version of H.R. 4121—the Treasury, Postal Service appropriation bill, 1982. These projects include a border station in San Luis, Ariz.; a courthouse project in Ashland, Ky.; a Federal building in Omaha, Nebr.; a courthouse project in Charleston, S.C.; advance design for a Bonneville Power Administration building; and a lease construction project in Tallahassee, Fla.

The Committee has included language in the joint resolution (sec. 112) to prevent the termination of the tax-exempt, small issue industrial development bond (IDB) program by the Internal Revenue Service through administrative action. The Committee believes IRS Revenue Ruling No. 81–216 may have run counter to the long-standing practices by States of pooling multiple lots of small issue IDB's into a single bond offering. Therefore, the language included in the joint resolution would effectively vitiate this ruling.

The Committee has approved language in the resolution (sec. 113) which expresses the sense of the Senate that the President of the United States not propose reducing Federal tax incentives for energy conservation or the development of renewable energy sources. In approving such language, the Committee lends its support for a continued commitment to reducing American dependence on imported petroleum and reducing uncertainty concerning the continuation of the tax incentives for energy conservation and renewable energy sources.

The Committee is aware that any interruption in funding for the supplemental food programs for women, infants, and children (WIC and CSFP) could have serious consequences on these programs and, potentially, on the health of the program participants.

The Committee, therefore, has included language (sec. 114) which directs that funds provided by the joint resolution for these programs be allocated immediately upon enactment in the amounts and manner prescribed in H. Rept. 97–313 for the first quarter of fiscal year 1982. This would include an annual funding level of $31,000,000 for CSFP.

Any delay or interruption in the funding, or any allocation level that is not consistent with the conference agreement on the Agriculture, Rural Development, and Related Services Appropriation Act, 1982, regarding WIC participation levels, would be contrary to the intent of this joint resolution.

Sec. 115. This provision would modify the conference agreement on the Transportation appropriations bill to conform with the language in the Senate-passed appropriations bill. That bill included a general provision limiting railroad branch line abandonments in North Dakota to 350 miles, whereas the conference language was intended to be responsive to numerous requests from Members of Congress to broaden the language to a 3-percent limitation nationwide.

However, since questions have arisen with regard to the applications of that provision to specific rail operations, the Committee recommends the original Senate-passed language. The Committee, however, notes and concurs in the Transportation conference language relating to surcharges, rate increases, and assistance from the ICC section of rail services planning.

Sec. 116. This provision is in response to the refusal of the Urban Mass Transportation Administration to properly interpret the stated intent of the conferees on the Department of Transportation and Related Agencies appropriations bill for 1982. The language would clarify the intent of the conferees, which is clearly set forth in the joint explanatory statement of the managers on that bill.

The Committee has added a new section (sec. 117) which references the Senate provisions regarding impact aid. This will prevent impact aid funds being distributed under the most restrictive provisions of both the House and Senate Labor-HHS-Education bills.

The Committee also added a new section (sec. 118) providing that medicaid reimbursement for Indian Health Services facili-

ties shall continue to be 100 percent federally reimbursed.

The Committee has provided $1 million for 20 positions, to be set aside from the account of the Office of the Assistant Secretary for Health to operate the Office of Adolescent Pregnancy in the Department of Health and Human Services for the duration of this resolution (sec. 119). This authority is needed in order to maintain the option for the Congress to consider funding mechanisms for the adolescent family life program which would be administered by the Office.

The Committee has included bill language (sec. 120) already agreed to on the fiscal 1982 Labor-HHS-Education appropriations bill relating to the classification of potash mines by the Labor Department. The amendment requires the Labor Department to go through formal rulemaking procedures, rather than issuing new national policy statements by executive fiat, with respect to classification of potash mines as "gassy." It in no way limits mine inspections and, therefore, protects the safety and health of miners.

The Committee has provided for a redistribution of $21,800,000 in several salaries and expenses accounts in the Department of Health and Human Services (sec. 121). The Committee has increased funding of three appropriations by $21,800,000, specifically: Assistant Secretary for Health (program direction and support services), Health Care Financing Administration, program management (administrative costs), and general HHS departmental management. These restorations will help assure continuation of certain priority activities. At the same time, the Committee has agreed to a $21,800,000 offsetting reduction in other salaries and expenses areas (sec. 122). This, in effect, reinstates the HHS portion of a salaries and expenses reduction passed by the House in H.R. 4560. In distributing this reduction, the Committee will expect to be consulted by the Secretary of HHS concerning the areas where he proposes to make cutbacks.

It is the intent of the Committee that this joint resolution contains funds for the Health Resources Administration to maintain sufficient staff—693 direct positions and 34 reimbursable positions—to administer ongoing programs.

The resolution provides that funding for assistance to areas impacted by Cuban and Haitian entrants shall be at the levels, and under the terms and conditions of the Senate Labor-HHS-Education Appropriations Act (sec. 123). This provision is particularly necessary to allow the special setaside of education funds for Dade County, Fla., which has had to absorb over 15,000 new students.

Effect of Senate and House committee reports

The Committee directs that the Departments and agencies covered under this joint resolution to follow the guidance provided in all relevant House and Senate Appropriations Committee reports in carrying out their programs. Where only one House has provided specific guidance with regard to a program or issue, the report language of that House should be followed. When the reports of the House and Senate Committees are conflicting, the Department and/or agency shall take expeditious action to notify the Committees of this disagreement and to request a resolution.

Mr. ROBERT C. BYRD. Mr. President, I shall suggest the absence of a quorum. I ask unanimous consent that I be recognized following the quorum to call up an amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, the committee amendments have not yet been adopted en bloc. I have discussed this request with the distinguished chairman of the committee.

I ask unanimous consent that I may be permitted to offer an amendment to the bill notwithstanding the fact that the committee amendments have not been adopted en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 651

(Purpose: To change the date until which funds may be available to December 19, 1981)

Mr. ROBERT C. BYRD. Mr. President, I send to the desk an amendment and ask that it be stated by the clerk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes an unprinted amendment numbered 651:

On page 18, line 18, strike out "September 30, 1982" and insert "December 19, 1981".

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, I am attempting here to change the expiration date for this continuing resolution from September 30, 1982, to December 19, 1981, which would be 4 weeks from this coming Friday.

I offer this amendment today not to obstruct in any way the continued operations of the Federal Government but rather to try to insure that the Government does operate under the security of final appropriations bills, and to the extent that such bills are not enacted finally, then, of course, under the security of a final appropriations act such as the continuing resolution.

There will be considerable discussion about the time constraints surrounding this continuing resolution. It is true that a continuation of funding must be in place by this coming Friday midnight, and my amendment does nothing to hinder that necessity.

On Tuesday, November 10, the President during his press conference complained, and rightly so, that Congress had not sent him one of the regular appropriations bills for fiscal year 1982.

My amendment would insure that Congress will address the President's concern.

We are told that the regular appropriations bills will be considered, that the defense bill will come to the floor for consideration, that the Labor-HSS bill will come to the floor for consideration, that the Treasury-Postal Service bill will come to the floor for consideration, and that the various conference reports on those and other appropriations bills will come to the floor for consideration.

But the Senate has had the HUD conference report since September 15 and we have not had that conference report brought to the floor. The appropriations committees have completed conferences on five appropriations bills. The House of Representatives passed and sent two of them to us and the Senate has not considered them.

Appropriating funds is among the major responsibilities of Congress. The people who elect us to represent them expect us to do just that, to represent them, to discharge our responsibilities.

There are major spending bills that have not had consideration other than by the 29 Senators who are privileged to serve on the Appropriations Committee. The entire Senate needs to exercise its responsibilities and to give full deliberation to those bills. Then both the House of Representatives and the Senate should work out the differences and both bodies agree or disagree to the compromise.

Here we have, Mr. President, a huge bill that will operate for a full year, until September 30, with not a single regular appropriations bill having reached the President's desk.

From time to time the Senate and the House of Representatives have adopted continuing resolutions as stopgap measures to provide funding for agencies for which regular appropriations bills have not yet passed Congress and been signed into law by the President.

Those continuing resolutions are precisely what I stated. They are stopgap appropriations measures. They are to fill the interim gap created by the fiscal year's beginning date having passed and until such time as the appropriations bill for that particular fiscal year has been enacted into law.

But now here what we see is a continuing resolution that would extend until next September 30, the end of the 1982 fiscal year, and wrapped up in that continuing resolution would be presumably the funding for all of the departments and agencies of Government that are normally funded through enactment of 13 regular appropriations bills, not counting supplementals and so on.

This, of course, is a subversion of the appropriations process.

It opens the way for an omnibus appropriation bill in the future in the form of a continuing resolution.

It may very well be that at some future time Congress would want to adopt rules and procedures allowing for appropriations to be made through an omnibus bill, and I have always felt or have long felt there are some things that can be said in support of that approach. But as of now we do not have that procedure. We are still operating under the rules and precedents of a good many years, and certainly through this year the House has passed a number of appropriation bills, sent them to the Senate. The Appropriations Committee of the Senate has taken up a goodly number of

those appropriation bills and has acted on them. But they have not been acted on by the full Senate. As I say, some of the conference reports that are ready for action in the Senate have not been taken up in the Senate.

So here we are now up against a deadline of Friday night of this week midnight. Agencies and Departments of Government would be unable to operate thereafter, social security checks, veterans checks, checks to the military, Federal employees, and so on, would not be sent out. Yet now we find ourselves in this kind of a box and faced with that situation, but also faced with the situation of not having finally sent to the President of the United States a single appropriation bill.

So this approach, as I say, perverts the normal committee process, the normal appropriations process, and it is a very serious precedent to have facing us. I think it deprives the Senate of the kind of contemplation that it should give to each of the appropriation bills, and it is for those reasons that I have sent the amendment to the desk.

The appropriating of funds is among the major responsibilities of Congress, as I state, and the entire Senate needs to exercise its responsibility and give full deliberation to all of the appropriation bills.

A full year's continuing resolution would not advance the decisions of the Senate which it has already made.

At this time four major appropriation bills have not been acted upon for inclusion in the continuing resolution, and the full Senate has never had the issue before it.

So in adopting an emergency stopgap measure it seems to me that we are very hard put to explain the providing of funding for, perhaps, a full year as an emergency or as a stopgap measure.

The Senate Appropriations Committee has done a remarkable job. The chairman of that committee, Mr. HATFIELD, has demonstrated the highest degree of fairness and dedication, integrity and purpose, and has done an extraordinary job. The other members of the committee, the ranking member, Mr. PROXMIRE, and all other Members on both sides of the aisle have dutifully approached their task and that committee has reported all of its bills.

As I look at the calendar, the committee has reported all of its bills, that is correct, and I am now looking at the status of appropriation bills, first session, 97th Congress. The Appropriations Committee has reported every regular appropriation bill. Two of them have passed the Senate and gone through conference and conference reports are awaiting action in the Senate—four have proceeded to that status.

What are we going to do about all of these appropriation bills? What is going to happen to these conference reports? Are they all going to be folded into this continuing resolution, which is meant to be a stopgap measure or are we going to take up those four conference reports and the remaining appropriation bills and act on them as we have heretofore?

As I say, heretofore there usually have been one or two bills, especially foreign operations or foreign assistance, that have not made it, and possibly one or two others where there has had to be a stopgap measure.

But never before have we seen this situation in which conference reports on appropriation bills await action here at the bar of the Senate; other appropriation bills have been reported from the Senate Appropriations Committee under the able leadership of Mr. HATFIELD and Mr. PROXMIRE, and yet the Senate does not take them up.

So the President was justified in complaining about the fact that not a single appropriation bill has been sent to him by Congress.

But here we find ourselves, therefore, without taking action on those bills and about to take action on the continuing resolution, which will wrap everything therein, and have a date, September 30 next year, which is the end of the fiscal year. So we might as well just quit and go home, pass continuing resolutions for a year at a time and take some of the burdens off the Appropriations Committees, and the Senate will not have to deliberate on 13 appropriation bills. Just pass one continuing resolution so that we avoid adequate debate on each department's funding request, we avoid the usual debate on the various agency requests, we obviate the opportunity to amend 13 appropriation bills that deal specifically with certain appropriation items.

We simply take up one continuing resolution, have it extend to the end of the fiscal year, September 30, and then begin anew and adopt a continuing resolution for the next year, but wait until the last 2 or 3 days before that expiration date is upon us, and then come with that continuing resolution to the floor.

There is obviously no time left to scrutinize carefully the items on the continuing resolution, and very little time left to debate them.

This continuing resolution was reported out from the Senate Appropriations Committee yesterday. There is no report accompanying it. I am a member of the committee and I find no fault with that under the exigencies that confronted the committee. To have a report accompany the continuing resolution from the committee would have meant the 3-day rule would have prevented taking up the continuing resolution this week probably unless a unanimous consent were given, which means that any one Senator could have objected to proceeding to this continuing resolution.

I find no fault with the committee. The committee was acting under extenuating circumstances. But that is what we are going to be faced with every year, the last 2 or 3 days just before the date of the expiration of the continuing resolution here, we will have the continuing resolution for a year that will extend to the following September.

Every Senator should be zealous not of his rights and prerogatives so much as the responsibilities he has to carry out his duties to his constituency and the right of his constituents to have these matters debated thoroughly and openly.

I shall shortly send to the desk an amendment in the second degree which provides for a December 18 date rather than a December 19 date. My amendment would not obstruct the action on this continuing resolution. It would simply mean that by 4 weeks from this coming Friday this continuing resolution would expire, thus giving the Senate time during that 4 weeks to take up, in an orderly manner, the remaining appropriation bills, the conference reports, carefully study them, debate them, and act upon them and, by virtue of such action as the Senate acted on each appropriations bill, to that degree it would be unnecessary to have a continuing resolution at the time this continuing resolution resolution would expire on December 18.

I think it is a reasonable request. I think it is our duty to demand that those appropriations bills be brought up in this body. I think it is our responsibility to the people to be able to debate each of those bills and the conference reports thereon and avoid adopting a continuing resolution that provides for the funding of various departments for an entire year—an entire year. I think we will be remiss in our duties if we do not follow the normal appropriations process and set a new expiration date here which would require us to again face this matter by December 18.

I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I will be very brief, because I understand the Senator from Mississippi, who is the senior member of the committee on both sides of the aisle, wishes to speak on the amendment of my good friend from West Virginia.

UP AMENDMENT NO. 652

(Purpose: To change the date until which funds may be available to December 18, 1981)

Mr. ROBERT C. BYRD. Madam President, I send my amendment in the second degree to the desk and ask that it be stated by the clerk.

The PRESIDING OFFICER (Mrs. HAWKINS). The clerk will state the amendment.

The bill clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes an unprinted amendment numbered 652 to unprinted amendment numbered 651:

In the matter proposed to be inserted, strike out "December 19" and insert "December 18".

Mr. ROBERT C. BYRD. Madam President, I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Madam President, I congratulate my good friend from West Virginia not only on his amendment but on his excellent statement with which I agree, of course, wholeheartedly.

In the course of his statement, the Senator from West Virginia spoke about the possibility of sometime having an omnibus bill that would embrace all the appropriations at one time. This is an interesting notion. But I think we ought to be very clear of the distinction between having that kind of an appropriation bill and what we have before us.

I recall very well the Senator from Washington, the former chairman of the

Appropriations Committee, Senator Magnuson, suggesting that maybe we should do what some State legislatures do; in other words, have 1 year on authorizing legislation of various kinds and 1 year—1 year—devoted to discussing appropriations.

Now, if we had an omnibus bill, I presume we would take at least a month on it. But, in this case, we have 3 days—3 days—to discuss the 12 appropriations bills. With all fairness, after all, two-thirds of the spending is involved in the Defense appropriation, Labor-HHS appropriation, neither of which we have had 1 minute to discuss on the floor of the Senate. So we are passing—brought before us, as the Senator from West Virginia has said so well, brought before us for a full year—measures that may have the force of law until the end of the fiscal year, without any real opportunity to go into the kind of deliberations, the kind of discussions, and the kind of considerations that we should have.

In addition to that, there will be no chance in conference for any detailed examination of this bill. So that the whole process of debate, discussion, deliberation, conference consideration and recommendation to the Senate is to be abbreviated, as I understand it, under the bill as proposed, to just 3 days.

I might point out the President of the United States, President Reagan, has not asked for this. He has not indicated he wants it. So it seems to me the amendment offered by my good friend from West Virginia is a logical amendment, a sensible amendment. It would keep the Senate on the right track. I am certainly delighted to support it.

Mr. ROBERT C. BYRD. I thank the Senate.

Before I yield the floor, I want to say that the September 30, 1981, date is not in the continuing resolution by virtue of any action that could be assigned to the Senate Appropriations Committee. That language was in the continuing resolution when it came over from the other body. So I do not attempt to assign any blame here or any fault. I am simply trying to correct what I think is a mistake—not a mistake, but correct an action which will prove to be a mistake.

I yield to the Senator from Mississippi.

Mr. STENNIS addressed the Chair.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. Madam President, I shall not detain the Senate very long. But I do believe there are some outstanding points about this proposal here and the course it can take that ought to be called to the special attention of the Senate. For that reason, I ask that we might have quiet and ask those who have conferences about other things to subside so we can concentrate on this.

Madam President, in the first place, the Senator from Oregon has done a remarkable job, an extensive piece of work, day and night all year. He has classed himself already with some of the great chairmen that I have known—Bridges of New Hampshire, for one; Russell of Georgia; an outstanding one, who was not chairman, but Saltonstall of Massachusetts; and the great Margaret Chase Smith of Maine, as well as others. It is amazing the way he has gathered all of this together under the pressure of time and the changes that were made in the request and the little time he had compared with the pressure on other fronts this year with reference to Mr. Reagan's plan. I am really proud of him as a fellow Member of this body and commend him highly for what he has done.

I do not believe, though, that this proposal is one of his better days or one of his better scores in connection with subordinating the whole appropriation family to a little continuing resolution concept that is, more or less, not an illegitimate child but kind of spawned in distress or pressure in the last 20, 25, or 30 years, the continuing resolution.

As I said yesterday, you would have been laughed out of town if you had proposed that we put the whole calendar, the whole year, under the provisions of a continuing resolution, unless the world had caught fire all of a sudden or something like a nuclear war was going on. Those things would just not have been tolerated here just a few years ago.

I have not heard anything about the President asking for this procedure here to provide to cover the whole year under a continuing resolution.

Mr. President, the real rub of this thing is it is an invasion of the rights and prerogatives and responsibilities carried on in an ordinary way in the Appropriations Committee of the U.S. Senate. You can say what you will, but there is where the Senate does its effective work. That is where it perfects the language and sentences into sound law. That is where the comparison work is done day and night and month after month. That is where the work is carried on by highly competent staff members—many of them are—with years of experience and knowledge and know-how, who know something about all the branches of Government and a great deal—a great deal, indeed—about the ones that they are working on.

Now, are we just going to have a scare story? I have not even heard a scare story. No other reason has been given for the Senate not to play its normal role to operate through these committees and come back here with reasoning and commonsense and wisdom, if I may use that term, cranked into the terms of these bills according to the membership's work and according to the best that they could do with the problem.

I take this quite seriously. The Senate will regret the day, I think, if they just abandon all these items of procedure, work, and the carrying on of the real matters assigned to them under the Senate rules, which I have outlined.

I cannot find any mention in the rules of the words "continuing resolution." They may be there. As I remember the ancestry of this, it was just devised to cover a few days' time.

Madam President, will you ask staff members to cease their conversations for just a few minutes?

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. The continuing resolution is to continue operations for a few days, taking the best figures available, current law, continuing the operations of the Government during that span of time.

It is really just a kind of authorization resolution and an appropriation resolution all cranked into one, and it serves a good purpose. It will serve a good purpose here. I have no objection to it being used in its normal fashion.

But, Madam President, no reason has yet been given for this idea of covering the whole year. I emphasize that the President has not said that things are in such a turmoil at home, abroad, or anywhere, that he needs all this authority to operate. Just as sure as we set up this precedent, abuses of it will come, repetition of it will come. We will rue the day when we set up here as respected proceedings, respected on this floor and by the American people, rules like this.

That is what a continuing resolution is. It is a rule, to some degree at best, but for some motive that we cannot even explain ourselves. The reason has not been given and was not given yesterday in the committee meeting.

I do not assign any personal blame, in my mind, to any Member, and I do not want to leave that impression.

I warn, however, that we will rue the day, and we will get into more trouble than we are in already with this year's work, if we now throw this continuing resolution out as the best that we can have and put it on the basis of the rest of the fiscal year.

Just read the resolution and you will see it. It says September 30. It is unbelievable that we could take that seriously and go into this thing blind, making it the law of the land.

I will vote for a lesser time, of course, but I hope it will not end here in just a contest as to who has the most votes to make it 30 days or whether we want to make it 11 months. It certainly ought not be decided on that point.

I hope reconsideration would lead to a meeting of the minds for 30 days, if necessary, and then pass the resolution in the regular way. Certainly, as much as we have already faced this year, we are not ready to run from something just because it is a problem, based on all the problems we have had to vote on in the first 6 or 7 months.

I think Senators have proven their mettle, their political mettle, to the extent that they are willing to stand up and be counted on the hard ones as well as the easy ones. I do not think we are faced with anything that is insuperable from here on out. But whatever it may be, let us face it and do it, rather than to resort to this weaselly method, as I see it, and thereby set a precedent.

The committees are already being inveigled in various ways, some of which I think may be necessary, but this resolution is not necessary in any way.

I want to close by saying that I have no personal grievance with anyone, not any. But we have to stand up and fight for some of the ground rules, for some of the principles involved, for some of the machinery in this body which has proven itself over decades and decades and dec-

ades. If there is a real emergency about something, resort to emergency measures, but believe me this joint resolution is not an emergency and it is not needed. We should go back to the more ordinary methods of meeting these problems.

Madam President, I yield the floor.

Mr. PRYOR addressed the Chair.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. PRYOR. Madam President, I would like to rise for a few brief remarks. First, I would like to associate myself with those great words of wisdom spoken by a very wise man, the distinguished Senator from the State of Mississippi, Senator STENNIS. He has been in this body long enough to have seen the drift of what is happening throughout this appropriations process. I believe he is warning us of a signal danger if we continue to operate this country by way of a continuing resolution of this sort.

I would like to strongly suggest that all of our colleagues in the Senate pay close heed to this very wise man and what he has stated about what we are about to do, with the committee structure, with the appropriations process, and with the decisionmaking that we are on the eve of abdicating, if we do not shorten the time of this particular continuing resolution that is now before this body.

If I might put it this way, Madam President, what we are really doing is we are admitting today on this black Wednesday that we no longer run this system, but the system is now running us.

We have to get control of that system. We do not get control of it unless we run that system. We do not run that system unless we allow the appropriations committee and the authorizing committees to operate in the manner they were intended to operate.

That abdicating is exactly what I fear we are about to do today if we do not shorten the time for this particular continuing resolution.

Basically, as all of us know, this is a piggy-back resolution. We are piggybacking every good and bad program together into one package. As sure as we are in this Chamber this afternoon, we are going to be here at 11:30 Friday evening. We are going to hear voices.

In no way do I impugn the character, the integrity, the ability of my great friend from Oregon, the distinguished chairman of the Appropriations Committee. There is not a more diligent public servant in this country than Senator HATFIELD.

But on Friday evening, Madam President, what are we going to hear? We are going to hear, "Oh, my, no one is going to get their social security checks. No one at the Farmers Home Administration is going to get paid tomorrow. No one out there who is receiving AFDC payments will get their payments on the day they supposed to because the Government is going to shut down."

That is what we are going to be hearing in just a very few hours during the time we are in this Chamber debating this resolution at this time. We have heard it for years and unless we do something about it now, we are going to continue to hear it for years.

What we are going to be doing is grafting onto appropriations bills every popular and unpopular program and cause that we can imagine. We are going to be limiting debate on the B–1 bomber; we are going to be limiting debate on the MX missile; we are going to be basically giving a blank check, I think, to the Pentagon for then next year of over $200 billion—the first time in history that the appropriation has been that high.

We are abdicating our role, Madam President, and I hope my colleagues will listen to the wise words of the distinguished Senator from Mississippi and will support the amendment offered by the distinguished Senator from West Virginia (Mr. ROBERT C. BYRD).

Mr. HATFIELD. Madam President, first, I express my deep appreciation for the generous, kind remarks made by the minority leader and by my very good compatriot on the Appropriations Committee, Senator STENNIS of Mississippi, and the kind remarks made by the Senator from Arkansas (Mr. PRYOR).

Madam President, I think that the minority leader raised a very significant point when he called attention to the fact that this September 30 date was placed on this resolution in the House of Representatives under the Democratic Party that now controls that House. As of yesterday, I discussed the matter with the staff of the Committee on Appropriations and, through them, the chairman of the committee. I discussed the matter with Speaker TIP O'NEILL of the House of Representatives. The Democratic leadership of the House indicated a very strong commitment to the September 30 date.

I just want to raise that as part of the record so there can be no implication here that there is a partisan issue at stake. There is not.

JAMIE WHITTEN, the longtime, very distinguished chairman of the House Committee on Appropriations, said this was debated in the House Appropriations Committee and came out of that House Appropriations Committee with a unanimous vote.

It was debated on the floor of the House, as I say, yesterday afternoon. When I was discussing matters with the Speaker, I asked him about the date and he said,

I support the position of the House and of the chairman of the House Appropriations Committee, Mr. Whitten.

I want to make sure that there is no implication here in any way that this is somehow evolving into a partisan question.

Mr. CRANSTON. Madam President, will the Senator yield?

Mr. HATFIELD. Yes; I am happy to yield.

Mr. CRANSTON. I should like to comment on the Senator's remarks about the partisan nature of this. It is not a partisan issue. It should not be a partisan issue. There are issues over procedure and over preserving the rights of Members of the Senate and the House to have a full opportunity to know what they are doing when they do it, when voting on matters as momentous as those contained in the continuing resolution.

The statements made by the distinguished Senator from Oregon are quite accurate about what occurred in the House. But I do believe many Democrats there are now having second thoughts and perhaps many Republicans are, too. I know it is true on the Democratic side of the aisle there.

The realization is growing there that decisions are being made without adequate knowledge of all the impact in terms of programs and dollars. I think that had the issue come before the House in a situation other than voting on the previous question, which was the parliamentary twist which it took, and had there been time to consider the matter more carefully, we might have found many Members of the House feeling quite differently than was reflected in the vote actually taken in the House.

Mr. HATFIELD. Madam President, I thank the Senator from California. It is the right of anyone to change a view or position on the matter. I only indicate my information as to the leadership position in the House of Representatives.

As I say, the minority leader himself made it very clear that he did not consider this such a matter. I just want to underscore that point made by the minority leader (Mr. ROBERT C. BYRD) here today.

Madam President, I think there is also an assumption that we are somehow extending this for a whole year, meaning there will be little or no action on the part of the Appropriations Committee or the appropriations process. I remind the body that we are functioning now under a continuing resolution, which has in no way inhibited the appropriations process. We have passed 9 of the 13 bills out of the full committee. We have had 7 appropriations bills on the floor and have 5 in conference or completing conference work. All 13 bills have functioned and actually been handled by the Committee on Appropriations.

Remember, Madam President, this is but a contingency as to the question of the future of these bills. In other words, when these bills are completed by Congress and when they are passed by the President, they drop out of the continuing resolution. There is no guarantee or no assumption that should be made that all the appropriations bills are going to continue under the resolution until September 30. But let me just outline the other side of the coin.

I believe that the amendment offered here poses one of the greatest dangers to the appropriations process, far more than anything I have faced since I have been on the Appropriations Committee. I shall state why.

Remember that if we should adopt December 18 as the date for the expiration of the continuing resolution, and assuming that there are unsigned bills that still exist somewhere in the pipeline, let me remind the Members that those bills then under a third continuing resolution are all vulnerable for any amendments, any changes that have been made

in the committees, or any process in the whole appropriation process.

Let me also remind Senators as to even those appropriations bills that have been signed into law we can, in the continuing resolution, go back into those. I, frankly, have, as the Senator from Mississippi, grown weary about having to fight Tennessee-Tombigbee every few months. Let me say to the Senator from Mississippi in all frankness, that could be an issue again on December 18, because that bill is open and vulnerable if it has not been signed into law; and if it has been signed into law, an amendment can be offered to that new continuing resolution that then deletes the money that has already been signed into law. Or that could be true of the Cardinal, a train in Amtrak, or the second powerhouse at Bonneville, or any other action that has been decided by this body. The appropriations process is open totally to a new continuing resolution on anything that has been done, that is being done, or that is in process of being done.

Madam President, let me also indicate that we are facing second concurrent resolution and we shall be into that situation for mandated levels that usurp, some people feel, the appropriations rights. That will be determined by this body through the concurrent resolution process.

Third, let me remind Senators that we shall be involved in the fiscal 1983 year. So, here we are, asking the Appropriations Committee, after going through this long exercise we have gone through in executing our responsibilities on 13 appropriations bills, to open them all up to vulnerability by December 18 again under a third continuing resolution. We are asking the Appropriations Committee to take that responsibility, then to come up with new appropriations measures.

Madam President, let me also say that in this period that we have been under this continuing resolution, there have been new budget requests, new add-ons, new directions; there has been a constant turnover of figures and economic assumptions and budgetary requests and add-ons and subtractions.

No, let me say, we are endangering the appropriations process, putting it into an impossible task if we extend this to December 18.

Let me then speak to the various agencies. What in the world can you expect of a Federal Government in terms of its commitments and its programs, in relation to its Federal programs or the State programs or the county programs or the city programs, if they do not have any kind of understanding of what the base of this operation is going to be? If we extend this to December 18, we are saying to all these agencies, "You can't make decisions, you can't do things that will commit you to a full year." We are creating an impossible administrative task within the agencies to be able to predict and project their commitments and their programs because they do not know what the figure is going to be, only until December 18, and then that can be changed with a new continuing resolution.

All I can say is that if we are anxious to really make a chowder here that is going to haunt us, by dumping in all these things and then stirring them up again and trying to resolve them again within a few weeks or a couple of months, we should support this resolution.

I believe—and I have made my commitment, and I think the record will stand—that we have aggressively pursued the appropriations process during this continuing resolution and we will continue to do so.

The minority leader indicated that we have five bills here waiting in conference or in some process of conference reports. The Appropriations Committee cannot control the business on the Senate floor. We are to control and act upon the responsibilities assigned to us, which we have done. I assure the Senate of my continued vigorous and aggressive assault on that responsibility, to complete the task and to do it in the proper way and in the least time necessary to accomplish it.

So I plead not to open a Pandora's box. That is exactly what we will be doing. We will be opening a Pandora's box again within a few months, with every one of the 13 bills. They will all be subject to having an amendment or a decision that will supersede the actions taken, wherever they may be, even whether they are signed into law.

So this, to me, is not the right direction to take, to make orderly Government possible and to maintain the orderly process of the Appropriations Committee.

I would prefer not to have any continuing resolution. I agree with the Senator from Mississippi: This, to me, is not the way to do business. But the Appropriations Committee does not have an option. We are forced into this situation at this time.

I can only say that I believe that, in spite of that, we have performed our functions and duties in a remarkable way to get these bills out of committee.

I have no assurance that the President will sign any of these bills. The President may decide to veto them, if he thinks we should go back to revising the bills, and so forth. But let that happen in an orderly process of either sustaining the veto or overriding the veto and then having the committee revise it. But do not force us into revising and opening up every one of the 13 bills because the President may have vetoed one.

That is why I say I think the 30th date maintains the appropriations process in a far better way than the 18th of December.

Mr. PROXMIRE. Madam President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. PROXMIRE. Madam President, I know of no one who is more persuasive or eloquent or knowledgeable, for that matter, in this area than the distinguished Senator from Oregon, but I just do not understand his argument. I do not understand the argument.

As the Senator from West Virginia pointed out and as the Senator from Oregon has just told us, we have acted on every appropriation bill. We have finished our committee work on every appropriation bill, without exception. They have all been acted on, as page 32 of the calendar today reports. They are all out of committee.

As the Senator knows, we have sent eight of these 13 bills to conference. The Senate itself has acted on them. So we have only a relatively few other bills for the Senate to act on.

We have until December 18 to do our job; and if we extend this until September 30, it seems to me to signal that we are not going to do that job in some of these cases throughout the entire year.

For the life of me, I cannot understand why, having done our committee work, having reported the bill, having the bill scheduled to be acted on, we cannot act in the next 30 days.

If the Senator will suggest that we extend it until February, perhaps we can work out a compromise. But to have this go until September 30, so that, throughout the entire year, we are acting on a continuing resolution, is beyond this Senator's understanding, as to why we have to do that. I do not see any merit in it.

Mr. HATFIELD. Will the Senator be willing to engage in a colloquy to try to clarify it?

Mr. PROXMIRE. Yes, indeed.

Mr. HATFIELD. Will the Senator describe what happens to an appropriation bill under a continuing resolution once the President has signed it? Obviously, it has passed Congress and has gone to the White House. What happens to that appropriation bill when the President signs it?

Mr. PROXMIRE. As the Senator has pointed out, and as we all know, it simply becomes law. It replaces the provision in the continuing resolution.

Mr. HATFIELD. It supersedes it.

Mr. PROXMIRE. It does.

Mr. HATFIELD. It drops out.

Mr. PROXMIRE. It drops out; that is right.

Mr. HATFIELD. So that that no longer is a part of the continuing resolution.

Mr. PROXMIRE. Yes. And we lose the discipline of having a continuing resolution—discipline on us, discipline on the President, discipline on the House.

Mr. HATFIELD. But we have in this, I remind the Senator, the language of the bills that have not followed into the conference situation. So we are still at a lower level for those bills to be acted upon in conference.

I ask a second question. Let us take this hypothetical situation: Will the Senator tell us what will happen to a bill once it has completed conference but has not been acted upon in the Senate, as to the conference report, such as the HUD bill today and four others we have completed, but which are still here, and the December 18 date comes and goes? What are we faced with then, so far as those bills are concerned that have not been acted upon and sent down to the President? What happens at that point?

Mr. PROXMIRE. Obviously, under

those circumstances, we would have to pass another continuing resolution.

Mr. HATFIELD. A third one.

Mr. PROXMIRE. That is the reason why it seems to me that then we have pressure, we have discipline, we have force, and we have a reason to pass those bills we have not acted upon.

It seems to me that we are asking for a situation in which we are going to be in this never-never land, a kind of area where we have not had discussion, debate, or determination by the House and the Senate, where we have not decided it, because we have kicked away, thrown away, the discipline that would require us otherwise to act.

Mr. HATFIELD. Will the Senator indicate where in the Appropriations Committee or in the appropriations process there has been any evidence of a lack of discipline?

Mr. PROXMIRE. The President, himself, said, as the distinguished Senator from West Virginia pointed out, that he has yet to get an appropriation bill from Congress. Of course, we were supposed to act on that by September 30 of this year, and we did not do it. There seems to be a breakdown somewhere—not of the Appropriations Committee, because we have reported all our bills.

Mr. HATFIELD. So there has been no evidence of a lack of discipline on the part of the Appropriations Committee in performing its function and getting these bills reported.

Mr. PROXMIRE. We could have done a better job. We did not report some of these until September. I have great admiration for the Senator from Oregon. The reason was that the President of the United States asked us to hold off, which we did.

Mr. HATFIELD. Is that an indication of a lack of discipline on our part?

Mr. PROXMIRE. It is not an indication of a lack of discipline on our part, but it is a lack of discipline on the part of the system. The President made his decision to postpone it, and we went along with it.

Mr. HATFIELD. I want to focus on the question of whether or not there has been evidence of a lack of discipline on the part of the Appropriations Committee and the appropriations process, and the Senator has answered that there has not been.

Mr. PROXMIRE. There has been a lack in the process in view of the fact that we have not acted on these appropriations bills by September 30, which we should have done. That is in the process, and it would take time to explain it. I would not put it at the doorstep of the distinguished chairman.

Mr. HATFIELD. I need not go back and review the history, that by September 30 we were in reconciliation and a few other things over which the Appropriations Committee had no control.

We have acceded to the request made by the President.

I challenge this implication that somehow we have a lack of discipline.

The system may have broken down on occasion. The system may have had some irregularities. I do not believe there has been any evidence of a lack of discipline.

Let me ask one final question. I am sure the Senator from Wisconsin has the highest degree of belief in the integrity of the minority leader and the majority leader of this Senate.

Mr. PROXMIRE. Of course.

Mr. HATFIELD. All right.

The majority leader and minority leader have stated publicly and frequently that they are going to expedite the whole matter of handling these bills and get them acted upon with preference, with priority, and in an expeditious manner.

Does the Senator from Wisconsin have any reason to disbelieve that commitment?

Mr. PROXMIRE. May I point out that my leader, the distinguished Senator from West Virginia, is the author of the amendment, and I think that amendment speaks very clearly for his position, and I think it is the general position taken by our party when we had a caucus and discussed it.

Mr. HATFIELD. That is not the question.

Mr. PROXMIRE. Most Members of our body agree that we should support the amendment because we should act on this by December 18 and by making a continuing resolution expire at that time we will be in a much stronger position to persist and act on it. I think all of us need discipline.

Mr. HATFIELD. If I might just observe, it seems to me the Senator is arguing we have to have this resolution date in order to keep the leadership's feet to the fire. I do not accept that. I believe when the leadership publicly and frequently has stated that it is going to expedite the handling of these bills, then I feel that the leadership's integrity is not to be challenged, and I frankly do not believe we have to have this amendment in order to keep their feet to the fire.

Mr. PROXMIRE. May I say to my friend from Oregon I am not going to be put in a position of saying anything critical of my good friend from Tennessee. He is a wonderful gentleman, he is a brilliant Senator, he is a great majority leader, he is a Republican, but then no one is perfect.

So, Madam President, this is not a criticism of the leadership but the fact is that somehow, someway, we should have acted on all of our appropriations bills, had them enacted and down to the President for his signature by September 30.

This is November 18, and we still have not sent a single appropriations bill down. I do not think we can get up here and say we have discipline when we have not been. We are certainly going to kiss away what discipline we have if we put the continuing resolution date as September 30, 1982, almost a full year away and for the first time in the history of Congress lose the pressure that we should have to report these in an orderly way and as soon as we possibly can.

Mr. HATFIELD. Madam President, I have nothing further to add to the argument. I think that the question is fairly clearly stated. I think really that the leadership is remarkable leadership in the Senate. I have every bit of faith in their statements and commitments. I feel the leadership functions without the necessity of arm-twisting, of having feet put to the fire, of having some kind of an extraordinary amount of discipline imposed from this kind of an amendment that otherwise they might not exercise.

I think really that it is not necessary to move that date and at the same time I argue that the appropriations process will be made even more difficult if not impossible to handle all of those actions that we must handle within that time frame of a second concurrent resolution with the mandated figures that will be given to the Appropriations Committee at that time with moving on fiscal year 1983 and with the probability of having to go to a third continuing resolution at least to handle one or more of those appropriations measures that have not been either signed or wherever they may be in the process.

So, I just wish to avoid the third continuing resolution. I wish to avoid all these matters, and that is why with great reluctance I oppose the amendment proposed by the minority leader as I did oppose it for these reasons and certainly nothing in any way would imply anything personal or any other matter. I just have great respect for him, but I do believe that this does make it impossible to function in an orderly way.

SEVERAL SENATORS. Vote!

The PRESIDING OFFICER. The question is on the perfecting amendment proposed by the Senator from West Virginia.

Mr. HARRY F. BYRD, JR., addressed the Chair.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. HARRY F. BYRD, JR. I thank the Chair.

Madam President, the Senate is indeed faced with an extraordinary situation. This has been emphasized by the able Senator from Oregon, the able Senator from Wisconsin, and the able Senator from Mississippi.

The overriding concern of the Senator from Virginia is which way or which time frame will bring about the smaller increase in Government spending.

I am not totally clear as to which would be the better course.

I wish at this point to address a question to the chairman of the Appropriations Committee, the Senator from Oregon (Mr. HATFIELD). May I ask the Senator from Oregon, the chairman of the Appropriations Committee: As I understand the thrust of his comments in regard to the pending amendment, he feels that by having the continuing resolution expire on September 30, 10 months from now, rather than 1 month from now, that in the appropriations process the amount of spending probably would not be as great as it might be if the continuing resolution lasted for only 30 days and then would undoubtedly need to be renewed bevond that point.

Mr. HATFIELD. I say to the Senator that the possibility is based upon our past experience of amendments offered

to add back or to add to, that every time we have a vehicle that broadens that possibility to include all 13 bills that likelihood is greater than when we let those bills drop out one at a time from under that continuing resolution once the Senate and the House of Representatives have worked their will and the President has signed it.

What I am saying is that we face the probability of a third continuing resolution, but that third continuing resolution does not restrict itself to just one or two of the unenacted-upon bills. It opens up all of the appropriations and there can be always reaching back into the action already completed with new requests or the economic conditions have worsened in certain areas and therefore we need to add back to certain programs that have already been determined at a previous date.

So from that standpoint I say the likelihood is there and the likelihood would be greater.

Mr. HARRY F. BYRD, JR. I am somewhat inclined to that view also, not permanently inclined, but somewhat inclined.

I remember in the spring of 1980 the atmosphere in the Senate was one of holding down spending. As we got into June, July, and August, as the months went by, the atmosphere was to increase spending.

Mr. HATFIELD. As we get closer to election—is that what the Senator is suggesting?

Mr. HARRY F. BYRD, JR. No, I was not equating it to the election because this is not an election year. I just am equating it to the passage of time. As time goes by, more and more reasons seem to develop as to why we need more spending.

That is why I am inclined to support the longer date, but I wanted to be sure that I understood the Senator from Oregon correctly in his analysis.

The proponents of the amendment of the Senator from West Virginia have cited certain dangers in having the continuing resolution run for the entire fiscal year, and they may have a point, but I think a mere 1-month extension is impractical. It would insure reopening all these issues and probably create more spending.

Mr. ROBERT C. BYRD. Mr. President, I hope the distinguished Senator from Virginia (Mr. HARRY F. BYRD, JR.) would also consider the fact that what we may be doing if we accept the longer date, we may be insuring lesser appropriations for defense. Mr. President, I am particularly concerned that the Senate not be denied an opportunity to debate and make decisions on our defense programs for fiscal year 1982. The bill appropriated for defense is the largest in the Nation's history, it incorporates funding for decisions which are of paramount importance, and which will be with us for the rest of this decade and beyond.

The Senate has a deep responsibility to thoroughly consider the import of these decisions. As the continuing resolution is now constructed, the defense funding level will be the lower of the House or Senate. This results in the Senate endorsing the lower House funding level, about $15 billion lower than the Senate bill.

It would be entirely appropriate to expect or at least realize the prospect that the Senate may never see a defense appropriation bill considered before the end of the session if we pass the continuing resolution with the September 30, 1982 expiration date.

There has been a rumor that a Senator will move to substitute not only the Senate appropriation bill level but also the text of that bill itself for the continuing resolution. Whether that rumor is well-founded I do not know, but certainly this can be done. It is an unusual procedure, but that is what we are seeing here, an unusual procedure.

It still does not guarantee that the Senate as a body will have the appropriate opportunity to debate this defense program in the responsible way and the full way that the Nation expects it to.

So the best way for the Senate to insure that a meaningful debate on the Nation's defense occurs is to vote for the amendment I have offered. By supporting that amendment Senators will guarantee they will fulfill their constitutional role. If Senators want the Senate-reported defense program, a program significantly stronger than the program recommended by the House of Representatives, they will vote for my amendment.

A vote against the amendment is a vote for a much weaker questionable program for defense spending, and for a program fashioned by the other Chamber. I do not think that most Senators will find that satisfactory.

One other thing, Mr. President. As the Senate knows, the Senate debated and made a decision at the time the Transportation appropriation bill was before the Senate in support of the retention of the Amtrak train, the Cardinal.

It is my understanding that the distinguished junior Senator from Oregon (Mr. PACKWOOD) plans to offer an amendment to this continuing resolution to knock out the Cardinal. The distinguished Senator from Oregon (Mr. PACKWOOD) offered such an amendment to the Transportation appropriation bill, as I have already indicated, the Senate debated that amendment and rejected it.

The distinguished Senator from Oregon has every right to offer such an amendment to the continuing resolution. But I am obligated to leave the Senate today at 5 o'clock, and I will ask unanimous consent now, in accordince with the rule, that I be excused from the Senate today after 5 p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I hope that the distinguished Senator from Oregon will do me the courtesy of coming over and offering his amendment before I leave the Senate.

I called the distinguished Senator several minutes ago, perhaps 20 or 30 minutes ago, and requested that he come over and offer his amendment. He has every right to do that, and I respect him for that. But I hope that in view of the fact that I will have to be gone after 5 p.m. today that he will come over and offer the amendment while I am here to oppose the amendment.

The amendment, if adopted, would certainly affect my State and its citizens. I implore and beseech the distinguished Senator to come to the floor and call up his amendment so that we can debate it and the Senate can act on it before I am obliged to leave the Senate Chamber. I would do the same for him or any other Senator under those circumstances.

Now, Madam President, I yield the floor and I express the hope the Senate will adopt my amendment that is now pending.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from West Virginia.

Mr. ROBERT C. BYRD. Madam President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Colorado (Mr. ARMSTRONG), the Senator from Minnesota (Mr. BOSCHWITZ), the Senator from Arizona (Mr. GOLDWATER), and the Senator from Washington (Mr. GORTON) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Vermont (Mr. LEAHY) is absent because of illness.

I further announce that, if present and voting, the Senator from Vermont (Mr. LEAHY) would vote "yea."

The PRESIDING OFFICER (Mr. WARNER). Are there any other Senators in the Chamber desiring to vote?

The result was announced—yeas 46, nays 49, as follows:

[Rollcall Vote No. 394 Leg.]

YEAS—46

Baucus	Ford	Mitchell
Bentsen	Glenn	Moynihan
Biden	Hart	Nunn
Boren	Heflin	Pell
Bradley	Hollings	Proxmire
Bumpers	Huddleston	Pryor
Burdick	Humphrey	Randolph
Byrd, Robert C.	Inouye	Riegle
Cannon	Jackson	Sarbanes
Chiles	Johnston	Sasser
Cranston	Kennedy	Stennis
DeConcini	Levin	Tsongas
Dixon	Long	Williams
Dodd	Matsunaga	Zorinsky
Eagleton	Melcher	
Exon	Metzenbaum	

NAYS—49

Abdnor	Hatch	Percy
Andrews	Hatfield	Pressler

East	Murkowski	Warner
Garn	Nickles	Weicker
Grassley	Packwood	

NOT VOTING—5

Armstrong	Goldwater	Leahy
Boschwitz	Gorton	

So Mr. ROBERT C. BYRD's amendment (UP No. 652) was rejected.

Mr. HATFIELD. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The minority leader is recognized.

UP AMENDMENT NO. 653

(Purpose: To change the date until which funds may be available to March 30, 1982)

Mr. ROBERT C. BYRD. Mr. President, I shall send to the desk an amendment which would change the September 30, 1982, date to March 30, 1982, which is the date, I am advised, that the President requested. The arguments have been made on the amendment as far as I am concerned. I know of no new argument to make on my amendment that I did not offer before, except to say again that it is my understanding that this is the date the President requested on the continuing resolution.

It seems to me, Mr. President, that this would allow the Senate to take up the other appropriations bills, debate them, and act upon them and send them to the President. It would allow the Senate, then, come March 30, 1982, to take a new look at any items that are covered by the continuing resolution which have not been superseded by action on appropriations bills prior to that.

Therefore, I send the amendment to the desk and ask that it be stated by the clerk.

The PRESIDING OFFICER. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes an unprinted amendment numbered 653:

In the matter proposed to be inserted, strike out "December 19, 1981" and insert "March 30, 1982."

Mr. HATFIELD. Mr. President, I shall yield to the Senator first if he wishes to make any remarks.

Mr. ROBERT C. BYRD. I have nothing more, Mr. President.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the committee amendments to House Joint Resolution 357, with the exception of the amendment on page 27, lines 9 through 22, be considered and agreed to en bloc and that the resolution as amended be considered as original text for the purpose of further amendment, with the understanding that no points of order be considered as having been waived by reason thereof and that the excepted amendment may be set aside by agreement with the majority and minority floor managers.

This has been cleared with the minority ranking member, Mr. PROXMIRE.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, and I certainly want to cooperate in every way I can with the distinguished chairman because he has been exceedingly fair with me and with others on this side of the aisle, I reiterate that I hope that the distinguished Senator from Oregon (Mr. PACKWOOD) will offer his amendment with respect to the Cardinal before I have to leave town.

I therefore hope that the distinguished chairman would exclude from the amendments which he has asked to have agreed to en bloc the amendment on page 7, beginning with line 7 and going through page 14.

Mr. HATFIELD. Mr. President, I withdraw my unanimous-consent request at this time, because we would have to exclude a whole section of the bill in order to get to the point of the Senator, as I understand it.

Mr. President, I withhold my unanimous-consent request for a few moments. Meanwhile, I yield to the Senator from Wisconsin (Mr. KASTEN) to handle a technical amendment.

UP AMENDMENT NO. 654

(Purpose: To amend the Foreign Assistance and Related Programs Appropriations Provision to reflect Senate action November 17, 1981)

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. KASTEN. Mr. President, I thank the chairman for yielding. I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. If the Senator will abstain for a moment, the Chair is advised by the Parliamentarian that there is a requirement——

Mr. HATFIELD. Mr. President, I ask unanimous consent that the amendment of the Senator from West Virginia be temporarily laid aside to handle this technical amendment.

The PRESIDING OFFICER. Without objection, all pending amendments are set aside and the Senator from Wisconsin is now recognized.

The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Wisconsin (Mr. KASTEN) proposes an unprinted amendment numbered 654.

Mr. KASTEN. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 5, line 14, beginning with "(b)" strike out all through "1956." on page 5, line 23, and insert in lieu thereof:

"(b) Such amounts as may be necessary for projects or activities provided for in the Foreign Assistance and Related Programs Appropriations Act, 1982, at a rate for operations and to the extent and in the manner as provided for in such Act as passed the Senate on November 17, 1981, as if such Act had been enacted into law, notwithstanding section 10 of Public Law 91-672, and section 15(a) of the State Department Basic Authorities Act of 1956."

Mr. KASTEN. Mr. President, this amendment is of a technical nature, the provision in the continuing resolution that pertains to foreign assistance and related programs refers to S. 1802, the Senate originated bill, as it was reported to the Senate and as amended by the Senate as of November 20. 1981.

Mr. President, my amendment would change this language to reflect the action this body took yesterday. The new provision for foreign assistance and related programs would, if this amendment is agreed to, read "as passed the Senate on November 17, 1981."

My understanding is that Senator INOUYE, the ranking minority member of the Subcommittee on Foreign Operations, has reviewed and has no problem with this technical amendment.

I hope the chairman of the Committee on Appropriations and the ranking minority member will agree to it also.

Mr. HATFIELD. Mr. President, the amendment speaks for itself and I urge the adoption of the amendment because it puts the Senate foreign operations appropriations bill in a position to deal in the conference with the House. It gives us a reference of our own making.

Mr. KASTEN. Mr. President, I move adoption of the amendment.

The PRESIDING OFFICER. Is there further debate? If not, the question is on agreeing to the amendment of the Senator from Wisconsin.

The amendment (UP 654) was agreed to.

Mr. KASTEN. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HATFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HATFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE AMENDMENTS

Mr. HATFIELD. Mr. President, I ask unanimous consent that the committee amendments to House Joint Resolution 357, with the exception of the portion of the amendment on page 21, lines 9 through 22, section 112, be considered and agreed to en bloc; that the resolution as amended be considered as original text for the purpose of further amendment, with the understanding that no point of order be considered as having been raised by reason thereof; and that the excepted amendment may be set aside by agreement of the majority and minority floor leaders. This has been cleared with the minority side and the minority leader.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The committee amendments agreed to en bloc are as follows:

On page 2, strike line 6, through and including line 12, and insert the following:

Department of Defense Appropriation Act, 1982;

Military Construction Appropriation Act, 1982;

On page 2, line 17, after "1982"; insert "and";

On page 2, strike lines 18 and 19;

On page 3, line 3, strike "October 1", and insert "November 20";

On page 3, line 6, strike "October 1", and insert "November 20";

On page 3, line 10, strike "October 1", and insert "November 20";

On page 3, line 19, strike "October 1", and insert "November 20";

On page 3, line 20, strike "*Provided*", through and including the end of line 25;

On page 4, line 7, after "1981", insert the following: "*; Provided further,* That for the purposes of this joint resolution, the Senate reported level of H.R. 4121, entitled 'the Treasury, Postal Service, and General Government Appropriations Act, 1982,' shall be the level reported by the Senate on September 22, 1981 (S. Rept. No. 97–192) as modified on November 17, 1981.".

On page 4, line 14, strike "October 1", and insert "November 20";

On page 5, strike line 4, through and including line 13, and insert the following:

(b) Such amounts as may be necessary for projects or activities provided for in the Foreign Assistance and Related Programs Appropriations Act, 1982 (S. 1802), at a rate for operations and to the extent and in the manner as provided for in such Act as reported to the Senate on November 3, 1981 (S. Rept. No. 97–266), and as amended by the Senate as of November 20, 1981, as if such Act had been enacted into law, notwithstanding section 10 of Public Law 91–672, and section 15(a) of the State Department Basic Authorities Act of 1956.

On page 5, strike line 24, through and including page 6, line 12, and insert the following:

(c) Such amounts as may be necessary for projects or activities for in the District of Columbia Appropriation Act, 1982, at a rate for operations and to the extent and in the manner provided for in the conference report and joint explanatory statement of the committee of conference (H. Rept. No. 97–327) filed in the House of Representatives on November 12, 1981, as if such Act had been enacted into law.

On page 6, beginning on line 24, strike "House of Representatives on July 24, 1981", and insert "Senate on November 5, 1981";

On page 7, strike line 1, through and including line 6, and insert the following:

(e) Such amounts as may be necessary for projects or activities provided for in the Department of Transportation and Related Agencies Appropriation Act, 1982, at a rate for operations and to the extent and in the manner provided for in the conference report and joint explanatory statement of the committee of conference (H. Rept. No. 97–331) filed in the House of Representatives on November 13, 1981, as if such Act had been enacted into law.

On page 7, line 23, strike "law.", and insert the following: "law, with the following new title:

TITLE V

SEC. 501. Notwithstanding any other provision of this Act—

(1) The amount of the increase in contract authority under the heading "HOUSING PROGRAMS, ANNUAL CONTRIBUTIONS FOR ASSISTED HOUSING", shall be $885,357,427, and the amount of the increase in budget authority under such heading shall be $17,373,528,040.

(2) The amount appropriated under the heading "HOUSING PROGRAMS, HOUSING COUNSELING ASSISTANCE", shall be $3,520,000.

(3) The amount appropriated under the heading "SOLAR ENERGY AND ENERGY CONSERVATION BANK, ASSISTANCE FOR SOLAR AND CONSERVATION IMPROVEMENTS", shall be $22,000,000.

(4) The amount appropriated under the heading "COMMUNITY PLANNING AND DEVELOPMENT, COMMUNITY DEVELOPMENT GRANTS", shall be $3,450,000,000.

(5) The amount appropriated under the heading "COMMUNITY PLANNING AND DEVELOPMENT, URBAN DEVELOPMENT ACTION GRANTS" shall be $440,000,000.

(6) The amount appropriated under the heading "POLICY DEVELOPMENT AND RESEARCH, RESEARCH AND TECHNOLOGY", shall be $20,000,000.

(7) The amount appropriated under the heading "FAIR HOUSING AND EQUAL OPPORTUNITY, FAIR HOUSING ASSISTANCE", shall be $5,016,000.

(8) The amount appropriated under the heading "MANAGEMENT AND ADMINISTRATION, WORKING CAPITAL FUND", shall be $528,000.

(9) The amount appropriated under the heading "DEPARTMENT OF DEFENSE—CIVIL, CEMETERIAL EXPENSES, ARMY, SALARIES AND EXPENSES", shall be $4,476,000.

(10) The amount appropriated under the heading "ENVIRONMENTAL PROTECTION AGENCY, SALARIES AND EXPENSES", shall be $512,837,000.

(11) The amount appropriated under the heading "ENVIRONMENTAL PROTECTION AGENCY, RESEARCH AND DEVELOPMENT", shall be $167,759,000.

(12) The amount appropriated under the heading "ENVIRONMENTAL PROTECTION AGENCY, ABATEMENT, CONTROL AND COMPLIANCE", shall be $377,194,200.

(13) The amount appropriated under the heading "ENVIRONMENTAL PROTECTION AGENCY, BUILDINGS AND FACILITIES", shall be $3,621,000.

(14) The amount appropriated under the heading "EXECUTIVE OFFICE OF THE PRESIDENT, COUNCIL ON ENVIRONMENTAL QUALITY AND OFFICE OF ENVIRONMENTAL QUALITY", shall be $919,000.

(15) The amount appropriated under the heading "EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF SCIENCE AND TECHNOLOGY POLICY", shall be $1,578,000.

(16) The amount appropriated under the heading "FEDERAL EMERGENCY MANAGEMENT AGENCY, FUNDS APPROPRIATED TO THE PRESIDENT, DISASTER RELIEF", shall be $324,720,000.

(17) The amount appropriated under the heading "FEDERAL EMERGENCY MANAGEMENT AGENCY, SALARIES AND EXPENSES", shall be $73,364,720.

(18) The amount appropriated under the heading "FEDERAL EMERGENCY MANAGEMENT AGENCY, STATE AND LOCAL ASSISTANCE", shall be $122,134,320.

(19) The amount appropriated under the heading "FEDERAL EMERGENCY MANAGEMENT AGENCY, EMERGENCY PLANNING AND ASSISTANCE", shall be $65,087,440.

(20) There are appropriated, out of any money in the Treasury not otherwise appropriated, for the repayment of notes dated April 17, 1979, and September 28, 1979, issued by the Director of the Federal Emergency Management Agency to the Secretary of the Treasury pursuant to section 15(e) of the Federal Flood Insurance Act of 1956 (24 U.S.C. 2414(e)), $328,240,000.

(21) The amount appropriated under the heading "DEPARTMENT OF HEALTH AND HUMAN SERVICES. OFFICE OF CONSUMER AFFAIRS", shall be $1,760,000.

(22) The amount appropriated under the heading "NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, RESEARCH AND DEVELOPMENT", shall be $4,791,900,000, of which not to exceed $3,104,900,000 shall be available for the Space Shuttle including space flight operations: *Provided*, That the limitations subject to the approval of the Committees on Appropriations contained under this heading shall not be affected by this subsection.

(23) The amount appropriated under the heading "NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, CONSTRUCTION OF FACILITIES", shall be $80,000,000.

(24) The amount appropriated under the heading "NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, RESEARCH AND PROGRAM MANAGEMENT", shall be $1,099,300,000.

(25) The amount appropriated under the heading "NATIONAL SCIENCE FOUNDATION, RESEARCH AND RELATED ACTIVITIES", shall be $950,000,000.

(26) The amount appropriated under the heading "NATIONAL SCIENCE FOUNDATION, SCIENCE EDUCATION ACTIVITIES", shall be $20,000,000.

(27) The amount appropriated under the heading "NATIONAL SCIENCE FOUNDATION, SCIENTIFIC ACTIVITIES OVERSEAS (SPECIAL FOREIGN CURRENCY PROGRAM)", shall be $3,080,000.

(28) The amount appropriated under the heading "SELECTIVE SERVICE SYSTEM, SALARIES AND EXPENSES", shall be $18,633,000.

(29) The amount appropriated under the heading "DEPARTMENT OF THE TREASURY, OFFICE OF REVENUE SHARING, SALARIES AND EXPENSES", shall be $6,184,000.

(30) The amount appropriated under the heading "DEPARTMENT OF THE TREASURY, NEW YORK CITY LOAN GUARANTEE PROGRAM", shall be $822,000.

(31) The amount appropriated under the heading "VETERANS ADMINISTRATION, COMPENSATION AND PENSIONS", shall be $13,824,000,000.

(32) The amount appropriated under the heading "VETERANS ADMINISTRATION, READJUSTMENT BENEFITS", shall be $1,938,800,000.

(33) The amount appropriated under the heading "VETERANS ADMINISTRATION, MEDICAL AND PROSTHETIC RESEARCH", shall be $128,215,000.

(34) The amount appropriated under the heading "VETERANS ADMINISTRATION, MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES", shall be $51,392,000.

(35) The amount appropriated under the heading "VETERANS ADMINISTRATION, CONSTRUCTION, MAJOR PROJECTS", shall be $378,338,000.

(36) The amount appropriated under the heading "VETERANS ADMINISTRATION, CONSTRUCTION, MINOR PROJECTS", shall be $102,942,000, of which not to exceed $30,018,000 shall be available for the Office of Construction.

(37) The amount appropriated under the heading "VETERANS ADMINISTRATION, GRANTS FOR CONSTRUCTION OF STATE EXTENDED CARE FACILITIES", shall be $15,840, 000.

(38) The amount appropriated under the heading "DEPARTMENT OF THE TREASURY, INVESTMENT IN NATIONAL CONSUMER COOPERATIVE BANK", shall be $41,360,000: *Provided*, That the final Government equity redemption date for the National Consumer Cooperative Bank shall occur on December 31, 1981, and the Secretary of the Treasury shall purchase all class A stock for which funds are hereby appropriated no later than ten days following enactment of this Resolution.

(39) The amount appropriated under the heading "MANAGEMENT AND ADMINISTRATION, SALARIES AND EXPENSES", including transfers from the various funds of the Federal Housing Administration, shall not exceed $564,776,000: *Provided*, That $15,640,000 shall be transferred and made available from the unearned fees and charges account for any necessary administrative and nonadministrative expenses under this head, which amount shall be in addition to (1) the amount otherwise appropriated and made available in accordance with this sentence; and (2) any other amount which would be available for operating expenses of the Department, pursuant to section 7(j) of the Department of Housing and Urban Development Act (42 U.S.C. 3535(j)).

(40) During fiscal year 1982, gross obligations of not to exceed $75,960,000 are authorized for payments under section 230(a) of the National Housing Act, as amended, from the insurance fund chargeable for benefits on the mortgage covering the property to which the payments made relate, and payments in connection with such obligations are hereby approved.

(41) The amount appropriated under the

heading "HOUSING PROGRAMS, PAYMENTS FOR OPERATION OF LOW-INCOME HOUSING PROJECTS—FISCAL YEAR 1981", shall remain available until September 30, 1982: *Provided*, That any part of the foregoing amount which has not been obligated before the forty-fifth calendar day following the enactment of this joint resolution, shall be deemed obligated notwithstanding the provisions of 31 U.S.C. 200(a).

(42) The amount appropriated under the heading "HOUSING PROGRAMS, PAYMENTS FOR OPERATION OF LOW-INCOME HOUSING PROJECTS", shall be $1,060,048,000.

(43) The Congress also disapproves the deferral under the heading "VETERANS ADMINISTRATION, (DISAPPROVAL OF DEFERRAL)", of the Washington, D.C., and Long Beach, Calif., projects as contained in deferral notice D82–140.

(44) Notwithstanding any other provision of this Act, including any other provision of this title, any agency may, before December 31, 1981, transfer to salaries and expenses from other sources made available to it by this Act, such amounts as may be required if the aggregate amount available for salaries and expenses, after such transfer, does not exceed the amount contained for such purposes in this Act before the application of the changes contained in title V: Provided, That such transfers shall be subject to the approval of the Committees on Appropriations.

On page 16, line 22, strike "filed in", and insert "as approved by";

On page 16, line 23, strike "5", and insert "12";

On page 17, strike line 9, through and including line 17;

On page 17, line 18, strike "(j)", and insert "(i)";

On page 17, line 18, strike "excess", and insert "excess and under the conditions";

On page 17, line 23, strike "(k)", and insert "(j)";

On page 18, after line 2, insert the following:

(k) Such amounts as may be necessary for projects or activities provided for in the Departments of Commerce, Justice, and State, the Judiciary and Related Agencies Appropriation Act, 1982, shall be at the rate provided in H.R. 4169 as reported to the Senate on October 30, 1981, as amended by the Senate through November 16, 1981, and under the authority and conditions provided in the applicable appropriation Act for fiscal year 1981.

On page 19, after line 15, insert the following:

SEC. 107. Notwithstanding any other provisions of this joint resolution and the provisions of sections 720(b) and 722(a)(1) of the Public Health Service Act, $20,790,000 is appropriated and shall remain available until expended for a grant for the construction or expansion of a teaching facility under section 720(a)(1) of such Act.

SEC. 108. Notwithstanding any other provision of this joint resolution, $869,240,000 is appropriated under this joint resolution for payment to the Postal Service Fund, of which $230,000,000 shall be available for public service costs and $639,240,000 shall be available for revenue foregone on free and reduced rate mail, of which $20,000,000 shall be available for revenue foregone under section 3626 of title 39, United States Code, with respect to the rates of postage for any class of mail or kinds of mailer under former sections 4358, 4554(b), and 4554(c) of such title.

SEC. 109. No funds made available pursuant to this joint resolution may be used to accomplish or implement a proposed reorganization of the Bureau of Alcohol, Tobacco and Firearms before March 15, 1982. Such reorganization plan may be implemented after March 15, 1982, unless disapproved by the House and Senate Committees on Appropriations.

SEC. 110. Notwithstanding any other provision of this joint resolution, the Secretary of the Treasury is authorized to transfer up to 2 per centum from any appropriation account provided by this joint resolution for the Department of the Treasury otherwise appropriated in H.R. 4121, entitled the Treasury, Postal Service and General Government Appropriation Act, 1982, to any other such appropriation account: *Provided*, That the recipient appropriation account is not increased by more than 2 per centum of the amount provided by this joint resolution: *Provided further*, That approval for such transfers is obtained in advance from the House and Senate Committees on Appropriations.

SEC. 111. Notwithstanding any other provision of this joint resolution, funds available to the Federal Building Fund within the General Services Administration may be used to initiate new construction, advance design, and repairs and alteration line-item projects and lease construction projects which are included in either H.R. 4121, as passed by the House, or in H.R. 4121, as reported by the Senate on September 22, 1981.

SEC. 113. It is the sense of the Senate that the President of the United States should not include in his recommendations for revenue enhancements any recommendations which would have the effect of reducing Federal tax incentives for energy conservation or the development of renewable energy sources.

SEC. 114. Notwithstanding any other provision of law, funds provided under this joint resolution for the special supplemental food program as authorized by section 17 of the Child Nutrition Act of 1966 (42 U.S.C. 1786), and the commodity supplemental food program as authorized by section 4(a) of the Agriculture and Consumer Protection Act of 1973 (7 U.S.C. 612c (note)) shall not be withheld from obligation during such time as any special message specifying a deferral or rescission of budget authority for such programs is pending before the Congress, to the extent that such withholding would reduce participation and benefit levels before those in effect as of September 1981: *Provided further*, That all funds appropriated for the first quarter of fiscal year 1982 for these programs shall be allocated to the States immediately upon enactment of this joint resolution.

SEC. 115. Notwithstanding any other provision of law or of this joint resolution, none of the funds provided in this or any other Act shall hereafter be used by the Interstate Commerce Commission to approve railroad branchline abandonments in the State of North Dakota by the entity generally known as the Burlington Northern Railroad, or its agents or assignees, in excess of a total of 350 miles: *Provided*, That this section shall be in lieu of section 311 (amendment numbered 93) as set forth in the conference report and the joint explanatory statement of the committee of conference on the Department of Transportation and Related Agencies Appropriations Act, 1982 (H.R. 4209), filed in the House of Representatives on November 13, 1981 (H. Rept. No. 97–331).

SEC. 116. Notwithstanding any other provision of law or of this joint resolution, the funds provided for section 18 nonurban formula grants and section 5 urban formula grants in this joint resolution shall be apportioned and allocated using data from the 1970 decennial census for one-half of the sums appropriated and the remainder shall be apportioned and allocated on the basis of data from the 1980 decennial census: *Provided*, That this section shall be in lieu of amendments numbered 64 and 66 as set forth in the conference report and the joint explanatory statement of the committee of conference on the Department of Transportation and Related Agencies Appropriations Act, 1982 (H.R. 4209), filed in the House of Representatives on November 13, 1981 (H. Rept. No. 97–331).

SEC. 117. Notwithstanding any provision of this joint resolution, the funds made available by this joint resolution which would be available under H.R. 4560, entitled "Departments of Labor, Health and Human Services, and Education and Related Agencies Appropriation Act, 1982", for school assistance in federally affected areas under title III of such Act shall be available under the authority and conditions set forth in H.R. 4560 as reported to the Senate on November 9, 1981.

SEC. 118. Notwithstanding section 1903(a) of the Social Security Act, all medicaid payments to the States for Indian health service facilities as defined by section 1911 of the Social Security Act shall be paid entirely by Federal funds and notwithstanding section 1903(t) of the Social Security Act, all medicaid payments to the States for Indian health service facilities shall not be included in the computation of the target amount of Federal medicaid expenditures.

SEC. 119. Notwithstanding any other provision of this joint resolution, there are appropriated $1,000,000 to continue the operations of the Office of Adolescent Pregnancy Programs of the Department of Health and Human Services.

SEC. 120. Notwithstanding any provision of law, none of the funds appropriated for the Department of Labor, Mine Safety and Health Administration, shall be used to classify a mine in the potash industry as gassy based upon air samples containing concentrations of methane gas, unless such classification standard has been adopted through formal rulemaking on or before November 5, 1981.

SEC. 121. Notwithstanding any other provision of this joint resolution, (1) amounts at the level provided in H.R. 4560 as passed by the House are available for general departmental management, Department of Health and Human Services, and the program direction and support services activity, Assistant Secretary for Health. (2) For carrying out, except as otherwise provided, titles XI, XVIII, and XIX of the Social Security Act, and sections 1526 and 1533(d) of the Public Health Service Act, $80,035,000, together with not to exceed $892,309,000 to be transferred to this appropriation as authorized by section 201(g)(1) of the Social Security Act, from the Federal Hospital Insurance and the Federal Supplementary Medical Insurance Trust Funds referred to therein: *Provided*, That none of these funds shall be used to pay the expenses of statewide professional standards review councils."

SEC. 122. Notwithstanding any other provision of this joint resolution, appropriations for salaries and expenses in this joint resolution for the Department of Health and Human Services are hereby reduced by $21,800,000."

SEC. 123. Notwithstanding any other provision of this joint resolution, funding for sections 501(a), (b), and (c) of the Refugee Education Assistance Act of 1980 shall be at the levels and under the terms and conditions of the Labor-Health and Human Services Education Act, 1982, as passed by the Senate.

Mr. HATFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. JACKSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, I ask unanimous consent to temporarily lay aside Senator ROBERT C. BYRD's amendment for consideration of some technical amendments of the committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 655

(Purpose: Technical amendments)

Mr. HATFIELD. Mr. President, I send to the desk a technical amendment and ask for its consideration.

The PRESIDING OFFICER. The amendment will be stated.

The bill clerk read as follows:

The Senator from Oregon (Mr. HATFIELD) proposes an unprinted amendment numbered 655.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 6, line 24, strike out "such Act as passed the".

On page 6, line 25, before the word "Senate" insert "such Act as passed the".

On page 24, line 20, strike out the word "grassy" and insert in lieu thereof "gassy".

On page 18, line 10, before the period insert ", notwithstanding section 15(a) of the State Department Basic Authorities Act of 1956 and section 701 of the United States Information and Educational Exchange Act of 1948, as amended".

Mr. HATFIELD. Mr. President, these are the line-by-line corrections. These are word corrections. These are purely typographical corrections. They have been cleared with the minority, I am told.

Mr. PROXMIRE. Mr. President, I have had an opportunity to see these amendments and they are technical and in order. I support them.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oregon.

The amendment (UP No. 655) was agreed to.

Mr. HATFIELD. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. PROXMIRE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HATFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, I have been informed that the proponent of the amendment is ready to go to vote on this question and I am ready to go to a vote.

Mr. BUMPERS. Have the yeas and nays been requested, Mr. President?

The PRESIDING OFFICER. They have been ordered.

Mr. PROXMIRE. Is the amendment the amendment of the Senator from West Virginia?

Mr. HATFIELD. Yes.

UP AMENDMENT NO. 653

The PRESIDING OFFICER. The question recurs on agreeing to the amendment of the Senator from West Virginia. The yeas and nays have been ordered, and the clerk will now call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Connecticut (Mr. DODD) is necessarily absent.

I also announce that the Senator from Vermont (Mr. LEAHY) is absent because of illness.

I further announce that if present and voting, the Senator from Connecticut (Mr. DODD) and the Senator from Vermont (Mr. LEAHY) would vote "yea."

The PRESIDING OFFICER (Mr. QUAYLE). Are there other Senators in the Chamber that desire to vote?

The result was announced—yeas 46, nays 51, as follows:

[Rollcall Vote No. 395 Leg.]

YEAS—46

Baucus	Exon	Metzenbaum
Bentsen	Ford	Mitchell
Biden	Glenn	Moynihan
Boren	Hart	Nunn
Bradley	Heflin	Pell
Bumpers	Hollings	Proxmire
Burdick	Huddleston	Pryor
Byrd, Harry F., Jr.	Humphrey	Randolph
Byrd, Robert C.	Inouye	Riegle
Cannon	Jackson	Sarbanes
Chiles	Johnston	Sasser
Cranston	Kennedy	Stennis
DeConcini	Levin	Tsongas
Dixon	Long	Williams
Eagleton	Matsunaga	Zorinsky
	Melcher	

NAYS—51

Abdnor	Grassley	Packwood
Andrews	Hatch	Percy
Armstrong	Hatfield	Pressler
Baker	Hawkins	Quayle
Boschwitz	Hayakawa	Roth
Chafee	Heinz	Rudman
Cochran	Helms	Schmitt
Cohen	Jepsen	Simpson
D'Amato	Kassebaum	Specter
Danforth	Kasten	Stafford
Denton	Laxalt	Stevens
Dole	Lugar	Symms
Domenici	Mathias	Thurmond
Durenberger	Mattingly	Tower
East	McClure	Wallop
Garn	Murkowski	Warner
Gorton	Nickles	Weicker

NOT VOTING—3

Dodd	Goldwater	Leahy

So Mr. ROBERT C. BYRD's amendment (UP No. 653) was rejected.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HATFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question now recurs on the first degree amendment.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that that amendment be temporarily laid aside so Mr. PACKWOOD may present an amendment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

UP AMENDMENT 656

The Senator from Oregon is recognized.

Mr. PACKWOOD. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The bill clerk read as follows:

The Senator from Oregon (Mr. PACKWOOD) proposes an unprinted amendment numbered 656:

On page 7, before the period at the end of line 14, insert the following: ", except that none of the funds made available by this joint resolution shall be used by the National Railroad Passenger Corporation for the operation of rail passenger service between Washington, D.C., and Chicago via Cincinnati."

Mr. PACKWOOD. Mr. President, this amendment is similar to a motion I made when we had the bill under consideration previously, to strike from the bill money for the train known as the Cardinal, which runs from Chicago to Washington through some States in between. Mr. President, I want to lay before the Senate a problem that is a procedural problem that is going to affect every committee, not just mine and the Commerce Committee—every single committee if they are faced with the possibility or the problem of the Appropriations Committee legislating on appropriations bills.

This is the situation that the Senate finds itself in. Under rule XVI, we are not allowed to legislation on appropriations bills. However, if the House of Representatives has legislated on an appropriation bill, if the issue of germaneness is raised as a defense before a ruling from the Chair on the point of order involving legislation on an appropriation bill, the defense of germaneness is considered first and if, indeed, the issue is determined by the Senate to be germane, then the point of order cannot be raised that you are legislating on an appropriation bill.

I emphasize very clearly, Mr. President, those are two different points: One, are you legislating on an appropriations bill; two, is it germane? Let us take this example.

In the appropriation bill is language which will keep the Cardinal going, this train between Chicago and Washington. In my mind, that is clearly legislating on an appropriation bill. I have checked with the Parliamentarian, I have checked with those who are parliamentary experts on the Republican side of

the aisle, and they agree that if that were the only issue raised—not germaneness, but legislating on an appropriation bill—then, indeed, it would be subject to a point of order. However, if, before the point of order is ruled on—and if the point of order were ruled on and ruled in my favor that this is legislative, it obviously takes it out of the bill. At that stage, there is no point in raising the question of germaneness because the issue is taken from the bill.

But if, before the Chair rules, the defense of germaneness is raised and the Chair submits the issue of germaneness to the Senate because there is something in the bill that comes from the House, then the point of order that you are legislating falls if the Senate agrees that the subject language is germane. If the issue of germaneness prevails and it is found to be germane, then there is no quarrel with legislating on an appropriation bill.

Mr. President, let me state what has happened and why it has happened. I am going to read to the Senate a letter that I have from the Parliamentarian, Robert Dove.

I am writing to you in an attempt to explain my interpretation of Rule XVI as it impacts on the right of Senators to have legislative language stricken from an Appropriations Bill on a point of order. Prior to November 9, 1979, this right was severely limited by the defense of germaneness, a question decided exclusively by the Senate itself, and based on the theory that if "the House of Representatives opens the door by incorporating legislation in a general appropriation bill, the Senate has an inherent right to amend . . . notwithstanding its rules." (Senate Procedure, p. 133)

On Nov. 9, 1979, during the consideration of an amendment offered by the Senator from Colorado, Mr. Armstrong, a point of order was made and sustained that where there was "no House language . . . to which the question of germaneness could be raised" the question of germaneness should not be submitted despite the wording of rule XVI to the contrary. (Senate Procedure, p. 130)

Mr. President, I want to emphasize what that ruling was: That where there was no House language to which the question of germaneness could be raised, then the question of germaneness should not be submitted.

This precedent was not used again until September 24, 1981, when, during the consideration of H.J. Res. 325, the Senator from Alaska, Mr. Stevens proposed an amendment to amend the Internal Revenue Code to allow Senators and Congressmen to deduct living expenses from their income for Internal Revenue purposes. When Senator Stevens raised the defense of germaneness to this amendment the Chair invoked the Armstrong Precedent and refused to submit the question. On the question of whether this was legislation on an appropriation bill the Senate overturned the Chair and the amendment was adopted.

As a result of the above mentioned occurrences I feel that if there is any House language to which an amendment could possibly be germane in any future appropriation bill, the Chair should submit the question in accordance with Rule XVI which states "all questions of relevancy . . . shall be submitted to the Senate."

Mr. President, here is the situation we find ourselves in. It is now going to be the ruling of the Parliamentarian that if there is anything in the House bill that in any way relates to legislating on an appropriation bill, then any kind of legislation offered by the Appropriations Committee here will be left to the Senate as to whether or not it is germane. It will no longer be stricken by the Chair on its own motion as being not germane.

There are 29 members of the Appropriations Committee. We all know the tendency, and we all do it, to stick with our committee. That means that any member of the Appropriations Committee that can get anything put in the bill that relates to legislating on something that relates to his district or his State, that is going to be found to be at least, at a minimum, subject to a vote in the Senate as to whether it is germane, whether or not we rationally might think it is germane. I do not need to tell you, Mr. President, the disproportionate influence that this gives to members of a committee that has 29 members on it who are inclined to band together, Republican and Democrat, and support their committee.

You will start out with 29 votes, and it does not matter that you are possibly invading the jurisdiction of the Commerce Committee or the Finance Committee or the Energy Committee or the Banking Committee or any other committee, because the issue is this: Is this germane? If the House has any shred of language in it—it does not even have to be related to the same subject—any shred of language in it involving legislative language, then it will be submitted to us; and the question will not really become "Is it or is it not germane?" It will be whatever we decide, on whatever vote will determine the outcome.

For those of us not on the Appropriations Committee, with the bulk of the Senate not on the Appropriations Committee, in most cases you will start out with 29 votes against you. I do not say that critically. There is simply a natural tendency for us to stick with our committees when it is in defense of something in a committee report or language in a committee bill.

Prior to submitting this amendment, which is strictly to say that no money shall be used for the Cardinal, I offered an amendment to the Senator from West Virginia (Mr. ROBERT C. BYRD), because he had indicated when we debated this earlier that he had been assured by Alan Boyd, the head of Amtrak, that no other train would be affected if the Cardinal were kept going.

So the additional language I was going to add was as follows:

If, due to the operation of such service—

The Cardinal—

the National Railroad Passenger Corporation—

Amtrak—

would be required to discontinue the operation of any train which is being operated on the date of enactment of this joint resolution, or would be required to modify or adjust the frequency or quality of service of any such train.

In short, I was willing to say, "Fine, go ahead and run the Cardinal, so long as the running of it does not impinge on any other train," which is the position the Senator from West Virginia held 2 weeks ago—it will not impinge on the running of any other train. I think it will. But I was willing to offer language, that I would not move to strike, despite the fact that I think the precedent, so far as it involves all other committees, is dangerous.

I offer this language. The Senator from West Virginia respectfully declined to accept it.

I have a letter dated November 18, 1981, from Alan Boyd. All Senators are aware that we will be voting later on moves to cut this bill by 2 percent or 5 percent. I have a letter from Alan Boyd indicating that if those cuts are made, four trains would have to be cut during the remaining 9 months of the fiscal year to obtain savings equivalent to a full year's savings of three trains. He also states:

In addition, Amtrak will be required to add service under the existing transportation appropriation bill between Chicago and Washington, notwithstanding any across-the-board reduction in the appropriation.

Let me make it clear that the Cardinal is not running now. It does not meet any statutory criteria that would allow it to run.

Several years ago, we ceased writing into the law, "Thou shalt keep my train running," by name or designation or route, and we set forth criteria the train had to meet. The Cardinal does not meet it and has not met it, and I do not think it is going to meet it.

We have not designated a single other train in this little bill, not one. If the Cardinal is not going to damage any other train and its service, then the language I offered should have been accepted.

Alan Boyd has made it clear that he is up against a very tight limit with the present appropriation for Amtrak next year in $75 million, and if we adopt a cut, other trains will go; but, mark my words, the Cardinal is going to be kept. This is not going to be kept in preference to two or three other trains. It it going to be kept in preference to every other train in this country, regardless of the merits, and it is going to be kept because we have put ourselves into a parliamentary situation in which the natural tendency of the Appropriations Committee, 29 strong, is to vote 29 "aye" for any provision in an appropriation bill.

Therefore, all you have to do is to appeal to your friends on a bipartisan basis, or on a geographic basis, or on a friendship basis, or on any other basis, to see if you can pick up the additional 22 votes you need, assuming that we have 100 votes here.

If that is the way the Senate wants to go, then, never again, under the rulings of the Parliamentarian, are you going to be able to challenge, under rule XVI, a provision that it is legislation on an appropriation bill. In every case, the issue of germaneness is going to be raised, and you will be starting out with 29 votes against you.

That is bad enough procedurally, from the standpoint of the functioning of the Senate; but if, in addition to that, the Senate is going to go on record to save

this train in preference to every other train in the Nation, when the president of Amtrak says that he can barely keep the train going now—and those of you who are going to vote for the 2 percent or 5 percent cut that is coming along should remember that if that cut comes, if three or four trains are cut out of this Nation and one of them is your train, while the Cardinal is kept, if you vote against me at this time on this motion, you will be doing damage to the procedures of the Senate, and you may be cutting out your own train which is not earmarked and specifically designated in this legislation. Even though it has more merit, you may be cutting out your own train, if my motion to delete this section fails.

Mr. ANDREWS. Mr. President, I oppose the amendment.

My colleague and good friend from Oregon has made some very important points on procedure in the Senate; and there is always a possible question, obviously, on the ruling of the Parliamentarian as to germaneness on issues of this type. But I point out to my good friend that the question on the point of germaneness was decided by a vote of 75 to 12, if I recall correctly.

Later, as the Senate invariably does, the Senate moved on to a separate vote on the merits of this particular issue; and on that recorded vote on the merits of retaining the Cardinal, the vote, as I recall, was 53 to 34.

There are some interesting precedents brought up. The principle, however, is, do the elective representatives of the people, those of us who are privileged to be Members of Congress, reserve the right, indeed the duty, to overrule occasionally the Alan Boyds and the other bureaucrats who make decisions from their nonelected positions?

That, actually, is the tradition under which this decision was made 2 weeks ago; and many Senators on both sides of the aisle voted. The decision was made by a recorded vote to retain the Cardinal, based on the merits of the case.

As to the charge that, somehow or other, the Appropriations Committee is banding together to "do in" the other committees or to "do in" the other Members of the Senate, I happened to leaf through the Committee of Conference Report on another matter that involved earmarking funds, specifically pointing out how these funds should be spent. Let me read from page 29 of the conference report. It says:

Sec. 325. Notwithstanding any other provision of law, the Secretary shall, with regard to the Urban Discretionary Grant Program of the Urban Mass Transportation Administration, promptly issue a letter of intent for the Dade County, Florida, Circulator System for $63,642,666, and, in addition, shall promptly issue a letter of intent for nonrail projects in the Portland, Oregon, Metropolitan region for $76,800,000 and also issue a letter of intent for the Southeast Michigan Central Automated Transit System for 110 million 1981 dollars.

Now, where should they issue letters of intent? The Senate directed that one was for $110,000,000 to southeast Michigan. Neither of Michigan's Senators is on the Appropriations Committee.

I point out to the Senate that the reason for this type of earmarking is undoubtedly that Appropriations Committee bills come up more often in the cycle of handling legislation than the legislative bills; and when the Senate, in its wisdom, perceives that an add-on shall be made or a deletion shall be made, an appropriations bill is the vehicle for that change.

I also point out that, in the same paragraph, we did in fact earmark and direct $76,800,000 to Portland, Oreg.

And we also in that same paragraph directed the issuance of a letter of intent for the Dade County, Fla., circulator system.

The Senate did direct. The Senate did, on an appropriations bill, overrule, in effect, the actions of various appointed officials because the Senate as a representative of the people—and the House of Representatives as a representative of the people, because I am referring to a conference report—felt that it was in the best interest of the Nation that these funds be earmarked and these projects or that train move forward.

It has been done that way not because the Appropriations Committee wants to enjoy some special privilege or special benefit, but because of the Members of the Senate coming to the appropriate subcommittees of the Appropriations Committee pointing out specific needs that can be recommended by being included in the appropriations bills as they move forward. Whether they are members of the committee or not, if their cases have merit, and if by a bipartisan vote of the majority of the members of the subcommittee and later sustained on the floor of the Senate or the House of Representatives, then those specific earmarkings do in fact move ahead.

Mr. President, I hope that the vote of 53 to 34 that decided this issue 2 weeks ago when we debated the bill will be upheld today.

I yield to my colleague from West Virginia, the senior Senator.

Mr. ROBERT C. BYRD. Mr. President, I thank my distinguished friend, the chairman of the Transportation Appropriations Subcommittee.

May I inquire of the distinguished Senator from Oregon what he proposes to do? Does he propose to strike the language in the continuing resolution or does he propose to offer a substitute? What are we facing here?

Mr. PACKWOOD. Mr. President, ask the question again. The only copy I have is at the desk. Ask it again and I will go up and take a look at it.

Mr. ROBERT C. BYRD. I merely want to know what I am up against. Is the Senator going to offer the amendment; is he moving to strike the language in the pending resolution. What does he propose to do?

Mr. PACKWOOD. I will read it to the Senator specifically.

On page 7, before the period at the end of line 14, insert the following: ", except that none of the funds made available by this joint resolution shall be used by the National Railroad Passenger Corporation for the operation of rail passenger service between Washington, D.C., and Chicago via Cincinnati."

Mr. ROBERT C. BYRD. Will the Senator read the language again?

Mr. PACKWOOD. Yes.

On page 7, before the period at the end of line 14, insert the following: ", except that none of the funds made available by this joint resolution shall be used by the National Railroad Passenger Corporation for the operation of rail passenger service between Washington, D.C., and Chicago via Cincinnati."

Mr. ROBERT C. BYRD. So the Senator proposes to prevent any funds from being utilized for the operation of the Cardinal?

Mr. PACKWOOD. That is correct.

Mr. ROBERT C. BYRD. Mr. President, in the first place the Senator assumes a reduction in the overall amount of $735 million. We discussed this at some length during the consideration of the transportation appropriation agencies bill at which time I indicated that Mr. Boyd, the president of Amtrak, had stated to me in my office that if the $735 million were appropriated, if State and local taxes were waived, the operation of the Cardinal would not impinge upon the operation of any other train.

Mr. President, this matter has been argued and decided upon on a number of occasions—in the Senate Appropriations Subcommittee on Transportation, in the full Senate Appropriations Committee, here on the Senate floor, and in conference with the House of Representatives.

The statement of the managers on the 1982 Department of Transportation and related agencies appropriations bill reads as follows:

The managers are encouraged by the improved ridership on this train in the past year and believe that further improvement is clearly possible. Amtrak is directed to improve local advertising and reservations service, along with the route of the Cardinal. Also the managers expect Amtrak to report before April 1, 1982 to the House and Senate Appropriations Committees on the feasibility of increasing ridership on the Cardinal through route changes, fare restructuring, and service improvements. In particular, this report should comment on the practicality of routing the Cardinal through Indianapolis, Indiana.

So the conferees in both houses have given careful study to this matter and they have directed Amtrak to take actions to increase the ridership on the Cardinal through various and sundry means.

And I will repeat what I said during the debate on the transportation appropriations bill.

The Cardinal has met the criteria as far as passenger miles per train mile in the month of June and in the month of July. It exceeded that figure during both months, the figure being 150 PMPT. In June the figure was 150.7, and in July the figure was 164.7.

The other performance criterion for long distance trains is a 10.1 cents avoidable loss per passenger mile. The Cardinal has an avoidable loss per passenger mile of 9.1 cents.

Mr. President, the language in the Transportation appropriations bill reads as follows:

Provided further, that notwithstanding any other provisions of law, the Corporation shall provide through rail passenger serv-

ice between Washington, D.C. and Chicago via Cincinnati.

That does not require that the Cardinal run 7 days a week. It does not require that the Cardinal run 6 days a week. It does not require that the Cardinal run 5 days a week. It just requires that the Corporation shall provide through rail passenger service between Washington, D.C., and Chicago via Cincinnati.

So this gives the Corporation the flexibility that is needed to increase the ridership and to make whatever adjustments are necessary in the operation of the Cardinal, whether it be 3 days a week, 5 days a week, or daily, whichever may appear to be most feasible and appropriate in the light of the circumstances.

So I hope that the Senate will vote down the amendment. The Senate has spoken on this previously.

In closing, I want to thank Mr. PACKWOOD for offering the amendment today so that the Senate may have an opportunity to debate the matter while I am present.

I close by thanking the distinguished chairman of the Appropriations Subcommittee, Mr. ANDREWS, and by urging all Senators to vote down the amendment.

Mr. PACKWOOD. Mr. President, let me thank the distinguished Senator from West Virginia, who has been very courteous on this matter, and I will wrap up in 5 minutes, and we will be able to finish within the time limit we have.

First, let me respond to the Senator from North Dakota when he talked about earmarking funds for Portland, Oreg. He is perfectly correct. But that is earmarking funds that have been authorized, and we all know we do not get everything in an appropriation bill we would like to get, and many more things are authorized than we find money for. It is a normal practice around here. We all go to the Appropriations Committee, and we have 10 projects in Oregon, and we ask "Can you fund them?" And they fund maybe four of them. But they are all authorized and go through this body, and we said that all of them are justifiable if you can get money from the Appropriations Committee.

That is not the situation involved here. We have said, if you want to call the standard we have set down for Amtrak authorization, if trains do not get 150 passengers per train mile, Amtrak shall not run them. So we are not saving we are going to interfere willy-nilly with the arbitrary discretion of Alan Boyd, president of Amtrak. This is not overruling some arbitrary decision of the bureaucrat. The bureaucrat is doing what we told him. We told him that if the trains do not meet the 150 passengers per train mile they are not to run.

The Cardinal in 1980 averaged 87 passengers per train mile during June and July. They averaged, the Senator from West Virginia said that was the best passengers per train mile in the country—Amtrak's projection for the Cardinal if it runs, if it runs daily, it will get 122 passengers, if they are lucky under the most optimistic projections; if they run three times a week it will be 128.

I will conclude by reading from one letter. The letter is not here, but it is from Tim Gillespie. The rest of the letter relates to other things, and Alan Boyd has not seen the letter and they cannot sign off on it, but they will sign off, and this is what this one paragraph says:

In the event that Amtrak experiences significant revenue reductions or significant cost increases or both during fiscal year 1982, it is possible that the operation of the Cardinal would have an impact on other services. As you know, Section 1183 of the Omnibus Budget Reconciliation Action of 1981 requires Amtrak to operate within available resources. If Amtrak were required to reduce services in order to meet that mandate, we may well be faced with the anomaly of reducing service along routes whose performance is better than the Cardinal.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oregon.

Mr. PACKWOOD. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? Apparently there is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Connecticut (Mr. DODD) and the Senator from Montana (Mr. MELCHER) are necessarily absent.

I also announce that the Senator from Vermont (Mr. LEAHY) is absent because of illness.

I further announce that, if present and voting, the Senator from Montana (Mr. MELCHER) would vote "nay."

The PRESIDING OFFICER (Mr. JEPSEN). Are there any other Senators wishing to vote?

The result was announced—yeas 47, nays 49, as follows:

[Rollcall Vote No. 396 Leg.]

YEAS—47

Armstrong	Grassley	Percy
Baker	Hatch	Pressler
Boschwitz	Hawkins	Proxmire
Cannon	Hayakawa	Roth
Chafee	Heinz	Rudman
Cochran	Helms	Schmitt
Cohen	Humphrey	Simpson
D'Amato	Jepsen	Specter
Danforth	Kassebaum	Stafford
Denton	Kasten	Stevens
Dole	Lugar	Symms
Domenici	Mattingly	Thurmond
Durenberger	McClure	Tower
East	Murkowski	Wallop
Garn	Nickles	Weicker
Gorton	Packwood	

NAYS—49

Abdnor	Exon	Metzenbaum
Andrews	Ford	Mitchell
Baucus	Glenn	Moynihan
Bentsen	Hart	Nunn
Biden	Hatfield	Pell
Boren	Heflin	Pryor
Bradley	Hollings	Quayle
Bumpers	Huddleston	Randolph
Burdick	Inouye	Riegle
Byrd, Harry F., Jr.	Jackson	Sarbanes
	Johnston	Sasser
Byrd, Robert C.	Kennedy	Stennis
Chiles	Levin	Tsongas
Cranston	Long	Warner
DeConcini	Lugar	Williams
Dixon	Mathias	Zorinsky
Eagleton	Matsunaga	

NOT VOTING—4

Dodd	Leahy	Melcher
Goldwater		

So Mr. PACKWOOD's amendment (UP No. 656) was rejected.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the amendment was rejected, and, Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HATFIELD. Mr. President, I would like to state at this time that as far as the immediate issues that we will take up next, there are two colloquies which are pending, and then we will move to set aside the present bill temporarily and take up the D.C. appropriations bill and act on it.

I am informed by the leadership that there is a target of 6:30 p.m. for recess. I thought Members would like to know that at this time we know of no rollcall vote that will be asked for on the D.C. appropriations bill. There is always that possibility of someone asking for one, though I am not aware of such a request to be made at this time.

At this time, Mr. President, I yield to the chairman of the Senate Environment and Public Works Committee, Senator STAFFORD, for a colloquy with Senator SCHMITT, chairman of the Subcommittee on Labor, HHS, Education and Related Agencies.

Mr. STENNIS. Mr. President, may we have order? Would the Senator use his microphone?

Mr. HATFIELD. I am using the microphone.

The PRESIDING OFFICER. The Senate will be in order.

Mr. HATFIELD. Mr. President, I yield to Senator STAFFORD.

UP AMENDMENT NO. 657

(Purpose: To provide additional conditions for Pell Grants)

Mr. STAFFORD. Mr. President, I have an unprinted amendment at the desk which I call up and ask for its immediate consideration.

The PRESIDING OFFICER. The Chair will advise that it will take unanimous consent to temporarily lay aside the pending committee amendment.

Is there objection?

Mr. ROBERT C. BYRD. Mr. President reserving the right to object.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the time agreement on this colloquy be 5 minutes equally divided.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. I would have no objection under those conditions.

The PRESIDING OFFICER. Hearing none, it is so ordered.

Mr. HATFIELD. Mr. President, I now ask unanimous consent to lay aside temporarily the pending amendment in order that the amendment on which there is a time agreement can be taken up.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The amendment will be stated.

The legislative clerk read as follows:

The Senator from Vermont (Mr. STAFFORD) proposes an unprinted amendment numbered 657.

Mr. STAFFORD. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the resolution, add the following new section:

SEC. . Notwithstanding any other provision of the joint resolution, the funds made available by this joint resolution which would be available under H.R. 4560, the Departments of Labor, Health and Human Services, and Education and Related Agencies Appropriation Act, 1982, as reported to the Senate on November 9, 1981, for Student Financial Assistance shall be subject to the following additional conditions:

(1) The maximum Pell Grant a student may receive in 1982–1983 academic year is $1,800, notwithstanding section 411(a)(2)(A)(i)(II) of the Higher Education Act of 1965.

(2) The cost of attendance used for calculating eligibility for and amount of Pell Grants shall be established by the Secretary of Education.

(3) The Secretary of Education may establish or approve separate systems of need analysis for academic year 1982–1983, without regard to the provisions of subsections (a), (b), and (c) of section 482 of the Higher Education Act of 1965, for the programs authorized under subpart 2 of part A, part C, and part E of title IV of the Higher Education Act of 1965.

(4) The family contribution schedule for the 1981–1982 academic year shall be the family contribution schedule for the 1982–1983 academic year, modified by the Secretary of Education to exclude payments under the Social Security Act and title 38, United States Code, described in paragraph (5) and to reflect the most recent and relevant data, except that the Secretary of Education shall establish a series of assessment rates applicable to discretionary income in accordance with section 482(b)(4) of the Higher Education Act of 1965. The modified family contribution schedule under this paragraph shall be submitted to the President of the Senate and the Speaker of the House of Representatives not later than 15 days after the date of enactment of this resolution and shall otherwise be subject to the provisions of section 482(a) of the Higher Education Act of 1965.

(5) Notwithstanding the provisions of section 482(b)(3) and the provisions of section 411(a)(2)(B)(ii), no Pell Grant shall exceed the difference between the cost of attendance at the institution at which the student is in attendance, and the sum of the expected family contribution and any amount paid to, or on account of, the student under the Social Security Act and any amount paid the student under chapters 34 and 35 of title 38, United States Code, and if with respect to any student, it is determined that the amount of a Pell Grant plus the amount of the expected family contribution, the amount paid to, or on account of, the student under the Social Security Act, and the amount paid the student under chapters 34 and 35 of title 38, United States Code, exceeds the cost of attendance for that year, the amount of the Pell Grant shall be reduced until the combination of expected family contribution, the amount of the Pell Grant, and the amount paid under the Social Security Act, and chapters 34 and 35 of title 38 of the United States Code does not exceed the cost of attendance at such institution.

Mr. STAFFORD. Mr. President, to be very brief, this amendment corrects some serious inequities in the Pell grant program under present law which will occur because of diminished funding, unless this amendment is adopted. Without the changes which this amendment makes, some 900,000 needy students proposing to go to college will not be able to receive Pell grants.

I am pleased that the committee, during its consideration of the appropriations bill for Labor, HHS, and Education, took the first step in this process—by allowing the historically separate methods of calculating awards for Pell grants and the campus-based student assistance programs to continue, by allowing the Secretary of Education to set an appropriated cost-of-attendance allowance, and by providing for an $1,800 maximum Pell grant.

This amendment, Mr. President, would have the effect of precluding in part the implementation of the admittedly unreasonable family contribution schedule sent to Congress by the administration on October 13, after a delay of more than 6 weeks. This delay has prevented the timely finalization of a schedule for distributing Pell grants at the time when millions of prospective and current students are in the process of determining their plans for the next academic year. Students and their institutions have experienced severe dislocation during the past 2 years due to unreasonable delays in receiving notification of their Pell grant awards from the Department of Education. This should not be allowed to continue.

If this or a comparable amendment is not adopted, the maximum Pell grant will be $2,100, at 60 percent of the cost of attendance, which would drive the cost of this program to an astronomical level—certainly above $3 billion. Using the schedule in law to reduce awards at less than the full funding level, drastic reductions in awards would result, dropping hundreds of thousands of students from the program.

On October 29, the Subcommittee on Education, Arts and Humanities, of which I am the chairman and of which Senator PELL is the ranking minority member, held a hearing to consider the family contribution schedule submitted by the administration for Pell grant awards for the 1982–83 academic year. That schedule, unless disapproved by Congress, will go into effect at the beginning of December. The administration witness at the subcommittee hearing characterized its own schedule as "relatively harsh." I would characterize it as "regressive," as it imposes, at the minimum, a 40-percent assessment, or tax rate, on family discretionary income, virtually four times that imposed in the last schedule submitted.

This assessment is so high as to eliminate students with adjusted gross family incomes above $15,000 from the program—effectively repealing the Middle Income Student Assistance Act of 1978. We will, later this week, be introducing a resolution of disapproval which will complement this amendment, but such a resolution cannot have the force of law to make the changes required.

Basically, Mr. President, the administration has informed us that it does not in fact want the schedule it has proposed to be implemented, but rather would like to see changes which would meet its proposed appropriations level for the Pell grant program, a level which both the Appropriations Committee and the House have rejected. While certain of these changes might be acceptable—such as the series of graduated assessment rates and the counting of part of a family's equity in a home in assessing student need for Pell grants—other changes are less acceptable.

For example, the administration would impose a dollar-for-dollar reduction in Pell grant benefits for every dollar received in social security assistance. As these benefits tend to go to the neediest students, such a proposal would have a "double-whammy" effect.

We had hoped, Mr. President, that the Secretary of Education would have exercised his authority to waive the provisions of the Pell grant program, subject to congressional review and approval, in order to prevent this continued impasse. As one of the authors of this provision, Section 516(d)(1)(B) Reconciliation Act, it was our intent, due to the essential interrelationship between the Pell grant program and the methods of needs analysis embodied in section 482 of the Higher Education Act, that the Secretary be able to recommend to Congress a waiver of provisions either in the Pell grant authorization—title IV, part A, subpart 1—or in section 482.

Specifically, Mr. President, our amendment, in conjunction with the committee amendment on House Joint Resolution 357, would put in place the same schedule as last year, adjusted for inflation and other updated changes. These adjustments should include income in 1981 as the base year for establishing Pell grant eligibility; should include calendar year 1981 and 1982 as the year to establish independent student status; and should establish calendar year 1982 as the appropriate year to calculate the independent student status of a married student.

This amendment would allow the Secretary of Education to establish a series of assessment rates on discretionary income, consistent with changes adopted in the Reconciliation Act earlier this year.

With respect to the Secretary's determination of cost-of-attendance allowances, we intend that the Secretary will follow the allowances designated for the 1981–82 academic year. We further expect that the Secretary would exercise his authority to increase asset exclusions for home, farm and business equity. Under our amendment, social security student assistance or VA student benefits would be considered as student aid rather than as family income for the purpose of Pell grant calculations.

Mr. President, it is imperative that these modifications be made in order to implement an equitable and fair distribution of Pell grants in the most timely

manner, so that students can make informed choices as to the financing of their education. I urge the Senate's adoption of this amendment.

Mr. President, I have discussed this amendment with the chairman of the Committee on Appropriations and with the distinguished chairman of the Subcommittee on Appropriations on educational matters Mr. SCHMITT. I believe that Senator SCHMITT, following our discussion, may be in a position to accept the amendment. I yield to the Senator.

Mr. SCHMITT. Mr. President, I am prepared to accept this language relating to Pell grants, although, as we all should be, I am somewhat reluctant to do so because it is legislation. However, I want to make it very clear that this amendment and these provisions are necessary at this time, urgently necessary, to allow the administrators of this program to begin processing applications for the next school year. I also realize that these provisions help constrain the costs of the Pell grant program.

My reluctance to accept this amendment stems from the fact that this is clearly legislation and really should not be offered as part of an appropriations bill.

I compliment the very able chairman of the Education Subcommittee for his achievements this year on the reconciliation bill, but I hope that in the coming year he will take a further look at the Federal role in student assistance. I particularly hope that he will continue to look further at ways to reduce the soaring costs of the guaranteed student loan program, the only entitlement in the Department of Education, which now takes up 19 percent of the education budget.

Three of the provisions in the Senator's amendment are already included in the Senate-reported Labor-HHS-Education bill: the $1,800 maximum grant, deferring the liberalized cost-of-attendance regulations enacted in 1980, and decoupling the needs analysis system for Pell grants from that used for the other campus-based student aid programs.

There are two additional provisions: One sets in place last year's family contribution schedule with a few minor modifications, and the other defines treatment of social security and VA student benefits under the Pell grant program.

Therefore, Mr. President, because of the urgent need for this, I recommend to the chairman and to our colleagues that we accept this amendment. Again, I compliment the chairman of the Education Subcommittee for his capable leadership of that very important subcommittee.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. RANDOLPH. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Vermont has the floor.

Mr. STAFFORD. Mr. President, let me first thank the Senator from New Mexico for his remarks, and for his cooperation in accepting this amendment. The staff of the Senator from New Mexico has been particularly helpful on this very complex issue.

Mr. PROXMIRE. On behalf of the minority, Mr. President, let me say that I am happy to support the amendment. As I understand it, this would not add any money to the bill, it simply would change the manner in which the funds are distributed to some extent to help needier students.

Mr. STAFFORD. The Senator is correct.

Mr. PROXMIRE. That is an excellent purpose.

Mr. STAFFORD. Compared to present law, it saves some costs.

Mr. SCHMITT. Mr. President, I think that is an excellent point, that compared to the present law, this amendment not only helps needier students, but it helps reduce costs.

Mr. RANDOLPH. Mr. President, will my colleague yield?

Mr. STAFFORD. I am glad to yield to the distinguished Senator from West Virginia (Mr. RANDOLPH).

Mr. RANDOLPH. Mr. President, it is not only a privilege for me but it is a pleasant assignment for me to serve on the subcommittee chaired by the able Senator from Vermont and to support this amendment which, happily, is agreed to by the managers of the pending legislation.

I do feel, without going into detail, that we need, as the Senate, to realize that student assistance programs, within reason, must be kept at funding levels whereby we will not endanger the higher education programs of the United States in literally hundreds and hundreds of independent and private colleges across America.

I am very grateful, as I think all of us are, regardless of the party to which we hold allegiance, that we understand, and I think we do understand, that these assistance programs are of particular importance to students in private and independent colleges of America who must be given the freedom of choice which they often do not have when stacked against the lower cost public institutions, which receive State appropriated aid, or those colleges that have strong church constituencies behind them. The Stafford amendment, assures that the Pell grant family contribution schedule treats all students in an equitable manner and assures access for more needy students at colleges throughout America.

I am graduated from a small college in West Virginia that is independent, that is private. It has no church background from the standpoint of money that can come in from a strong constituency, be it Methodist or Baptist or Presbyterian. We do not have that. So these programs, I must say to the Senator, are vital to the continuation of the financial stability of the institution which has meant so much to me as a graduate and, through the years, I know has accomplished much in the way of education. I am confident that more than half of the Members of the Senate, who are also graduates of private, independent, church-related colleges, will agree with my feelings, and would share my concern for these institutions and the students they serve.

I am very happy that, on the Subcommittee on Education, with the capable leadership of the Senator from Vermont, we are not thinking in terms of crossing or recrossing party lines. If we are to strengthen and continue the programs of education in institutions of this country such as Salem College, that I have spoken of as my alma mater, in face of the reductions which we know will take place in the operation of our Government under this continuing resolution requires a clarification of the family contribution schedule, such as the Senator from Vermont is proposing today in the presentation of this amendment.

Mr. STAFFORD. I thank the Senator for his comments, and for our collaborative efforts on this and other important matters in the Education, Arts, and Humanities Committee and the Committee on Environment and Public Works. Senator RANDOLPH's advocacy for our student assistance programs is well known, and I appreciate his continual support for all education programs.

The PRESIDING OFFICER. The time has expired on the amendment.

Mr. SCHMITT. I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP 657) was agreed to.

Mr. STAFFORD. Mr. President, I move to reconsider the vote.

Mr. SCHMITT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 658

(Purpose: To express the sense of the Senate with respect to information transmitted by the President relating to reductions in budget authority and outlays and increases in revenues)

Mr. ROBERT C. BYRD. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) for himself and Mr. LEAHY proposes an unprinted amendment numbered 658 to his amendment numbered 651:

At the end of the amendment of Mr. ROBERT C. BYRD, add the following:

SEC. . It is the sense of the Senate that the President should include with the Budget submitted for fiscal year 1983 pursuant to section 201 of the Budget and Accounting Act, 1921, a full and complete list of all reductions in budget authority and outlays and increases in revenues for fiscal years 1982, 1983, and 1984, which he determines and certifies are necessary to insure that outlays do not exceed revenues by fiscal year 1984. It is further the sense of the Senate that such list—

(1) should only include categories of reductions in budget authority and outlays which explicitly specify the programs and appropriation accounts in which such reductions are to be made, the exact amount of such reductions, the provisions of law with respect to entitlement programs which must be changed in order to carry out such reductions, and the provisions of law with respect to increases in revenues which must be changed in order to achieve such increases; and

(2) should not include categories of reductions in budget authority and outlays such as "unidentified cuts", "future savings", "reductions to be proposed at a later date", or other categories imprecisely describing reductions in budget authority and outlays which are similar to the categories

included in the budget (including amendments and revisions thereto) submitted by the President for fiscal year 1982.

Mr. ROBERT C. BYRD. Mr. President, I understand that the distinguished Senator from Kentucky (Mr. FORD) wishes to engage in a colloquy at this time. I yield the floor.

Mr. FORD. I thank the distinguished minority leader.

Mr. President, on behalf of Senator HUDDLESTON and myself, I should like to pose a question to the distinguished Senator from Idaho, the chairman of the Energy and Natural Resources Committee, if I may.

It is our understanding that the effect of section 101(g) is to incorporate by reference into this act the entire bill language of the Department of Interior and Related Agencies Appropriation Act, 1982 conference report, as passed by the House. Is it correct to assume that the amendments, reported in disagreement by the conferees but passed last Thursday by this body, are incorporated in this act by this section?

Mr. McCLURE. Mr. President, in response to the question of the Senator from Kentucky, let me say he is correct. For instance, amendment No. 97 to the Interior appropriations bill was reported in technical disagreement and approved by the House. Section 101(g), if signed into law, would therefore appropriate the new funding contained in amendment No. 97, disapprove deferral D82–9, and permit expenditure of these funds in the manner described in the statement of managers of the Interior appropriations conference report.

Mr. FORD. Mr. President, I thank the distinguished Senator from Idaho for his response. I thank the distinguished minority leader, the Senator from West Virginia (Mr. ROBERT C. BYRD) for allowing us to have this colloquy.

Mr. McCLURE. Mr. President, may I ask the distinguished Senator from Oregon (Mr. HATFIELD), the manager of the pending legislation, if the answer of the Senator from Idaho in response to the question of the Senator from Kentucky is correct?

Mr. HATFIELD. The Senator is correct.

Mr. McCLURE. I thank the Senator from Oregon.

UP AMENDMENT NO. 658

Mr. ROBERT C. BYRD. Mr. President, this amendment expresses the sense of the Senate that the administration provide a detailed list of budget cuts and tax increases necessary to achieve a balanced budget in fiscal year 1984.

Only 2 months ago, on September 21, President Reagan reaffirmed his belief in a balanced budget, saying:

> This administration is committed to a balanced budget, and we will fight to the last vote to achieve it in 1984.

Two weeks ago, however, the administration abandoned that goal. Speaking then about a balanced budget, Mr. Reagan said:

> If we can't do it in 1984, we'll have to do it later.

Mr. President, in short, this amendment expresses the sense of the Senate that the President, in developing his budget for presentation in January 1983, provide for a balanced budget in fiscal year 1984 and that he at the same time identify the plan by which that balanced budget in fiscal year 1984 will be reached.

In other words, there would be no so-called unidentified cuts. There would be no vague language that would leave Congress in doubt or the American people in doubt as to what cuts would be necessary or what tax increases would be required in order to achieve a balanced budget in fiscal year 1984. It would all be out on the table, for everyone to see and understand, for the Congress and the American people, so that they could clearly appreciate what cuts would be included and what tax increases would be required.

The amendment, I think, is a reasonable one. I believe it is reasonable to ask the administration to spell out in detail the necessary tax cuts, the necessary budget cuts, and the necessary tax increases to balance the budget by 1984.

I hope that the Senate will adopt the amendment.

I believe the goal of balancing the budget by 1984 is to important to relinquish, and I will continue the fight I began earlier this year to encourage this necessary fiscal prudence. This amendment is an important step in that direction.

On October 15, I submitted an amendment instructing OMB Director Stockman to reveal which budget cuts, and which tax increases, would be necessary to reach the administration's deficits targets of $43.1 billion in fiscal year 1982, $22.9 billion in fiscal year 1983, and a balanced budget in fiscal year 1984. This amendment, which asked nothing more than that the full picture be painted for the Congress and the American people, was made into a partisan matter and voted down on a straight party line vote.

On October 28, I introduced a bill which again directed the Office of Management and Budget to spell out the unidentified budget cuts and tax increases necessary to reach the administration's deficit targets. There has been no action on that bill.

My concern about the blue smoke and mirrors, which gave an aura of reality to this administration's budget projections, began on March 10th, when the President transmitted his budget to Congress. Even at that time, there were disturbing signs. Most disturbing were the $74 billion in "unidentified" cuts for fiscal years 1983 and 1984, which were necessary to balance the budget by 1984.

As the administration's budget and tax bills marched successfully through Congress, new obstacles cropped up in the path to a balanced budget, and three Republican Senators joined Senate Budget Committee Democrats in opposing the fiscal year 1982 first budget resolution because it did not provide for a balanced budget in fiscal year 1984.

To answer that, over the Easter recess, the administration developed a new master budget plan which reduced fiscal year 1984 spending by $44.8 billion, exactly the amount necessary to balance the budget in that year. Of this $45 billion reduction, $28 billion came from "unidentified cuts."

Although these unidentified cuts troubled me, and my fellow Democrats, the worst was yet to come, because the administration's July tax cut bill, which slashed $280 billion in revenues between 1982 and 1984, has proved to be a disaster.

Not only is this tax cut an unfair transfer of wealth from the middle to upper-income citizens, but it put a balanced budget out of reach by 1984. President Reagan said the Kemp/Roth tax bill ". . . includes just about everything to help the economy. . . ." But we now find out from Mr. Stockman that it was nothing more than a trickle down wolf in the sheep's clothing of supply side economics.

In September, the budget situation turned ever more grim. The economy was not responding to the plan, and the Congressional Budget Office now estimated that even if the previous $74 billion of unidentified cuts were made in fiscal years 1983 and 1984, the fiscal year 1984 deficit would equal $50 billion.

As the bad news continued to mount, the administration announced another multi-year budget plan to bring the deficit to zero by 1984. This fall budget plan included new spending cuts of $48 billion for fiscal year 1984 on top of the $51 billion that has already been cut by the administration's reconciliation plan passed in July.

After carefully evaluating this new administration plan, it was obvious that the numbers did not add up. This came as no surprise to the Nation's businessmen and financial markets, which had long been worried by the administration's unidentified cuts. It was then that I first offered legislation designed to clear the haze which surrounded the balanced budget plan.

After the surprising vote on my October 15 amendment, I sent a letter to Director Stockman on October 29. The letter asked Mr. Stockman to answer two crucial questions:

> First, what are the amounts of "unidentified" cuts for fiscal years 1982, 1983, and 1984 that are presently included in the President's Fall Budget Program? Second, based on the economic and budget situation as you see it today, what is your best estimate of spending reductions and revenue increases that are necessary to maintain the Fall Budget Programs' projected deficits of $43.1 billion in FY 1982, $22.9 billion in FY 1983, and a balanced budget in FY 1984?

Although this letter was sent nearly 3 weeks ago, I have received no response. Of course, those intervening days have brought some added pressures on Director Stockman, due to his candor in a national magazine. Unfortunately, that article confirmed the fear I had harbored all along, the fear that had caused me to offer legislation seeking clarification of the unidentified cuts and necessary tax increases assumed by the President's package.

The article depicted David Stockman as lightly dismissing this important matter of unidentified cuts. To him, the unidentified cuts, which held his deficit projections together, were just magic

asterisks. Well, I suppose magic asterisks have their place in a program the Vice President once labelled voodoo economics. Unfortunately, they have no place in the world of free market economics.

Government should seek to keep the investment horizon clear, not to fog it up by promising massive programmatic and tax changes without spelling out, in detail, the way such changes will be accomplished.

Without detailed information about which programs are scheduled for cuts, and which taxes are scheduled to be increased, there is no way to judge the likelihood that the administration's deficits will not balloon out of sight. Based on the last decade, and on the reception given to this September's budget proposals, investors, businessmen, and working people have good reason to doubt vague promises of future savings.

Without the detailed information I have called for in previous legislative initiatives, the risk-minimizing investor will not make risky productive capital investments.

Secretary Regan recently lashed out at the business community for not making new capital investments. He said:

We have carried through on our commitments . . . but where is the business response? Where are the new research and development initiatives? Where are the new plants? Where are the expansion plans? It's like dropping a coin down a well—all I'm hearing is a hollow clink.

The problem is not hollow clinks from business, but hollow promises from government. The administration may have decided to abandon its balanced budget goal for 1984, but I have not, and the Senate should not. If we abandon this goal, what point of reference do our business and labor leaders have as they try to plan for the future? If we abandon this goal, I am afraid we are jeopardizing economic recovery.

For that reason, I am proposing this amendment which would express the sense of the Senate that the administration should spell out in detail the necessary cuts and tax increases to balance the budget by 1984. It is time that we give the people of this country reason to believe in the projections and promises of their government.

I ask unanimous consent that my letter to Director Stockman, an article on Mr. Stockman from the Wall Street Journal, and a special report detailing the administration's flip-flops on the balanced budgets, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
OFFICE OF THE DEMOCRATIC LEADER,
Washington, D.C., October 29, 1981.

HON. DAVID A. STOCKMAN,
Director, Office of Management and Budget, Executive Office Building, Washington, D.C.

DEAR MR. DIRECTOR: On October 15, 1981, I offered an amendment to H.R. 4331, a bill to amend the Omnibus Reconciliation Act of 1981 to restore minimum benefits payments under the Social Security Act.

My amendment asked that you report to Congress a complete list of budget reductions and revenue increases that are necessary to achieve the FY 1982 and FY 1983 deficits, and the balanced budget for FY 1984 projected in the President's Fall Budget Program.

My amendment sought to identify all budget initiatives necessary to meet the Administration's most recent projections. This would include your latest internal revisions of the budget, as well as the "unidentified" savings assumed in the Fall Budget Program. Based on the information provided in the September 24, 1981, Fact Sheet released by the White House, it appears that there were "unidentified" cuts of $51.7 billion in FY 1983 and $82.0 billion in FY 1984.

Today, for the first time, I learned that the Office of Management and Budget privately disputes that the amounts of "unidentified" cuts in fiscal years 1983 and 1984 are that large.

To help clarify this situation, I would be grateful if you could immediately provide the answers to two questions. First, what are the amounts of "unidentified cuts for fiscal years 1982, 1983, and 1984 that are presently included in the Presidents Fall Budget Program? I believe these amounts should include any proposals that have not been transmitted to Congress.

Second, based on the economic and budget situation as you see it today, what is your best estimate of spending reductions and revenue increases that are necessary to maintain the Fall Budget Program's projected deficits of $43.1 billion in FY 1982, $22.9 billion in FY 1983, and a balanced budget in FY 1984?

I would appreciate your immediate attention to this matter.

Sincerely,

ROBERT C. BYRD.

[From the Wall Street Journal, Nov. 17, 1981]

WHY THERE'S LIFE AFTER DAVID STOCKMAN

(By Lindley H. Clark, Jr.)

David Stockman, the brilliant head of the Office of Management and Budget, clearly has ended his usefulness to the Reagan administration. If the President weren't such a nice guy he would have accepted Mr. Stockman's resignation last week and gotten on with the business of government.

That is not to say that there was anything evil or even wrong in what Mr. Stockman did. The long series of interviews with the Atlantic Monthly showed, if anything, that Mr. Stockman is a much better economist than anyone realized. But he also is a much less adept politician than most of us thought.

Supply-side economics means many things to many people, and the so-called supply-side economists often bicker among themselves. It starts with a fact, not a controversy. The U.S. has been lagging behind several other major industrial nations in the growth of productivity. No one can argue about that; the figures are there for everyone to see.

Large numbers of economists and businessmen go on from that fact to argue that the reason for low productivity gains is that Americans are overtaxed. The money that goes to Uncle Sam in taxes can't be invested in new plants and equipment that would make American business more efficient.

Well, there is controversy about that point. Some analysts point out that more than 20% of the nation's industrial plant stands idle and contend that this shows there is a limited need for new investment. But there is something like majority agreement that a step-up in new investment would be good for what ails us. Some of the idle plant, it's recognized, is simply inefficient. New technology creates a need for new spending on facilities if the U.S. is to keep up with its competition abroad.

But how do we encourage that new investment? Rep. Jack Kemp of New York in an early supply-side bill several years ago proposed to encourage investment directly with special tax concessions to business. But special tax breaks for business are awfully hard to sell unless they're accompanied by substantial tax breaks for individuals, especially low- and middle-income individuals.

What gradually evolved from such thinking was the so-called Kemp-Roth approach: cutting individual tax rates by 10% a year for three years, with the top rate reduced to 50% from 70%. It was to provide something for everybody, so it was easy to couple with it special tax benefits for business investment.

But there were a lot of old fuddy-duddies in Congress and elsewhere who thought that such sweeping tax cuts would mean huge budget deficits for three or four years, or until the increases in investment had a chance to generate new taxable income.

What to do? Well it was a job that required a little sales engineering.

There were supply-siders around who thought that the Kemp-Roth tax cuts would stimulate so much additional work and investment so fast that budget deficits would not be a major worry. A few even argued that deep cuts in federal spending would not be necessary to make satisfactory progress toward getting the budget under control.

The real extremists, however, never had a handle on policy. Supply-siders within the administration, such as Treasury Under Secretary Norman True and Mr. Stockman, from the start were certain that deep budget cuts were absolutely essential.

But what everyone was playing with here were people's expectations. The reason for planning annual tax cuts for three straight years was to encourage the public to do some long-term planning. The hope was that citizens, confronted by a government bound and determined to beat inflation and assured that they could keep more of their income, would indeed work harder and invest more.

The numbers that went with this were never any more solid than the planners' hopes. With hindsight it's easy to wish that the administration had been more candid, less optimistic. Many economists who fully supported the Reagan program from the start were deeply skeptical of the forecasts that accompanied it.

It's easy to suspect that the optimistic forecasts were formulated in part to sell the program to Congress. It would be hard for a lawmaker to vote against a tax cut if he believed that the cut would not mean bigger budget deficits and more inflation just ahead.

Whether or not salesmanship was the aim, the administration's chickens have come home to roost. It is not enough to argue, as Mr. Stockman apparently did in the Atlantic interviews, that Congress Christmas-treed the administration tax bill. Of course it did. But the administration tax cuts were somewhat reduced and somewhat delayed, too. It may be that the size of the eventual tax cut wasn't much different from what the administration asked.

Excessively optimistic forecasts are hardly new in government, but the Reagan administration had seemed to promise us something better. The administration in the past week has made a good start toward clearing the air, toward providing the sort of candor that probably would have been better from the first.

What the country needs now is more of the same. An essential spokesman for such a policy is the head of the Office of Management and Budget. David Stockman, who evidently realized that the official forecasts were wrong months ago but kept quiet in public, has disqualified himself for the job.

There is nothing fundamentally wrong with the Reagan policy. If the administration will level with the country, there will indeed be life after David Stockman.

SPECIAL REPORT—DEMOCRATIC POLICY COMMITTEE

This Administration is committed to a balanced budget, and we will fight to the last blow to achieve it by 1984. . . .

We will not sit on our hands and watch helplessly as the deficit swells and swells—President Ronald Reagan, Sept. 21, 1981.

I did not come here to balance the budget—not at the expense of my taxcutting program and my defense program. If we can't do it in 1984, we'll have to do it later—President Ronald Reagan, Newsweek, Nov. 16, 1981.

THE BALANCED BUDGET: ANOTHER BROKEN PROMISE

After nine months of predictions that a balanced budget in 1984 would be a reality, the Administration finally admitted what non-Administration economists were saying all along. Given the Administration's economic plan, it cannot happen.

Below is a history of select quotes about the balanced budget starting with September, 1980, and ending in November, 1981.

Ronald Reagan: September 9, 1980—We must balance the budget, reduce taxes, and restore our defenses. These are the challenges. . . . I know we can do these things, and I know we will—Source: Address to the International Business Council.

Ronald Reagan: September 21, 1980—I believe the budget can be balanced by 1982 or 1983—Source: Anderson-Reagan debate.

Ronald Reagan: October 28, 1980—I have submitted an economic plan . . . and believe that over a five year projection, this plan can permit the extra spending for needed refurbishing of our defensive posture, that it can provide for a balanced budget in 1983 if not earlier, and that we can afford—along with the cuts that I have proposed in government spending—we can afford the tax cuts I have proposed. . . .—Source: Carter-Reagan debate.

February 3, 1981—And he (President Reagan) told interviewers in the Oval Office that "one of the things I have not retreated from is the 1983 target" of a balanced budget.—Source: The New York Times, Feb. 4, 1981.

February 18, 1981—By fiscal 1984—under the policy recommendations presented in this document—the Federal budget should be in balance—Source: America's New Beginning: A Program for Economic Recovery.

March 2, 1981—Budget director David A. Stockman said yesterday that the Reagan administration will propose further spending cuts if a weakening economy later this year threatens to increase the budget deficit. . . .

Stockman said that if such a trend develops this spring, the Reagan administration would "as a matter of basic policy, look for offsetting economies," rather than accommodate that kind of growth in the deficit. "It may not be a 100 percent offset," he said, "but we would not allow the budget to become hostage to the economy"—Source: The Washington Post, Mar. 3, 1981.

President Ronald Reagan: September 15, 1981—I'm as committed today as on the first day I took office to balancing the budget, freeing the people from punitive taxation, and making America once again strong enough to safeguard our freedom. And I'm surer today than I ever was that we can achieve all three of these things. We'll continue to make budget adjustments as needed, and we'll hold the line.—Source: Remarks at a White House Reception.

President Ronald Reagan: September 21, 1981—This Administration is committed to a balanced budget, and we will fight to the last blow to achieve it by 1984. . . .

We will not sit on our hands and watch helplessly as the deficit swells and swells.—Source: Address to the National Federation of Republican Women.

President Ronald Reagan: September 24, 1981—Maybe you'll remember that we were told in the spring of 1980 that the 1981 budget, the one we have now, would be balanced. Well, that budget, like so many in the past, hemorrhaged badly and wound up in a sea of red ink.

I have pledged that we shall not stand idly by and see that same thing happen again.—Source: Televised Address to the Nation Sept. 24, 1981.

OMB Director David Stockman: October 26, 1981—I don't think anybody's talking about literal accounting balance or making a fetish (of a balanced budget).—Source: The New York Times, Oct. 29, 1981.

White House Communications Director David Gergen: October 29, 1981—The President is sticking firmly to the idea of a balanced budget in 1984.—Source: The New York Times, Oct. 31, 1981.

October 30, 1981—Testifying before the Senate Budget Committee, Mr. Regan said it is 'possible, but not probable' that the goal (of a balanced budget) will be reached.—Source: The Baltimore Sun, Oct. 31, 1981.

Treasury Secretary Donald Regan: November 6, 1981—We will not be able to achieve a balanced budget by 1984, but we will be on a path leading to a balanced budget.—Source: The Baltimore Sun, Nov. 7, 1981.

President Ronald Reagan: November 6, 1981—I've never said anything but that it was a goal. And the eventual goal, whether it comes then (in 1984) or whether it has to be delayed or not, is a balanced budget.—Source: The Washington Post, Nov. 7, 1981.

President Ronald Reagan: November, 1981—I did not come here to balance the budget—not at the expense of my tax-cutting program and my defense program. If we can't do it in 1984, we'll have to do it later.—Source: Newsweek, Nov. 16, 1981.

REAGAN ADMINISTRATION BUDGET PLANS

	Fiscal year—		
	1982	1983	1984
SEPTEMBER 1980			
Receipts:			
"Current Law" estimate	712	828	951
Proposed policy changes:			
Tax reductions	−61	−107	−149
Increased revenues due to additional economic growth	+10	+18	+20
Net receipts	661	739	822
Outlays:			
"Current Law" estimate	710	778	845
Proposed policy changes: Budget reductions:			
Partial cuts	−28	−39	−51
Full cuts	−43	−62	−85

Unspecified future budget reductions	0	−11.7	−23.0
Net outlays	709.3	737.0	771.0
Projected deficit/surplus	−43.1	−22.9	0
Projected deficit/surplus without future budget cuts (specified and unspecified)	−56.1	−54.9	−47.8

Mr. HATFIELD. Mr. President, it is with great reluctance—unless someone else wishes to speak to this subject—that I observe that this is primarily a matter relating to the Budget Committees of the Senate and the House, and, therefore, I move to table the amendment.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, no debate is allowed, but I ask unanimous consent that I may proceed for 30 seconds.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Does the distinguished Senator move to table the amendment in the second degree or the amendment in the first degree by which both amendments would fall?

Mr. HATFIELD. My intent was to move to table the underlying amendment, to bring down the entire vehicle.

Mr. ROBERT C. BYRD. I thank the distinguished Senator.

Mr. President, what the motion would do would be to table my amendment in the first degree, which changes the date on the continuing resolution from September 30, 1982, to December 19, 1981; and, in addition, would table my amendment in the second degree, which is the sense of the Senate amendment calling on the administration to submit a balanced budget for fiscal year 1984 and to identify all the details with respect to budget cuts and tax increases required to achieve such balanced budget.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the underlying amendment. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Connecticut (Mr. DODD) is necessarily absent.

I also announce that the Senator from Vermont (Mr. LEAHY) is absent because of illness.

I further announce that, if present and voting, the Senator from Connecticut (Mr. DODD) and the Senator from Vermont (Mr. LEAHY) would vote "nay."

The PRESIDING OFFICER. Are there any other Senators who desire to vote?

The result was announced—yeas 50, nays 47, as follows:

[Rollcall Vote No. 397 Leg.]

YEAS—50

Abdnor	Garn	McClure
Andrews	Gorton	Murkowski
Armstrong	Grassley	Nickles
Baker	Hatch	Packwood
Boschwitz	Hatfield	Percy
Chafee	Hawkins	Pressler
Cochran	Hayakawa	Quayle
Cohen	Heinz	Roth
D'Amato	Jepsen	Rudman
Danforth	Kassebaum	Schmitt
Denton	Kasten	Simpson
Dole	Laxalt	Specter
Domenici	Lugar	Stafford
Durenberger	Mathias	Stevens
East	Mattingly	Symms
Thurmond	Wallop	Weicker
Tower	Warner	

NAYS—47

Baucus	Exon	Melcher
Bentsen	Ford	Metzenbaum
Biden	Glenn	Mitchell
Boren	Hart	Moynihan
Bradley	Heflin	Nunn
Bumpers	Helms	Pell
Burdick	Hollings	Proxmire
Byrd, Harry F., Jr.	Huddleston	Pryor
	Humphrey	Randolph
Byrd, Robert C.	Inouye	Riegle
Cannon	Jackson	Sarbanes
Chiles	Johnston	Sasser
Cranston	Kennedy	Stennis
DeConcini	Levin	Tsongas
Dixon	Long	Williams
Eagleton	Matsunaga	Zorinsky

NOT VOTING—3

Dodd	Goldwater	Leahy

So the motion to lay on the table Mr. ROBERT C. BYRD's amendment (UP No. 651) was agreed to.

Mr. HATFIELD. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. PROXMIRE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, may I have recognition for a moment?

The PRESIDING OFFICER. The Chair recognizes the Senator from Tennessee.

Mr. BAKER. Mr. President, if we could have order in the Senate for a minute, I wish to make an inquiry and perhaps an announcement.

It is 6 o'clock, Mr. President. It is my intention to ask the Senate to recess over at 6:30 until tomorrow at 10.

RECESS UNTIL 10 A.M. TOMORROW

Mr. President, I now ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, if I could inquire of the distinguished managers of the bill on both sides is there another amendment that we could do before 6:30?

D.C. APPROPRIATIONS BILL

Mr. HATFIELD. Mr. President, it would be our hope to take up, perhaps, one brief one and two colloquies, and then set the bill aside temporarily and take up the D.C. appropriations bill. We have no amendments we are aware of and it could be passed very quickly, and no rollcall is expected.

Mr. PROXMIRE. As I understand, the Senator from Massachusetts has an amendment which, I think, we can handle very quickly.

Mr. BAKER. Could I inquire of the managers then if you do go to the D.C. appropriations bill do you expect a record vote or can you arrive at final passage without one?

Mr. HATFIELD. There is no report of any request for a record vote that we have before us.

Mr. PROXMIRE. The Senator from New York, who is managing the bill indicates there will be no record vote.

Mr. D'AMATO. There will be no record votes.

Mr. BAKER. All right. It would appear that the schedule for the remainder of the evening——

The PRESIDING OFFICER. The Senate will please be in order.

Mr. BAKER. Mr. President, it would appear then that the schedule for the remainder of the day will be to conclude a colloquy on this measure, as described by the distinguished Senator from Oregon, and to temporarily lay aside the pending measure.

I now ask unanimous consent that we may lay aside the pending measure temporarily, following after the colloquy to be conducted by the Senator from Oregan and another Senator, and proceed then to the consideration of the D.C. appropriations bill. Mr. President, I make that request at this time.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. BAKER. Mr. President, assuming that the estimates I have received all around are correct, and if there is no requirement for a rollcall vote on the D.C. appropriations bill, I believe there will be no further record votes today.

Mr. PROXMIRE. Will the Senator yield? Does the Senator from Massachusetts, Senator KENNEDY, want a record vote?

Mr. KENNEDY. I do want a record vote.

Mr. BAKER. Let me say, then, before anybody misunderstands, apparently there is a request for a record vote on an amendment to be offered by the Senator from Massachusetts. So I withdraw the previous statement. There will be another record vote this evening.

Mr. SARBANES. Will the majority leader yield for a question on tomorrow's schedule?

SCHEDULE FOR THURSDAY

WAIVER—ALASKA NATURAL GAS TRANSPORTATION ACT

Mr. BAKER. Mr. President, at 10:30 a.m. tomorrow, it is the intention of the leadership to ask the Senate to proceed to the consideration of Calendar Order No. 378, Senate Joint Resolution 115, a joint resolution to approve the President's recommendation for a waiver of law pursuant to the Alaska Natural Gas Transportation Act of 1976. There is a statutory time limitation on that resolution of 1 hour, and a rollcall vote would be expected prior to the hour of noon, I would judge.

After that, Mr. President, it is the expectation of the leadership that the Senate will resume consideration of House Joint Resolution 357, Calendar Order No. 382, the continuing resolution and proceed through the day tomorrow, and late into the evening tomorrow evening, in a determined effort to try to finish the continuing resolution before the expiration of our business on tomorrow.

Mr. HATFIELD. Will the Senator yield?

Mr. BAKER. Yes.

Mr. HATFIELD. Is it the statutory time which requires this matter to be taken up tomorrow? Could it be taken up on Friday? Otherwise, we will not get back on the continuing resolution until

at least noon. We still have to go to conference with the House whenever we complete the continuing resolution and get the report back here and wait for the House to act and get it all done before Friday, midnight.

Mr. BAKER. Mr. President, I believe, under the terms of the statute, it would be possible to do this on Friday instead of Thursday. But I would ask the Senator from Oregon to indulge us, if he will, because for some days now we have tried to arrange a time that meets the maximum convenience of Senators who are deeply involved. I would especially ask the Senator from Alaska to speak to this point on the question of whether or not we could do this on Friday instead of Thursday.

Mr. STEVENS. I would say to my good friend that we agreed to put it off from Wednesday to Thursday already, because it would have interferred sometime at noon here today. Under the statute, it has a 1-hour time frame and it is a priority matter, a privileged matter. I do not see anything to gain by putting it off.

Mr. HATFIELD. Mr. President, I will not belabor the point. But I think the continuing resolution, the Government is in jeopardy of being brought to a halt unless we act upon it before midnight on Friday night. I have had complaints of many of my colleagues in the past about being pushed up to the midnight hour and then the House having adjourned and gone home and saying that we have to either bail out the Government or let it fall. I do not see anything that takes a higher priority at this time. But that may be my own bias.

Mr. STEVENS. Let us review it again. It took a long time to get that agreement with regard to who is here and who is not here. We have the agreement for tomorrow. I would not like to put it off unless we get a similar agreement for Friday.

Mr. BENTSEN. I would like to say that a number of us made certain commitments for tomorrow.

Mr. BAKER. Mr. President, I hope the Senator from Oregon would not press that point. I think it is almost a foregone conclusion that we are going to have to be here late tomorrow night. This might mean that we are going to be in another hour later than we would be in. The waivers have to be addressed and taken care of this week. So, Mr. President, I would like very much to go ahead on that basis.

Mr. HATFIELD. Mr. President, I am not going to object. If there is a unanimous-consent request pending, I will not object and just invite everyone to bring their dinner on Friday night.

Mr. President, may we proceed at this point? Is there any request pending?

Mr. BAKER. Mr. President, I would like to make this request. Let me make this request and if there is objection, it can be stated.

ORDERS FOR THURSDAY

Mr. President, I ask unanimous consent that on tomorrow after the recognition of the two leaders under the standing order, that the Senator from Delaware (Mr. BIDEN) be recognized for not to exceed 15 minutes on a special order. Following the special order so provided for, I ask unanimous consent that there be a period for the transaction of routine morning business to extend not past the hour of 10:30 a.m., with statements therein limited to not more than 2 minutes each. Also, Mr. President, I ask unanimous consent that at 10:30 a.m., the Senate turn to the consideration of Calendar Order No. 378, Senate Joint Resolution 115, a joint resolution to approve the President's recommendation for a waiver of law pursuant to the Alaska Natural Gas Transportation Act of 1976. Finally, I ask unanimous consent that following conclusion of the debate and disposition of that measure—and may I say parenthetically there is a 1-hour statutory time limitation on that measure—that the Senate resume consideration of Calendar Order No. 382, House Joint Resolution 357, the continuing resolution.

The PRESIDING OFFICER (Mr. SIMPSON). Is there objection? Without objection, it is so ordered.

Mr. BAKER. Mr. President, could I make one further inquiry? The Senator from Massachusetts has indicated to me that he does require a rollcall vote on his amendment. I would like to do that amendment tonight. Is there not already an order to lay aside this measure after a colloquy to be conducted and proceed with the consideration of the D.C. appropriations conference report?

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. Mr. President, may I say, then, that as soon as the amendment of the Senator from Massachusetts is disposed of by a rollcall vote, there will be no further rollcall votes this evening.

Mr. STEVENS. Is there a time limit on the amendment of the Senator from Massachusetts on the D.C. appropriations bill?

Mr. HATFIELD. There is no time agreement.

Mr. STEVENS. Is the Senator prepared at all to consider a time agreement on his amendment to the D.C. appropriations bill?

Mr. KENNEDY. The amendment which I intend to offer was to the continuing resolution. I have no amendment to the D.C. appropriations bill.

Mr. HATFIELD addressed the Chair.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. HATFIELD. Mr. President, I yield to the Senator from Rhode Island for a brief statement.

Mr. BAKER. Mr. President, will the Senator from Rhode Island permit me to interrupt?

Mr. CHAFEE. Yes.

Mr. BAKER. Mr. President, if that is the case, we have the matter fouled up here a little bit. Do I understand that the amendment of the Senator from Massachusetts is to the continuing resolution?

Mr. KENNEDY. The Senator is correct.

Mr. BAKER. Mr. President, I ask unanimous consent that that portion of my request dealing with temporarily laying aside this measure to proceed to the D.C. appropriations conference report follow on after both the colloquy and the disposition of the amendment of the Senator from Massachusetts.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Having done that, would the majority leader again let me inquire if it is possible to get a time agreement on that amendment to the continuing resolution?

Mr. KENNEDY. I would be delighted to enter into a time limitation of maybe a half an hour, 15 minutes for each side. It is a simple amendment. It is basically to add additional resources for job training, youth training, given the problems that we are facing with increasing unemployment. It is an issue that is well understood by the Members of this body. I do think it is important, given the reports this morning and yesterday about the continuing growth in unemployment. I wish to be able to address that issue before the Senate, but I am not interested in taking time. Those are programs that are well understood by the membership. I think it is important to point out to the Senate what the continuing resolution includes and what will happen unless this particular amendment is accepted for job training for the young people of this country.

Mr. BAKER. Mr. President, in view of the statement by the distinguished Senator, I ask unanimous consent that there be a time limitation on this amendment of 30 minutes equally divided with control of the time to be in usual form.

The PRESIDING OFFICER. Is there objection?

Mr. SCHMITT. Mr. President, reserving the right to object, and I hope I will not object, the amendment of the Senator from Massachusetts deals with what?

Mr. KENNEDY. With training programs.

Mr. SCHMITT. And to what level does the Senator wish to increase it?

Mr. KENNEDY. To increase it up to the House level.

Mr. SCHMITT. That is an increase of $200 million?

Mr. KENNEDY. It would still be significantly below the reconciliation figure.

Mr. SCHMITT. But it is an increase of $200 million?

Mr. KENNEDY. The Senator is correct.

Mr. BAKER. Mr. President, let me make another inquiry. We will have 30 minutes on this amendment to the continuing resolution. I wonder if the Senator from Massachusetts would be agreeable to take up this matter on tomorrow. I think that is the better part of discretion.

I may say that the Senator from Massachusetts suggested that in the first instance. I was the one who insisted that we do it tonight. But now I not uncharacteristically have changed my mind.

Mr. KENNEDY. Mr. President, I indicated earlier today that I had an amendment and would be prepared with 2 or 3 minutes notice to offer it. I think I had about a minute notice. I can take a shorter period of time.

Frankly, I am interested in having more Members here than a longer period of time. If we debate this in the morning, we will be lucky to have three or four Members. I will shorten the period of time. If I can have 2 minutes to get the amendment over here, we can vote at 6:30, with 7 minutes on each side.

I would rather have the Members here listening to the debate than to be talking to an empty Chamber. To call the roll at 6:30 would be fine.

Mr. BAKER. Mr. President, I so amend my request.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, is the Senator from Massachusetts ready to proceed with his amendment?

SECOND CONTINUING APPROPRIATIONS, 1982

The Senate continued with the consideration of the joint resolution (H.J. Res. 357).

UP AMENDMENT NO. 659

(Purpose: To increase the appropriations for the Youth Employment Demonstration Program, the Job Corps Program, the Summer Youth Program, and the Private Sector Opportunities for the Economically Disadvantaged Program under the Comprehensive Employment and Training Act)

Mr. KENNEDY. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The bill clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY), for himself, Mr. EAGLETON, Mr. RIEGLE, Mr. PELL, Mr. RANDOLPH, Mr. WILLIAMS, and Mr. METZENBAUM, proposes an unprinted amendment numbered 659.

Mr. KENNEDY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the resolution add the following new section:

SEC. . Notwithstanding any other provision of this joint resolution, there are appropriated—

(1) $200.000,000 for part A of title IV of the Comprehensive Employment and Training Act relating to the Youth Employment Demonstration Program,

(2) $28,000,000 for part B of title IV of such Act relating to the Job Corps,

(3) $91,932,000 for part C of title IV of such Act relating to the Summer Youth Program, and

(4) $14,700,000 for title VII of such Act relating to the Private Sector Opportunities for the Economically Disadvantaged Program,

which are in addition to the amounts appropriated under this joint resolution which would otherwise be made available under H.R. 4560, the Departments of Labor, Health and Human Services, and Education and Related Agencies Appropriation Act, 1982, as reported to the Senate on November 9, 1981, for such programs.

Mr. KENNEDY. Mr. President, as I understand, we are to vote on this amendment at 6:30. What I would like to do is to ask that the time be evenly divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I yield myself 4 minutes.

Mr. President, I consider this amendment to be the most important anti-recession amendment that we will have an opportunity to consider during the Senate's debate of the continuing resolution. It is directed toward employment and training assistance for unemployed young people and adults. It would add $334 million to the resolution to restore four programs to the funding levels agreed to by the House.

Any Member of this body who has read the reports in the last 48 hours by the Secretary of the Treasury, the Secretary of Commerce, and the chairman of the Council of Economic Advisors and listened to the Director of the Bureau of Labor Statistics of last week, saw the significant rise in unemployment. The unemployment figures last week were announced at 8 percent, 1 million more men and women unemployed today than in July of this last year. The best estimate is that it will go up to 9 percent before the President's program, even if it works, will begin to have some impact on unemployment.

Last spring, the Senate, in reconciliation, approved a total of $2.2 billion for youth training, Job Corps, summer jobs, and the private sector initiative program.

The House concurrent resolution is at $2,058,000,000. The Senate is at $1,700,000,000.

This amendment adds $334 million, which will put the Senate concurrent resolution at the same level as the House concurrent resolution, $250 million less than what the Senate accepted in reconciliation just a few short months ago.

This amendment will bring the Senate bill in line with the funding levels set by the House for four programs designed to provide work experience and skill training to unemployed youth and adults. More precisely, my amendment would:

Add $200 million for year round youth jobs and training.

Restore $92 million to next year's summer jobs program.

Provide $28 million to Job Corps; and restore $14 million to the title VII private sector initiative program.

Mr. President, this country is in a recession. Last month unemployment rose to 8 percent nationally. Just this week the chairman of the President's Council of Economic Advisors and the Secretary of Commerce have raised the specter of 9 percent unemployment and many believe it will go higher. There are more Americans out of work now than at the height of the Great Depression.

We all hope the administration's forecast of a spring thaw in this frosty economic picture proves correct. But, these rosy predictions have an all too familiar Republican ring. I am reminded of Herbert Hoover's campaign theme in 1932—"Prosperity is just around the corner."

For most of us the Great Depression is just a memory, a historic interlude. But for too many of our fellow Americans the current recession has become a depression. In States like Michigan and Ohio, unemployment is in double digits. Workers there have been without a pay check for a year or longer with no prospects for early relief. Last month, my own State of Massachusetts, with an economy that had been described as recession-proof, suffered the single largest increase in unemployment of any industrialized State. Since April, unemployment there has jumped more than 2 points, going from 5.6 to 7.9 percent.

And these figures do not begin to tell the story for some workers. Unemployment among blue collar workers is 11 percent. Unemployment in the construction industry is 18 percent. And for the least advantaged in our society the situation is disastrous. Unemployment among minorities is at record levels, almost 15 percent for blacks and Hispanics. Unemployment among teenagers is over 20 percent, 43 percent of minority teens cannot find work and the rate just for Black teens alone is a staggering 46 percent.

Yet, despite these bleak reports, and the administration's admission that it is going to get worse, we are told to hold our course, accept more cuts and be patient—"prosperity is just around the corner."

The amendment I am proposing is a modest one. It is intended to provide a few more opportunities for the truly needy in our society who cannot find work now to get the skills and education and experience they will need to qualify for the millions and millions of new jobs the President has promised when prosperity does return. My proposal would permit a few thousand more unemployed adults to get classroom and on-the-job training in skills centers like the nationally recognized one in Springfield, Mass. There, individuals who have run out of options are training for good-paying jobs with a future. It would insure 90,000 more teenagers part-time jobs and the basic education they need to get their high school degrees. It will mean another 94,000 youngsters will be gainfully employed next summer, and finally it will give 4,000 more young adults a chance at Job Corps. It would also insure that three new Job Corps Centers in Illinois, New York, and Kentucky will open as planned.

I want to emphasize that these funds are not for public service jobs. They are to train the unemployed for private sector jobs. Even with the additional resources I have proposed, these programs would still operate at or below the levels authorized in reconciliation.

Two of these programs—Job Corps and summer jobs—were part of the "safety net" President Reagan announced last March. But by September these programs and those who benefit from them had fallen through. My amendment would put these programs back in the safety net.

President Reagan also promised to give the private sector a greater voice in designing and operating federally funded training programs. Title VII was the only program he held harmless in his September budget yet the Senate bill cuts $38 million below the President's request. My amendment would add just $14.7 million to bring the private sector initiative program back to the higher levels supported by the House.

You may ask what evidence we have that these programs work. Recently released findings by Dr. Robert Toggace writing for the W. E. Upjohn Institute and the General Accounting Office, provide conclusive evidence that training programs are cost effective both for society and for the individuals who are served.

Those in classroom and on-the-job training gain between 10 to 18 percent more in earnings in the first year after the program than similar individuals not enrolled.

Job Corps graduates earned 21 percent more than their peers 2 years out of training.

Evidence is also clear that training programs reduce crime and cut the costs of welfare and other income transfer programs.

In short these training programs work. They are good business. It is the best kind of supply-side economics. It is an investment in human resources that yields a positive return.

Mr. President, I would like to share with my colleagues an article from the November 9 issue of the Boston Globe which tells the story of Timothy Holding who lost his job because of the Reagan budget. Timothy's out, his only option, was a life of crime. The amendment I am offering is intended to insure that there are productive alternatives for the thousands of other Timothys in this country.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Globe, Nov. 9, 1981]

TIMOTHY HOLDING'S PATH TO A COURTROOM

(By Todd Balf)

Eighteen-year-old Timothy Holding of Revere is under police guard at Boston City Hospital, where he is recovering from a gunshot wound to the temple. Last week he told a former CETA youth program director who visited him that he'd "messed up."

Florence Cirino said Holding told her, "Flo, I messed up, I'm sorry, Flo. I messed up."

Timothy Holding's past includes years of shuttling between his divorced parents and switching schools. He dropped out of 10th grade and was convicted for robbing an MBTA turnstile when he was 17. His future is uncertain. He is facing court arraignment in connection with a bungled armed robbery attempt in Charlestown.

Holding faces charges of armed robbery, assault with intent to kill and unlawful possession of a firearm when he leaves the hospital. He was shot in the left temple by off-duty Boston police detective Joseph Smith Jr. on Oct. 30 when, police said, he held a .38 caliber revolver on 20 persons in the New England Merchants National Bank in Charlestown.

Holding and a 17-year-old youth carrying a derringer were arrested while a third suspect escaped, police said.

Counselors, friends and acquaintances of Timothy Holding who were interviewed last week say his record, his inability to read and write effectively, his broken home and the fact that he could not find steady employment may have contributed to his frustration and anger. Among young adults like Holding, these people said, such problems more frequently are erupting into violence.

"All we want people to know is that Timmy's not unique," said Cirino, the former director of CETA's Youth Activity Programs in Revere, Chelsea and Winthrop. "There are hundred of kids around just like Timothy," said Cirino.

Born in Charlestown, Timothy Holding is one of five children of Donald and Barbara Holding. After moving to Saugus, the couple were divorced when Timothy was 11 years old and custody of the children was won in court by Mrs. Holding, according to Donald Holding of Revere.

"After we split up," said Holding, "Timmy became mixed up. It hit him the hardest," he said in an interview.

Timothy Holding continued to attend school, according to his father, but gave up trying to learn after he was forced in both elementary and high school to repeat grades. Holding explained that his former wife and his children moved several times to different apartments in Charlestown and East Boston.

"He'd just disappear from everybody and be by himself," said Holding yesterday. He said that on several occasions his teenage son disappeared for long periods and he had to search for him.

CETA counselors said that when Holding quit school after his sophomore year, he had the equivalent of a fourth-grade education.

Six months later, at age 17, Holding and several other youths robbed an MBTA turnstile and received a year's probation according to court records. Timothy moved in with his father soon afterwards. His probation officer handed Holding's case to Cirino in March.

"Timothy had a long way to go," said Frank Nemeth, Holding's chief supervisor and friend in the CETA program. In March, he gave Holding the first job he'd had in two years.

"But Timmy was one of the guys I could trust," he said. "He could hardly construct a sentence," Nemeth said, "and he was so frustrated. But he tried."

"He was so excited and happy because finally he had a job," said his father.

Nemeth said the 18-year-old with short dark hair and a baby face was one of three persons on a CETA crew that weatherized local businesses by installing insulation and weather-stripping. He received the minimum wage.

On September 30, with less than a week's notice, Timothy Holding and 1000 other youths in his CETA program found themselves out of work when CETA's federal subsidy was cut by the Reagan Administration.

Cirino said counselors desperately tried to place Timothy Holding in a job. Cirino, Nemeth and CETA coordinator Eleanor Mahon said Holding was worthy of placement because of his punctuality, effort and initiative.

But, unlike many of his friends, Holding failed several skills tests which could have placed him in a job. On his own, he took the exam to enlist in the National Guard, according to Nemeth. He failed again.

"He tried in several places to find a job," said his father. "But he did not have the training or the education. And he needed money."

"It's in the people's own interest' to pick up on kids like this," said Nemeth. "There are many kids who want to be productive citizens but need help getting there. Who does it pay off in the end if we have to send a kid to Walpole for 20 years?"

Timothy Holding is listed in stable condition at Boston City Hospital. No date has been set yet for his arraignment.

Mr. KENNEDY. Mr. President, I urge my colleagues to keep faith in all those Timothy's and support this modest addition to the Senate resolution to provide the jobs and training the unemployed so desperately need.

Mr. SCHMITT. Mr. President, this is a very large addition to the bill as reported by the Appropriations Committee which is part of this continuing resolution by reference.

The committee is not oblivious to the facts which the Senator from Massachusetts has given us. As a matter of fact, they were considered very carefully in our recommendation to the Senate.

The committee has included $200 million to continue the youth employment and training programs together with, and I emphasize this, Mr. President, an estimated $195 million of unspent prior years funds. A total of $395 million would be available to enroll an estimated 195,000 youths. The House has included $400 million for the youth employment training program, and this is only part of the amendment, plus carryover, for a total of $595 million.

A split in the conference in this area, I say to the Senator from Massachusetts, should that occur, would provide a total level of nearly $500 million.

The President's September request, as he knows, is $213,782,000. In March, he had proposed eliminating the program but revised his proposal after Congress reauthorized it with a funding ceiling of $576 million in the omnibus reconciliation bill.

The Senate Appropriations Committee also included report language to limit unnecessary stipends for enrollees during training. Stipends amount to about 20 percent of the cost of CETA training programs, and are currently given to all enrollees, regardless of need. If stipends were given only to the most needy students, at least 10 percent could be saved and used instead to expand enrollment opportunities.

The total recommended for all CETA programs is $3.2 billion—of which two-thirds is for youth. All of the Job Corps, funded at $600,000,000, is for youth; another $674,168,000 is included for summer youth jobs. Half the remaining $1.7 million in CETA funding serves youth, for an estimated total of $2.3 billion for youth out of the $3.2 billion in overall CETA funding.

Even though the youth unemployment rate is now on the average, over 20 percent and even more for minority youth, thousands of unskilled jobs go begging every month. In September, State Employment Services offices listed 340,000 job openings nationwide. Fast-food restaurants are generally always looking to hire, and openings remain unfilled for janitors, farm workers, service station attendants, and salespeople.

So the Senate Appropriations Committee, particularly the subcommittee that I chaired, tried very hard to target the resources available to us on jobs that were going to create skills that could be used in the marketplace.

I think, Mr. President, that that covers the major provision the Senator from Massachusetts has proposed—that is, an additional $200 million for part A of title IV of the Comprehensive Employment and Training Act. Similar arguments can be made relative to the other somewhat smaller but still significant additions.

Mr. President, the total of the Kennedy amendment would be an addition of $334.7 million.

I say, Mr. President, in conclusion, we are going to take this bill to conference. I am absolutely convinced of it. The leadership has guaranteed that everyone will have a chance to offer amendments such as this on the bill as a whole. We shall get to conference at the earliest possible time. I think there are definite incentives for the House to go to conference and the Senator from Massachusetts will see some significant increases, more than likely, as a result of conference action.

I hope the Senate will disapprove his amendment at this time and delay consideration again until the regular Labor-HHS-Education bill is before the Senate.

Mr. President, I reserve the remainder of my time.

Mr. KENNEDY. Mr. President, the Senate, in its judgment, passed a reconciliation bill, which authorized $2.2 billion for these programs. That was just last July. Since July, 1 million more people are out of work. Youth unemployment for minority youth has gone up in excess of 10 percent. This body, in July, made the estimate that $2.2 billion was a bare minimum figure to deal with youth unemployment, particularly those who were facing the hardest time acquiring skills.

Mr. President, we have had a dramatic increase in the needs of young people since July of this year, but still, the Committee on Appropriations comes back and says to us, "We are effectively going to reduce that $2.2 billion in the Senate by over $500 million."

Mr. President, that response bears absolutely no relationship whatsoever to the needs and to the changing economic conditions. Those unemployment predictions were not stated by those who have differed with the economic policies of the administration, but by Mr. Regan himself, who is the Secretary of the Treasury, and Mr. Weidenbaum, the chairman of the Council of Economic Advisers, and Mr. Baldrige, the Secretary of Commerce.

They say that unemployment will not stop at 8 percent. It is going up to 9 percent and perhaps higher. If those predictions are accurate, there is going to be an even greater need for these youth training programs.

Mr. President, all that this amendment will do is restore $324 million to make our program comparable to the House. This level is still $200 million less than the Senate voted on in July of last year. What I am suggesting is that we take a look at the needs of young people in this country—some of whom had jobs in July and are out of jobs, others of whom had no opportunity to acquire jobs because of the economic conditions—so that, at least, we are giving them skills so that when there is some revival to our economy, they will have some sense of hope for the future. Mr. President, that is what this amendmnet does.

The PRESIDING OFFICER. The Senator from New Mexico.

Mr. SCHMITT. Mr. President, the Senator from Massachusetts expresses, I think, the general sentiments of this body and the general sentiments of the Appropriations Subcommittee that I chair. Unfortunately, we have a limited budget. We have $85 billion in the Senate version of the regular Labor-HHS-Education bill, approximately 70 percent of which is in the entitlement area and that is going up almost exponentially. It is squeezing these programs to death.

I do not like it. As a matter of fact, as the Senator from Wisconsin knows, I tried to find a way to cap these entitlements, cap their growth so we can add money to these very programs. It was part of my proposal. But I do not have the votes in this body to do that, to override the points of order to give us some flexibility so we can fund these kinds of programs.

Given that, the proposals that the subcommittee made to the full committee and that are now before the Senate as a reported bill did take into account overall, looking at the total programs available for training young people, and actually increased the funding for programs like Job Corps that were going to the very problem that the Senator from Massachusetts has addressed.

We have done the very best we can, I say to the Senator, and until we can get some relief on entitlements, so we can go in and work on low-income energy assistance, student aid, higher education, and youth employment and training, which are discretionary programs, we are going to be stuck with these problems. I hope the Senator from Massachusetts will help when it comes time to convince others that we must cap the growth of those entitlements. They are totally out of control.

Mr. KENNEDY. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. One minute and 14 seconds.

Mr. KENNEDY. The point, Mr. President, is really, we are pitting the same groups, almost the same families, against each other. It is the same family that is going to be squeezed on medicaid, because of the cap on that, whose son is going to lose his job and whose grandson is going to be thrown out of a training program. The fact remains that within the concurrent resolution, it is going to be the same families that are going to be most affected.

I could point out other areas of the growth in terms of Federal expenditures, which I believe has taken place in terms of the tax expenditures over the period of time. We have debated those issues. We have to establish priorities here in this body.

It seems to me that what we have seen is that, with the dramatic reduction in job training programs, we are saying to young people in this country, "With regard to your programs, we can cut those back by some 40 percent, in spite of the significant increase in unemployment, while we are unprepared to cut back in some of the other areas."

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. KENNEDY. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. EAGLETON. Mr. President. I support Senator KENNEDY's amendment to add $334.8 million to restore youth employment and training programs and the private sector initiative program to the House-passed levels.

This country faces a situation in which 1,800,000 of our young people are literally walking the streets in search of a job. In just the last month. the unemployment rate among minority youth rose from a shocking 37.5 percent to an astounding 42.9 percent. For white youth. the rate rose from 17 to 17.6 percent. Last month's overall unemployment figures represented the largest monthly increase in the number of unemployed in 5 years. The current number of unemployed is the largest number of unemployed since 1939.

And how does this continuing resolution seek to meet the needs of these unemployed, particularly the needs of youth aged 16 to 19 who are without jobs? Why, it reduces the previous level of support for year-round youth employment programs by a whopping 71 percent. It reduces last year's level of support for the summer youth employment program by 20 percent.

How callous can we be to say we are going to eliminate thousands of training slots for these young people? How callous can we be to say that we have already cut these programs substantially under reconciliation, so let us put the knife in a little deeper and twist it a little harder?

I know that the argument will be made that this is a continuing resolution, and that the Senate should not load it up with extraneous amendments, since it is only a stopgap funding measure. To those who are safely secure in their own livelihood, safely secure in their own jobs, the issue of unemployment may be extraneous. But to millions of other people, to 1,800,000 young Americans who are jobless—and for all practical purposes will remain jobless as they face the future without skills—there is no issue more transcendent, more important than the question of employment.

If one looks at the way the employment and training programs are funded under this continuing resolution, one would think that the recession must be over. There must be plenty of jobs out there in the private market. There must be no need to be concerned about people who are unemployed.

Nothing, Mr. President, nothing could be further from the truth.

On the front page of the Washington Post this morning, the administration's chief economic adviser is predicting that unemployment will climb to 9 percent, the highest level of unemployment since World War II, and that the "worst—of the recession—hopefully will be behind us as 1982 unfolds."

The front page of the New York Times carries a similar story, the lead paragraph of which reads as follows:

> President Reagan's chief economic adviser, Murray L. Weidenbaum, in an implicit acknowledgment that the recession will be neither mild nor brief, scaled back his forecast today for economic growth in 1982.

If we pass the continuing resolution today with the appropriations figures for employment and training programs as recommended by the committee, we are saying that the U.S. Senate does not give a damn about people who are not employed. If we allow these cuts to go through, we are taking away the only ray of hope for many Americans who have fallen by the wayside.

I will admit that some of the youth training programs in the past have been ineffective. I will admit that there has been some waste and abuse in these programs in the past. I remind my colleagues that these year-round youth programs were invented just 4 years ago; the private sector initiative program is only

3 years old. But again, I emphasize that they are new programs, programs which have had some growing pains, but programs which are now able to produce their desired results.

To back away from our commitment to job training programs now would be a deep mistake. It would be a move away from the very goals of this administration, which none of us would fail to support, of economic growth, of investments, and of productivity. We simply cannot strengthen our economy without investing in our single most important resource, our human capital.●

● Mr. BRADLEY. Mr. President, I am pleased to support the amendment of the Senator from Massachusetts which will restore needed funds for existing training and employment programs.

We need only look to the financial pages of our Nation's newspapers to see why these funds are needed. Among this week's headlines are the following:

Commerce Secretary Baldrige warns that unemployment could reach 9 percent under the President's economic recovery plan;

The President's chief economic adviser, Murray Weidenbaum, revised his estimate of 1982 economic growth from 3.4 percent to 1 percent; and

The Federal Reserve Board recently reported that our Nation's factories operated at 76.9 percent of capacity last month, only two percentage points above the lowest level of the last recession.

Unfortunately, I could continue with an extensive description of the sad shape of our economy: Bankruptcies are up, unemployment is up, housing starts are down, and real growth is, of course, down. At a time when our economy is in such shape and over 8½ million people are unemployed, the administration proposes with this continuing resolution to reduce the funds available for employment and training assistance.

The amendment which we propose would restore funds for many critical programs, including the Job Corps, the summer youth employment program, various private sector programs, and other youth employment programs. The House of Representatives' spending recommendation for all of the employment and training assistance is over $3 billion less than last year's appropriation. With this amendment we seek to restore $334 million to these particular programs.

It makes no sense whatsoever to reduce our commitment to employment and training assistance at a time when the administration itself concedes that we are in for "tough times ahead," as the Secretary of Commerce has said. I ask the Senate to approve this amendment and restore the necessary funds for these important programs.●

● Mr. CHILES. Mr. President, I want to speak briefly in support of this amendment to increase funding for youth job training. While I have been critical over the years of the CETA public jobs programs, youth training is another matter. We want disadvantaged youth to get the skills they need to work in our rapidly changing economy. When I look at everything happening in our economy, I see the potential of a serious shortage in skilled labor.

Mr. President, we have passed a huge tax incentive for capital investment. So that we can get a higher level of industrial technology. But higher technology requires workers with greater skills. At the same time, we are giving our military the resources they need to attract and retain skilled labor. Since the peak of the "baby boom babies" entering the work force has passed, we are going to have fewer youth going into jobs. That says to me that we have to put a greater emphasis on the quality of job skills, and make them available to all our youth.●

● Mr. PELL. Mr. President, I support the amendment of the distinguished Senator from Massachusetts (Mr. KENNEDY) to increase the funding of the CETA youth programs by $330 million.

Youth training programs authorized under the Comprehensive Employment and Training Act have provided interdisciplinary services necessary to give disadvantaged teenagers a "fair chance" in our society.

This amendment would bring funding for year-round youth training, summer jobs, Job Corps, and the private sector initiative program up to the levels that were approved by the House several months ago.

These are difficult budgetary times, Mr. President. But our young people are our country's greatest resource and deserve a chance for meaningful work experience.

Having served as chairman of the Subcommittee on Education for 12 years, I know that education and training programs take time. The fruits of our investment are often not realized immediately. I hope that my colleagues will consider the tremendous gains that are being made in this area by community-based organizations and local education authorities and vote to approve this amendment.

Mr. President, youth employment is at an alltime high level. There are not enough jobs in our cities for mature, skilled workers, let alone teenagers with little work experience. If the CETA youth programs are funded at the level proposed by the Senate Appropriations Committee, three-quarters of the high school dropouts, inner-city youth, and teenagers with special personal problems who are participating in the program will be dropped and, perhaps, lose whatever opportunity they might have had to break into the job market.

If this amendment is defeated, it sends a message to the American people that Congress does not consider the problem of youth employment serious enough to maintain the only Federal program that exists to solve the complex economic and social problem of youth employment. In my view, every young person, regardless of family income, should receive the necessary job training and experience to compete for permanent, secure jobs. Normally this training would be sponsored by the private sector. However, at a time when our general unemployment rate is approaching double-digit levels, it is unreasonable to expect that this will occur. Our Government, which in many ways has contributed to the current economic crisis, has a responsibility to this generation of teenagers and I hope that my colleagues will approve this amendment.●

Mr. SCHMITT. Mr. President, a parliamentary inquiry.

Is a motion to table the amendment in order, under the unanimous-consent agreement?

The PRESIDING OFFICER. The unanimous-consent agreement was to the effect that a vote would occur on this amendment at 6:30, which would preclude a motion to table.

Mr. SCHMITT. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Arizona (Mr. GOLDWATER), and the Senator from Kansas (Mrs. KASSEBAUM) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Connecticut (Mr. DODD) and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

I also announce that the Senator from Vermont(Mr. LEAHY) is absent because of illness.

I further announce that, if present and voting, the Senator from New York (Mr. MOYNIHAN) would vote "yea."

The PRESIDING OFFICER. Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 36, nays 58, as follows:

[Rollcall Vote No. 398 Leg.]

YEAS—36

Baucus	Hart	Metzenbaum
Biden	Heinz	Mitchell
Bradley	Hollings	Pell
Burdick	Huddleston	Pryor

NOT VOTING—6

Baker	Goldwater	Leahy
Dodd	Kassebaum	Moynihan

So Mr. KENNEDY's amendment (UP No. 659) was rejected.

Mr. SCHMITT. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. PROXMIRE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

REGARDING OIL AND GAS ON THE ARCTIC COASTAL PLAIN

Mr. JACKSON. Mr. President, I should like to clarify one aspect of this measure dealing with the U.S. Fish and Wildlife Service and the U.S. Geological Survey.

Language appears on page 10 of the joint statement of managers with regard to amendment 12 as follows:

Within available funds, the Service is . . . to provide $300,000 for the North Slope study for transfer to the Geological Survey. This will permit the Survey to discharge its duties as the lead agency in assessment of oil and gas exploration development and production on the Arctic Wildlife Refuge pursuant to Sec. 1002 of Public Law 96-487. There is no objection to initial development on new Alaskan refuges while the refuge management plans are being prepared.

From reading this language, one might conclude that section 1002 of the Alaska Lands Act, or the pertinent legislative history, directs that a particular agency within the Department of the Interior be designated as the "lead agency" for the purpose of carrying out the oil and gas exploration program on the coastal plain of the Arctic Wildlife Refuge.

This is not the case. We did not specifically address this issue in section 1002 nor, in my view, is there any clear legislative history directly on this point.

It is my understanding that Secretary Watt has directed that the lead agency for portions of the study be the USGS. It is also my understanding that this decision of the Secretary is currently being challenged in the courts. I would certainly not want any one to construe the action in this conference report as having any effect on that pending litigation. Nor should this language be construed as in anyway amending ANILCA or the Refuge Administration Act.

I am also concerned, Mr. President, that this language in the conference report and the statement of managers might be viewed by some as providing authority for oil and gas development and production in the Arctic Wildlife Range. This language certainly does not provide that authority, and I want to be sure my colleagues understand that.

Section 1003 of ANILCA is very clear on this point. Production, leasing, or other development leading to production of oil and gas from the Arctic Wildlife Refuge is prohibited unless specifically authorized by an act of Congress.

I am sure that the conferees on this measure did not contemplate overturning this statutory provision with this language in the statement of managers relative to the USGS' "assessment of oil and gas exploration, production and development." However, I thought I had better clarify this matter for the record.

Mr. JOHNSTON. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. JOHNSTON. I appreciate the remarks of the Senator from Washington. Let me say that as the manager of this bill for the minority, I certainly never intended to include anything in the conference report or the statement of managers designed to make moot any court decision or affect the outcome of any pending litigation. Nor is anything in the report designed to modify or amend anything in the ANILCA or the Wildlife Refuge Administration Act.

Similarly, I agree with the Senator from Washington that this legislation in no way authorizes any oil and gas development or production in the Arctic Wildlife Refuge. That decision, as required by section 1003 of the ANILCA, will have to be made later by Congress. The legislation we are considering today does not constitute any type of congressional authorization in this regard.

I thank the Senator for bringing these matters to the attention of the Senate.

Mr. McCLURE. Mr. President, with regard to section 101(g) concerning activities provided for in the Department of Interior and Related Agencies Appropriation Act, 1982, I understand the phrase "if such act had been enacted into law" means the conference agreement on such act. Therefore funds would be made available to the strategic petroleum reserve off-budget account?

Mr. HATFIELD. Yes.

Mr. McCLURE. In addition, I understand that the funds made available for the acquisition and transportation of petroleum, and for other necessary purposes, would include all those purposes under section 167 of the Energy Policy and Conservation Act of 1975, as amended by the Omnibus Reconciliation Act of 1981. Is this correct?

Mr. HATFIELD. Yes.

ARSON

● Mr. GLENN. I would like to address the provision appearing on page 20 at line 7, which is a prohibition against a premature reorganization of the Bureau of Alcohol, Tobacco and Firearms without congressional oversight. I applaud my colleague from South Dakota, the chairman of the subcommittee, for including this provision in the continuing resolution. I might wish he had gone further, in fact.

I would ask my colleague if the prohibition is intended to encompass a proposal that would curtail or eliminate the arson law enforcement program of the Bureau of Alcohol, Tobacco and Firearms?

Mr. ABDNOR. The Senator from Ohio is correct. The arson law enforcement program is included in the prohibition against reorganization before March 15, 1982, or thereafter if disapproved by the House and Senate Committees on Appropriations.

Mr. GLENN. Is it the committee's intent that the arson law enforcement program be maintained and effectuated under the ultimate reorganization plan that is finally approved?

Mr. ABDNOR. That is correct.

Mr. GLENN. I thank the chairman of the subcommittee.●

THE COMMUNITY SERVICES BLOCK GRANT

● Mr. RUDMAN. Mr. President, some questions have arisen regarding the effect the continuing resolution would have on the community services block grant and the Secretary's discretionary fund which is tied to it. This requires some clarification in order to ensure that the Department of Health and Human Services has the required guidance.

The House version of the Labor-HHS appropriations bill appropriates $362,522,000 for the community services block grant and sets aside $32,630,000 of that amount for the Secretary's discretionary fund as authorized by section 681 of the Reconciliation Act.

The amount set aside is the maximum 9 percent authorized under section 681(b). Although the House did provide the maximum for the discretionary funds, given a $362.5 million appropriation for the block grant, I believe there are some serious problems with how the funds are distributed in the House report language specifically the fact that some important existing programs are not funded.

By contrast, the Senate appropriated $300 million for the block grant. No specific amount was set aside for the discertionary fund in the bill but, through report language, the Senate directed the Secretary of HHS to fund all vital ongoing programs including, by specific reference, the programs the House chose not to fund.

Under the continuing resolution, only $300 million, as appropriated by the Senate, would be available for the block grant. Yet, if the more restrictive House bill language, which designates $32.6 million for the discretionary fund, is followed, HHS would be violating the 9 percent ceiling in the authorizing statute.

It is my contention that HHS should resolve this conflict between the House appropriations bill language and the authorizing statute by spending 9 percent of $300 million, or $27 million, to maintain all ongoing programs under the discretionary fund, and further, that no program should bear a disproportionate cut. Does the Senator from New Mexico agree with this?

Mr. SCHMITT. Mr. President, I think the Senator from New Hampshire is correct. I appreciate his bringing this problem to my attention, and I would expect HHS to spend the money as is indicated here.

Mr. RUDMAN. I should add, at this point, that this matter has been discussed with Senator DENTON, the chairman of the authorizing subcommittee, and he agrees with this interpretation.●

● Mr. CHILES. Mr. President, I wish to take this opportunity to express concern with two growing trends in our congressional budget process that we witnessed in the process of considering this continuing resolution. Both of these trends, I believe, point to the further erosion of our normal committee process; they represent an erosion of our reputation as the greatest deliberative body in the Nation, and they represent an erosion of the power of the purse authorities given to the Congress by the Constitution.

The first matter of concern to me is the fact that this continuing resolution, as proposed by the committee, would be in effect for the entire fiscal year or until September 30, 1982. This eliminates all the normal pressures for the completion of our process of marking up and passing each of our 13 appropriations bills. The rush of amendments that I witnessed yesterday in the full committee markup of this resolution, and the large

number of amendments that have been called up and debated on the floor today are motivated by the fear and growing conviction that we will not pass our regular bills, and this is the last chance to catch the train.

Yesterday in the committee, Senator STENNIS, who has the great prospective of history after 34 years of service in the Congress, gave us a history lesson on the continuing resolution. I believe some of that bears repeating here today. Senator STENNIS reminded us that the continuing resolution is a device that was invented shortly after the Second World War. It was intended to be a short-term stop-gap measure for only a matter of days to bridge the gap between when 1 fiscal year ended and when one of the regular appropriation bills could be passed. The continuing resolutions were in short-term measures. They were for only one or two bills. This process has now changed to the point where this continuing resolution is for the entire year and covers all 13 major appropriations bills.

While I agree that there is no real alternative at this point, it seems to me that a preferable approach would be to make the continuing resolution apply only for 1 month or until December 18, 1981. This would be an adequate time to permit us to complete the regular bills. Without such a deadline confronting us and goading us to action, I believe that many or most of the regular bills will not be completed. If this were to come to pass, I believe it would be an undesirable short cut that erodes the function and expertise of our Appropriation Subcommittees. It also erodes the normal committee process and institution of the Congress by presenting us from working our will on these matters.

Mr. President, the other matter that is of concern to me is the growing trend to offer across-the-board cuts to these spending measures. If our appropriations bills are too high, as I believe many of them are, we need to reduce them in a surgical way that relies on the expertise of the committee. I am relatively sure that because this resolution provides funding levels that are too high as compared to the President's September proposals that it will be vetoed by the President. When that happens the pressures will only mount to provide across-the-board reductions to appropriated funds, as well as to entitlement programs.

My opposition to across-the-board cuts and Presidential impoundment powers is not just a matter of protesting congressional prerogatives. I believe that the people of Florida expect me to be accountable for my votes on policy issues which affect their lives. As the events of this year point up, budget issues are vital to the American people.

Across-the-board cuts let Members avoid standing up and being counted on which programs to cut and which to fund. In a similar way, giving the President impoundment powers lets Members vote for any high level of spending, and count on the President to exert fiscal responsibility. In the long term, letting Members of Congress avoid those tough choices is going to produce higher levels of spending.

I also want to address the issue of letting the President modify or reduce spending for "entitlement" programs. While I believe that we must look for ways to get better control of entitlements, a wide open grant of legislative authority to the Executive is not the way to do it.

No one of us has a monopoly on wisdom. The Constitution lets the President propose legislative changes. But only Congress can enact the changes. The congressional process provides for public hearings, where individual citizens and their representative groups can present their views and offer advice.

Equally important, 535 Members of Congress go home to their States and districts during the process. They get to hear what people say about the issues giving the executive branch power to modify the provisions of law goes far beyond letting the President carry out his economic program. In only a few major areas, like social security or the B–1 bomber does the elected President actually make these decisions. In most of the detailed provisions, the changes will be made by bureaucrats, who are elected by no one, and who do not have to speak to ordinary citizens about the effect of their proposals.

Mr. President, I have taken the time to point these matters out because of their importance to the Senate and the Congress as an institution. We must avoid continuing resolutions of such a massive nature in the future as they represent a shortcut approach which only erodes our responsibilities in the Congress.●

OFFICE OF INSPECTOR GENERAL AT THE DEPARTMENT OF THE TREASURY

● Mr. CHILES. Mr. President, section 110 of the continuing resolution before the Members today gives the Secretary of the Treasury Department 2-percent transfer authority. This will permit the Secretary of the Treasury Department, with the approval of the House and Senate Committees on Appropriations, to transfer up to 2 percent away from any appropriation account provided that no recipient account is enriched by more than 2 percent.

Senator ABDNOR, chairman of the Treasury, Postal Service and General Government Subcommittee was successful yesterday in committee in this amendment, and I rise to compliment him on his foresight in this matter.

Last year when I chaired this subcommittee, I recommended a similar measure, and I believe Senator ABDNOR's proposal has considerable merit. It will give the Department greater flexibility to manage their programs and to meet unexpected contingencies.

Also, in view of the rigid fiscal restraints placed on the Department under the revised fiscal year 1982 budget, the committee felt that this transfer authority was essential to allow the Secretary to sustain his critical Treasury functions. It should also reduce the need for the Department to seek supplemental appropriations with the occurrence of every contingency and unexpected event. It can also be used to enhance activities that will raise additional revenues or help eliminate waste. For example, I believe that this transfer authority can and should be used by the Department to help create a more credible Inspector General operation.

Mr. President, the Department of the Treasury now has a small Inspector General function included within the Office of the Secretary. This small office has fewer than 15 professional investigators and auditors and does not have statutory independence as do other Inspector Generals in the executive branch; it does not have subpena powers and it is also not required to report to the Congress on its activities as are the statutory Inspector General offices.

Currently, the Department relies on the auditors and investigators in each of the independent agencies to investigate allegations of their own wrong doing. While the small Inspector General activity in the Office of the Secretary tries to provide oversight to these activities, it is too small to have any real leverage. It is also not independent from top management in the Department.

Last year, the Appropriations Committee recommended to the full Senate the transfer of 200 positions and $7.5 million from the various Treasury agencies and departments to create a new Office of Inspector General.

Mr. President, I ask unanimous consent to have a table printed at this point in the RECORD which shows the transfers that were recommended last year. These transfers would have been achieved by moving approximately 15 percent of the auditor and inspector resources that now exist in each of the independent agencies to a central office. This would have left each of Treasury bureaus and agencies with adequate resources to also conduct their own internal investigations.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Office/Bureau	Offsets	
	Positions	Amount
Office of the Secretary	22	$882,000
Bureau of Government Financial Operations	3	115,000
Bureau of Alcohol, Tobacco and Firearms	5	193,600
U.S. Customs Service	30	1,163,700
Bureau of the Mint	1	28,000
Bureau of Public Debt	2	71,000
Internal Revenue Service	134	4,976,500
U.S. Secret Service	3	115,000
Total	200	7,544,800

Mr. CHILES. Mr. President, last year we also recommended that this new Inspector General office be included as a separate appropriation account; that it be given subpena powers; and that it be required to comply with the reporting requirements of section 5 of Public Law 95–452, the Inspector General law of 1978. As the Members may recall, the Treasury bill never came to the Senate floor last year and, therefore, the full Senate was never given a chance to vote on those particular recommendations.

This year the House has passed H.R. 2098 to create a statutory Inspector General at Treasury. This legislation is now

pending in the Senate Committee on Governmental Affairs. I am hopeful that this legislation will be passed into law and the Department will move quickly with this transfer activity to create a more credible Inspector General operation.

I ask Senator ABDNOR if he believes that the transfer authority he has recommended could be used by the Department to help provide an expanded Inspector General function at the Department without waiting a full additional year for the fiscal year 1983 appropriations process?

Mr. ABDNOR. Yes. Mr. President, I believe that is an example of the kind of flexibility that this transfer authority will give the Department. I would also add that our traditional prerogatives in the Appropriations Committee, as well as those of the authorizing committees, will be protected as these transfers cannot be made without the approval of the House and Senate Committees on Appropriations.

Mr. CHILES. I appreciate the Senator's response, Mr. President. We have heard considerable discussion by this administration and previous administrations, and in fact from this Senator as well, that we need to aggressively eliminate fraud, waste, and abuse to reduce Government spending. I think it is fair to say that many of us expect the Department to use this authority to recommend improvements in the Inspector General function at the Department.●

(By request of Mr. ROBERT C. BYRD the following statement was ordered to be printed in the RECORD:)

HUD APPROPRIATIONS REVISIONS

● Mr. LEAHY. Mr. President, when the Appropriations Committee considered the continuing resolution, Senator EAGLETON offered an amendment on my behalf to restore the funds for the Environmental Protection Agency (EPA) which the administration proposed to cut in its September round of budget cuts.

These cuts in EPA's budget—$140 million—went far beyond the savings that can be achieved through increased efficiency or elimination of waste and fraud. Combined with the large budget reductions proposed for the Agency in March, the administration's September proposal cut EPA's budget by 30 percent this year and by 50 percent in 1983.

These severe cuts would effectively repeal the public health and environmental legislation enacted over the last decade. The administration's plan would reduce the EPA to roughly half its present size—this despite the fact that Congress has acted to expand the authorities of the Agency in recent years, especially in the area of cancer-causing toxic substances.

We must not permit the administration, through budget cuts, to weaken the EPA and effectively repeal the laws which protect the public health and economic strength of the Nation.

I strongly object to the fact that the committee has accepted these cuts in EPA's budget without receiving any justification for $70 million of the $127 million in cuts.

The justification the Committee has received for the $13.4 million cut in research and development read like a press release, not a budget document. We have received a budget justification for the cuts in abatement, control and compliance element of EPA's budget. The description of the cuts was so damaging that the subcommittee chairman was constrained to reject a quarter of the pollution abatement cuts.

In spite of these additions, the remaining cuts severely damaged EPA's ability to protect the public against cancer-causing toxic chemicals.

Let me quote briefly from the pollution abatement budget justifications. These quotes show the severe impact of these cuts:

AIR POLLUTION

Fewer standards for hazardous air pollutants.

Curtailment of hazardous pollutant screening studies.

Result in an ad hoc approach to the gathering of (pollution) data—with a resultant loss in timeliness—and data verification/quality assurance.

WATER POLLUTION

Delay in identifying toxic pollutants.

Cut by 25 percent contract support for oil spill cleanup activities.

Cut inspections of construction grants for sewage treatment plants which would reduce the emphasis on quality of construction work.

HAZARDOUS WASTE MANAGEMENT

A significant loss of contract funds for Hazardous Waste Management in the Regions; decreased inspection of generators and transporters of hazardous wastes.

TOXIC SUBSTANCES

The $8 million cut in testing and evaluation will eliminate a substantial part of the program—to more accurately and economically predict human health effects—of chemicals.

Mr. President, if the citizens of this country realized that these budget cuts meant more cancer and disease in their families, I am sure they would reject these cuts. But these cuts are justified as a budget-balancing measure. But even if my entire original amendment were adopted—a $140 million add-on—it would affect the Federal deficit next year by only three-tenths of 1 percent.

These cuts have nothing to do with budget savings. They are, instead, an effort to repeal a decade of environmental and public health legislation. In committee. positive steps were taken. But I want to make clear to my colleagues that I will vigorously oppose further attempts to destroy the effectivenes of this agency.

THE B–1 BOMBER

Mr. President, for many years I have been opposed to the building of the B–1 bomber. I have opposed the building of this bomber because I am convinced that this single program will drain away such a large portion of the Federal budget that other essential defense and domestic needs will not be met.

Because of my concern about the B–1's cost, I asked the Congressional Budget Office to prepare an assessment of the real cost of this program.

I submit for the RECORD a copy of Director Rivlin's statement at this point.

The statement follows:

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., November 6, 1981.

Senator PATRICK J. LEAHY,
Senate Appropriations Committee,
Russell Senate Office Building.

DEAR SENATOR LEAHY: In response to your request the Congressional Budget Office (CBO) has reviewed the investment (procurement and research development) costs of the B–1 bomber and assessed the impact of potential inflation on the program. Our estimate includes the total acquisition costs of the baseline bomber; the four major additional items that the Air Force has requested the contractor to examine; and, as you requested, the items GAO has indicated should also be included in the cost of the B–1.

The baseline costs of the 100 bomber program as provided by the Air Force are, $19.7 billion (in constant 1981 dollars). In addition, the Air Force requested the prime contractor to examine four major items that may be included in the final contract. These four items are rear bomb bay enlargement, permissive action link/command disable system, air-launch cruise missile (ALCM) carriage, and ALCM avionics. The Air Force estimates that these additions to the program would cost $1 billion (in constant 1981 dollars).

As you requested, we have also analyzed the major investment items that the General Accounting Office (GAO) has indicated should be included in any cost estimates on the B–1. The GAO identified these items under three broad classifications: (a) questionable reductions, (b) expenses in other program elements, and (c) potential additions. These items are shown in Attachment 1. The identified cost for all GAO items is $5.5 billion (in constant 1981 dollars). For several of these items, including operational and electromagnetic pulse testing, conventional weapons certification, a fuel tank inerting system, low and very low frequency communications, and improvements to offensive and defensive systems—the GAO was unable to obtain basic cost estimates. We have, therefore, not included estimates for these items in this assessment. Also, in estimating contractor support and nuclear weapons certification, the GAO anticipated a range of $1 billion to $2.8 billion; in this assessment we have used the mid-point of the GAO range for these two items.

After applying CBO's inflation rate assumptions to the full range of program costs discussed above, we estimate that B–1 investment costs will be $39.8 billion in then-year, or budget, dollars. With the Administration's inflation rate assumptions, the comparable cost would be $35.4 billion.

Attachments 2 through 5 provide year-by-year estimates of budget authority, using both CBO and Administration economic assumptions, for the baseline bomber (Attachment 2), the four options for which the Air Force requested contractor proposals (Attachment 3), the various items the GAO has indicated as being appropriate for any B–1 cost estimate (Attachment 4), and a summary of the total program costs (Attachment 5). Attachment 6 provides a year-by-year comparison of estimated budget authority and outlays for the total program.

These estimates, it should be noted, are for investment costs only; they are not life-cycle costs. They do not reflect the costs of operating the B–1 once it is in the Air Force inventory. Nor do they reflect the possible costs of other weapon systems to enhance the capability of the B–1 such as a new short range attack missile or a new tanker for aerial refueling.

I am sending an identical letter to Senator Proxmire and a copy to Chairman Hatfield. If your staff should have any questions concerning these estimates or the attachments they can contact Mr. Patrick Renehan of our Defense Cost Unit at 226–2840.

Sincerely,

ALICE M. RIVLIN,
Director.

ATTACHMENT 1: ADDITIONAL ITEMS IDENTIFIED BY GAO (In millions of constant 1981 dollars)

SUBJECT	COST
Questionable Reductions:	
Engineering change order budget	440
Change in avionics learning curve	100
Change in airframe learning curve	500
Reduction in avionics production estimate	86
Consideration for multiyear procurement	800
Transfer of engine component engineering development to component improvement account	40
Deferral of air vehicle depot support development	300
Expenses in other program elements:	
Operational test and evaluation	No Estimate
Engine component improvement program	115
Conventional weapons certification	No Estimate
Interim contractor support	500-2,000
Production facilities improvement	71
Manufacturing technology enhancement	170
Base facility improvement	173
Nuclear weapons certification	500-750
Potential Additions:	
Second inertial navigation system	220
Forward looking infrared sensor	125
Simulator development and procurement	337
Full scale fuselage fatigue testing	140
Fuel tank inerting system	No Estimate
Electro-magnetic pulse testing	No Estimate
Low frequency/very low frequency communications	No Estimate
Hardware, testing, electronics and support for additional weapons	No Estimate
Future improvements to avionics	No Estimate

Mr. LEAHY. Mr. President, these new estimates of the cost of the B–1 bomber show that this weapon system will be twice as expensive as the Air Force estimated just 4 months ago. Our national budget cannot afford this enormous cost, and our national security will not be improved by a penetrating bomber that cannot penetrate.

In the mid-1980s, when our budget problems are most severe, the costs of this aircraft will be at their zenith. These huge costs will force higher budget deficits—and take money away from more effective strategic programs. These very large B–1 expenditures will reduce our military strength because fewer funds will be available for military readiness or for the Stealth bomber which is widely agreed to be a superior aircraft.

Cost estimates of the B–1 have increased so dramatically because original estimates were based on unrealistically optimistic economic assumptions and did not include all the required equipment and design changes. Unfortunately, we cannot pay for the B–1 with last year's dollars or build it without full equipment.

The B–1 bomber will be obsolete before it is deployed. I do not believe we can afford a $40 billion flying Edsel.

MATERNAL AND CHILD HEALTH AMENDMENT

Mr. President, I am pleased to cosponsor Senator BUMPERS' amendment to provide funding for maternal and child health programs, including screening and immunizations, diagnostic testing for genetic disorders and handicapping conditions in young chilren, and adolescent pregnancy services.

A story is told of a couple who went to an orphanage to adopt two children. The matron of the orphanage first brought out the most beautiful children for the couple to meet. And the couple was displeased. Then she brought out the most talented of the children to the future parents. And they were displeased. Finally, she brought out the most intelligent of the children. The couple rose to leave and explained, "you have misunderstood, we want the ones no one else will have."

The children served by these maternal and child health programs are often the ones that no one else will have. They are handicapped, abused, neglected. Their mothers are often poor, but do not qualify for medicaid. They fall between the cracks and crevices of eligibility for many Federal and State programs. The funds provided under these maternal and child health programs are

often their only source of assistance. This Congress, in adopting Senator BUMPERS' amendment, would be exhibiting both compassion and commonsense.

A further reduction in funds for maternal and child health services would be contrary to the administration's goal of protecting the truly needy in our society. A further reduction in funds for these programs would be contrary to our goal of containing health and social welfare costs. The State of Alabama reports that for every $1 spent on maternal and child health services, the State saves from $5 to $10 in costs that would otherwise have occurred from a lack of access to prenatal and primary health care.

The State of Mississippi reports that it costs $1,100 to provide complete prenatal care to a pregnant woman, while it costs the State $20,000 a year to provide institutional services to a child born with handicapping conditions because his mother did not receive the necessary care. These maternal and child health programs have enabled over 1 million children to receive immunizations and other basic health services. Three million children receive services for serious genetic disorders, hemophilia, and sudden infant death syndrome. Over 1 million mothers receive prenatal and delivery services under these programs. Still, many more mothers and children are unable to receive the help they need.

Even at the level of funds Senator BUMPERS is recommending, maternal and child health programs face a dramatic reduction from the fiscal 1981 level of $457 million. The efforts in my own State of Vermont to provide essential health services to mothers and children will suffer dramatically if Senator BUMPERS' amendment is not approved. Many of our public health offices would be closed, there would be a sharp decrease in prenatal classes, immunizations and well child clinics. Our child development clinic, the only facility in the State for the diagnosis of mental retardation in very young children would be closed.

Mr. President, I believe that a society which expects its citizens to do all they can for their country when they are well is a society which should do all it can for its citizens when they are ill. I urge all of my colleagues to support Senator BUMPERS' amendment.

FUNDING FOR VOCATIONAL REHABILITATION AND SPECIAL EDUCATION PROGRAMS

Mr. President, many years ago, lepers were cast aside, kept in a hiding place of secrecy and sorrow. If they left their place, they were forced to wear a bell around their necks to warn others to flee. For them, the bell tolled, "Leper, leper, leper."

Not so many years ago children and adults, disabled, disfigured or disturbed were also isolated, kept away from the public's eye. They did not attend our schools. They did not work in our stores. They did not belong to our society. And when they happened to be seen, it was as though they wore a bell which tolled, "Cripple, cripple, cripple."

In time, we came to learn that the bells which tolled for the Nation's disadvantaged tolled also for us. In time, our attitudes and our laws changed. Strong efforts were made to correct past injustices.

The greatest efforts have been made in the past decade when the Congress enacted landmark legislation to allow handicapped children and adults to participate fully in our society. In 1973, the Congress approved the Vocational Rehabilitation Act which affirmed the rights of handicapped citizens to fair employment. This law has enabled many handicapped Americans to obtain the guidance, training, and services necessary to lead more independent and productive lives.

Congress also approved the Education for All Handicapped Children Act, Public Law 94–142, which required the States to provide a "free appropriate public education" to all handicapped children. In 1980, 4 million children were educated in our public schools or in the least restrictive setting possible.

These laws have helped many handicapped Americans, but there are as many who are still in need of assistance. For every child who has been helped by Public Law 94–142, there is another who has not. For every handicapped adult who has been placed in a productive job, there are still others waiting for employment assistance.

These laws stand as promissory notes to a Nation's handicapped children and adults. The failure of the Congress to approve an adequate level of funding for special education and rehabilitation services will send a clear signal to them that we are prepared to retreat from the extended promise of equal educational and employment opportunity.

There are many reasons to support Senator WEICKER's amendments to restore funds to special education and vocational rehabilitation programs. First, these programs serve the most truly needy in our society, children and adults who are blind, hearing-impaired, developmentally disabled, wheelchair bound. If this administration and this Congress do not consider these citizens truly needy and worthy of special attention, then the "social safety net" is moored in sand. Second, these programs, according to numerous Federal and private studies, are effective in achieving their stated goals. Third, by educating and training handicapped individuals, we are saving Federal, State, and local expenditures for public assistance and institutional care.

For every $1 spent by the Federal Government on vocational rehabilitation, another $8 are saved in costs for medicaid alone. For every dollar spent on the early education of handicapped children, vast amounts are saved in social welfare costs. Finally, the States and local school districts are already paying the largest share of the cost of educating and training disabled Americans. For example, the States spent $5 billion on the education of handicapped children in 1980. The Federal Government contributed only a small fraction of the total cost. In fact, the Congress has never appropriated more than 12 percent of the cost of educating handicapped children.

Senator WEICKER's amendment would allow us to continue special education and vocational rehabilitation services at last year's level. They would allow us to continue to pay about 11 percent of the cost of educating handicapped children. The level of funding sought is that which was approved under the Reconciliation Act of 1981.

Mr. President, there are those who will say that we cannot afford to continue these programs at the current level given the condition of the economy. I believe that we cannot afford not to increase funding for special education and vocational rehabilitation programs. We cannot afford to know the price of everything while considering the value of nothing.

In budget actions taken this past year, we have for our handicapped citizens already deferred too many dreams, rescinded too many hopes, and we cannot reconcile a lessening of the goals we have set forth under the Education for All Handicapped Children and Vocational Rehabilitation Acts. I strongly urge all of my colleagues to support Senator WEICKER's amendments.

LOW-INCOME ENERGY ASSISTANCE PROGRAM

Mr. President, I should like to express my total support for this amendment to provide additional funds for low-income energy assistance. The only opposition I would raise is that this amendment is still far from adequate to meet the proven need. Low-income energy assistance is one of the most basic—and most underfunded—of the so-called safety net.

I have argued for this program for the last 2 years, and each year the statistics become more grim. Over half the Vermonters eligible for fuel assistance have an income of less than $6,000 per year. These people live in the oldest and most poorly insulated housing. They have switched to cheaper forms of energy—although now even wood is expensive—and have turned down their thermostats to a point where their health is often affected.

Mr. President, it seems as if every year we debate the issue of energy assistance well after the time when these funds should be on their way to those in need. Vermont has been hit with the first of many snowfalls, and below-freezing temperatures are already the norm. Yet my State still does not know how much it will finally receive for energy assistance. What promises to be a long, cold winter has already begun, and thousands of Vermonters are living in fear that there may not be enough fuel assistance funds to go around. Relief is not in sight as far as they are concerned.

The funding we are seeking today will partially restore what is really needed. I urge my colleagues to support this amendment.

HUD APPROPRIATIONS REVISIONS

Mr. President, I should like to express my disapproval of the Appropriations Committee's action yesterday to further reduce funding levels for the urban development action grant (UDAG) and community development block grant (CDBG) programs. I did not endorse the committee's decision to reduce UDAG funding by a full 12 percent from $500 million to $440 million for fiscal year 1982. Although I supported the committee's rejection of an earlier proposal by

the administration to slash CDBG funding by 12 percent or $448 million, I did not support the 6-percent or $224 million cut from what the House and Senate committees had approved.

Cities throughout my home State of Vermont have undertaken major projects over the past several years to step up efforts to save once-dying city centers. Almost every community in the State with a population over 3,000 is involved to some extent in upgrading their downtown areas. Federal programs such as UDAG and CDBG, combined with the dedicated efforts of community and business leaders, have played a major role in this successful revitalization.

Due to the cuts endorsed by the Appropriations Committee yesterday, UDAG funds, which have been used in economically beleaguered Vermont communities to stimulate joint public/private development projects, have been reduced so significantly that many promising projects in my State will have to be abandoned. The cuts in the CDBG program will mean that only about $1.6 million will be available to fund new projects in Vermont in fiscal year 1982. Considering that the average CDBG grant in Vermont is approximately $300,000, this means that as few as 5 of Vermont's 251 communities can expect to participate in the CDBG program in fiscal year 1982.

Earlier this year, I expressed my concern that under the guise of "New Federalism" the States would be handed the burden of administering the CDBG small cities program without the support of adequate Federal funds. Unfortunately, this latest round of budget cuts confirms my fears. I am not surprised that many States are now reconsidering their decision to take over the small cities program in fiscal year 1982. In fact, the latest indications are that as many as half of the States will decline to take over the small cities program this year.●

DISTRICT OF COLUMBIA APPROPRIATIONS ACT, 1982—CONFERENCE REPORT

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of the conference report on H.R. 4522, which the clerk will now report.

Mr. SCHMITT. Mr. President, I ask unanimous consent to vitiate that order.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The previous order is vitiated.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that there now be a brief period for the transaction of routine morning business to extend not past the hour of 7:10 p.m. in which Senators may speak.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATOR WILLIAM COHEN

Mr. RUDMAN. Mr. President, in the Bangor Daily News, there appeared a column by John Day about our colleague and my friend, Senator WILLIAM COHEN of the State of Maine. It is a very searching and sensitive column devoted to the agonies that many of us go through on a vote such as the AWACS vote.

I ask unanimous consent that a copy of this column be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

FAMILY POLITICS

(By John Day)

WASHINGTON.—Andy Warhol, an artistic figure of little substance, once said, "The day will come when everyone will be famous for 15 minutes."

Reuben Cohen is such a man. Like Ed Muskie's sainted father, "the immigrant Polish tailor," and Joe Brennan's worthy male parent, "the Munjoy Hill dockworker," Reuben Cohen bursts into national prominence each time his son, Sen. William S. Cohen, confronts a major crossroads in his political career, and then fades back into obscurity the following day.

The media, for reasons that have little scientific validity, have always subscribed to the theory that the actions of political sons are unfailingly rooted to their ethnic fathers. Therefore, when Cohen changed his vote Wednesday in favor of the AWACS sale to Saudi Arabia, turning the tide on that because, as the media pointed out, Cohen was the "son of a Jewish baker . . . the son of a Jewish bagel-maker . . . (even) the son of a Jewish bagle-factory owner."

The size of Reuben Cohen's bakery and his daily production of bagels always increases in a direct proportion to the reporter's ignorance of Maine politics. Wednesday afternoon, a few minutes after the speech which announced his change of position on AWACS, Cohen was swarmed around by reporters who asked such questions as "Does your father agree with this . . . did you talk to your father about this . . . (and) are you Jewish?"

Cohen was one of four senators, all of them original cosponsors of the resolution seeking to block AWACS, who switched at the last minute to give President Reagan his first major foreign policy victory. Two were freshman Republicans, Slade Gorton of Washington and Mark Andrews of North Dakota, regarded as likely targets to cave in to pressure from the While House. The other was Democrat Edward Zorinsky. Most of the heat fell on Cohen's shoulders, because he was the "son of a Jewish baker."

Which brings us to one of those gray areas that are rarely discussed in print, the subtle backlash that follows a politician who falls between the cracks of the media's pat, ethnic stereotypes. There was no mention Wednesday that Cohen is also the son of a proud, independent Irish woman. Her name is Clara Hartley Cohen. In Cohen's book, "Roll Call," the senator credited her with having as great an influence on his life as his father, who is rapidly becoming this country's most famous Jewish baker.

There are shades of discrimination in the world. Every politician with a Jewish name in America has run up against anti-Semitism. Cohen still talks about the hate mail he received from right-wing conservatives in 1973 following his vote in favor of Richard Nixon's impeachment while a member of the House Judiciary Committee.

The blatant stuff is easy to deal with. More difficult is the subtle, reverse discrimination which the Maine senator often runs up against in the Washington power circles. It showed up Wednesday during the cross-examination of Cohen on his AWACS vote. Bob Kaiser of the Washington Post, sometimes regarded as Ben Bradlee's successor, positioned himself directly in front of Cohen and announced to other reporters that he was going to tear into the Maine senator. Mary McGrory, the Post's liberal columnist, devoted a substantial portion of her column the next day to chastizing Cohen for "capitulating" to Reagan for reasons he "miserably" explained on the Senate floor. David Rogers, the Boston Globe's Capitol Hill reporter, suggested that Cohen cowardly sneaked out of the Senate chamber to avoid debate questions from Sen. Joseph Biden.

You could argue the intellectual disdain some journalists hold for Cohen stems from the senator's style, or his actions. You also could be cynical, and ascribe some of it to a subtle sort of reverse discrimination. Cohen, to many people down here, is the senator with a Jewish name who goes to a Protestant church. I've heard one of CBS's White House correspondents refer to Cohen, in the company of his peers, as being "the Unitarian Jew" in the same manner that Muskie is alleged to have slurred Franco-Americans by calling them "Canucks."

The relish with which some Washington journalists, many of them Jewish themselves, panned Cohen's two books was a sight to behold. He's not the worlds greatest politician-writer. I doubt he's as bad as the reviews in the Post and Star.

Cohen rarely talks about the complicated personal drives which took him from Bangor's impoverished York-Hancock Street to the U.S. Senate. He complained to me once of the obsession reporters have for "trying to get inside my mind to see what makes me tick." Cohen wants to be judged by his deeds, not his hangups.

In his book, Roll Call, the senator provides the answers to most of the questions people raise about his mixed heritage. He makes a clean breast of it.

Cohen wrote about the conflict between his mother and father over whether he would be brought up Jewish or Protestant. Encouraged by his father, Cohen said, " I decided at a very early age that I would be an athlete," and began skipping Saturday classes at Bangor's Hebrew School for afternoon basketball games at the YMCA.

"My split heritage of having an Irish mother and a Jewish father precluded me from ever being considered or accepted as a Jew, so I rationalized away the need to attend Saturday services. My absence upset some of my classmates, because it spoiled any chance for a perfect class attendance record and the prize that went with it," the senator wrote.

He continued, "Had my mother converted to Judaism perhaps things would have turned out differently for me, but she remained a woman of fierce independence and iron will against all the social pressures for conformity.

"I found it difficult to carry the name of Cohen and the label of Jew during the time when bigotry was rather rampant in rural Maine . . . One of my more vivid recollections is the time I was pitching in a Little League game in a small town . . . an angry, red-faced man hurled a beer can at me, yelling 'Send the Jew boy home!'

"I was only 12 at the time, and I can remember thinking, But you don't understand: I'm not . . ."

The conflict of religions came to a head. "I had no need to resolve the confusion that existed in my mind at the time, but I could not drift forever in a fuzzy world of religious nonalignment. When it came time for me to be Bar Mitzvah'd and celebrate my admission into the ranks of responsibility, I discovered that I first would have to participate in a special religious conversion ceremony. I ran to my father with tears in my eyes. 'Dad, I'm not going to do it.' He responded, 'Billy, you don't have to.'

"I knew that my mother had talked to him. She had always remained indifferent to the social pressure that called for her to change her views or conduct in order to please others. Any measure of independence

that I have today, I attribute to her example of self-esteem and self-confidence," the senator wrote.

Cohen said he was angry and the pressures which were being placed upon him because of different heritages of his parents.

He concluded:

"It was a lesson that has stayed with me for a lifetime. The Jewish community could not carve out an exception to its faith and laws just to accommodate me. I chose exclusion from the Jewish faith rather than accept the terms of confirmation. Snapping the bonds of conformity carried with it a price tag. . . . Exclusion meant freedom from conformity, but it also meant a lack of security and identity. . . . It meant that I could not expect to take refuge behind a common wall of numbers against the inevitable insults and assaults of future years."

I have no way of judging whether Cohen really believed his change of vote is in Israel's best interests, as he says, or he merely "capitulated" to Ronald Reagan, which is McGrory's thesis. I do know his decision was not the easy way out, and it came after some very deep soul searching. Reporters who judge him spend too much time focusing on the senator's Jewish father, and not enough attention to his mother and the other forces that moulded him.

ALASKA NATURAL GAS TRANSPORTATION SYSTEM

Mr. McCLURE. Mr. President, tomorrow the Senate will consider Senate Joint Resolution 115, to approve the President's recommendation for a waiver of law for the Alaska natural gas transportation system.

Today I received a joint letter from Secretary of State Alexander M. Haig, Jr., and Secretary of Energy James B. Edwards reiterating the critical importance of the project to the energy security of this country and strongly urging support for this important national energy project.

I ask unanimous consent that their letter be printed in the RECORD for the information of my fellow Members.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF ENERGY,
Washington, D.C., November 17, 1981.

Hon. JAMES A. MCCLURE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MCCLURE: On October 15, President Reagan transmitted a proposed waiver of law to the Congress pursuant to Section 8(g) of the Alaska Natural Gas Transportation Act. In his accompanying message, the President reiterated the "critical importance of the project to the energy security of this country" and as a demonstration of cooperation between the United States and Canada.

As you know the Senate Energy Committee has conducted extensive hearings on the proposed waiver of law and received testimony from a broad spectrum of witnesses, including financial experts, and consumers, as well as the project sponsors themselves.

As the Senate now moves toward final consideration on the proposed waiver, we would like to take this opportunity to reiterate several points which we believe are crucial in your analysis of the President's proposal.

1. Access to Alaska natural gas reserves is vital to the Nation's long-term energy security. The 26 trillion cubic feet of proven reserves at Prudhoe Bay comprise about 13 percent of domestic proven gas reserves. Completion of the project also will facilitate exploration and development of an estimated additional 100-200 trillion cubic feet of undiscovered gas in Alaska. It is our conclusion that the ANGTS represents the most realistic option to bring this gas to the lower 48 states.

2. Approval of the waiver will fulfill important U.S. commitments to the Canadian Government. Prior to the decision of the Canadian Government in the summer of 1980 authorizing the export of Canadian gas in support of the early construction of portions of the pipeline system, President Carter sent a letter to Canadian Prime Minister Trudeau underscoring the U.S. commitment to the project and pledging to initiate appropriate action before the Congress to remove legal impediments to the ability of the Canadian sponsors to recover their costs upon completion of the Canadian portion of the system. This commitment was endorsed by the Congress through the passage of a concurrent resolution in July 1980 stating that the project "enjoys the highest level of congressional support for its expeditious construction and completion." Given these commitments, failure to approve the proposed waiver could have serious repercussions for United States-Canadian relations.

3. The proposed waiver will ensure an equitable balance of the economic risks associated with the project. Given the extensive design and engineering work already completed by the project sponsors, the risk of precompletion billing due to significant construction delays or abandonment is remote. A more substantial risk to consumers is that, in the event of delay or abandonment of the project as a result of congressional inaction on the President's waiver proposal, they will be forced to rely on more costly and unstable supplies of imported oil. This project represents an important investment in the energy future of this country from which energy consumers will receive substantial long-term benefits. Significant procedural and other safeguards included in the terms of the proposed waiver, as well as in the underlying authority of the Federal Energy Regulatory Commission to review and ultimately to approve the project including the final tariff, will ensure that the interests of consumers remain protected.

4. The President's decision to propose the waiver of law was reached independently of the Administration's ongoing review of natural gas price decontrol. Whatever decision is reached by the President and the Congress on decontrol, the project sponsors will have a range of options to ensure the marketability of Alaska natural gas. The analyses of the various economic studies prepared for the project sponsors and made available to your Committees during the course of the hearings demonstrate that over the life of the project, the cost of Alaskan natural gas will be significantly below the price of alternative fuel supplies under any decontrol plan.

The proposed system will be the largest privately financed project in history. However, for the sponsors to attract significant private capital, they must demonstrate that the gas will be marketable when delivered to the lower 48 States. The proposed waiver is designed to clear away Governmental obstacles which now prevent a true market test of the project.

In his letter transmitting the proposed waiver to the Congress, President Reagan stated that it is critical to the energy security of this country that the Federal Government not obstruct development of energy resources on the North Slope of Alaska. We strongly urge your support for this important national energy project.

With best wishes,

Sincerely,

ALEXANDER M. HAIG, Jr.,
Secretary of State.
JAMES B. EDWARDS,
Secretary of Energy.

A MESSAGE FROM A FRIEND

Mr. MATHIAS. Mr. President, Alois Mertes is a respected figure in German political life. He is a pragmatic conservative who deals with life as he finds it and does not indulge in wishful thinking.

Although he speaks for the opposition in the Federal Republic of Germany, he speaks with the prudence and restraint usually characteristic of those bearing the responsibility of political office. Therefore, when he speaks, his words merit attention.

For many months, he has been worried by the drift in affairs that could cause a deterioration in the relationship between the United States and Europe. He recalls that he was originally an opponent of the "opening to the East" and the Soviet-German treaty.

But he is a realist and recognizes that those decisions were, in fact, accepted and have been the guidelines for international conduct for more than a decade.

Now, as a conservative as well as a realist, Mr. Mertes is speaking out of concern that history will be ignored and that a price will have to be paid, as is always the case when the lessons of history are forgotten.

In a recent interview published in the Washington Post, Mr. Mertes speaks to his long-time American friends, and I suspect particularly to the Members of the U.S. Congress.

I ask unanimous consent that the article from the Washington Post reporting his views be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REAGAN STYLE IS CRITICIZED: BONN CONSERVATIVE LEADER NOTES DISQUIET IN WESTERN EUROPE

(By Bradley Graham)

BONN, Nov. 7.—Talk by senior U.S. officials about fighting a limited nuclear war, on top of continued squabbling within Washington's foreign policy team, has begun to trouble even leading conservative politicians here, one of whom has warned that the Reagan administration is adding to "uncertainty and disquiet in Europe, above all in Germany."

In a statement, Alois Mertes, in his capacity as foreign policy spokesman for West Germany's opposition Christian Democratic Union, advised Washington to play down public references to military-strategic options and instead focus more on the political character of the East-West conflict. He also urged a stop to the sniping within the administration at Secretary of State Alexander M. Haig Jr., who is seen here as an official who understands Europe.

With crucial U.S.-Soviet negotiations approaching on arms limitations, Mertes said last night that it is important that the United States and Europe follow "a clear and constant course with respect to the Soviet Union."

Implicit in the appeal, which Mertes said represents "a mood that is widely spread" in his traditionally pro-American party, is the feeling that the Reagan administration is not sufficiently attuned to European political sensitivities and may be undercutting its own recent efforts to shore up alliance backing for plans to deploy new medium-range nuclear missiles in Western Europe. The criticism addresses the administration's style, not its policy. The Christian Democrats have not issued a formal statement.

Meanwhile, according to informed sources in London, U.S. Ambassador to Britain John J. Louis Jr. plans to tell the administration during consultations in Washington that there is more to the European peace movement than officials in Washington like to think there is.

Louis is expected to report that conflicting U.S. statements on nuclear strategy fan the movement and add to the concerns of the government of Prime Minister Margaret Thatcher.

Bonn has sought publicly to distance itself from this week's controversy in Washington over nuclear strategy. But Mertes, a leading party figure who was speaking out critically for the first time this year, highlight the seriousness of current U.S.-West German differences and would appear to signal a sort of storm watch in transatlantic relations.

Mertes, who volunteered his comments in a telephone call to The Washington Post here last night, said he was speaking as a friend of the United States and hoped his message would be interpreted in Washington as an attempt "to strengthen the bridge" between West Germany and Washington.

His criticism comes shortly after the Christian Democratic Union's national congress in Hamburg, which had stressed more dialogue with West Germany's youth, many of whom are active in the country's peace movement. There has been controversy in the CDU about how to reconcile the party with the peace campaign and West Germany's now established détente with the Soviet Union.

Mertes said West Germany's young people "are committed to the values of the West," but are put off by U.S. arguments "framed in military terms." The contrast this week between the military debate in Washington and the youth debate in Hamburg is what Mertes said prompted him to issue his warning.

"The fact that some representatives of the American government overemphasize military-strategic options instead of using more political argumentation, along with the criticism of Secretary of State Haig within the administration, favors the Soviet strategy of raising uncertainty and disquiet in Europe, above all in Germany," Mertes said in a brief formal statement.

"From a European point of view," he continued, "it is important in the current phase for the whole alliance to follow a clear and constant course with respect to the Soviet Union in order to achieve success in the coming [arms limitation] negotiations, which should lead to a balanced and verifiable reduction in the [military] potential on both sides without causing a reduction in security."

The U.S. discussion of nuclear plans and options, sparked by President Reagan last month and heated up again this week in congressional testimony by Haig and Defense Secretary Caspar Weinberger, has generally disturbed Europe more than America.

The reason for this has partly to do with Americans being more accustomed to public debate about nuclear weaponry than are West Europeans.

Europeans have been all the more disturbed by what looks to them as the matter-of-fact, almost casual way in which nuclear war is talked about in the United States when it would involve a European battlefield.

Further, there is a suspicious attitude to start with among some segments of the European public toward the security and defense intentions of the Reagan administration.

Mertes, asked what the administration should be saying to win European support for its policies, suggested the following:

The United States should say that the Soviet Union, like the United States, does not want war and the destruction of Europe. Rather, the Soviet strategy should be described as an attempt to undermine Europe psychologically to get it to follow Moscow's line. In order to do this, the Soviets can be said to be developing a wide range of military options that are intended less for military use than for use as political threats.

This line of argument, Mertes said, is preferable because it frames the East-West conflict more in political than military-strategic terms.

In fact, this line has been reflected in many of the comments made by members of the Reagan administration during the recent stepped-up U.S. campaign—involving European visits and interviews with European media—to convey U.S. policy more clearly and convincingly. But much of the American message has tended to be overshadowed here by the references to and controversy over nuclear weapons doctrine.

Haig's comments this week about an allied plan to fire a nuclear "warning shot" and Weinberger's denial of any such concrete plans received prominent play in the West German press. They have not, however, drawn as many sharp political and editorial outbursts as followed the remarks by President Reagan two weeks ago about the possibility of an East-West nuclear exchange limited to Europe.

One of those who joined in the earlier barrage of criticism—Karsten Voigt, foreign policy spokesman for the parliamentary group of Chancellor Helmut Schmidt's Social Democratic Party—told the Reuter news service he now felt resigned rather than indignant.

"I think the people who make these remarks must be doing it in the secret hope of strengthening the peace movement," Voigt said sarcastically. "They're certainly succeeding."

MOBIL CORP.: EXPLORATION BY ACQUISITION

Mr. CANNON. Mr. President, I take issue with a hostile attempt by the giant Mobil Oil Corp. to gain approval for their proposed acquisition of Marathon Oil Co.

This body gave long and careful consideration to this far-reaching issue at the time domestic oil prices were decontrolled and windfall profits for the industry approved. We were assured that these actions were needed to find more oil. Under the banner of "free enterprise" these special concessions were granted over the expressed skepticism and opposition of some of us concerned about the effects upon consumers and the validity of promises that new sources could now be found.

The message went like this: If we allowed them to enjoy the benefits of free enterprise, they said, expenditures for new-reserve exploration would increase tremendously. We could begin to break the grasp of OPEC, and aim for the day when we could stand free as self-sufficient, energy-producing Americans.

Yes; it was a wonderfully compelling story, and we bought it. It almost seemed like there was a muted chorus of "God Bless America" in the background whenever the oil giants gave us their promises.

But, Mr. President, it was a beguiling approach at best, and a blatant deception at worst. The Mobil Corp., in its bold attempt to take over the unwilling Marathon Oil Co., has given us their definition of new-reserve exploration—take your windfall profits and buy up the smaller guy's reserves.

It certainly is a very clean method of exploration, and with virtually no risk to Mobil. No messy and time-consuming test drillings, no discouraging dry holes, no exotic research into alternative sources. Just pull out your wallet and buy somebody else's tank—whether he wants to sell or not.

What does the consumer get out of this clever scheme? If he lives in one of several Midwest States where Mobil and Marathon currently compete, he may see the end of that competition and the price and service benefits derived from it. If he pins our country's exploration hopes on the entrepreneurial efforts of the smaller oil companies, he may watch his hopes come unpinned with the absorption of the lessers by the greaters. And if he expects this plot will lessen our dependence on OPEC oil, he is in for a lesson in big business.

As Prof. Morris Adelman of the Massachusetts Institute of Technology, an authority on world oil markets, explained in a Wall Street Journal story of November 12, Mobil has a critical relationship with the most powerful OPEC member, Saudi Arabia. It is one of the four U.S. companies with a significant role in marketing Saudi Arabia's crude oil. Professor Adelman asked:

> Is it a good thing to let a selling agent (Mobil) of the chief cartel member (Saudi Arabia) absorb a company that would otherwise be an independent buyer?

So those are all the wonderful things the consumer can expect from this innovative exploration scheme planned by the Mobil Corp. But surely, we ask with unflagging hope, the cost of this unfriendly acquisition must be minimal when compared to Mobil's budget for our hopelessly old-fashioned concept of real exploration, where undiscovered energy frontiers are entered—instead of the cash register. After all, that is the general picture painted for us by the big oil industry.

Again, Mr. President, we are wrong in making any hopeful assumptions concerning the giant oil companies. Mobil's $5.1 billion offer for Marathon is over 45 percent more than its entire 1980 budget for capital and exploration.

I am certainly not suggesting that I am any critic of the free enterprise system. But I am doing more than just suggesting that Mobil has hidden its exploration intentions behind the benign cloak of that concept, only to dash out and consume the competition in the name of free enterprise.

Mobil may rest assured that I am not alone among this body in remembering the soft promises given us months ago, and shuddering at the cold, hard actions of today.

As a retired oil company economist was quoted in the Wall Street Journal,

> This, the attempted acquisition, is bad for the industry. It is not going to promote competition; it is going to hurt it. And you want to maximize competition if you want to minimize Government regulation.

For once, there is an economist who makes sense. It is just unfortunate for Mobil that it has made a mistake in estimating the length of our memory.

What we now are witnessing is a race to merge on the part of the oil giants. Windfall profits are being used to increase monopoly power over energy production and to buy control of nonenergy companies as well.

The sheer economic power proposed here threatens the well-being of virtually every sector of the economy and encourages other oil companies to initiate still new mergers, eliminating competition and doing nothing to make America energy independent. This merger will produce not a single additional drop of oil. Since the independents traditionally plow back a higher percentage of their profits into exploration, it is likely to reduce supplies.

What the merger would do would be to place enormous pressure on already tight capital markets, fuel inflation still further, and boost high interest rates which respond in upward fashion as the credit crunch tightens. Certainly it will result in higher prices for gasoline and home heating oil.

The merger threatens to nullify the antitrust safeguards that the Congress has provided since the only foreseeable result would be to appreciably lessen competition and open up a long list of other companies to takeover attempts which would dismantle the competitive pricing of gasoline and petroleum products in retail markets.

Mr. President, I ask unanimous consent that the full text of the Wall Street Journal article, "Mobil and Marathon: Antitrust Considerations," by Paul Blustein, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Nov. 12, 1981]

MOBIL AND MARATHON: ANTITRUST CONSIDERATIONS

(By Paul Blustein)

NEW YORK.—"The Energy Crisis Is Over!" the cover of this month's Harper's magazine announced in bold black letters. Whether permanently extinct or not, world oil shortages and gasoline-station lines are indeed faded memories.

That's one reason that Mobil Corp.'s $5.1 billion offer for Marathon Oil Co., announced Oct. 30 hasn't generated much political fireworks. Another reason is that Marathon, the country's 16th largest oil company, is less than half the size of ninth-ranked Conoco Inc., which Mobil tried to acquire last summer after bids had been made by Seagram Co. and Du Pont Co.

But Mobil's sudden, unwelcome offer for Marathon does raise important public policy issues, according to a wide array of analysis and observers—including many friends of Big Oil. "This is bad for the industry," fumes an economist who recently retired from one of the top five U.S. oil companies. "It's not going to promote competition: it's going to hurt it. And you want to maximize competition if you're going to minimize government regulation."

Adds Leonard Weiss, an economics professor at the University of Wisconsin: "I thoroughly agree that (oil price) controls were very unfortunate, and I'm glad they're gone. But the assumption when we removed those controls was that the industry would behave competitively. If Mobile can acquire another major oil company, it would be difficult to prevent many mergers by firms only slightly smaller than Mobil. And I would much prefer that they put their money into exploration rather than acquiring competitors."

Mobil officials declined to be interviewed, citing various regulations surrounding the offer for Marathon (which is currently tied up in court proceedings). But Mobil has plenty of defenders as well as critics. A Mobil takeover of Marathon wouldn't by itself be injurious, says Prof. Robert Stobaugh of the Harvard Business School, co-author of "Energy Future," a study of energy policy. "The industry is fragmented and highly competitive," he says, noting the losses many companies have had in refining and marketing over the past year.

API FIGURES

Public perceptions aside, the oil industry is unconcentrated by most standards. Exxon Corp., the biggest company, controls just 7.7% of U.S. crude oil production and 8.8% of U.S. petroleum products sales. Mobil, the second largest in terms of revenue, controls 3.1% and 4.7% respectively; the eight largest firms control 40.8% and 46.1% respectively, according to American Petroleum Institute figures.

Oil industry experts say, however, that such figures sometimes mask important underlying factors.

As one of the four U.S. companies with a dominant role in marketing Saudi Arabian crude oil, Mobil has an unusually sensitive industry position, says Prof. Morris Adelman of the Massachusetts Institute of Technology, an authority on world oil markets. That's because Saudi Arabia is by far the most powerful member of the Organization of Petroleum Exporting Countries. "Is it a good thing to let a selling agent (Mobil) of the chief cartel member (Saudi Arabia) absorb a company that would otherwise be an independent buyer?" Mr. Adelman asks.

"Mind you," he continues, "as an independent buyer, Marathon is a small part of the picture. But I think every participant is valuable in policing the market a little bit."

Other analysts, however, say that the real worry isn't in the "upstream," crude oil producing end of the business—where there are literally thousands of competitors—but rather in the "downstream" refining and marketing end, where concentration ratios are somewhat higher in certain markets. Even downstream, the industry is far more fragmented than, say, automobile manufacturing. But that misses the point, according to Walter Mead, professor of economics at the University of California at Santa Barbara. "The question is," says Mr. Mead, "What is the relevant market?"

An economist with one of the "Seven Sisters" top oil companies maintains that the greatest threat to competition from a merger probably exists in gasoline retailing. While national figures may show high levels of competition, "you have to look at individual regions, cities and towns," the oilman says. "If the consumer has to drive 20 miles to a place where prices might be lower, it doesn't do him much good, because he uses up more gas than he saves. It's very different in the auto industry. If there's only one dealer in a town, it pays to try the next town."

Explains F. M. Scherer, a Northwestern University economist: "You have to be more worried about maintaining a large number of competitors for repetitively purchased, low-value consumer goods, than in markets for big-ticket items for which buyers do a lot of shopping around!"

Mobil and Marathon gasoline stations compete in several Midwest states: the question of whether the companies overlap significantly will presumably require close study. Mobil did, however, indicate during the Conoco battle that it would be willing to shed Conoco's marketing facilities. And it is no secret that Mobil is seeking Marathon, too, not for its downstream facilities but for its crude reserves.

That motive raises a different issue: how the companies are spending their OPEC-bloated profits. Some observers have long contended that acquisitions by the majors provide evidence that the industry isn't serious about finding new energy supplies, and the oil companies have always countered that the dollars spent on acquisitions are small compared with their overall capital budgets. (One of the most controversial acquisitions, for example, was Exxon's merger with Reliance Electric Co. in 1979. The $1.17 billion price tag contrasted with $6.3 billion that Exxon spent in capital and exploratory outlays that year.)

Exploration and development have been proceeding as rapidly as possible, oilmen say, with American Petroleum Institute figures showing domestic outlays by the two dozen largest companies at $17.8 billion for 1960, up from $13.2 billion in 1979. The first six months of 1981 showed a further 75% rise from the like 1980 period, according to the API.

Mobil's $5.1 billion offer for Marathon, however, dwarfs its $3.5 billion 1980 capital and exploratory budget. There have been other huge oil acquisitions in the past, most notably Shell Oil Co.'s $3.6 billion takeover of Belridge Oil Co. in 1979. But Shell brought technological expertise to Belridge, providing hope that Belridge's massive, hard-to-get "heavy" oil reserves in California could be more effectively exploited. While it's possible that Mobil may be able to get more oil out of Marathon's fields than Marathon can, there is no obvious reason to think so, analysts say.

A combined Mobil-Marathon would probably spend less on capital outlays than the two companies would separately, says Harvard's Prof. Stobaugh. Paying $5 billion to acquire Marathon "would give Mobil less financial flexibility: it's a big number even compared to the amount going into the oilfields," he says. "But it's not clear that if Mobil didn't buy Marathon, it would spend all that money for exploration. Mobil might just buy some small companies in deals that wouldn't be contested from an antitrust standpoint."

SELLING RESERVES TO MAJORS

Small oil producers, Prof. Stobaugh notes, often explore for petroleum in hopes of being able to sell their reserves to the majors. "That's why a lot of those independent oil operators are out there in the first place," he says.

But the larger independents, such as Marathon, ought to remain just that—independent, argues Samuel Schwartz, senior vice president-administration at Conoco (now a Du Pont unit). These "second-tier" integrated firms such as Phillips Petroleum Co., Cities Service Co., and Getty Oil Co. "have by and large plowed back their cash flow (into exploration) more fully" than the big internationals, Mr. Schwartz contends. "The nation benefits from having a broader range of companies."

It is the prospect of a wholesale raid on the second-tier companies, or a slew of defensive mergers among them, that most disturbs critics of the Mobil bid for Marathon. With crude reserves selling in the stock market at levels far below their replacement value, takeovers of companies similar to Marathon—if permitted by the government and the courts—might prove financially irresistible to other oil giants besides Mobil.

"Some people think you ought to ask: If Mobil is permitted to acquire Marathon, what will come next?" says Phillip Areeda, professor of antitrust law at Harvard Law School. One approach, he says, is for the government to decide, "If we would prevent other mergers of similar size, we should prevent this one."

It might seem unfair to judge a takeover on any but its own merits, so another approach is for the government to permit mergers up to the point where they become anticompetitive, and then intervene. Such a policy, notes Donald Turner, a former colleague of Prof. Areeda's, does present one obvious problem. "It's like an invitation," says Mr. Turner, a Washington attorney, "to race to merge."

THE DEPARTURE OF AMBASSADOR HEDDA

Mr. PERCY. Mr. President, I would like to commend Ali Hedda who has recently completed 8 years as Ambassador of Tunisia in Washington. Ambassador Hedda and his wife, Nedra, during their service here, have contributed immensely to the continuing warm and close relations between our two nations.

Ambassador Hedda's skill and charm have been a big factor in the growing support for Tunisia. Tunisian-American relations have been excellent for nearly three decades, but they have never been better than they are today. Ambassador Hedda tirelessly pursued Tunsia's interests with the administration and with Congress. When an issue arose in North Africa which directly affected Tunisia's or America's interest, Ali Hedda promptly and succinctly explained Tunisia's position.

There is no really right time for a good Ambassador to leave, but if Washington must give up Ali Hedda so that he may return to Tunisia to assume responsibilities there, now may well be the opportune moment. Tunisia is a success story in terms of both economic development and political liberalism.

During the past year, Tunisia had crossed the threshold from a lesser developed to moderately developed nation.

Last Sunday, Tunisia took a significant step toward greater democracy. The first multiparty elections were held in more than a quarter century. I would hope that the excellent relations between our two nations encouraged and assisted the Tunisians in achieving these successes.

The Ambassador has been more than the representative of Tunisia. As dean of the Arab diplomatic corps in Washington, Ali Hedda ably represented the Arab and Islamic world. Deputy Assistant Secretary of State Peter Constable called him "a bridge between Western culture and the Islamic world." This task has not always been easy considering growing regional tensions.

On a personal note, I would like to express my own warm feeling for Ali and Nedra Hedda. During the past 8 years, we have developed a strong friendship. As they return to Tunisia this week, I wish them well. Their country has every cause to be very proud of them.

CHURCHILL MEMORIAL LECTURE DELIVERED BY LORD CARRINGTON

Mr. PERCY. Mr. President, I would like to insert in the RECORD today the text of the Churchill Memorial Lecture delivered by the distinguished Foreign Minister of Great Britain, Lord Carrington, on October 27, 1981, before a meeting of European Foreign Ministers in Luxembourg.

Lord Carrington's speech is a significant contribution to the debate at present being conducted in Europe on the role of nuclear deterrence and of arms control in the maintenance of peace and stability.

I would strongly recommend that my colleagues in the Senate, if they have not done so, read Lord Carrington's excellent address. Lord Carrington's speech is a most positive step toward clarifying perceptions among the European public and restoring a sense of purpose and increased value to the North Atlantic Alliance.

I ask unanimous consent that the text of the Churchill Memorial Lecture, delivered by Lord Carrington, be printed in the RECORD.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

TEXT OF CHURCHILL MEMORIAL LECTURE DELIVERED BY LORD CARRINGTON IN LUXEMBOURG ON OCTOBER 27, 1981

FOUNDATIONS OF PEACE IN EUROPE

Introduction

I am particularly glad to be speaking in this European Capital as British Foreign Secretary at a time when my country holds the Presidency of the Council of Ministers of the Community. I am very honoured by the presence of His Royal Highness the Grand Duke. We in Britain take pride in the links between our two Royal Houses. And I personally am proud to have been, your Royal Highness, a fellow officer in the Brigade of Guards in the last war. The British admire courage and the staunchness of friends. We salute the proud determination with which, forty years ago, Her Royal Highness the Grand Duchess Charlotte and the people of Luxembourg upheld the honour and the spirit of your country.

Winston Churchill spoke in this city 35 years ago of the vitality and personality, and of the courage guided by wisdom, which have preserved the independent and sovereign life of the Grand Duchy across centuries of shock and change. It is about the preservation of freedom in Europe that I shall speak tonight. It is a supreme important subject. It calls for clarity above all things. I shall try to be guided by one of Churchill's admonitions: men will forgive a man anything except bad prose.

Europe since 1945

Europe has changed very much since the last war. There have been tragedies and failures, but there have also been major successes.

Democracy and political stability, the ultimate foundations of peace, have taken root again and flourished in Western Europe as never before.

Our economies, despite their current problems, have grown greatly. Our living standards have risen beyond recognition. This too is a foundation of peace.

The overseas empires of the European powers have ended. This was a major change, which tripled the number of States in the world. It was accomplished in nearly all cases without major crisis—peacefully and with honour.

The rivalries, which had bedevilled Western Europe since the dawn of the nation state and had caused two world wars, have been buried forever. Instead we have forged a new unity and joined in an unprecedented effort to co-operate. In doing so we have enriched our partnership with America. These achievements are expressed in two unique institutions: the North Atlantic Alliance and the European Community.

In central and eastern Europe, the years since 1945 have been blighted by the tragic divide of the iron curtain. For nearly two decades it largely cut us off from our fellow Europeans beyond the Elbe. More recently the contacts which are natural among neighbours have again developed. We welcome this, and we know that the independent spirit lives on in every part of Europe.

I have mentioned good things and bad. But I have still to mention the most important and the best feature of our post-war Europe. It is contained in that ordinary word —post-war. We have had peace for 36 years. Our post-war period of half a lifetime is already approaching double the period between the two world wars. Half the people of Western Europe today were born since the guns fell silent.

Many in this audience, like me, have vivid memories of the pitiless suffering of conflict and occupation. Those memories make us all the more glad that our children have been spared similar experiences. Those memories also lay upon us a double obligation: to devise effective policies to maintain peace, and to make sure that those policies are understood by all generations and all sections of society.

There is no subject more important than the prospects for peace. I welcome the renewed public discussion about it in recent months. I respect the concern of those who think that the prospects are less reliable than before. I can understand why this feeling is reflected in a new questioning of our security policies, and especially of nuclear weapons. I agree that we must never be complacent and must never relax in our efforts for peace. That is why I am devoting this lecture, dedicated to Britains great war leader, to the crucial subject of peace in Europe.

The military balance

Military matters are too often discussed in impersonal, even inhumane, terms. I shall not speak in the grim jargon of megatons and overkill. But we must start by recalling the facts about the military balance.

In the early years after the war, the Soviet Union and its allies already had far larger conventional forces than the west in Europe. But the United States had nuclear weapons and the Soviet Union did not. The Soviet forces were able to promote the establishment of communist regimes across Europe and Central Europe. They also tried to frighten the western powers into abandoning Berlin. But the West stood firm. The lesson was already there: the Soviet Union would use its military strength to apply political pressure, but could be resisted successfully if the West was strong and determined.

Since then the military balance has changed radically. The Soviet Union has actually increased its advantage in conventional forces in Europe. It has laid greatest stress on attack weapons such as tanks, where the Warsaw pact now has an advantage of nearly three to one over NATO. But the biggest change, of course, has been in nuclear weapons. In intercontinental strategic nuclear forces, the Soviet Union has now caught up with the United States. And in long range theatre nuclear forces—those which are capable of reaching Western Europe from the Soviet Union and vice versa—the Soviet Union has built up clear superiority. A similar imbalance is now developing in shorter range nuclear forces. At the same time the Soviet Union has caught up with the West in the technical sophistication of its weapons. And it has acquired a worldwide Navy.

To achieve all these things the Soviet Union has recently been devoting some 13% of its gross national product to defence. This is an enormous burden, especially for a

country where the people have a far lower living standard than is enjoyed here in the West. Why have those sacrifices been made?

Soviet foreign policy

History may have given Russia a feeling of insecurity. That might help to explain the early stages of the Soviet military build-up. But it is difficult even then to justify on this basis the development of a heavy superiority in tanks and other offensive conventional weapons. And a vast superiority in theatre nuclear forces in Europe, in addition to greater conventional strength, cannot possibly be seen as defensive. Moreover, the Soviet Union can see very well that NATO is deployed, organized, equipped and trained only for defence. Our Alliance, I am glad to say, could not contemplate aggression even if it wanted to.

The record shows that the Soviet Union is willing to use force. We have seen it in Hungary and Czechoslovakia. We are seeing it now in Afghanistan. But we have not seen it so far in Western Europe. Why this difference? Because the risks have been too great. The creation of NATO and the American commitment to Western Europe have made aggression too dangerous.

Deterrence

That brings me to the concept of deterrence—of possessing weapons to prevent war. How is this basic argument to be re-stated with an immediacy that the young man or woman in the street will feel and comprehend?

He who will not learn the lessons of history is condemned to relieve them. That is certainly a principle that Churchill understood. Political debate today too often lacks historical perspective. For 2,000 years the experience of the peoples of Europe has been to live and relive the lesson that the price of freedom is untiring vigilance. A first duty of the State is to ensure protection from external assault.

Why should it be any different today? Observing the behaviour of the most powerful state on the Eurasian landmass since 1945. Do we have any reason to suppose that western security can be left to look after itself? I think the answer is self-evident. I am reminded of that wry East European joke which says, by way of excuse for the hardships of everyday life, we are going through a bad five hundred years just now. I never wish to see Western Europe obliged to fall back on such dark humour.

Nuclear weapons have transformed our view of war. But abhorrence of war is no substitute for realistic plans to prevent it. Our task is to devise a system for living in peace and freedom while ensuring that nuclear weapons are never used, either for destruction or for blackmail.

Nuclear weapons dominate the discussion today. But we tend conveniently to forget that some 50 million people died in World War II, killed by what are comfortably called conventional weapons. A nuclear war which does not happen is better than a conventional one which does.

That is a harsh saying but surely a true one. Since 1945 conventional war has killed up to 10 million more—but not in Europe. We in Europe, to ensure our security, must prevent any East-West war.

The combination of geography and totalitarian control of resources gives the Soviet Union a massive conventional strength which the western democracies have chosen not to match. And even if they were to, no western non-nuclear effort could keep us safe against one-sided Soviet nuclear power.

The purpose of deterrence is to influence the calculations of anyone who might consider an attack, or the threat of an attack, against us, to influence them before any such attack is ever launched, and to influence them decisively. Planning for this means thinking through the possible reasoning of an opponent. It means trying to ensure that he could never see a possibility of depriving the West of all alternatives but surrender. Failure to recognise this complicated but crucial fact about deterrence—that it rests on blocking off in advance a variety of possible moves in the mind of any possible opponent—underlines many of the criticisms made of Western security policy. To do this is not in the least to have a war-fighting strategy or to plan for nuclear war as something expected or probable. It is on the contrary to ensure that, even if an adversary believed in limited nuclear war, as Soviet writings sometimes seem to do, he could not expect actually to engage in one without losses out of all proportion to the desired gains.

NATO, then, is there to deter a possible adversary from starting a war, by making sure that the risk will always be too high. The East-West peace has held for 36 years now, a peace between political systems that are sharply opposed, between powers whose interests directly conflict. In the European historical perspective that is a striking achievement. No one can prove that deterrence centered on nuclear weapons has played a key part, but commonsense suggests that it must have done and it would be lunacy to assert that it had not.

Our purpose today is to maintain peace. That brings me back to the Soviet military build-up. Chancellor Schmidt is right when he stresses the importance of military balance. The danger today is that the imbalances that have developed will undermine deterrence. The erosion of deterrence would reduce the risks facing a potential aggressor. He might begin to consider more aggressive policies in Europe. He might consider starting a war. More likely he would calculate that he need not go so far. He might use his military superiority for military threats, hoping to win decisive influence over all of Europe without a war. That would create the biggest crisis in Europe since 1945. It would take us straight to the brink of catastrophe.

The many honest people in Europe who oppose nuclear weapons, and those in my country who advocate unilateral disarmament, are mistaken because of one fundamental fact: what they are suggesting would make war more likely.

Long range theatre nuclear forces

The task of maintaining deterrence involves a wide range of forces, including conventional forces in Europe and the intercontinental missiles of the United States. But the particular danger in Europe at present is the imbalance in long range theatre nuclear forces. NATO's capability in this field is small and aging. The decision to modernise it was taken in order to maintain deterrence. When NATO took that decision in December 1979, the Soviet Union had already deployed about 100 SS20 missiles with three warheads each.

Each warhead had a destructive force at least ten times that of the Hiroshima bomb. That was two years ago. Those numbers have now reached about 250 missiles with 750 warheads, of which two-thirds are targetted on Western Europe along with other long range theatre missiles and aircraft. And deployment is continuing unabated.

We do not need to match these numbers warhead-for-warhead, and we do not plan to. But in face of this threat we do need to sustain NATO's shield of deterrence. As Churchill said, you cannot ask us to take sides against arithmetic.

If nothing was done about this enormous imbalance, what would be the consequences. The Soviet Union, now or at sometime in the future, under tomorrow's leaders if not today's might reckon that it could afford to threaten nuclear attack on Western Europe without risking retaliation against Soviet territory.

The Soviet calculation would be that the West's only defence against Soviet long range theatre nuclear weapons would be the intercontinental missiles in the United States: and that America might not use these to defend Europe because of the prospect of Soviet nuclear retaliation against the United States itself. We have confidence in our American allies: but it is what the potential adversary may think that determines his behaviour.

The modernisation of American long range theatre nuclear forces in Western Europe, which have been stationed here since the early 1950's, makes impossible a Soviet calculation of the kind I have described.

It makes clear to the Soviet Union that the risks in an attack or a threat of attack in Europe far outweigh any possible benefits, the Soviet planner, seeing the modernised American theatre forces in continental Europe, cannot calculate that conflict can be confined to the central area, leaving the Soviet Union in sanctuary. America's commitment, which is the cornerstone of Europe's security, is reaffirmed. Deterrence is reinforced, and that reduces the risk of war.

Multilateral arms control

I am not suggesting that deterrence itself is an adequate policy in East-West relations. We must work unremittingly for better ways of ordering the world. I want East-West communication and contact at all levels, from tourism to summit meetings.

I want discussions with the Soviet Union on all the problems facing the world. I am glad that last month the Foreign Ministers of the United States and the Soviet Union spent no less than nine hours discussing the main issues together in New York.

I met Mr. Gromyko there too and I was in Moscow in the summer for discussions with him about the initiative of the Ten on Afghanistan. I want East-West negotiations. These have produced some successes over the years. More should be possible if the Soviet Union is ready as the West is, to show restraint in its international activities.

Negotiations about arms control are especially important, I am very glad to speak of this today, during United Nations Disarmament Week. It is a field where we must be vigorous and imaginative, for nothing is more important than to reduce the vast resources devoted to arms.

As Mr. Haig has said, the search for sound arms control agreements should be an essential element in our programme for achieving and maintaining peace. What are the principles that should guide us? The fundamental one is that arms control must enhance security. That means that it must limit the forces of both East and West.

It must be balanced. As Herr Genscher said in the General Assembly last month "Anyone who sets out in disarmament talks to seize or perpetuate unilateral advantages is heading up a blind alley".

Arms control must also be properly verified, so that confidence is created by each party knowing that the others are complying. To quote Herr Genscher again: "Anyone who rejects the necessary on-site inspection or other forms of verification, is liable to be suspected of wanting to conceal and deceive." He is destroying confidence instead of creating it.

The process of arms control needs to advance step by step. As one measure is achieved, and seen to work, so trust is created and more ambitious measures become possible. Grandiose declarations based on wishes rather than thoughts are, sadly, unlikely to achieve anything. We in Britain have been active in working for arms control. We played a prominent part in the negotiations of the Partial Test Ban Treaty and the Non Proliferation Treaty.

We introduced the Convention on particularly inhumane weapons which was adopted by a United Nations conference in 1980. We

are participating in other negotiations, including those in Vienna on mutual and balanced force reductions.

We welcome the announcement that negotiations on long range theatre nuclear forces are to begin between the United States and the Soviet Union next month. These negotiations were proposed by NATO at the same time as it took the decision to modernize its capability. Intensive consultation is taking place in the Alliance to prepare for the negotiations. We are ready to accept equal limits as low as the Soviet Union will accept. We have always said that we would be ready to look again at our deployment plans in the light of progress in negotiating Soviet reductions. The ideal would of course be the complete dismantling of all the Soviet missiles.

In their two meetings last month, Mr. Haig and Mr. Gromyko discussed SALT as well as theatre nuclear forces. The United Kingdom has always supported the SALT process. I hope that negotiations will resume early next year so that we may see the two sets of negotiations taking place at once about limitations on theatre nuclear forces and about reductions in strategic missiles.

The CSCE Review Conference resumes in Madrid today. We shall make every effort to reach agreement on the imaginative French proposal for a Conference about new measures to build confidence and security in Europe. We want such measures to satisfy four basic criteria: they must be mandatory, verifiable, militarily significant and applicable to the whole of Europe up to the Urals. If these criteria are met, the new measures can significantly enhance confidence in Europe. They can reduce the risk of miscalculation and surprise, by increasing the knowledge on each side of military activities on the other.

Unilateralism

I should like briefly to discuss some of the arguments advanced by the opponents of nuclear weapons in Europe. They say that Western planning is now based on fighting and winning a nuclear war. This is mistaken. In any nuclear war there would only be losers. NATO's nuclear weapons, as I have said, are designed to prevent war. They also claim that the cruise missiles destined for deployment in Europe are a first strike weapon. This is nonsense. The planned cruise missiles are of too short a range: they are also too slow and too few to knock out the Soviet missiles targeted on Western Europe.

The unilateral disarmers in my country say that other States would follow suit if Britain disarmed. But a British Prime Minister from the Labour Party, Ramsay MacDonald, was right when he said 50 years ago that disarmament by example does not work. The Soviet Union has explicitly rejected unilateral steps. Unilateral reductions on our side would remove the Soviet incentive to negotiate seriously about multilateral arms control. Remember that Soviet military expenditure went on increasing rapidly in the past 12 years, despite the fall in real terms on the Western side.

The movement for European nuclear disarmament has called for a nuclear weapon free zone from Poland to Portugal. This is unfortunately a delusion. I have pointed out that the Soviet Union has far stronger conventional forces. Their use would more readily be contemplated if there were no nuclear deterrent. Moreover, Soviet nuclear weapons can reach Western Europe from beyond Poland—indeed from beyond the Urals. What would there be to stop the Soviet Union threatening nuclear war?

The same movement says it hopes to extend its activity to the Soviet Union. How do they propose to set about that? There is surely a certain naivete in such suggestions, when confronted with the closed Soviet system.

Look at the persecution of the people who tried not to urge disarmament, but merely to monitor their country's compliance with the Helsinki final act. Remember the tragic example of Anatoly Shcharansky and the appalling treatment he has received for supporting the rights and freedom which all of us take for granted in the West.

My last example is the claim that we face the choice between being red or dead. This too is highly misleading, because there is in fact a third alternative. It is the one which Western Europe has pursued successfully for half a lifetime: to prevent war and remain free.

So let me say to the opponents of nuclear weapons, in Voltaire's words: I disapprove of what you say but I will defend to the death your right to say it. And let me add this. Please be careful that your agitation does not unintentionally serve the purposes of the Soviet Union, for under that system it is quite certain that you would never be allowed to speak and act as you do today.

Western European unity and the alliance with America

Let me quote Winston Churchill again. In Luxembourg in 1946 he said: "The future of the world lies not with the marauding empires of the past but with free countries dedicated to the simple human virtues, whose security is preserved by their collective strength upholding the rule of law." How prescient he was. I think we have done well in the way we have developed healthy political and economic institutions in Western Europe. The European Community is a demonstration that man can learn the lessons of history.

Instead of the carnage of Waterloo or Ypres, we nowadays solve our differences at the conference table. The differences can be wide and the issues can affect vital national interests. But we succeed because we all recognise the overriding need to find solutions which are fair and acceptable to all. This is why I am confident that we shall achieve success in the current, very business-like discussions about the future development of the internal policies of the Community and their financing. And we must work for the day when Spain and Portugal shall join in our growing co-operation.

At the same time we must strengthen our efforts to ensure that the members of the European Community speak with a joint voice on the main issues of world affairs. Our political co-operation has greatly advanced and this month in London the Foreign Ministers of the Ten adopted a report which consolidates past progress and opens up new possibilities.

I pay tribute to the work of past presidencies, not least that of Luxembourg this time last year in achieving this. Together we are working for peace in areas outside Europe too—such as Afghanistan and the Middle East. We are developing a dialogue with other countries and groups of states—for example with the Arab Nations and the Association of South-East Asian Nations, whose five Foreign Ministers met their 10 European colleagues in London a fortnight ago.

But the most important relationship for the security of Europe, of course, is the one with the United States. Europe and America still represent the prime example of that fashionable word interdependence. America has twice intervened to save freedom in Europe. Everything I have said this evening shows that without America we in Europe could never be secure. Moreover, the interest is mutual.

Without Europe, America would be isolated and at a grave disadvantage in dealing with Soviet ambitions. These ties of mutual interest, expressed in the North Atlantic Alliance, reinforce those of cousinhood and culture which underlie the transatlantic relationship. America itself is in the fullest sense a pillar of peace in our continent.

Conclusion

Peace in Europe rests four square on these foundations:

Effective deterrent, prevent war.

A Search for agreements to control arms on a balanced basis.

A renewed effort to develop our own West European Unity and to knit together the work we do in the European Community and in political co-operation.

A confident alliance with the United States based on co-operation and consultation.

If we build firmly on these foundations, we shall not find ourselves at the brink. They are the best hope for ensuring that not only our children but also our children's children shall not know the suffering of war. To those in Europe who would allow them to be eroded, let me quote Winston Churchill just once more: "Facts", he said, "are better than dreams. So let us espouse realism and, in Abraham Lincoln's words, cherish a just and lasting peace among ourselves, and with all nations."

S. 1802, FOREIGN ASSISTANCE APPROPRIATIONS

Mr. DOLE. Mr. President, I would like at this time to give recognition to the important work of a large group of private, voluntary organizations (PVO's) who for years have been serving this country as ambassadors of more than just goodwill—these organizations have brought technical assistance and know-how to developing nations in fields ranging from agriculture to health care to community planning.

Organizations, such as the Cooperative Agency for Relief Everywhere (CARE), the National Rural Electric Cooperative Association (NRECA), the Cooperative League of the United States of America (CLUSA), and the Church World Service/Lutheran World Relief of the National Council of Churches to only name a few, have provided a unique and constructive element to this Nation's overall foreign assistance efforts. They embody a direct and personal representation of American public concern for the welfare of the poor in developing countries. Many of these organizations are the conduits of private and public American contributions, and as independent, private and nonprofit agencies, they provide a significant measure of flexibility and efficiency to our foreign assistance programs.

The individuals working out of these organizations serving in the field, living and working among the poor populations of the world, are dedicated individuals who demonstrate the finest qualities of American public life and the principles of self-help and community cooperation which are the trademarks of the American way of life.

Mr. President, the Senate Appropriations Committee report on S. 1802 states that "in carrying out the mandates of this function, the committee believes that experienced outside organizations such as the National Rural Electric Cooperative Association and the Credit Union National Association should be utilized as much as posible. In recommending this, however, the committee is not suggesting that unrestricted funds be given to such organizations or that such funds be given without recourse to future evaluation or audit. However, the

committee does believe that organizations such as these can help to increase the effectiveness of the Agency—Agency for International Development—and therefore encourages their participation."

Mr. President, I strongly endorse the recommendation made by the Senate committee and urge my colleagues to join in supporting funding through S. 1802 that would allow these organizations to continue their outstanding work and relationship with the Agency for International Development (AID).

This bill contains provisions that directly impact on the future of these PVOS's and the work that they are currently involved with worldwide. Unless adequate funding is adopted this year by the Congress, practically all will be subject to cutting back their efforts in relief and technical assistance and development. For the past 3 years, Mr. President, these organizations have operated their AID-assisted programs on continuing resolutions. Because of this, activities have been limited, many have been ended.

At this time, Mr. President, I would like to give you just one example from the four previously mentioned PVO's in project involvement abroad and how that involvement is benefiting not only the people in the developing nation, but also the U.S. citizen and our economy.

NRECA

The National Rural Electric Cooperative Association (NRECA) represents the 1,033 rural electric cooperatives in the United States, which serve more than 25 million rural consumers. The International Programs Division of NRECA has been working since 1962 in over 40 developing countries by sharing U.S. know-how in creating reliable and cost-effective rural energy systems. Using 50 years of American experience and technological development in this field, NRECA has successfully shown how lower developed countries (LDC's) can help themselves to develop rural generation and transmission facilities and the managerial institutions to run them effectively.

Energy supply, particularly in the poor rural regions of the world, is key to economic and social development. Yet less than 5 percent of the rural populations in LDC's are currently supplied with power. When a rural community receives its own power, there is a resurgence in economic activity, bringing life to rural industries, irrigation for crops, and light to homes, schools, and hospitals. People are more willing to stay and work in an area where an energy source gives promise for future prosperity and a better standard of living.

U.S. assistance, both public and private, is helping to meet this need today. NRECA has carried out more than 300 assignments to assist in the planning and implementation of rural electrification and renewable energy development, and has assisted in making 1.8 million electric connections reaching 12 million of the developing world's rural poor. An additional 10 million people have benefited indirectly in terms of improved public health and services, employment opportunities and other day-to-day benefits which come with the introduction of energy.

In the Philippines, there are presently 120 energized cooperatives which have made 1.3 million electric meter connections directly benefiting some 8.5 million rural Filipinos. Twenty years ago, before NRECA and the Agency for International Development (AID) went in to help, there was virtually nothing. Today, these co-ops represent the strongest rural institutions in that country. Between 1965 and 1969, AID loaned $3.3 million to Banco Nacional De Costa Rica to develop three electric co-ops with NRECA assistance. So far, the project has reached 19,800 consumers with the co-ops holding $8 million in assets.

In these cases, and many others, AID provided funding for the technical assistance, engineering services and materials to build initial systems. Once the projects were well established and successful, the international lending community quickly came forward with funds to expand the program. In this role, funding through AID proves the value of a project at minimum costs, leading others to follow with the main sources of funding. In many projects, such as Costa Rica, significant local funding has been raised to move the project forward.

In virtually every case where NRECA has worked abroad, it resulted in demand for U.S. goods and services. Since U.S. rural electrification standards were used in setting up the distribution systems in these countries, the equipment used was American. Moreover, NRECA activities in the field of small hydrodevelopment markets for U.S. suppliers of turbine and generating equipment now exist. The goal of opening up new markets for U.S. exports continues to be a high priority of the National Rural Electric Cooperative Association (NRECA).

CWS/LWR

Church World Service (CWS) of the National Council of Churches and Lutheran World Relief (LWR) are two of the major international development and relief agencies of Protestant churches in the United States. Each has been active in basic human needs programs for over 30 years and each is part of an international network through which people around the world express their common concern in addressing chronic hunger, malnutrition, and improving the quality of life among the poor.

In 1980, CWS supported activities in 74 countries and the United States. Most of this funding came from church denominations, congregations, and individuals. About 43 percent originated with the U.S. Government due to U.S. interest in supporting CWS activities in Kampuchea and resettlement of refugees in the United States. About 30 percent of its funds came from the U.S. Government, in 1978 LWR was awarded an aid-matching grant of $3 million for a 3-year period, to be matched by privately generated resources. The AID–LWR matching grant resources to date have supported 57 projects in 12 countries in the areas of agriculture and community development, institution building, health and welfare and human resources development.

An example of one project involves an effort in Niger, West Africa, to increase food production through dry season gardening based on small-scale irrigation. Shallow-well construction has been encouraged using cement cylinder linings which help to preserve hand-dug wells from early collapse. To protect the wells and gardening plots from wandering animals and uninvited people, fencing is provided through appropriate varieties of thorn trees and bushes.

Other agricultural inputs are provided through the Government of Niger's agricultural Services Department. A total of 577 shallow wells, each capable of irrigating at least 0.25 hectares, are being constructed in six projects. The projects also incorporate literacy training, health education, and nutritional and dietary instruction.

Like the projects of other PVO's, the activities of CWS/LWR are carefully planned, monitored, and evaluated by counterpart agencies such as AID.

CARE

Almost everyone in the United States is familiar with the CARE relief package. But contrary to that popular belief, today CARE is more than just the package—although CARE was the first to carry food relief to Poland through the package, CARE has been working in overseas development for over 35 years in over 60 countries.

CARE holds a dual emphasis on immediate relief—such as starvation and disaster relief—and self-help development. CARE receives private contributions of approximately $30 million per year. In addition to this, it helps to administer and distribute $170 million worth of U.S. Government food commodities under Food for Peace and also receives grant moneys from the Agency for International Development in the establishment of projects, such as irrigation and food production.

CARE development projects work in many ways, such as food for work. In the country of Haiti, a community water system and small farm irrigation project was funded 1979–82 through $115,000 in donated funds and $167,000 in a U.S./AID grant. Approximately 75,000 people in Haiti will benefit from this project once completed with 16 villagers trained as maintenance and repair technicians.

During this project, a great deal of unskilled labor among the citizens is utilized, thereby utilizing an integration of resources and technology transfer from the United States. Food-for-peace commodities are used as compensation for the several thousand worker-days of unskilled labor needed to complete the project.

In Sri Lanka, a thriposh—high-protein, cereal-based food—production project is going on, producing 10,000 metric tons of foodstuffs, to be distributed to 600,000 mothers, preschool, and primary schoolchildren suffering from malnutrition. Funding for the food production project is provided by a U.S./AID grant of $55,000, $802,000 from CARE donated funds, and over $3 million from the Sri Lanka Ministry of Health.

This is an ongoing project promoting the use of soy foods and also marketing with the same funding involved. This project is well on the way to developing

self-reliance among the people of the community and promise to the Ministry of Agriculture in operating similar production and marketing projects.

CLUSA

The Cooperative League of the U.S.A. (CLUSA) activities in countries abroad have resulted from collaborative efforts between the league, the U.S. Government, and many foreign governments for the past 27 years. Throughout this period, the league has witnessed healthy collaborative efforts in establishment of cooperative systems in over 40 countries.

At present, the Cooperative League is carrying out development efforts in eight countries abroad ranging from marketing of fruits and vegetables, to construction of grain silos to numeracy training.

Since 1953, the league has maintained an office in India, when the Indian Cooperative Union requested assistance from U.S. co-ops in developing programs. In 1966, the Agency for International Development (AID) mission began assistance through financing for a permanent league office. The current operation program grant (OPG) provides financing for the office through 1981.

Since 1953, the league has helped to develop and provide technical assistance to major projects of Indian cooperatives in the areas of fertilizer production and distribution, oilseeds processing, dairy cooperatives, cooperative education and training, agricultural credit, farm machinery cooperatives, hybrid seeds cooperatives, consumer cooperatives, as well as many other types.

All of the league projects in India have resulted in major impacts on increased food production and enhancement of economic situations in the areas where the co-ops are located.

In almost all the international development projects of the league, initial input of between 1 and 10 percent is followed by a greater increase of other financial resources. In the projects of India, for 1978–83, CLUSA/AID assistance totaled $1.1 million—7 percent, with the Canadian Government providing $45 million—28.8 percent. Under this project, containing U.S. Public Law 480, donated vegoil, approximately 300 oilseed grower cooperatives encompassing 500 villages of 18,000 small farmer members will be established. The oil is important not only for generating funds for financing the various activities of co-ops, but will create a marketing system in anticipation of increased national production.

In Rwanda, the league has assisted in the construction of seven grain storage centers for local cooperative societies, the training of management of the storage units and local committee and staff of the Government Ministry of Social Affairs and the cooperative movement. With successful completion of the seven initial units, the Government of Rwanda asked the league to expand this operation to 40 cooperatives. The league is also conducting a feasibility study to develop a national level cooperative training and research center to serve Rwanda's growing cooperative movement. This approved project is funded not only by the Government of Switzerland, but a grant from the Agency for International Development (AID) will cover additional costs of the project.

Mr. President, these are just a few examples of the work of the private, voluntary and cooperative organizations of the United States. I believe that the work which they have done, and will continue to do, should receive not only high recognition by this body, but also our support for the efforts that they wish to continue in this fiscal year. These are not welfare projects, we are not throwing money out at will—these efforts are based on a minute amount of U.S. taxpayer money, leading to an opening up of markets for U.S. businesses abroad and the development of a solid, secure international relationship with these poorer nations through the transfer of this technology and know-how, and then leaving the country when self-help and development has taken solid root.

Mr. President, I believe that development assistance and those organizations which further that cause should receive more recognition than we have given it in the past, as well as adequate funding and needed support of all of us.

END THE VIOLENCE IN NORTHERN IRELAND

Mr. KENNEDY. Mr. President, the recent escalation of violence in Northern Ireland and in Great Britain is a cause of deep concern to all Americans who care about peace in Northern Ireland.

This new round of violence culminated last Saturday in the assassination by the provisional IRA of a member of the British Parliament from Northern Ireland, the Reverend Robert Bradford, who was shot down while meeting with his constituents in a community center in Belfast. A worker at the center also died in the assault.

Throughout the past decade, I have condemned the brutality and the killing on both sides in Northern Ireland. I condemn the murder of Mr. Bradford, just as I condemn the cruel sectarian murders of innocent Catholics by Protestant terrorists in Northern Ireland in recent weeks.

In this troubled period, I urge all the parties to refrain from any further escalation of the violence. I renew my appeal to all Americans who share the cause of peace in Northern Ireland to avoid any action or association that contributes in any way to the continuing violence. There are hopeful signs of progress toward a peaceful settlement of the conflict, and we must not permit them to be destroyed by those who seek to provoke greater violence.

Mr. President, I extend my sympathy to Mr. Bradford's family and to the families of the others who have died in this recent tragic violence. I ask unanimous consent that a statement in the Irish Parliament by Prime Minister FitzGerald on these deaths be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT IN THE IRISH PARLIAMENT BY PRIME MINISTER FITZGERALD

Before we begin our normal business I would like to refer to the brutal murder, by the Provisional I.R.A., of the Reverend Robert Bradford, M.P. in Belfast on Saturday last. His death and that of Mr. Ken Campbell, caretaker at the Finaghy Community Centre, are part of a calculated series of atrocities committed in recent days. I know all the people we represent share the sense of sorrow, anger and outrage felt by the people of Northern Ireland in recent days.

The killing of an elected representative of the people calls for particular condemnation in the strongest possible terms and serves to remind us of the real objectives of the organisation responsible. The I.R.A. has once again shown its utter contempt for human life and for the democratic process which it has recently sought to distort for its own ends. Its true attitude to democracy and freedom was summed up by a recent statement of an I.R.A. spokesman who, when asked by an interviewer for a foreign newspaper about the wishes of the people in this part of the country concerning an aspect of reunification, replied—"We call the shots. We don't really give a damn what they want."

The first clear objective of the killers of Mr. Bradford was to incite vengeance among Loyalist extremists and thus to expose once again to murderous retaliation the innocent among the most vulnerable community in this island, the Catholics of Northern Ireland. This has already begun to happen. The sectarian killings of Belfast and Lurgan are a direct and intended result of the Provisionals campaign of recent weeks, a campaign itself trenchantly described last Saturday by John Hume as one of "sectarian genocide" directed against Protestants.

I join with those brave and responsible leaders, clerical and lay, in Northern Ireland who have said to the Unionists and Loyalists: do not become the prisoners of the Provisional I.R.A.'s strategy, do not respond as they have intended and planned that you should do—in anger and in a manner that could escalate violence to new levels of horror and ultimately undermine your rights and liberties.

The Reverend Mr. Bradford had, for some time, considered an attempt on his life to be a strong possibility. It is a tribute to his courage that he did not flinch from that danger.

On behalf of the House, I would ask you, Ceann Comhairle (Speaker of the House) to extend our deepest sympathy to Mrs. Bradford and her family.

INTERIM REPORT ON EXPERIMENTAL PROGRAM OF ALTERNATIVE WORK SCHEDULES FOR FEDERAL EMPLOYEES

Mr. THURMOND. Mr. President, as the President pro tempore of the Senate, I have received the Office of Personnel Management's interim report on the Government's experimental program of alternative work schedules for Federal employees. This report is available for review by my colleagues in my President pro tempore office.

EXTRADITION ARTICLE NO BAN TO APPROVING GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, today I would like to discuss a facet of the Genocide Convention which continues to be misunderstood by those who oppose its ratification. That issue, Mr. President, is extradition.

Although this aspect of the treaty has been addressed many times, opponents cling to the notion that an accusation of

genocide automatically deprives an American of his rights to a fair trial.

Mr. President, nothing could be further from the truth.

First, the treaty is not self-implementing. Nothing in the treaty could be construed as an automatic instrument of extradition.

Second, the committee which drafted the convention makes clear that nothing precludes the right of any nation to bring to trial before its own courts any of its nationals for acts committed outside the nation. Not content to rely on the assurances from others, the draft of implementing legislation for the convention, section 3, specifically directs the Secretary of State in negotiating future extradition treaties which include genocide to always reserve the right to try Americans here at home.

Third, a U.S. citizen in a foreign country is normally subject to the laws of that country. If that country includes genocide among the crimes it condemns, a person could be detained whether or not the United States or the accusing country were parties to the convention.

Finally, Mr. President, any extradition treaty that the United States may negotiate in the future and which would include genocide, would be voted on by this body. There would be opportunity for full debate, opportunity for each and every Senator to fully express his concerns. I think it is safe to say that my colleagues would consider carefully the fairness of the judicial system in a given country before ratifying an extradition treaty with it.

Mr. President, again there is no self-implementing aspect to the convention. Congress is charged with the responsibility of approving any and all implementing legislation. It is to our credit as a Nation that we have proceeded carefully in entering into treaties where U.S. judicial guarantees are concerned.

It is not to our credit, however, to delay ratification of the Genocide Convention on these grounds. It is precisely because we value our constitutional guarantees that we are the international proponent of human rights and civil liberties.

Ratification of the convention would focus international attention on the real issue at hand: that of the prevention of genocide. As we have seen, the extradition provision should not deter our passage of the Genocide Convention. I urge its immediate ratification.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting a withdrawal and a nomination which were referred to the appropriate committees.

(The withdrawal and nomination received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 10:46 a.m., a message from the House of Representatives, delivered by Mr. Gregory, one of its reading clerks, announced that the House has agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 815) to authorize appropriations for fiscal year 1982 for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons and for research, development, test, and evaluation for the Armed Forces, to authorize appropriations for fiscal year 1982 for operations and maintenance expenses of the Armed Forces, to prescribe the authorized personnel strength for each active duty component and the Selected Reserve of each Reserve component of the Armed Forces and for civilian personnel of the Department of Defense, to authorize the military training student loads, to authorize appropriations for fiscal year 1982 for civil defense, and for other purposes.

The message also announced that the House has passed the following bill, without amendment:

S. 1133. An act to amend the National Advisory Committee on Oceans and Atmosphere Act of 1977 to authorize appropriations to carry out the provisions of such act for fiscal year 1982, and for other purposes.

At 3:17 p.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3454) to authorize appropriations for fiscal year 1982 for the intelligence and intelligence-related activities of the U.S. Government, for the intelligence community staff, and for the Central Intelligence Agency retirement and disability system, to authorize supplemental appropriations for fiscal year 1981 for the intelligence and intelligence-related activities of the U.S. Government, and for other purposes.

The message also announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4522) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1982, and for other purposes; that the House recedes from its disagreement to the amendments of the Senate numbered 4, 5, 30, and 41 to the bill, and concur therein; that the House recedes from its disagreement to the amendments of the Senate numbered 7, 11, 12, and 22 to the bill, and concurs therein, each with an amendment; and that the House insists upon its disagreement to the amendment of the Senate numbered 42 to the bill.

The message further announced that the House has passed the following bills, in which it requests the concurrence of the Senate:

H.R. 1797. An act directing the Secretary of the Department in which the U.S. Coast Guard is operating to cause the vessel *Capt Tom* to be documented as a vessel of the United States so as to be entitled to engage in the coastwise trade; and

H.R. 4500. An act extending through fiscal year 1983 SBA pilot programs under section 8 of the Small Business Act.

HOUSE BILL REFERRED

The following bill was read twice by unanimous consent, and referred to the Committee on Commerce, Science, and Transportation:

H.R. 1797. An act directing the Secretary of the Department in which the U.S. Coast Guard is operating to cause the vessel *Capt Tom* to be documented as a vessel of the United States so as to be entitled to engage in the coastwise trade.

HOUSE BILL PLACED ON THE CALENDAR

The following bill was read twice by unanimous consent, and placed on the calendar:

H.R. 4500. An act extending through fiscal year 1983 SBA pilot programs under section 8 of the Small Business Act.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-2240. A communication from the Director of the Office of Management and Budget transmitting, pursuant to law, the cumulative report and status of fiscal year 1982 rescissions and deferrals as of November 1, 1981; jointly, pursuant to the order of January 30, 1975, to the Committee on Appropriations and the Committee on the Budget.

EC-2241. A communication from the Assistant Secretary for Research, Development, and Logistics of the Department of the Air Force transmitting, pursuant to law, a report on the decision to convert the refuse collection and disposal function at Pope Air Force Base, N.C., to performance under contract; to the Committee on Armed Services.

EC-2242. A communication from the Director of the Defense Security Assistance Agency transmitting, pursuant to law, a report on a proposed foreign military sale by the Air Force to Turkey; to the Committee on Armed Services.

EC-2243. A communication from the Maritime Administrator, Department of Transportation, transmitting pursuant to law, a cost comparison study relative to repairing and outfitting the training vessel *Bay State* or reactivating and converting the *SS Tulare* to serve as the training ship of the Massachusetts Maritime Academy; to the Committee on Commerce, Science, and Transportation.

EC-2244. A communication from the Secretary of Transportation transmitting, pursuant to law, findings of an investigation into allegations of impropriety and wrongdoing and an allegation of negligence made

against certain senior officials of the Federal Highway Administration; to the Committee on Governmental Affairs.

EC–2245. A communication from the Assistant Attorney General of the United States for Legislative Affairs transmitting, pursuant to law, a report on the Department of Justice review of the annual report of the Inspector General of the Department of Health and Human Services relative to health care cases referred for prosecutive consideration to the Department of Justice; to the Committee on Governmental Affairs.

EC–2246. A communication from the Deputy Assistant Secretary of Defense for Administration transmitting, pursuant to law, a report on a new system of records under the Privacy Act; to the Committee on Governmental Affairs.

EC–2247. A communication from the Deputy Assistant Secretary of Defense for Administration transmitting, pursuant to law, a report on a new system of records under the Privacy Act; to the Committee on Governmental Affairs.

EC–2248. A communication from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Stronger Crackdown Needed on Clandestine Laboratories Manufacturing Dangerous Drugs"; to the Committee on the Judiciary.

EC–2249. A communication from the Administrator of the Veterans Administration transmitting, pursuant to law, a report on a new system of records under the Privacy Act; to the Committee on Veterans Affairs.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. THURMOND, from the Committee on the Judiciary, with amendments:

S. 691. A bill to amend titles 18 and 17 of the United States Code to strengthen the laws against record, tape, and film piracy and counterfeiting, and for other purposes (Rept. No. 97–274).

By Mr. DOLE, from the Committee on the Judiciary, with amendments:

S. 1700. A bill to establish a U.S. Court of Appeals for the Federal Circuit, to establish a U.S. Claims Court, and for other purposes (with additional views) (Rept. No. 97–275).

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following executive reports of committees were submitted:

By Mr. PERCY, from the Committee on Foreign Relations:

Milan D. Bish, of Nebraska, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Barbados, and to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary of the United States of America to Saint Lucia, and Ambassador Extraordinary and Plenipotentiary of the United States of America to Saint Vincent and the Grenadines;

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Milan D. Bish.

Post: Ambassador to Barbados.

Contributions, amount, date, donee.

1. Self, $500 (each), 1979 and 1980, Nebraska Governor Club (Nebraska Republican Party).

2. Spouse, none.

3. Children and spouses names, none.

4. Parents names, none.

5. Grandparents names, none.

6. Brothers and spouses names: none.

7. Sisters and spouses names: none.

Elliott Abrams, of the District of Columbia, to be Assistant Secretary of State for Human Rights and Humanitarian Affairs;

Edwin Gharst Corr, of Oklahoma, a career member of the Senior Foreign Service, class of counselor, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Bolivia;

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Edwin Gharst Corr.

Post: Ambassador to Bolivia.

Contributions, amount, date, donee.

1. Self and Spouse, $100, November 1979 to August 1980, President's Club of the Democratic National Committee.

2. Children and Spouses: Michelle Ruth (single), none; Jennifer Jean (single), none; Phoebe Rowena (single), none.

3. Parents: E. L. (Bert) and Rowena Corr, $12, 1976 to 1980, Washington County Women's Democratic Club, Oklahoma (annual dues of $3). $15, July 29, 1980, Washington County Democrats. $37, 1979, Washington County Democrats. $20, 1978, Washington County Democrats.

4. Grandparents (deceased).

5. Brothers and Spouses: E. L. (Bert) Corr, Jr., and wife Jeri, $50, 1980, Jim Hamilton, Democratic candidate for U.S. Senate. $50, 1978, Mike Sullivan, Democratic candidate for Oklahoma State Senate. $80, 1976–80, Political Action Group for Educators, Oklahoma (annual dues).

William R. Corr (single), none.

6. Sister and spouse: Ted and Jean Cochrane, $20, August 1, 1978, Common Cause. $25, November 6, 1978, Democratic National Committee. $20, November 6, 1978, American Civil Liberties Union. $50, November 15, 1978, Oklahoma County Democratic Party. $20, May 2, 1980, American Civil Liberties Union.

Note: I have made no contribution to political groups aside from those listed above I do not believe any of my relatives have either, but I am asking them to see if any have made donations during 1981 and will amend this statement if they have.

Melvin Herbert Evans, of the Virgin Islands, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Trinidad and Tobago;

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Melvin H. Evans, M.D.

Post: Ambassador to Trinidad-Tobago.

Contributions, amount, date, and donee.

1. Self, none.

2. Spouse, Mary Phyllis, none.

3. Children and spouses name: Melvin, Jr., and Kay Evans; Robert and Maresa Evans; William and Pat Evans; Cornelius Evans, none.

4. Parents names: Deceased more than 4 years, none.

5. Grandparent names: Deceased more than 4 years, none.

6. Brothers and spouses names: No brothers, none.

7. Sisters and spouses names: Myrtle Farrelly (husband deceased); Beverly Batroni (husband deceased); Jeanne Cruz (divorced), none.

By Mr. JEPSEN, from the Committee on Armed Services:

Melvyn R. Paisley, of Washington, to be an Assistant Secretary of the Navy.

Mr. JEPSEN. Mr. President, I report favorably the following nomination: Lt. Gen. Richard H. Groves, U.S. Army (age 58), for appointment to the grade of lieutenant general on the retired list. I ask that his name be placed on the Executive Calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JEPSEN. In addition, Mr. President, in the Air Force Reserve there are 62 promotions to the grade of colonel (list begins with Ernest Z. Adelman), in the Naval Reserve there are 10 permanent promotions to the grade of commander and below (list begins with Hugh Highland), in the Navy and Naval Reserve there are 3,734 permanent promotions to the grade of commander (list begins with Charles E. Aaker), and in the Navy there are 67 permanent promotions/appointments to the grade of lieutenant commander and below (list begins with Michael A. Harwell). Since these names have already appeared in the CONGRESSIONAL RECORD and to save the expense of printing again, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of November 4, November 9, and November 10, 1981, at the end of the Senate proceedings.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mrs. KASSEBAUM:

S. 1859. A bill to amend the Federal Reserve Act to shorten the terms of office of the Board of Governors of the Federal Reserve System, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. MOYNIHAN:

S. 1860. A bill to protect communications among Americans from interception by foreign governments, and for other purposes; to the Committee on Foreign Relations.

By Mr. CANNON (for himself and Mr. LAXALT):

S. 1861. A bill to amend the Internal Revenue Code of 1954 to simplify certain requirements regarding withholding and reporting at the source and to correct inequities regarding carryover of losses; to the Committee on Finance.

By Mr. MOYNIHAN:

S. 1862. A bill to modify the navigation project for Moriches and Shinnecock Inlets, N.Y.; to the Committee on Environment and Public Works.

S. 1863. A bill to authorize the Secretary of the Army, acting through the Chief of Engineers, to construct the project to control beach erosion and provide storm protection along the Atlantic Coast of New York City from Rockaway Inlet to Norton Point; to the Committee on Environment and Public Works.

S. 1864. A bill to authorize the Secretary of the Army, acting through the Chief or Engineers, to construct the project for flood control, Cazenovia Creek, Buffalo metropolitan area, New York; to the Committee on Environment and Public Works.

By Mr. DANFORTH (for himself, Mr. MOYNIHAN, Mr. ROTH, Mr. HEINZ, and Mr. MITCHELL):

S. 1865. A bill to delay the effective date of amendments relating to group eligibility requirements for trade adjustment assistance; to the Committee on Finance.

By Mr. GORTON (for himself, Mr. GRASSLEY, Mr. BENTSEN, and Mr. ABDNOR):

S. 1866. A bill to assure safe drinking water; to the Committee on Environment and Public Works.

By Mr. McCLURE (for himself, Mr. JACKSON, Mr. ABDNOR, Mr. DOMENICI, Mr. GOLDWATER, Mr. HATCH, Mr. HAYAKAWA, Mr. LAXALT, Mr. SIMPSON, Mr. SYMMS, and Mr. WALLOP):

S. 1867. A bill to amend and supplement the acreage limitation and residency provisions of the Federal reclamation law, as amended and supplemented, and for other purposes; to the Committee on Energy and Natural Resources.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mrs. KASSEBAUM:

S. 1859. A bill to amend the Federal Reserve Act to shorten the terms of office of the Board of Governors of the Federal Reserve System, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

FEDERAL RESERVE ACT AMENDMENTS OF 1981

Mrs. KASSEBAUM. Mr. President, in recent weeks we have been discussing the budget and its various facets. Certainly we have all become acutely aware of the potentially devastating impact high interest rates on our economy. As we continue to seek ways of obtaining reduced and stable interest rates, we have had the opportunity to closely observe the institutional and structural aspects of our monetary control system.

I have been and continue to be in favor of an independent, depoliticized Federal Reserve System. The worst thing we could do for our long-term economic stability is vest control of the money supply with Congress.

Nevertheless, I believe there are some structural modifications that would make the Fed more responsive and more open. Today, I am introducing legislation to begin this process.

First of all, my bill would limit tenure on the Board of Governors to 8 years instead of the existing 14 years. Current members would be allowed to finish their terms, with the 8-year limit applying to all succeeding members. I believe this accelerated turnover on the Board would create an infusion of new thoughts without jeopardizing its political independence.

Second, the bill would permit all 12 District Reserve Banks to have voting representation on the Federal Open Market Committee. Currently, only 5 of the 12 sit on the committee at a given time with the seven Governors of the Federal Reserve Board comprising the remainder of the committee. By making the District representatives a majority on the committee, the powers of the Fed would be decentralized.

Since the Federal Open Market Committee determines the extent to which the Federal Reserve System buys and sells Government securities, it is the most important policymaking body and this modest diffusion of control would conform with our system of federalism.

Finally, the bill would give the District Reserve Banks greater discretion in responding to economic conditions in their area by allowing them to make changes of up to 1 percent in the discount rates they charge on loans to member banks.

Currently changes in the discount rate are subject to the approval of the Board of Governors. My bill would permit this additional freedom only if the total amount of increases or decreases during the preceding 12-month period does not exceed 2 percent.

Further, the maximum differential between the highest and lowest rates in the Nation cannot exceed 3 percent. It also instructs the Board of Governors to establish procedures to confine the benefits of a lower rate to the District that has established that low rate.

Mr. President, I recognize that this bill will not lower interest rates, nor is it designed to do so. However, I believe that it would foster a structure more conducive to addressing monetary policy in the country. I encourage the Banking Committee to consider this and other proposals as soon as possible.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1859

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Reserve Act Amendments of 1981".

SEC. 2. (a) The second sentence of the second paragraph of section 10 of the Federal Reserve Act is amended to read as follows: "Upon the expiration of the term of any member of the Board in office on the date of enactment of the Federal Reserve Act Amendments of 1981, the President shall fix the term of the successor to such member at eight years, and thereafter each member shall hold office for a term of eight years from the expiration of the term of his predecessor unless sooner removed for cause by the President.".

(b) The last sentence of the second paragraph of section 10 of the Federal Reserve Act is amended to read as follows: "Any person appointed to be a member of the Board after the date of enactment of the Federal Reserve Act Amendments of 1981, shall not be eligible for reappointment after he or she has served a full term of eight years.".

SEC. 3. Section 12A(a) of the Federal Reserve Act is amended—

(1) by striking out "five representatives" in the first sentence thereof and inserting in lieu thereof "a representative of each"; and

(2) by striking out all after "Federal Reserve banks" in the second sentence and inserting in lieu thereof a period.

SEC. 4. Section 13 of the Federal Reserve Act is amended by adding at the end thereof the following:

"Notwithstanding any other provision of this section, a Federal Reserve bank may increase or reduce the rate or rates applicable to advances and discounts under this section by not to exceed one percentage point without review or determination by the Board of Governors if—

"(1) the sum of the amount of the proposed increase or reduction and the total amount of increases or reductions of the same rate or rates during the preceding twelve-month period by that bank does not exceed two percentage points; and

"(2) the differential between the rate or rates established by that Federal Reserve bank and the rate or rates established by any other Federal Reserve bank would not, after the increase or reduction, exceed three percentage points.

The Board of Governors shall establish procedures to limit access to any rate which may be established pursuant to this paragraph for a district and which is lower than a rate established by another Federal Reserve bank to borrowers located in the district in which the Federal Reserve bank establishing the lower rate is located.".

By Mr. MOYNIHAN:

S. 1860. A bill to protect communications among Americans from interception by foreign governments, and for other purposes; to the Committee on Foreign Relations.

FOREIGN SURVEILLANCE PREVENTION ACT OF 1981

● Mr. MOYNIHAN. Mr. President, in July 1977, I introduced the Foreign Intelligence Surveillance Act which addressed what must properly be regarded as the gravest threat to Americans' right to privacy which has yet arisen. I refer to the well-known Soviet practice of making use of its diplomatic establishments in this country to monitor the telephone conversations of Americans on a truly enormous scale.

Through the use of sophisticated electronic technology, the Soviets have been able to eavesdrop on the private telephone conversations of thousands upon thousands of Americans. Whatever the intelligence value of such activity—and perforce it must be substantial—there would exist here a profound problem even if the Soviets had never been able to make use of the information gained in this ongoing effort. For the Constitution of the United States obligates the Government of the United States to insure that the guarantees of the Constitution are not violated. It is not for nothing that we are enjoined to protect the Constitution of the United States against all enemies, foreign and domestic.

I return to this subject today, for the failure of the disclosures of this Soviet activity to stir a proper response in this country is more striking than it has ever been. Let us remember that the information regarding Soviet eavesdropping has been in the public domain since 1975. Indeed, the first reports of it were neither obscure, nor unofficial. The report of the Commission of CIA Activities within the United States, chaired by the late Nelson Rockefeller, said the following on June 6, 1975:

While making large-scale use of human intelligence sources, the communist countries also appear to have developed electronic

collection of intelligence to an extraordinary degree of technology and sophistication for use in the United States and elsewhere throughout the world, and we believe that these countries can monitor and record thousands of private telephone conversations. Americans have a right to be uneasy if not seriously disturbed at the real possibility that their personal and business activities which they discuss freely over the telephone could be recorded and analyzed by agents of foreign powers.

The bill I introduced on July 21, 1977, called on the President to take forceful action, including the expulsion of foreign diplomatic personnel, to put a stop to widespread electronic eavesdropping being perpetrated by the Soviet Union against the citizens of the United States. At that time, I said:

The violation of privacy by electronic means, the use of sophisticated electronics equipment to intercept telephone calls, data transmissions, and the like has become a major enterprise of the principal totalitarian government in the world, that of the Soviet Union. Through the use of machinery installed at its diplomatic missions around the United States—in New York, in Washington, D.C. in San Francisco—Soviet espionage services have eavesdropped on "hundreds of thousands, even millions" of Americans (so the Chicago Tribune reported in June of 1975) and have presumably used the information gained thereby to advance the national interests of the Soviet Union. Private communications of all sorts have been violated—and on a scale that dwarfs any previous surveillance effort by friend or foe alike.

Yet a curious—even eerie—unwillingness exists to confront not merely the dimensions of the problem, but also to imagine that we in the United States can do anything about this! I have stated that I regard it as the responsibility of the government of the United States to protect the right of privacy of all citizens, regardless of whether the threat comes from our own government or foreign governments. I believe that the Fourth Amendment to the Constitution, which protects the right to privacy, is under assault by foreign powers, and that it is time for the U.S. Government to do something about it.

I cannot stress too strongly that modern technology has given to foreign espionage a new dimension which needs to be understood in this country. The targets of Soviet interception of telephone communications now include our businesses, our banks, our brokerage houses, as frequently as our government agencies. Soviet espionage seeks to penetrate into other aspects of American life—commercial, intellectual, political—as much as it seeks illegal entry into the councils of governments. This is precisely why the problem is now one of interest to all Americans in their daily lives—not an abstract problem for intelligence operatives in trench coats.

The principle here is simple: so far as electronic surveillance is concerned our law defines what Americans cannot do to each other; it is time for a law which says what foreign governments cannot do to us.

Since then the administration has taken some actions in this area. On November 20, 1977, the New York Times reported that:

President Carter has approved a broad Government program to make it more difficult for the Soviet Union, other nations or businesses to eavesdrop on telephone communications in the United States.

Under the program, Federal research on how to improve telephone security will be increased. Nearly all Government telephone messages in Washington, New York and San Francisco are in the process of being routed through underground cables, rather than over the more frequently used but less secure microwave radio towers, and private industry is being actively encouraged to develop and use more secure telephone equipment.

The officials also said that the United States had made a direct diplomatic approach to the Soviet Union about its eavesdropping here, in connection with the discussions of the high levels of microwave radiation discovered in the vicinity of the American Embassy in Moscow.

More recently, the New York Times revealed some detail about a special unit set up as a result of the 1977 decision to combat such eavesdropping. In a March 26, 1979 article David Burnham reported that:

The Special Project Office was created to encourage businesses and Federal agencies to protect "sensitive information" that, experts in the National Security Council say, could be useful to a potential enemy even though it cannot be classified or otherwise controlled by the Government.

The office is the result of several years of secret debate among the top security advisers of President Carter and former President Gerald R. Ford about ways to secure public and private telephone messages, transmitted throughout the United States by microwave towers or satellites, against interception efforts by the Soviet Union and perhaps other countries.

Charles K. Wilk, a staff member of the Special Project Office, told a group of communication officials at a convention in Dallas recently that there was no question that "some sensitive Government information is vulnerable to interception and exploitation and should be better protected."

In discussing the vulnerability of some private companies, Mr. Wilk said that "the Federal Government plans to raise awareness and encourage the use of improved protections."

Both Mr. Bortz and Mr. Wilk cautioned against overreaction by the public. "The Federal Government is not suggesting that everyone's telephone calls are being monitored," Mr. Wilk said.

Creation of an agency to curb Soviet surveillance activities in the United States began with a special study conducted by the National Security Council under President Ford.

During the study, such far-reaching remedies as the abandonment of the widespread use of microwave telecommunication towers and the encouragement of the use of underground cables were considered. But the Council decided at the end of the Ford Administration that the decision should be left to the incoming President.

Shortly after Mr. Carter took office, the Council resumed its consideration of methods to stop Soviet eavesdropping, and decided about a year ago to adopt a far more modest approach than had been considered by the previous Administration.

And, Mr. President, last Saturday, November 14, 1981, the Times again reported on Soviet espionage activity in New York City where, according to FBI officials, the Bureau's own phones are stamped "not secure" because of Soviet eavesdropping. I ask that it be reprinted in the RECORD.

The actions which our Government has taken to date have been essentially defensive in nature and have been slow to take effect. At best, they can solve only part of the problem and only until such time as the Soviets develop new methods of counteracting our efforts to block their eavesdropping.

For these reasons, I am obliged to reintroduce my legislation today to stiffen our Nation's opposition to these electronic assaults on the privacy of our people. A democratic society has much of which it can be proud and among these things are openness and respect for the rights of individuals. These characteristics, which we cherish, should not become the playthings of the intelligence apparatus of a totalitarian state.

By reintroducing this legislation, I do more than call attention to our inadequate response to date. I also suggest that the pattern of avoidance which so far has characterized our response can and must be broken. For it is a matter of self-defense, plain and simple, and yet our passivity suggests that we are losing that basic instinct. It is more than time for this subject to be removed from the realm of technological exotica and placed squarely in its proper place—that is, an urgent subject for both our foreign and domestic policies.

There being no obligation, the article was ordered to be printed in the RECORD, as follows:

NEW YORK TERMED "HUB" OF FOREIGN SPIES IN U.S.

(By Leslie Maitland)

From the Soviet residence in the Riverdale section of the Bronx, where rooftop equipment permits surveillance of telephones throughout the Northeast, to Russian émigré communities in Brooklyn, where the Federal Bureau of Investigation fears that "sleeper" Soviet agents live in disguise, American and Russian agents are fighting each other for information.

Largely because New York City is the home of the United Nations and its many delegates, but also because of its pre-eminence as a business capital in an age when manufacturing advance represent the secrets many foreign governments are most eager to share in, the city is the focus of international espionage efforts.

According to the FBI, for example, even its own telephones are subject to eavesdropping by Soviet agents. Its own intelligence activities have made the bureau aware of that danger. Every telephone in the bureau's foreign-counterintelligence section is therefore marked with a sticker warning that it is "not secure." And for sensitive communication, agents use a separate, special scrambler phone that requires a different code each day from the National Security Agency in Maryland.

Understandably, perhaps, espionage is a subject that bureau officials have not discussed often in public. In addition to security reasons for keeping silent, they are subject to criticism both for laxity and for overzealousness. But in a recent series of interviews, the F.B.I.'s foreign counterintelligence experts in New York described some of their methods of operation, their efforts to stymie espionage by other countries and the importance of New York City as a spying center.

While F.B.I. accounts of intelligence activities cannot be substantiated in most respects because of their secret nature, the agency's descriptions offer a revealing look at what it says are its activities in intelligence gathering.

According to Donald J. McGorty, the special agent in charge of the bureau's Sino-Satellite foreign counterintelligence section—which focuses on every country but the Soviet Union—New York is actually "the largest base for foreign intelligence-gathering."

"New York is the hub," he said. "There are many more diplomats here than anywhere

else—even Washington. Even countries with whom we do not have diplomatic relations and who have no embassies have missions at the United Nations. And anyplace these people have establishments, there's an opportunity for espionage."

Not all the spying in the city, however, is actually directed at the United States, Mr. McGorty said. Some of it constitutes "third-country recruitment"—the development of a Libyan spy, for example, by Soviet agents here. The United Nations makes the city a prime location for such enlistment.

TARGETS OF U.S. AGENTS

Agents in the Sino-Satellite section devote most of their attention to representatives of 20 so-called "criteria countries," designated as top priorities. Under guidelines from the Attorney General, Mr. McGorty said, the bureau needs no specific information or suspicious move to touch off an investigation of a criteria country's actions, but it must be able to present "specific and articulable facts" to support arguments for inquiries into noncriteria countries.

He declined to name all of the target countries, but said they included Libya, Communist-bloc countries and the Palestine Liberation Organization. He added that more than 2,000 officials of criteria countries either worked or lived in New York City.

R. Jean Gray, the special agent in charge of Soviet counterintelligence, said that among more than 600 people the Russians have working in New York, 110 have diplomatic immunity, which extends to their spouses.

"About 35 percent of the people with immunity are suspected to be officers of Soviet intelligence services," Mr. Gray said. "Experience has indicated that among the remainder, a significant percentage are also members of Soviet intelligence services or are co-opted to carry out tasks for those services from time to time."

F.B.I. HAS 300 ON THE CASE

By contrast, the bureau has more than 300 agents assigned to foreign counterintelligence in New York, many less than it had at the height of the Cold War. With détente, the ranks were reduced, but in the past five or six years, chilling trends led to the adding of personnel.

Mr. McGorty and Mr. Gray say the bureau's espionage mandate is not primarily to gather information, but to detect and prevent spying by foreign agents. This obviously requires identifying spies in the city's foreign population, which calls for delicate judgments as to whether someone is acting outside the scope of his stated diplomatic functions.

"We have to find out who the players are before they play ball," Mr. McGorty said. The easiest way to accomplish that, he added, is to "get one of them to work for us so we'll know what they're up to." The prime recruits are intelligence agents from target countries, but the job of enlisting them is not easy.

An initial approach, Mr. McGorty said, is generally disguised as simple friendliness. Bureau agents (who are not allowed to operate outside the United States and cannot enter the gates of the United Nations) pose as lawyers or accountants while hobnobbing in the bars and restaurants frequented by representatives of other countries. Overtures are gradual, while agents work at cultivating confidence.

SHOPPING IN SUPERMARKETS

In some cases, he said, female F.B.I. agents are dispatched to supermarkets or beauty parlors used by a target's wife to enlist the woman's help in influencing her husband to shift his sympathies.

Making contact with Soviet targets has become particularly difficult since the opening of their residential complex in the Riverdale section of the Bronx, Mr. Gray said.

"They travel in by special bus from Riverdale together every morning and go back there together every night," he said. "At lunch, they eat in the cafeteria at the Soviet Mission. They don't have a lot of pocket money. You don't find them carousing around town."

Besides having to evaluate whether Soviet employees are really serving a legal function in New York, the bureau has also faced a problem in discerning whether spies are being slipped in among the 400 Soviet émigrés who arrive in the country each month.

MAY BECOME TAXI DRIVERS

"It used to be they would take a name from a tombstone in Michigan or someplace of someone who died at the age of 2 and write for a birth certificate and spend years creating a false identity," Mr. Gray said. "Now all they have to do is send him in as a Soviet émigré. An illegal may come in and spend five years driving a taxi, but then be called into action."

"By then," the agent continued, "he may even be a citizen, and he's learned the language. Maybe then he seeks a job with Grumman Aerospace, saying that in Russia he was an engineer." At that point he gains access to potentially important information.

The bureau has been attempting to develop a profile of the sort of person who may be only masquerading as a refugee. When suspicion arises, Mr. Gray said, "we try to interview them, or we try to neutralize their activities by interviewing everyone they're talking to—or else we notify the Immigration Service that the person should be returned."

In some cases, he said, the spy may not be posing as a refugee, but actually be an émigré unwillingly pressed into service as a Soviet agent—threatened, for example, with reprisals against family members still in the Soviet Union.

CONCERN ABOUT TECHNOLOGY

Ideally, bureau officials said, reluctant Soviet spies can be utilized as double agents to funnel misinformation. But this can be tricky, for the bureau may be deceived into believing it has a double agent working for the United States, when the spy is really a triple agent—a Soviet agent really working for the Soviets while pretending to the F.B.I. to have switched his loyalty.

"You can be reeled in for a year before you realize you've been hooked," Mr. Gray said.

The transfer of American technology to criteria countries—of growing concern, not just to the bureau, but to such agencies as the Customs Service and the Commerce Department—is regarded as a major focus of current spying efforts.

"Our only salvation is that they can't possibly assimilate all they're getting," Mr. McGorty said. He added that his agents regularly instructed companies with top-secret government contracts about how to guarantee security.●

By Mr. CANNON (for himself and Mr. LAXALT):

S. 1861. A bill to amend the Internal Revenue Code of 1954 to simplify certain requirements regarding withholding and reporting at the source and to correct inequities regarding carryover of losses; to the Committee on Finance.

LEGAL GAMING INDUSTRY TAX

● Mr. CANNON. Mr. President, on behalf of my distinguished colleague, Senator LAXALT, and myself, I introduce a bill to amend the Internal Revenue Code to simplify certain requirements that apply to the legal gaming industry and its patrons.

There are three features of this measure that I intend to address. The first provision of the bill repeals the present withholding requirements. The second provision of my bill would raise the level for informational reporting on payouts from $600 to $10,000. Last, the third provision would provide for a 3-year carryback and carryover of net gambling losses.

Mr. President, before I undertake an explanation of each of these three provisions, let me assure my colleagues from the outset that this legislation does not benefit only a narrowly defined set of gaming interests. On the contrary, the scope of this measure is much broader. I am not just talking about legal casino gambling in my State—rather, my bill is aimed at achieving equity in the tax treatment of patrons of several legal gaming industries.

For example, many people are not aware that over 30 States in our Nation have established parimutuel racing industries which provide those States with a significant revenue base that now, more than ever, is urgently needed. Furthermore, Mr. President, 15 States, the Virgin Islands, and Puerto Rico have authorized State lotteries and those States similarly derive economic benefits. I think it is easy to see that this legislation intends to alleviate the burdens of numerous States which must comply with these requirements.

Let me now review and discuss the first feature of this bill which would repeal present withholding. Currently, 20 percent withholding requirements exist for winnings of more than $1,000 involving bettor odds of 300 to 1 or higher from horseracing, dogracing, and jai alai. The 20 percent also applies to winnings of more than $5,000 from State-conducted lotteries. When one examines the issue of withholding, it is interesting to review some of the findings of the 1976 report to Congress of the Commission on the Review of the National Policy Toward Gambling, on which I served. Not only did the Commission find that withholding generates nominal revenues to the Federal Government, but it also pointed out that withholding only stimulates illegal gambling.

Now, Mr. President, I have consistently supported those policies which have proven to be effective in the deterrence of illegal gambling. I firmly believe we must do everything that we can to insure that illegal operators are halted in their tax-free ride at the expense of those law-abiding taxpayers. No one more than I wants to see the illegals pay their share. However, Mr. President, when a policy proves to be ineffective, and once more, even harmful to those States responsible for its compliance, then I must question its validity.

For example, the current emphasis on individual States assuming a greater share of the responsibility for providing services to its citizens is a point worth discussing as it relates to this issue. As Congress continues to make the necessary cuts in the Federal budget, and as individual States increasingly begin to feel the pressures to fill the gap, it becomes more and more important to use each and every viable alternative to raise revenue. As withholding has stimulated illegal gambling, reduced revenues have

directly affected the more than 30 States who rely on this industry as one of those viable alternatives.

To me, Mr. President, two Federal policies exist which appear to contradict each other. Instead of impeding the States diligence to realize its revenue goals, the Federal Government should be facilitating those endeavors in every way possible.

It is equally important to review the revenue aspects of withholding. The IRS, in its "Study of Compliance in Reporting Gambling Winnings—Tax Year 1977," estimated that gross tax collections from withholding in 1977 was $100 million. The Service's statistics admit that a portion of that $100 million is returned to those persons not required to file and from those that withholding exceeded the amount due. When those are deducted, the dollar amount is reduced to $68 million. Furthermore, it is estimated that $59 million is withheld from those taxpayers who comply voluntarily. Thus, one has to conclude that only about $9 million is generated by withholding.

In addition, Mr. President, it is significant to note that these computations do not even take into account the portion of sums now wagered illegally that would flow into legal channels as a result of change in this tax situation. IRS estimates that $12 to $15 billion is wagered illegally each year. Even if a small amount of this figure were brought into the legal system, substantial revenues to the Federal, State, and local, and industry sectors would be realized.

As I indicated earlier, the second feature of this bill raises the level of money an individual can win before reporting it to the IRS from $600 to $10,000. I know that my colleagues are aware of the ever-increasing costs for administering various and numerous Federal regulations. If one reviews recent studies in terms of a cost-benefit relationship, it is interesting to note that the administrative costs involved are greater than the benefits of procuring the names of each and every individual who won as much as $600.

Furthermore, these studies show that, while a higher reporting level would result in fewer transactions, those transactions reported would be those of real tax liability. It is also worth mentioning that most players are, in fact, net losers. As such, their winnings at the current level net out to an actual loss for that tax year. Therefore, the $10,000 reporting level would cover those transactions that do net out to a win, thus substantially reducing both industry and Government administrative costs.

The last provision of this measure would allow taxpayers a 3-year carryforward or carryback of net gaming losses. Current law permits taxpayers to deduct wagering transactions only to the extent of gains from such transactions. The Commission on the Review of the National Policy Toward Gambling, in its report, determined that very few bettors actually realize net wagering gains during their gambling careers. What this means, then, Mr. President, is that taxpayers who incur losses in a given tax year are unable to offset those losses if there are no winnings in that same tax year. Mr. President, this practice discriminates against the legal patron and just encourages individuals to patronize illegal operations in order to avoid the taxes in their entirety.

In conclusion, Mr. President, I think we can all agree that every effort should be made to insure that our tax laws are as equitable as possible. This measure, if enacted, will, I believe, bring a certain amount of that equity to the tax treatment of law-abiding citizens who patronize legal gaming operations.

In addition, this legislation is important because it will remove some of the barriers that prevent individual States, who by approval of their citizenry have adopted legal gaming as a legitimate form of revenue, from realizing their revenue goals. Notwithstanding these considerations, one very important factor stands out—one that we, as Members of Congress, should not ignore. By eliminating those policies that provide for a competitive illegal gaming alternative, this measure will substantially meet the goal of inhibiting the activities of the illegal gaming industry.●

By Mr. MOYNIHAN:

S. 1862. A bill to modify the navigation project for Moriches and Shinnecock Inlets, N.Y.; to the Committee on Environment and Public Works.

S. 1863. A bill to authorize the Secretary of the Army, acting through the Chief of Engineers, to construct the project to control beach erosion and provide storm protection along the Atlantic Coast of New York City from Rockaway Inlet to Norton Point; to the Committee on Environment and Public Works.

S. 1864. A bill to authorize the Secretary of the Army, acting through tht Chief of Engineers, to construct the project for flood control, Cazenovia Creek, Buffalo metropolitan area, N.Y.; to the Committee on Environment and Public Works.

NEW YORK WATER RESOURCES PROJECTS

● Mr. MOYNIHAN. Mr. President, I now introduce three bills that would authorize the Corps of Engineers to construct water resources projects in the State of New York.

Each of these projects was included in the Water Resources Development Act of 1980, S. 3170, which I introduced last September 1980 in my capacity as chairman of the Water Resources Subcommittee. S. 3170 was reported by our subcommittee on September 16, 1980, but was never acted upon by the full Environment and Public Works Committee.

The prospect for passage of an omnibus water projects authorization bill in this Congress, I regret to say, is only marginally better than in the last two Congresses. Save for relatively minor rivers and harbors acts in 1974 and 1976, there has not been a water bill for over a decade.

Nonetheless, the possibility does exist for some action to occur in the near future on a small authorization bill. To this end, I introduce the Moriches Inlet stabilization project, the Coney Island Beach erosion project, and the Cazenovia Creek flood control project as separate pieces of legislation.

There are other important projects in New York which I will introduce at a later date.

Mr. President, I ask unanimous consent that each bill be printed in the RECORD followed by a brief description of each project.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1862

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the project for navigation at Moriches and Shinnecock Inlets, New York, authorized in section 101 of the River and Harbor Act of 1960 (Public Law 86–646) is hereby modified to require the Secretary of the Army, acting through the Chief of Engineers, to take such action as may be necessary to stabilize Moriches Inlet at ten feet mean low water for the purpose of insuring safe navigation, at an estimated cost of $5,000,000 (October 1979). Such project is further modified to provide that the operation and maintenance of the project shall be the responsibility of the Secretary of the Army, acting through the Chief of Engineers. Local interests shall pay the first $25,000 in cash or materials for any such costs expended in any one year.

MORICHES INLET

Mr. MOYNIHAN. Mr. President, the bill directs the corps to alleviate hazardous navigation conditions at the inlet. The State of New York and the Long Island Regional Planning Board have endorsed the Corps of Engineers' plan to stabilize the inlet against further tidal erosion. Although water quality and beach stabilization will also be enhanced by the project, the corps has justified this project essentially on its navigation benefits. The estimated cost of the project is $5 million. Local interests will cover the first $25,000 of any annual operation and maintenance costs incurred by the corps at the project.

The Corps of Engineers has been maintaining Moriches Inlet, formed during a storm on March 4, 1931, since the passage of the 1960 Rivers and Harbors Act. The corps is presently carrying out emergency repair work at the inlet as a result of a breach which occurred during January of 1980. The breach greatly increased the exposure of thousands of Suffolk County residents to significant flooding.

Moriches Inlet, one of six openings through the barrier beach on the south shore of Long Island, is now officially closed to navigation. The inlet is in the town of Brookhaven, Suffolk County. Over the last 20 years, the inlet had become increasingly dangerous to navigate as a result of progressive shoaling problems. Local commerce has suffered and a number of boating fatalities have occurred.

The inlet, now a recreational center and haven of refuge for coastal craft, once supported a receiving center for commercial fish catches. Commercial fishermen now regard Moriches Inlet as too hazardous for routine navigation and consequently have sought out neighboring inlets. Only four commercial fishing boats now operate out of the inlet.

The hazardous navigation conditions, mainly shallow water depths over a sandbar, have produced an alarmingly high rate of capsizing over the last decade. Between 1974 and 1978, six deaths occurred. As a percentage of overall boat use in the inlet (approximately 4,000 boats), the fatality rate is roughly three times the national average.

In addition to the navigational hazards, closure of Moriches Inlet has created serious water pollution problems. Moriches bay drains about 60 square miles of land. An abnormally high loading of nitrogen enters the bay through underground flow and stream flow. The nitrogen contributes to unacceptably high concentrations of coliform bacteria and has led to a ban on shellfishing.

S. 1863

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Army, acting through the Chief of Engineers, is authorized and directed to construct a project to control beach erosion and provide storm protection along the Atlantic Coast of New York City from Rockaway Inlet to Norton Point, in accordance with House Document 96-23, at a cost of $2,240,000 (October 1979). In conducting this project the Secretary shall protect the shores situated to the west of the terminal groin to be built at West 37th Street from possible adverse effects of this project. These protective measures shall not include the use of hard structures, but shall be limited to sand fill encompassing a protected zone beginning at the groin at West 37th Street and extending not less than two thousand feet toward Norton Point. The sand thus placed shall be replenished in the same manner and according to the same schedule as the beaches lying to the east of the above mentioned groin.

CONEY ISLAND

Mr. President, the purpose of the Coney Island Beach erosion control project is to restore the beach by hauling in additional sand, a process known as beach nourishment. The project will protect the beach from further erosion by the construction of groins. Groins are stone barriers extending from the beach several hundred feet into the ocean.

The Corps of Engineers project is strongly supported by the city of New York and the community residents. In 1979 dollars, the project is estimated to cost $2.2 million.

Erosion has taken its toll on the Brooklyn beaches. Beach widths are as narrow as 40 feet in some locations. In 1973, when initial engineering studies were conducted, the beach was about 300 feet wide.

Coney Island has as many as 10 million visitors annually. During the summer peak periods, over 400,000 people crowd the beach each day. The sand replenishment program, proposed by the Corps of Engineers, will reinforce current efforts by the Department of Parks and Recreation of the city of New York to improve the Coney Island Beach frontage.

Several details of the bill's language require explanation. The corps is directed to protect the sea gate coast from water pollution or erosion which may be exacerbated by the construction of the groin at Norton Point. The bill further stipulates that such protective measures shall be limited to "soft structures" such as sand fill. The New York State coastal zone management plan has adopted a policy which favors soft over hard structures because of their lower cost, reduced environmental harm, and greater esthetic value.

S. 1864

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Army, acting through the Chief of Engineers, shall construct the project for flood control, Cazenovia Creek, Buffalo metropolitan area, New York: House Document 96-126, at a cost of $1,830,000 (October 1979).

CAZENOVIA CREEK

Mr. President, in 1977, the Corps of Engineers submitted to Congress a plan for flood protection in the Cazenovia Creek Watershed. The corps recommended the construction of an ice retention structure on Cazenovia Creek in the town of West Seneca. Such a structure would provide flood protection as would exist along the creek under ice-free conditions.

Cazenovia Creek is the largest tributary of the Buffalo River. Over the last several years the Soil Conservation Service has placed riprap along the streambanks to retard further erosion. The Corps of Engineers completed two small snagging and clearing projects on Cazenovia Creek in 1949 and 1971.

Flooding remains the most serious problem in the Cazenovia Creek basin. Snowmelt and rainfall during the late winter and early spring, combined with ice jams, have caused considerable flood damage in the past. Failure to control the ice formation along the creek will cause the repetition of excessive flooding and property damage.●

By Mr. DANFORTH (for himself, Mr. MOYNIHAN, Mr. ROTH, Mr. HEINZ, and Mr. MITCHELL):

S. 1865. A bill to delay the effective date of amendments relating to group eligibility requirements for trade adjustment assistance; to the Committee on Finance.

TRADE ADJUSTMENT ASSISTANCE

Mr. DANFORTH. Mr. President, I rise today on behalf of myself and Senators MOYNIHAN, ROTH, HEINZ, and MITCHELL, to offer legislation that could well have an impact on the livelihood of many thousands of deserving working men and women in America. This legislation, if enacted, would prevent an unnecessarily harsh eligibility standard under the trade adjustment assistance program from going into effect next February. It would not increase the program's budget allocation for fiscal year 1982, but rather would help assure the program's viability.

As part of the Omnibus Budget Reconciliation Act of 1981, the Congress agreed to extensive changes in the trade adjustment assistance program. This program has been in existence for over 18 years and is an integral part of our international trade policy. By compensating workers who lose their jobs as a result of imports, we are making a long-term investment in American labor. This investment is designed to insure that we maintain an experienced work force, ready to take on jobs in growth industries and in mature industries that need to retool to bolster their international competiveness.

The changes made in the TAA program in June cut substantially its costs and gave it a new direction. By equalizing the benefits received by workers who receive TAA with benefits received by workers under unemployment insurance (UI), we were able to reduce Federal spending for the program to the administration's targeted amount of no more than $205 million for the entitlement in fiscal year 1982. This represents a substantial reduction from the $1.5 billion originally estimated for the program. At the same time, we sought to move the program away from the traditional emphasis on cash benefits toward a much stronger emphasis on retraining and relocation.

In this regard, the administration pledged to spend an additional $112 million on retraining the smaller number of workers who would now be eligible for the TAA program.

Mr. President, this revised TAA program went into effect in September, although I note that money for training has yet to be appropriated. One additional change in the eligibility criteria, however, is not scheduled to go into effect until February 1982. This change would require imports to be a "substantial cause" of the unemployment, rather than the more reasonable "contribute importantly" eligibility standard currently in the law.

In June, I offered an amendment which was incorporated in the reconciliation bill that postponed enactment of this final change in the program by 6 months. At the time, many of us feared the new restriction would prevent thousands of deserving workers from qualifying for the small amount of money allocated for the program. It had never been the subject of hearings in the Senate Finance Committee.

Furthermore, the CBO estimated that the changes already enacted in the TAA program would in and of themselves result in a program that met the administration's budget objectives. CBO had no estimates for the savings from the measure in question, but in June reported that "due to the proposed requirement that individuals exhaust their UI benefits before being eligible for TAA, the proposal's impact would be miniscule." Therefore, it seems to me unnecessary, if not counterproductive, to retain this additional cumbersome criterion.

The CBO report to the Finance Committee cited another serious problem created by the "substantial cause" language:

> It might also be difficult to implement the Administration's proposal that the criteria for determining the eligibility of groups of workers be restricted substantially. The shift from a "contributed importantly" test to a "substantial cause" test, of the impact of imports on job separations would require substantial changes in the type of analysis performed by the Department of Labor (DOL) in its eligibility determinations.

The Secretary would be required to examine all possible causes of job separations and compare their relative contribution to layoffs in order to decide whether or not imports were less important than any other cause. This change presumes a level of sophisticated economic analysis that may not have been developed yet. Currently the Secretary only must determine if imports are an important cause of layoffs without examining other causes.

On December 7, I intend to hold hearings on this bill and will gladly hear any cost estimates the administration or anyone else cares to offer. In the meantime, however, one look at how the TAA program functioned as established by the Congress in the Trade Act of 1974, compared to how it is operating today, provides clear evidence that this final change in criteria is unnecessary and redundant. Between April 1975 and September 1981 some 1,241,636 workers were certified for adjustment assistance. Yet this year, for the period January 1 through the end of September, only 17,714 have been certified.

If this dramatic decline can be even partially attributed to changes already enacted in the TAA program, certainly the addition of one more severely restrictive eligibility criterion will cut away more of the program than the administration or the Congress ever intended. We should not let this happen.

By Mr. GORTON (for himself, Mr. GRASSLEY, Mr. BENTSEN, and Mr. ABDNOR):

S. 1866. A bill to assure safe drinking water; to the Committee on Environment and Public Works.

SAFE DRINKING WATER REGULATORY REFORM ACT

● Mr. GORTON. Mr. President, today I am introducing a bill, the Safe Drinking Water Regulatory Reform Act, which would, if enacted make several changes in the substance of the Safe Drinking Water Act. The bill raises what I think are some of the key issues involving that act, the goal of which is to assure that water supply systems serving the public meet minimum national standards for protection of public health.

Maintaining safe drinking water for America's cities and communities is an important and appropriate purpose for Federal regulatory activity. Yet this year, drinking water quality has been obscured by important congressional consideration of the issues of clean air and hazardous wastes. In my view, safe drinking water is at least as important. Many people with whom I speak do not know that there is a Safe Drinking Water Act. Others confuse it with the Clean Water Act. Before we can have an intelligent discussion of the issues, we must become aware of what the issues are. The bill I introduce today raises some of those issues. Hopefully, others will be raised and amendatory suggestions made as we consider the issues raised by this bill.

I would like to briefly synopsize the provisions of this bill. First, this bill would retain the Administrative Procedures Act as the primary mechanism for reviewing agency regulations promulgated under the Safe Drinking Water Act. The venue for judicial review, would, however, be expanded to be national in scope rather than limited to the District of Columbia Circuit Court of Appeals.

Second, this bill requires the Administrator to consider relevant recommendations or advice provided by the National Drinking Water Advisory Council. The act currently requires only that the Administrator consult with the Council. One section of this bill changes the composition and size of the National Drinking Water Advisory Council. The new composition would be four membership groups of four members each:

The general public, persons in the scientific community expert in the field of public health and water hygiene, representatives from State and local agencies concerned with water hygiene and public water supply, and representatives of both the publicly owned and private, investor owned segments of the water supply industry.

Third, this bill would add a new series of requirements to the proposal and promulgation of a national primary drinking water regulation or a State underground injection control program regulation. These include a determination that the costs of compliance with the rule are justified by the benefits resulting from application of the rule.

The relevant provision does not attempt to define "cost" or "benefit." It does not require that benefits be equal to or greater than costs. What the bill requires is a disclosure of the facts used by the Administrator, a general statement of the weight given them, and the extent to which these factors favored the rule.

The act, which came into existence in 1974, establishes two types of national primary drinking water regulation—interim and revised. The Environmental Protection Agency promulgated interim regulations in 1975, which became effective in 1977. Those interim regulations ware based upon a review and updating of the 1962 Public Health Service standards. As of this date, the Environmental Protection Agency has not proposed or promulgated a revised regulation under the act. Revised regulations were to have been based on reports of the National Academy of Sciences or other suitable scientific body.

This bill would eliminate the Administrator's authority to continue to amend interim regulations but would continue his or her authority to propose and promulgate revised regulations. Consequently, the bill would not retroactively modify or eliminate any existing maximum contaminant level. Only were the Administrator to promulgate a revised national primary drinking water regulation which expressly or impliedly amended an existing standard would the existing maximum contaminant levels be changed.

This bill would eliminate the Administrator's authority to prescribe particular treatment techniques which a water provider must utilize to realize the maximum contaminant levels established by the Administrator.

This bill would change the premise upon which the Administrator's regulation of contaminants would be based. The current law provides that the Administrator should "establish maximum contaminant levels for each contaminant which in his (or her) judgment * * * may have an adverse effect on the health of persons." This bill would substitute an Administrator's determination that a contaminant presents an unreasonable risk to the health of persons. This change presents a major issue which I hope can be openly and forthrightly discussed by the Toxic Substances and Environmental Oversight Subcommittee, which I chair, and the Environment and Public Works Committee, of which I am a member.

This bill will not affect what is known under the act as State primacy. Each State will remain free to enact and enforce drinking water standards that are more stringent than those provided by Federal law.

The current authorization for the Safe Drinking Water Act expires at the end of this fiscal year. Though the bill as introduced does not include the required reauthorization language, it is my intention that a reauthorization be added when President Reagan's budgetary proposals for fiscal year 1983 have been made available.

I want to stress at the outset, and I will continue to do so throughout the consideration of this bill, that I am not wedded to every change which is proposed. I regard this bill as a vehicle that raises some key issues. If this bill receives close scrutiny and generates thoughtful discussion from which we can devine improvements to the procedures called for in the Safe Drinking Water Act, the bill will have served its purpose.

I am pleased to observe that several of my colleagues have elected to join with me by cosponsoring this bill. They are Senator GRASSLEY and Senator BENTSEN. I appreciate their support. Also Senator ABDNOR.●

By Mr. McCLURE (for himself, Mr. JACKSON, Mr. ABDNOR, Mr. DOMENICI, Mr. GOLDWATER, Mr. HATCH, Mr. HAYAKAWA, Mr. LAXALT, Mr. SIMPSON, Mr. SYMMS, and Mr. WALLOP):

S. 1867. A bill to amend and supplement the acreage limitation and residency provisions of the Federal reclamation law, as amended and supplemented, and for other purposes; to the Committee on Energy and Natural Resources.

RECLAMATION REFORM ACT OF 1981

Mr. McCLURE. Mr. President, today I am joined by Senators JACKSON, ABDNOR, DOMENICI, HATCH, HAYAKAWA, LAXALT, SIMPSON, SYMMS, WALLOP, and GOLDWATER in introducing legislation to amend and revitalize the outdated Reclamation Act of 1902. The bill we introduce is a product resulting from consultation with Members of the House, the administration, and other interested groups and individuals. It incorporates many of the same ideas included in the bill passed by the Senate during the 96h Congress, and adds to them new concepts which will serve to increase the flexibility farmers may have in deciding how to manage their operations.

It provides, I believe, a good basis for the eventual resolution of the reclamation issues during this Congress. I intend to proceed to hold hearings on the bill in the Committee on Energy and Natural Resources before this session adjourns. I am assured that hearings on the subject will be held in the House as well, and it is my hope and intention to coordinate these hearings with the House so that those who wish to testify on the subject will not have to make more than one trip to Washington.

Mr. President, those of my colleagues who were Members of this body during the 96th Congress will remember the highly charged and sometimes emotional debate during Senate consideration of S. 14 in September 1979. Few other issues I have seen generated so much conflicting information, misinformation, and misunderstanding, and I hope we can avoid that situation's recurrence; but reclamation reform is indeed a very complex subject because of the variety of circumstances which exist. We have tried very hard to address these varied circumstances in a fair and equitable manner, but I do not doubt that there may be things we have failed to think of and that there may be room for improvement.

Mr. President, I have been interested and actively involved in the area of water resource development all of my professional life, both as an elected public official and as a private citizen practicing law in Payette, Idaho. I speak from direct experience about my own State of Idaho, but I also know that what applies to Idaho is true as well for all the 17 Western States. Much of our economy and quality of life can be attributed to the 1902 Reclamation Act, and its success. Idahoans know the benefits of the Federal reclamation program; 44 percent of Idaho's irrigated farmland is on reclamation projects, and 85 percent of its agricultural returns are from irrigated land. One-third or more of Idaho's people receive benefits from these projects.

It has been estimated that over $54 billion in economic benefits have been gained nationwide as a result of our investment in reclamation projects which has amounted to less than $7 billion since the program began. Rather than merely consuming resources like so many other of our Federal welfare and social programs, these projects produce wealth for our Nation. I believe in and will continue to support the Bureau of Reclamation program which has helped to build my State and the West.

There is, though, no question that the 1902 Reclamation Act, based as it is on an ownership limitation of 160 acres, is in need of updating. It should not be necessary to point out that farming has changed so dramatically since 1902 that applying terms and contexts from that era to the present is somewhat of an exercise in sentimentality. Through a process of evolution, the old law has become in many respects unworkable, unrealistic, and arbitrary.

We are all aware that the issue came to a head when the Carter administration, influenced by notions of agrarian land reform and redistribution and threatening a reversal of nearly 100 years of work in water development, issued regulations that went far beyond what was required by the courts to enforce the 1902 act. While the Carter administration is, of course, no longer in office, uncertainty over the status of the Federal reclamation program and the onus of the Andrus regulations still hangs over the heads of thousands of Western farm families. Like us, the Reagan administration is anxious to have the question of acreage limitation and the several other related issues settled as well, and the sooner the better.

Unfortunately, our old enemy, time, is catching up with us again. There is, at best, little more than a month left in this session of the 97th Congress, but I still think there is something to be gained in taking some action on the subject now as proof that we are indeed serious about answering the questions and solving the problems which exist in the area of reclamation law as it applies to so many people and places throughout the West.

I cannot keep from mentioning again, though, that the Senate did pass a bill on the subject, and while I was disappointed in some aspects of the bill as it was passed in final form, it was nevertheless a basically sound product of diligent work and hard compromise. We can pass a better bill during this Congress, and I very much hope the House will be able to solve its special problems this time around as only it can, so the people who are depending upon Congress as the policymaking branch of Government to settle this situation will not be disappointed.

I certainly wish to congratulate Congressman LUJAN of New Mexico for the leadership he has shown by writing and introducing his legislation on the subject, and I am quick to acknowledge that I have followed his format and language to a large extent in preparing my own bill for introduction. I believe it is fair to say that the House and Senate are headed in the same direction.

My bill, Mr. President, addresses the reclamation issues in three titles. Title I gives reclamation districts the option to remain under existing law, which provides an ownership limitation of 160 acres per individual or legal entity, in other words partnership, corporation, et cetera.

For example, a husband, wife, and two children could own a total of 640 acres. Existing law does not explicity address the question of leasing, and therefore under title I of my bill, farmers can lease an unlimited number of acres as long as the leases meet the arms length provisions in title III, which are designed to insure the benefits of the project accrue to the landowners.

Title I also contains several amendments to existing law which were agreed to in some form by the Senate in S. 14:

A landowner would no longer be required to live on or near his landholding.

An individual or legal entity which farms land within a district which has lesser productive potential than class I farmlands can request and receive water for a larger acreage which provides an equivalent productive potential.

The Secretary of the Interior is provided the authority to dispose of lands held in excess of the acreage limitations by an impartial process if the landowners have failed to dispose of the land themselves under their contract provisions.

The time for landowners to dispose of their excess lands is extended if they have been delayed in that process by a court order or secretarial action.

Exemptions from the acreage limitations are provided in the following circumstances:

First. After a district has paid its portion of the cost of the Federal project;

Second. If the landowner is a bona fide charitable or religious organization;

Third. If the landowner holds the property as a fiduciary—for example, trusts and banks;

Fourth. If water is supplied to lands only in unusually wet years or as a result of flooding;

Fifth. If the land is acquired through involuntary process of law, for example by foreclosure;

Sixth. If the tracts supplied with water are isolated and otherwise not economically usable;

Seventh. For municipal and industrial users pursuant to a contract;

Eighth. For projects constructed by the Corps of Engineers; and

Ninth. If the lands are owned by a State or a State subdivision.

Mr. President, there is general consensus in both the House and Senate about these exemptions. They have been considered in the past, and should not be controversial. In addition to these exemptions, title I provides that provisions of contracts and the legal effect of certain written instruments from the Secretary may be validated by the Congress. This item is of particular importance in my own State.

A court decision in the State of California, which held that advance payout of financial obligations would not permit exemption or release from the acreage limitations of the reclamation law, was interpreted by the Secretary of the Interior as invalidating the payout provisions of specific contracts. Idaho has over 50 contracts with payout provisions that may not be honored without this validation language.

Furthermore, the Federal Government is required to give its consent to be sued over other representations it may have made with regard to the applicability of reclamation law to water users.

Title II provides an option to the water district to have an opportunity for its farmers to own an additional amount of acreage eligible to receive project water which is not currently available under existing law. This option is only available to qualified recipients as previously defined by the Senate in S. 14, that is qualified individuals, families, or small legal entities which benefit 25 persons or less.

Marriages, deaths, inheritance, illness and retirement would therefore not affect the operational status of the farm, as is the case under existing law. Furthermore, the options for expanded ownership in

title II are not available to large corporations, which continue to be covered under title I. By this approach, we are able to recognize present realities and accommodate them while continuing to support the purpose of the Reclamation Act in promoting the family farm. What we have said is that a qualified recipient can elect to own up to 1,600 acres, and can lease up to an additional 1,600 acres.

An additional feature of title II is that a qualified recipient may elect to lease lands which push the landholding over the 3,200-acre mark, but only if the recipient pays full cost for the water supplied for lands leased in excess of the 1,600-acre base. To further remove the presence of what could be viewed as a Federal subsidy on this water, full cost is defined as the share of the project construction cost allocable to irrigation, plus operation and maintenance deficits, plus interest applied at the current rate applicable to 15-year U.S. Treasury obligations. Thus there can be no argument about a continuing subsidy as under other suggested full-cost formulas, because of the Federal Government's refinancing of its debt at current rates.

Title III requires that all leases under both existing law as provided in title I and under the expanded ownership provisions of title II, must be in writing, cannot be for a term of more than 10 years, and must contain certification that they are "arms length" transactions. Thus we prevent a situation in which a sham ownership is created wherein lands are leased on terms well below the true market value, in an effort to circumvent the intent of the reclamation laws.

That is, Mr. President, the thrust of my bill in a nutshell. I believe it encompasses a reasonable, workable, and constructive approach to a very complex problem—one which all the various parties should be willing to support. It provides reasonable limitations and conditions without cutting a farmer's ability to do just a little bit better because he has the ability and the initiative to do so.

I ask unanimous consent the text of the bill and a brief outline of it be printed in the RECORD.

There being no objection, the bill and outline were ordered to be printed in the RECORD, as follows:

S. 1867

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act shall amend and supplement the Act of June 17, 1902, and Act supplementary thereto and amendatory thereof (43 U.S.C. 371), hereinafter referred to as the "Federal reclamation law."

DEFINITIONS

SEC. 2. As used in this Act—

(a) The term "Secretary" means the Secretary of the Interior.

(b) The term "irrigation water" means water made available for agricultural purposes from the operation of reclamation project facilities pursuant to a contract with the Secretary.

(c) The term "district" means any individual, or any legal entity established under State law, which has entered into a contract with the Secretary for irrigation water.

SEC. 3. The provisions of the Federal reclamation law shall remain in full force and effect, except as amended in title I of this Act, or as may be inconsistent with title II of this Act as it applies to those electing to qualify under title II provisions.

TITLE I—RECLAMATION REFORM

RESIDENCY REPEALED

SEC. 101. Notwithstanding any other provision of law, hereafter irrigation water made available from the operation of reclamation project facilities shall not be withheld from delivery to any project lands for the reason that the owners, lessees or operators thereof may not live on or near them.

EQUIVALENCY

SEC. 102. Wherever an acreage limitation is imposed by the Federal reclamation law, including this Act, the Secretary upon the request of a contracting entity shall designate by rule lands under the applicable acreage limitation within a district classified as having Class I productive potential or the equivalent thereof in other lands of lesser productive potential. Standards and criteria for determination of land classes pursuant to this authority shall take into account all factors which significantly affect the economic feasibility of irrigated agriculture, including but not limited to, soil characteristics, crop adaptability, costs of crop production, and length of growing season.

RECORDABLE CONTRACTS

SEC. 105. (a) Irrigation water made available in the operation of reclamation project facilities constructed after the enactment of this Act may not be delivered for use in the irrigation of lands held in excess of the acreage limitations imposed by the Federal reclamation law, including this Act, unless and until the owners thereof shall have executed a recordable contract with the Secretary requiring the disposal of their interest in such excess lands within a reasonable time. Such reasonable time shall be established by the Secretary, but shall not exceed ten years after the initial delivery of such water to those lands under terms and conditions required by reclamation laws generally.

(b) Lands held in excess of the acreage limitations imposed by the Federal reclamation law, including this Act, which, on the date of enactment of this Act, are receiving delivery of irrigation water made available by the operation of existing reclamation project facilities may continue to receive such deliveries only: (1) if the disposal of the owner's interest in such lands is required by an existing recordable contract with the Secretary, or (2) if the owners of such lands are actively engaged in good faith negotiations with the Secretary for such contracts: *Provided,* That such deliveries shall continue for a period of not more than one year after the enactment of this Act if such a contract shall not by then have been executed.

(c) All recordable contracts covering excess land sales shall provide that a power of attorney shall vest in the Secretary to sell any excess lands not disposed of by the owners thereof within the period of time specified in the contracts. In the exercise of that power, the Secretary shall sell such lands through an impartial selection process according to such reasonable rules and regulations as he may establish: *Provided,* That the Secretary shall recover for the owner the fair market value for the land and improvements thereon unrelated to irrigation water deliveries.

(d) The periods of time for which the disposal of excess lands may have been required under recordable contracts executed under the Federal reclamation law, including this Act, are hereby, and in the future shall be, extended for the period of time in which the Secretary shall have withheld the processing or approval of the disposition of such lands, whether he may have been compelled to do so by court order or whether he may have declined to do so for other reasons, and shall be added to the period provided by such contracts.

(e) Excess lands which shall have been disposed of to comply with the terms of recordable contracts executed pursuant to this Act may continue to receive irrigation water only:

(1) if they are held by nonexcess owners under this title, or qualified recipients under title II; and

(2) if their title is burdened by a covenant prohibiting their sale, for a period of ten years after their original disposal to comply with the Federal reclamation law or title II of this Act, for values exceeding the sum of the value of newly added improvements and the value of the land as increased by market appreciation unrelated to the delivery of irrigation water. Upon expiration of the terms of such covenant, the title to such lands shall be freed of the burden of any limitation on subsequent sale values which might otherwise be imposed by the operation of section 432e of title 43, United States Code.

CORPS OF ENGINEERS PROJECTS

SEC. 104. Notwithstanding any other provisions of law to the contrary, neither the acreage limitation requirements nor other provisions of the Federal reclamation law, including this Act, shall be applicable to lands receiving benefits from Federal water resources projects constructed by the United States Army Corps of Engineers unless:

(a) the project has, by Federal statute, explicitly been designated, made a part of, or integrated with a Federal reclamation project; or

(b) the Secretary of the Interior, pursuant to his authority under the Federal reclamation law has provided project works for the control or conveyance of an agricultural water supply for the lands involved; or

(c) the provisions of the Federal reclamation law are, by Federal statutes, explicitly made applicable to the lands involved.

LEASING

SEC. 105. Except as provided in title II of this Act, lands which are leased, or subject to an option to lease by any lessee shall not be considered in the application of the acreage limitations provisions of the Federal reclamation law to the landholding of the lessee.

APPLICABILITY

SEC. 106. Neither the limitations and restrictions imposed by this Act nor any other provision of the Federal reclamation law shall prohibit the delivery of irrigation water for the irrigation of any lands:

(a) after the obligation of a district for the repayment of the construction costs of the project facilities used to make water available for delivery to such lands shall have been discharged, whether by payment of a single lump sum, by payment of periodic installments throughout a specified contract term or by such payments made on an accelerated schedule chosen by the obligor: *Provided,* That where any contract has been or may be entered into pursuant to the authority of the Rehabilitation and Betterment Act (Act of October 7, 1949, 63 Stat. 724, as amended), the contracting entity shall have the additional option of adopting a form of repayment consistent with section 5(c)(2) of the Small Reclamation Projects Act of 1956 (Act of August 6, 1956, 70 Stat. 1044, as amended) and if such form of repayment is adopted, the acreage limitation provisions of the Federal reclamation law shall not apply solely as a result of the indebtedness under such contract: *Provided further,* That the appropriate contracting entity or owner or owners of land with respect to which the contractual repayment obligation shall have been dis-

charged may request, and the Secretary shall provide, a recordable certificate acknowledging that the acreage limitation provisions of the Federal reclamation law no longer apply to such lands;

(b) so long as the lands thus supplied are held by a bona fide religious or charitable organization using the agricultural produce from the land or the proceeds of the sales thereof for charitable purposes;

(c) so long as the lands are held by a trustee, individual or corporate, in a fiduciary capacity for a beneficiary or beneficiaries whose interest in the lands served do not exceed the limits imposed by the Federal reclamation law or title II of this Act;

(d) when the lands served receive only a temporary, not to exceed one year, supply made possible as a result of—

(1) an unusually large water supply not otherwise storable for project purposes; or

(2) infrequent and otherwise unmanaged flood flows of short duration;

(e) acquired by involuntary foreclosure, or similar involuntary process of law, by bona fide conveyance in satisfaction of mortgage, by inheritance, by devise: *Provided*, That if, after acquisition, such lands are not qualified under the Federal reclamation law, including this Act, they shall be furnished temporarily with a water supply for a period not exceeding ten years from the effective date of such acquisition;

(f) which are isolated tracts found by the Secretary to be economically farmable only if they are included in a larger farming operation but which may, as a result of their inclusion in that operation, cause it to exceed the acreage limitations of the Federal reclamation law, including this Act;

(g) serve with a temporary supply of irrigation water under contract conditions permitting the withdrawal of such water from such lands for later use for municipal and industrial purposes;

CONTRACT REQUIRED

SEC. 107. Irrigation water temporarily made available from reclamation facilities in excess of ordinary quantities not otherwise storage for project purposes or at times when such water would not have been available without the operations of those facilities, may be used for water quality, irrigation, municipal, or industrial purposes only to the extent covered by a contract requiring payment for the use of such water, executed in accordance with the Reclamation Project Act of 1939, or other applicable provisions of the Federal reclamation laws.

VALIDATION

SEC. 108. (a) Any provision of any contract between the Secretary and any party to a contract dealing with matters arising under the Federal Reclamation laws generally may be validated at the request of any non-Federal party to such contract made to the Secretary within three years after the enactment of this Act.

(b) Written representations relating to the acreage limitation provisions of Federal reclamation law which were in effect or made prior to the effective date of this Act by the Secretary of the Interior or his authorized agents on behalf of the United States, with or for the benefit of a contracting entity may be validated at the request of any non-Federal party to whom such written representation was made within three years after the enactment of this Act.

(c) The Secretary shall, within 90 days after the receipt of such request under subsection (a) or (b), transmit it with his comments and recommendations to the Congress. Unless the Congress, by joint resolution disapproves the application within 90 days from the date on which it receives the Secretary's transmittal, the contractual provision or written representation, which is the subject of the request shall be deemed to have been validated.

CONSENT TO SUE

SEC. 109. In addition to any other remedy available in law or equity, any party to a contract with the Secretary providing for water service or for the repayment of the construction costs of Federal reclamation project facilities used to produce irrigation water may bring an action in the United States district court for the district in which the project facilities are located, and only in such district, for mandatory injunctive or other appropriate relief to adjudicate, confirm, validate, or decree the contractual right of any person or entity, including but not limited to any contracting entity, who is the beneficiary of any such contract and to reform such contract in accordance with the terms of any written representation concerning the application or interpretation of the Federal reclamation law including this Act, or contracts made by the Secretary or his representative to such party or his predecessor in interest. Exclusive jurisdiction for such suit is hereby vested in the United States district court. In the case of written representation, if the court finds, on the basis of the evidence submitted, that the party would not have entered into the contract or accepted the interpretation of the contract but for the written representations made by the Secretary or his representative, which were relied on by those using such irrigation water, then the court shall order the Secretary to reform the contract to conform with the representations, and the contract, as reformed, shall be considered valid as of the date of the written representation.

ADMINISTRATIVE PROVISIONS

SEC. 110. (a) Nothing in this Act shall repeal or amend any existing statutory exemptions from the acreage limitation provisions of the Federal reclamation law.

(b) The Secretary may prescribe regulations and shall collect all data necessary to carry out the provisions of this Act and other provisions of Federal reclamation law.

(c) Section 3 of the Act of July 7, 1970 (43 U.S.C. 4256), is amended by striking the phrase "for a period not to exceed twenty-five years" following the term "project water".

(d) Any nonexcess land which is acquired into excess status pursuant to foreclosure or other process of law, conveyance in satisfaction of mortgage, inheritance, or devise, may be sold at its fair market value without regard to any other provision of this Act or to section 46 of the Act entitled "An Act to adjust water rights charges, to grant certain relief on the Federal irrigation projects, and for other purposes," approved May 25, 1926 (43 U.S.C. 423e): *Provided*, That if the status of mortgaged land changes from nonexcess into excess after the mortgage is recorded and is subsequently acquired by the lender by involuntary foreclosure or similar involuntary process by law, by bona fide conveyance in satisfaction of the mortgage, such land may be sold at its fair market value.

(e) Beginning October 1, 1982, there are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

TITLE II—OPTIONAL EXPANDED OWNERSHIP

DEFINITIONS

SEC. 201. As used in this title:

(a) The term "individual" means any natural person, including his or her spouse, and including other dependents thereof within the meaning of the Internal Revenue Code (26 U.S.C. 152).

(b) The term "qualified recipient" means an individual who is a citizen of the United States or a resident alien thereof or any legal entity established under State or Federal law, which benefits twenty-five such individuals or less.

(c) The term "landholding" means total irrigable acreage of one or more tracts of land owned or operated under a lease which is served with irrigation water pursuant to a contract with the Secretary.

(d) The term "full cost" means all construction costs of facilities in service which are properly allocable to irrigation, plus all operation and maintenance deficits funded, less credit for payments, with interest on both accruing from the date of a new or amended contract pursuant to this title on costs outstanding at that date, or from the date incurred in the case of costs arising subsequent to the new or amended contract, and shall be calculated on the basis of the computed average interest rate payable by the Treasury upon its marketable public obligations which are neither due nor callable for redemption for fifteen years from the date of issuance.

AMENDMENTS OF CONTRACTS

SEC. 202. Any provision of any contract existing between the Secretary and any party pursuant to Federal reclamation laws as of the date of enactment of this Act may be amended to conform with the provisions of this title, and the Secretary shall so amend such contractual provisions at the request of the non-Federal party to such a contract. The provisions of this title shall become applicable to any such contract and to such party only upon amendment of the contract.

DELIVERY OF WATER

SEC. 203. (a) Upon the amendment of a district's contract to conform to the provisions of this title, and notwithstanding any other provisions of the law to the contrary, irrigation water may be delivered to a qualified recipient for use in the irrigation of a landholding of not more than three thousand two hundred acres of Class I lands, or the equivalent thereof: *Provided*, That not more than sixteen hundred acres of such landholding may be owned by the qualified recipient: *Provided further*, That lands leased for a term of one year or less for the purpose of water management and conservation in years of inadequate project water supply shall not be considered as part of a landholding solely because of having been so leased.

(b) Irrigation water may be delivered to lands leased in excess of a landholding of three thousand two hundred acres or the equivalent thereof as described in subsection (a), only if "full cost" as defined in subsection 201(d) of this Act is paid for such water as is assignable to those lands leased in excess of a landholding of sixteen hundred acres.

(c) In determining whether a landholding exceeds three thousand two hundred acres, the Secretary shall add to any landholding held directly by an individual, whether by ownership or lease, that portion of any landholding held by a legal entity or entities operating as a qualified recipient from which that individual benefits as an owner in proportion to that ownership.

(d) For the purpose of applying the full cost provisions of this section, the Secretary shall apply a duty of water to lands within a given district based upon the average duty of project water delivered to lands within the district each year for a period of five years preceding the year in which water is currently being delivered. Absent such a history, the Secretary shall consider the average duty of water for such periods of time as may be available, and such other pertinent data as he may determine.

TITLE III—LEASING REQUIREMENTS

SEC. 301. Notwithstanding any other provision of the Federal reclamation law including this Act, lands which receive irrigation water may be leased only if the lease instrument is:

(1) written; and

(2) for a term not to exceed ten years, including any options exercisable by the lessor.

In addition, the Secretary shall be provided with a certificate signed by the lessee which includes a legal description of the leased land, the term of the lease, and a certification that the rent paid reflects the reasonable value of the irrigation water to the productivity of the land.

SEC. 302. Any lease in effect as of the date of this Act shall be required to comply with the provisions of this Act within ten years of enactment of this Act.

THE RECLAMATION REFORM ACT OF 1981

SUMMARY

The bill provides options for treatment under Federal reclamation laws. Title I leaves existing law in place as to acreage limitations and leasing, but makes necessary amendments regarding residency, equivalency, exemptions, validation, consent to sue, etc. Title II provides a mechanism for individuals and legal entities benefiting 25 individuals or less to operate landholdings of up to 3,200 acres so long as not more than 1,600 acres is owned. In addition, lands in excess of 3,200 acres may be operated under lease if full cost for the project water is paid for all lands leased in excess of 1,600 acres. Title III provides that all leases under reclamation law must be (1) written; (2) at arm's length; and (3) for a period not to exceed ten years.

I. Title I—Reclamation reform

A. Residency requirement repealed.

B. Equivalency applied at the request of a contracting entity.

C. Disposal of excess lands by impartial process determined by the Secretary.

D. Extends time for disposal of excess lands which have been delayed by Secretarial action or Court order.

E. Exemptions: After payout (accelerated or lump sum); Bona fide charitable organizations; Fiduciaries; Unusually wet years or flood flows; Involuntary process of law; Isolated tracts; Municipal and industrial uses per contract; Corps of Engineers projects; and

F. Provides for validation of existing contracts, and certain written instruments.

G. Provides consent of the U.S. Government to be sued on contract provisions.

II. Title II—Optional expanded ownership

A. Provides that any individual may receive project water for a landholding of up to 3,200 acres, provided that not more than 1,600 acres may be owned.

B. Project water may be supplied to lands leased in excess of 3,200 acres, if full cost is paid, for project water used on lands leased in excess of 1,600 acres.

C. Full cost is defined as construction costs allocable to irrigation plus all operation and maintenance deficits funded. Interest shall be applied at the rate applicable to 15-year U.S. Treasury obligations.

III. Title III

Provides that all leases under both existing law and this Act must be: written, for a period not to exceed ten years; and at arm's length. Existing lessees are given ten years to comply with these provisions.

ADDITIONAL COSPONSORS

S. 569

At the request of Mr. JEPSEN, the Senator from South Dakota (Mr. PRESSLER) was added as a cosponsor of S. 569, a bill to amend the Internal Revenue Code of 1954 to provide an investment tax credit for certain soil and water conservation expenditures.

S. 895

At the request of Mr. MATHIAS, the Senator from Massachusetts (Mr. TSONGAS) was added as a cosponsor of S. 895, a bill to amend the Voting Rights Act of 1965 to extend certain provisions for an additional 10 years, to extend certain other provisions for an additional 7 years, and for other purposes.

S. 1131

At the request of Mr. DANFORTH, the Senator from Indiana (Mr. QUAYLE), and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of S. 1131, a bill to require the Federal Government to pay interest on overdue payments and to take early payment discounts only when payment is timely made, and for other purposes.

S. 1645

At the request of Mr. MOYNIHAN, the Senator from Idaho (Mr. SYMMS) was added as a cosponsor of S. 1645, a bill to let funds in individual retirement accounts be used to purchase collectibles.

SENATE JOINT RESOLUTION 93

At the request of Mr. HAYAKAWA, the Senator from Idaho (Mr. SYMMS), the Senator from South Carolina (Mr. THURMOND), the Senator from North Carolina (Mr. HELMS), the Senator from Nevada (Mr. LAXALT), and the Senator from Alaska (Mr. MURKOWSKI) were added as cosponsors of Senate Joint Resolution 93, a joint resolution to clarify that it is the basic policy of the Government of the United States to rely on the competitive private enterprise system to provide needed goods and services.

SENATE JOINT RESOLUTION 123

At the request of Mr. HAYAKAWA, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of Senate Joint Resolution 123, a joint resolution authorizing the President to proclaim "National Disabled Veterans Week."

SENATE CONCURRENT RESOLUTION 32

At the request of Mr. MATHIAS, the Senator from New York (Mr. MOYNIHAN) was added as a cosponsor of Senate Concurrent Resolution 32, a concurrent resolution authorizing a bust or statue of Dr. Martin Luther King., Jr., to be placed in the Capitol.

SENATE RESOLUTION 98

At the request of Mr. CRANSTON, the Senator from Arizona (Mr. GOLDWATER) and the Senator from South Carolina (Mr. THURMOND) were added as cosponsors of Senate Resolution 98, a resolution to designate February of each year as "American History Month."

SENATE RESOLUTION 209

At the request of Mr. JEPSEN, the Senator from Wyoming (Mr. WALLOP), the Senator from Nebraska (Mr. ZORINSKY), the Senator from Alabama (Mr. HEFLIN), the Senator from Alabama (Mr. DENTON), the Senator from Wyoming (Mr. SIMPSON), the Senator from Oregon (Mr. PACKWOOD), the Senator from Connecticut (Mr. WEICKER), the Senator from Colorado (Mr. ARMSTRONG), the Senator from Kansas (Mr. DOLE), the Senator from Nevada (Mr. LAXALT), and the Senator from South Dakota (Mr. ABDNOR) were added as cosponsors of Senate Resolution 209, a resolution expressing the sense of the Senate that the President of the United States, the U.S. Senate, and the Senate Committee on Banking, Housing, and Urban Affairs should pay careful deference to the specific provisions of the Federal Reserve Act, requiring broad regional and economic representation on the Board of Governors of the Federal Reserve System, in their consideration of nominees to the Board.

SENATE RESOLUTION 242

At the request of Mr. HART, the Senator from Nebraska (Mr. EXON) was added as a cosponsor of Senate Resolution 242, a resolution regarding SALT II.

AMENDMENT NO. 630

At the request of Mr. WEICKER, the Senator from Connecticut (Mr. DODD), the Senator from Maine (Mr. MITCHELL), the Senator from Maine (Mr. COHEN), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Rhode Island (Mr. CHAFEE) were added as cosponsors of amendment No. 630 intended to be proposed to H.R. 4560, a bill making appropriations for the Departments of Labor, Health, and Human Services, and Education, and related agencies for the fiscal year ending Sepember 30, 1982, and for other purposes.

AMENDMENT NO. 631

At the request of Mr. WEICKER, the Senator from Rhode Island (Mr. PELL), the Senator from Kentucky (Mr. HUDDLESTON), and the Senator from Arkansas (Mr. BUMPERS) were added as cosponsors of amendment No. 631 intended to be proposed to H.R. 4560, a bill making appropriations for the Departments of Labor, Health, and Human Services, and Education, and related agencies for the fiscal year ending September 30, 1982, and for other purposes.

AMENDMENT NO. 632

At the request of Mr. WEICKER, the Senator from Rhode Island (Mr. PELL), the Senator from Kentucky (Mr. HUDDLESTON), and the Senator from Arkansas (Mr. BUMPERS) were added as cosponsors of amendment No. 632 intended to be proposed to H.R. 4560, a bill making appropriations for the Departments of Labor, Health, and Human Services, and Education, and related agencies for the fiscal year ending September 30, 1982, and for other purposes.

AMENDMENTS SUBMITTED FOR PRINTING

COMMERCE, JUSTICE, STATE, AND THE JUDICIARY APPROPRIATIONS—H.R. 4169

AMENDMENT NO. 634

(Ordered to be printed.)

Mr. WEICKER proposed an amendment to the bill (H.R. 4169) making appropriations for the Departments of Commerce, Justice, and State, the Judiciary, and related agencies for the fiscal year ending September 30, 1982, and for other purposes.

SECOND CONTINUING APPROPRIATIONS, 1982

AMENDMENT NO. 635

(Ordered to be printed and to lie on the table.)

Mrs. HAWKINS (for herself and Mr. CHILES) submitted an amendment intended to be proposed by them to the joint resolution (H.J. Res. 357) making further continuing appropriations for the fiscal year 1982, and for other purposes.

NOTICE OF HEARINGS

COMMITTEE ON THE BUDGET

Mr. DOMENICI. Mr. President, the Senate Budget Committee will hear testimony relating to S. 193, the Tax Expenditure Limitation and Control Act, on Tuesday, November 24 at 2 p.m. in room 6202 of the Dirksen Senate Office Building.

Witnesses scheduled to appear are Senator EDWARD M. KENNEDY; Norman Ture, Under Secretary, Department of the Treasury; Alice Rivlin, Director, Congressional Budget Office; Paul R. McDaniel, professor of law, Boston College; and Fred Wertheimer, president, Common Cause.

For more information, contact Lynn Pearson of the Senate Budget Committee staff at 224–0544.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON THE JUDICIARY

Mr. BAKER. Mr. President, I ask unanimous consent that the Judiciary Committee be permitted to meet during the session of the Senate at 1:30 p.m. on Thursday, November 19, to discuss Government merger policies.

The PRESIDING OFFICER. Without objection, it is so ordered.

SELECT COMMITTEE ON INTELLIGENCE

Mr. BAKER. Mr. President, I ask unanimous consent that the Select Committee on Intelligence be authorized to meet during the session of the Senate on Thursday, November 19, at 10 a.m., to hold a full committee meeting to receive a briefing on intelligence matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON ENERGY, NUCLEAR PROLIFERATION, AND GOVERNMENT PROCESSES

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Energy, Nuclear Proliferation, and Government Processes of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Thursday, November 19, at 10 a.m., to hold a hearing on nuclear proliferation policy and the implication of new technology.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

SUPPORT FOR DIXON-PERCY EMBARGO AMENDMENTS

● Mr. SASSER. Mr. President, I rise to speak in favor of the Dixon-Percy amendment that the Senate passed on November 12. This amendment would prohibit embargoes of American agricultural products unless such a restriction is part of an across-the-board ban on all products.

I voted for the amendment because such an assurance is greatly needed to insure that the American farmer, and the agriculture industry in general, is not singled out to bear the brunt of foreign policy actions intended to benefit the entire Nation.

I do have one problem with the amendment, Mr. President, and that is its 1985 effective date. As originally proposed the amendment would have taken effect immediately. I favored this original date because I believed that the protections afforded farmers by this amendment were needed right away and should not be postponed for 4 years.

The sponsors of the amendment, however, accepted the change in the effective date. The amendment, even in its altered form, is of great importance to agriculture. I therefore supported it with this one reservation.

Agriculture is of supreme importance to this country and its trade position. Exports of agricultural products totaled some $42 billion in 1980 and are estimated to top $45 billion in 1981. Approximately 22 percent of the American labor force is involved in agriculture.

The profound impact of disruptions on this vital sector of our economy, Mr. President, cannot be treated lightly. This amendment recognizes the importance of agriculture by insuring that Congress will have a voice in future embargoes. The pending amendment permits the President to impose an embargo of agriculture products for a maximum of 60 days.

During this time Congress can decide whether or not to extend it for a longer period. If the Congress determines that the embargo should not be extended, then the matter ends there and the embargo expires.

In January of 1980, when the Soviet grain embargo was imposed in response to the Soviet invasion of Afghanistan, the American farmer was generally in support of the action. The patriotism of the farming community has been amply demonstrated in the past and this time was no exception.

As the embargo stretched on and on, however, and as it became apparent that the Soviets were able to obtain the grain they needed elsewhere, patience wore thin. Farmers had been willing to accept a fair embargo, but this one was not fair and, worse still, it was ineffectual.

The agricultural sector was left hanging for month after month. Under this amendment, this could not happen again.

It is essential, Mr. President, that a sector of the economy that is so vital to our balance of trade not be hampered by a selective embargo of indefinite duration; 20 percent of all U.S. exports are agricultural products. This represents our single largest category of exports.

We cannot jeopardize all the time, effort, and money that have gone into the developing of foreign markets for our agricultural products by the continuation of an uncertain embargo policy.

Mr. President, I endorse the Dixon-Percy amendment and urge my House colleagues to do the same.●

THE CRIMINAL CODE REFORM ACT

● Mr. HELMS. Mr. President, the Judiciary Committee is presently considering the reform of the Federal criminal code, and is working on a bill known as S. 1630. There has been considerable controversy surrounding this legislation, and it deserves careful study.

Recently, the Heritage Foundation published an analysis of various components of the Criminal Code Reform, prepared by Mr. Nicholas E. Calio, of the Washington Legal Foundation. Mr. Calio's observations go into great detail on some of the problems associated with so monumental an effort. He concludes:

Whether the act will accomplish its goal of streamlining criminal law to effect better and fairer criminal justice remains to be seen. What is certain, however, is that a measure as monumental as criminal code reform absolutely needs deliberate and careful consideration.

Haste, in this case, will be the enemy of responsible legislation. This is particularly true because all Federal legislation of the type and magnitude of S. 1630 has a "teaching" effect on the States. Many states can be expected to use S. 1630, if adopted, as model legislation and the bill's defects will ripple across the Nation.

Mr. President, I ask that Mr. Calio's study be printed in the RECORD at the conclusion of my remarks.

The study follows:

[From the Heritage Foundation, Nov. 10, 1981]

THE CRIMINAL CODE REFORM ACT OF 1981 (S. 1630)

INTRODUCTION

Congress has been working on a massive recodification of federal criminal laws for well over a decade. The most recent incarnation of this legislative effort is S. 1630, the Criminal Code Reform Act of 1981. Its stated purpose is the consolidation and simplification of all federal criminal laws in order "to establish justice" by "defining and providing notice of conduct that indefensibly threatens harm to those individual or public interests for which federal protection . . . is appropriate"; "prescribing appropriate sanctions for engaging in such conduct . . ."; and "establishing a system of expeditious procedures" to enforce the sanctions.

The Act was introduced by Senator Strom Thurmond (R-S.C.), Chairman of the Senate Committee on the Judiciary on September 17, 1981, and is co-sponsored by Senators Biden (D-Del.), Hatch (R-Utah), Kennedy (D-Mass.), Denton (R-Ala), DeConcini (D-Ariz.), Simpson (R-Wy.), and Specter (R-Pa)

S. 1630 is 425 pages long and goes far beyond a "recodification" of federal criminal law. A Heritage Foundation Issue Bulletin of July 1980 called S. 1630's predecessor in the 96th Congress, S. 1722, "[o]ne of the most potentially far-reaching—and, ironically, perhaps one of the least generally understood—legislative proposals of the past decade. . . ."

The same statement is true of S. 1630. Despite its lengthy history and quantity of co-sponsors, the present reform bill contains all or most of the defects which infected its predecessors. It seeks not only to recodify, but to revise and extend all existing federal criminal law. As such, the Act attempts too much and suffers from major theoretical,

practical and philosophical defects. No one, not even the drafters, seems to understand fully the impact of this proposed revision.

To evaluate this legislation is to begin with the question: does it accomplish its purpose? The answer is in part found by examining statements in last year's Judiciary Committee Report on the substantially similar bill from the last Congress, S. 1722.[1]

The report of January 17, 1980, states that the purpose of criminal code reform is "to restructure Federal criminal law so as to better serve the ends of justice in their broadest sense—justice to the individual and justice to society as a whole." The report also quotes remarks by Senator Kennedy published in the May 2, 1977, CONGRESSIONAL RECORD:

"The Criminal Code Reform Act . . . constitutes the most important attempt in 200 years to reorganize and streamline the administration of Federal criminal justice. It is a major undertaking, of critical importance to our people. As I have repeatedly stated in recent months, I view this legislation as the cornerstone of the Federal Government's commitment to the critical problem of crime in America."

The need to "streamline" federal criminal laws by virtue of a wholesale overhaul is based upon the belief expressed in the Judiciary Committee report that present "statutory criminal law on the Federal level is often a hodgepodge of conflicting, contradictory, and imprecise laws with little relevance to each other or to the state of the criminal law as a whole." If the goal of the criminal law reform is to streamline the administration of criminal justice in order to better address the problem of crime in America, then the answer to whether S. 1630 will achieve these goals is open to serious question.

To the extent that the bill would eliminate genuinely archaic provisions of the present code or do away with needless duplication and conflicting or vague language, the legislation is laudable and little ground for substantive controversy exists. However, the bill in fact fails to clarify the vagaries of criminal law and, as previously noted, goes far beyond recodification and clarification. In addition, despite the widespread belief that violent crime is America's most critical law enforcement problem, the bill appears to ease standards and penalties for such offenses while simultaneously adopting a strong anti-business posture by significantly expanding the potential criminal liability of businesses.

The Act also would repeal provisions which make it illegal to conspire to overthrow the United States government and to teach or advocate overthrow. Meanwhile, penalties for crimes such as rape, importing pornographic materials, and drug trafficking would be reduced. Yet S. 1630 is much tougher on "white collar crime." It would allow corporations to be prosecuted for the acts of agents acting without the authority of the company as well as for offenses like "racketeering" based upon two or more technical violations of the securities laws. Business fines would be increased radically and a new civil action would require companies to notify customer/victims of alleged company offenses.

These are only a few of the many provisions which have been inadequately examined.

HISTORY OF CRIMINAL CODE REFORM

S. 1630's long history dates from 1952 when the American Law Institute began drafting a "Model Penal Code." Ten years later, the Council of the American Law Institute published the "Proposed Official Draft" of the Model Penal Code.

In 1966, Congress created the National Commission on Reform of Federal Criminal Laws. The Commission, whose chairman was former California Governor Edmund B. Brown, submitted its recommendations to Congress and the President in a Final Report on January 7, 1971. The Report was intended as a "work basis" for congressional choices. Extensive hearings by the Subcommittee on Criminal Laws and Procedures of the Senate Judiciary Committee followed during 1971 and 1972.

On January 4, 1973, Senators John McClellan, Roman Hruska, and Sam Ervin, all of whom served on the Brown Commission, introduced S. 1, the first in a series of omnibus bills to reform, revise, and recodify the Federal Criminal Code. Similar bills have been considered—without passage—in each succeeding Congress.

During the 95th Congress, the Criminal Code reform bill was known as S. 1437. It was reported favorably by the full Judiciary Committee on November 15, 1977, and was passed by the Senate on January 30, 1978. None of the various bills, however, has ever reached a vote on the floor of the House of Representatives.

The history of this legislation and the many changes that have been worked on successive versions are evident in the hearings and reports of the Senate Judiciary Committee and its Subcommittee on Criminal Laws and Procedures, a record that encompasses some 11,750 pages of testimony, statements, and exhibits in 18 volumes of hearings conducted during 1971, 1972, 1973, 1974, 1975, 1977, and 1979 under the overall title "Reform of the Federal Criminal Laws."

During the 93rd, 94th, 95th, and 96th Congresses, these hearings have been supplemented by detailed Committee reports of great length and comprehensiveness; the most recent report (Senate Report No. 96–553, "Criminal Code Reform Act of 1979," January 17, 1980) runs 1,517 pages. (The hearings recently held on S. 1630 have not been transcribed.)

The hearings contain detailed pro and con analyses by some of the nation's most eminent legal authorities, representatives of concerned special interest groups, and officials of the Department of Justice.

An examination of selected provisions of the bill underscores the deficiencies characteristic of the entire bill, the changes it will effect in existing law, and its anti-business bias.

WORDS AND DEFINITIONS

Perhaps the most fundamental deficiency in S. 1630 is that it replaces statutory language enhanced and illuminated by hundreds of years of common law development with new words and definitions subject to de novo interpretation by a modern federal judiciary which already is unable to keep pace with its caseload.

Furthermore, the definitions in different sections relate to one another in such a way that cross reference is necessary to fully understand the bill.

Chapter 3 of the bill, for instance, defines the culpable states of mind and the proof necessary for each. It identifies four states of mind: intentional, knowing, reckless, and negligent.

It then applies these states of mind to three possible situations: conduct, an existing circumstance, and a result. The state of mind necessary to convict varies with each situation.

Not only is this type of codification confusing, it eliminates the traditional concepts of mens rea (guilty mind or criminal intent) and culpability developed over the last 400 years of Anglo-American jurisprudence.

Chapter 3 alone could alter federal criminal law fundamentally as each federal district judge struggles to define the new terms in his own fashion.

Numerous states of mind now exist which apply to particular offenses and which have been developed through case law as needed. Eliminating this body of law through "codification" may simplify the process, but it certainly will not improve criminal justice and may well be a step backward.

Under the bill, each federal criminal law has been codified and defined to be comprehensive and inclusive. These definitions have extended the reach of each federal violation; just how far and what conduct the new interpretation will reach will depend on innovative and aggressive prosecutors who may attempt to expand their authority. At this time, however, it is impossible to foresee all the areas of potential abuse.

Reviewing a few offenses covered by the bill exposes some of the difficulties which should be examined carefully by Congress.

INCHOATE OFFENSES: EXPANSIONS

S. 1630 contains three inchoate offenses: attempt, conspiracy, and solicitation. The proposed code expands federal jurisdiction in defining these crimes and in its procedural approach to these inchoate offenses.

Attempt

S. 1630 creates a federal "attempt" statute. Currently, no such federal statute exists; only specific attempts in relation to particular crimes are punishable. The most important conceptual problem with the "attempt" provision is that it mixes contradictory concepts.

While requiring as a culpable state of mind that an individual "intentionally engages in conduct," it also provides that such conduct need only "in fact, constitute a substantial step toward the commission of the crime."[2]

Section 302(a)(1) provides that conduct is "intentional" if it is a "conscious objective or desire to engage in the conduct."

Section 303(a)(1), on the other hand, provides that "no state of mind must be proved with respect to a particular element of an offense or . . . specified . . . as existing or occurring 'in fact.'"

These two sections contradict each other, thus badly confusing the definition of "attempt" as embodied in S. 1630.

This section also eliminates the common law defenses of legal impossibility and merger. Under common law, legal impossibility has constituted a defense to an attempt charge. Legal impossibility exists if the defendant did—or could do—all of the things he intended to do but nonetheless actually did not violate the law. Now, Section 1001(c)(1) provides that even if completion of the act would not violate the law, "if the crime could have been committed had the circumstances been as the actor believed them to be" then the actor is guilty of breaking the law. Thus, individuals can now be convicted of what might be termed "thought crime."

Similarly, Section 1001(c)(2) eliminates the merger defense by which an individual cannot be held legally accountable under common law for both attempting and completing a crime; the attempt was logically held to be merged into the greater offense. All of the above points raise the question of whether the attempt statute will streamline the administration of justice.[3]

---

[1] A Judiciary Committee Report has not yet been issued on S. 1630.

[2] "Substantial step" is not defined.

[3] It bears noting that Section 1001(b), which provides an "affirmative defense" to attempt, contains a trap in connection with Section 1325 of the Act which makes it a crime to tamper with physical evidence. For instance, under the code, a manufacturer of a product could manufacture an item that turns out to violate some statute. While he lacked intent to violate the law, it has "in fact" occurred and he could be guilty of "attempt." Assuming he discovers the problem prior to shipping the product and proceeds to destroy it, he could be charged and convicted for tampering with physical evidence as that offense is described in the proposed Section 1325.

Conspiracy

The language of the proposed conspiracy provision, Section 1002, could be interpreted in ways which greatly expand the concept of conspiracy beyond its current meaning in common law. As written, this section could cover unilateral activity by a single co-conspirator.

Solicitation

Criminal solicitation is an entirely new concept. The definition of solicitation embodied in Section 1003 is extremely broad and subject to abuse. For example, under the common law, conduct preparatory to an inchoate offense is not criminal—one cannot be guilty of attempted conspiracy. Now, it seems, two inchoate offenses, taken together, could constitute criminal conduct.

INCHOATE OFFENSES: LIMITATIONS—NATIONAL SECURITY IMPLICATIONS

Unlike the provisions which expand federal jurisdiction, Section 1004 of S. 1630 dramatically changes the common law in a way that has grave implications for national security. The Act provides that there can be no attempt, conspiracy, or solicitation for a number of specified offenses.

Almost all of these offenses relate to the national security interests of the government or to matters affecting public order and the administration of justice. For example, attempting, conspiring, or soliciting to obstruct military recruitment, to incite mutiny or desertion, or to fail to register for the draft, among other things, would not constitute criminal activity.

Soliciting to defraud the government would also be legal. In short, unless a person participates directly in anti-government activities, he cannot be held responsible. Thus, these limitations invite pressure groups to provoke unlawful anti-government conduct without being held acccuntable for their actions.

ANTI-RACKETEERING AND RELATED PROVISIONS

A number of provisions in the bill related to anti-racketeering efforts constitute, when read together, a threat to business interests. Under Section 1802, a company could be convicted of racketeering based upon two technical securities violations simply because the definition of racketeering activity is so exhaustive.

Moreover, a new civil damage action is created by Section 4101 for anyone injured in his personal business or property by "racketeering" activity. Relief includes treble damages as well as attorney and investigative fees.

Section 4011 authorizes the Attorney General to initiate a civil injunctive proceeding to restrain "racketeering" activities. Section 4013 provides the Attorney General the additional authority to serve a Civil Investigative Demand requiring any person to produce any material relevant to the civil proceeding under Section 4011. The Attorney General may therefore obtain discovery in a civil action which can be used in a subsequent criminal action. The potential for abuse of such a powerful tool is awesome.

LIABILITY OF ORGANIZATION FOR CONDUCT OF AGENT

Section 402 of the proposed Act, which provides for criminal liability of an organization for the conduct of an agent, lacks a statutory predecessor and appears to expand the law of agency. The entire section is riddled with vague language subject to broad interpretation. It provides criminal liability for an offense if the agent's conduct: "occurs in the performance of matters within the scope of the agent's employment or authority and is intended by the agent to benefit the organization."

Three separate determinations, all subject to a broad reading, are required: is the act within the scope of employment; is it within the agent's authority; is it intended to benefit the corporation?

The latter two points are most troublesome. Under present law, a corporation may not be held criminally liable for the conduct of an agent acting with only "apparent" authority; for liability, the authority must be "actual" or "implied." This distinction is not made in Section 402. Hence, a company could specifically forbid certain conduct and, though not criminally culpable in any meaningful sense, still be branded and punished as a criminal.

Moreover, experience with the "intended to benefit the corporation" language teaches that it is subject to abuse. The conduct of an employee wholly motivated by self-aggrandizement may always be interpreted as benefiting the company in some way, even if the company is being cheated by the agent. While senior management may not have desired the dubious benefits which flow from illegal conduct, the agent will likely maintain during investigation and trial that his actions were intended to benefit the organization.

Finally, Section 402(b) holds a corporation criminally liable for the failure of its agent to perform a duty specifically imposed on an organization by law. Taking the broad range of regulatory and other duties imposed by law, together with other sections of S. 1630 which provide that reckless ignorance of circumstances is no bar to prosecution, the impact of this provision could be enormous.

In short, Section 402 is a boon to prosecutors who are politically ambitious, hostile to "big business," or hungry for the publicity emanating from indicting a corporation. The Department of Justice, moreover, has always favored expanding corporate criminal liability for the acts of agents and employees.

MURDER

The murder statute, Section 1601, significantly expands federal jurisdiction. The traditional common law terms "kill" or "killing" are replaced by the phrase "intentionally causes the death of."

In addition, under the Act murder is committed if one "engages in conduct by which he causes the death of another person under circumstances manifesting an extreme indifference to human life."

Any experienced lawyer passably aware of both criminal and product liability law must shudder at the invitation for abuse provided by the language in this section. For example, the "extreme indifference" language, as interpreted by product liability case juries, is an extremely low standard; that is, almost any corporate conduct is found to manifest an "extreme indifference."

To extend this interpretation to criminal law hardly seems to serve the public interest.

SENTENCE OF FINE

The proposed Section 2201 dramatically increases criminal fines for corporations and organizations from their current level of between $1,000 and $10,000 to $1,000,000 for a felony and $100,000 for a misdemeanor. With the myriad of federal regulations, technical violations are increasingly likely. The new high fines would impose an enormous burden on the nation's business community.

Under present law, the number of times a particular statute has been violated is often at issue in cases of alleged regulatory violations. For instance, if a company mails 100,000 copies of an allegedly deceptive advertisement on a single day, is it guilty of one violation or 100,000 violations?

Prosecutors usually claim the latter in order to increase their leverage and force a company to settlement. That power, together with the increased fine, makes it likely that companies will be forced to settle, rather than fight for their rights against the government.

ORDER OF NOTICE TO VICTIM

Section 2005 proposes to vest authority in the courts to require corporations to notify victims of corporate offenses of the company's conviction.

This section has no counterpart in current law and will constitute an open invitation to civil damage lawsuits even though the company will likely have paid a large criminal fine.

CONCLUSION

The above points are only a glimpse at the problems in S. 1630, a legislative package of monumental scope. The provisions examined, however, represent the types of changes made to existing law as well as the types of interpretive problems likely to be caused by S. 1630.

Whether the Act will accomplish its goal of streamlining criminal law to effect better and fairer criminal justice remains to be seen. What is certain, however, is that a measure as monumental as criminal code reform absolutely needs deliberate and careful consideration.

Haste, in this case, will be the enemy of responsible legislation. This is particularly true because all federal legislation of the type and magnitude of S. 1630 has a "teaching" effect on the states. Many states can be expected to use S. 1630, if adopted, as model legislation and the bill's defects will ripple across the nation.

REFRAMING OUR RELATIONS WITH OUR FRIENDS AND AMONG OUR ALLIES

● Mr. HART. There are few people as well qualified as McGeorge Bundy to discuss American relations with Western Europe in the field of nuclear weapons, the topic of a recent speech at the New York University Sesquicentennial Conference. By dint of his many years of experience in this area, his views are well worth reading.

At a time when the Western Alliance is in disarray, his reminder that it is "political folly" to forget our allies viewpoint or ignore their wants and needs is good advice indeed. One of his important assertions in this thoughtful exposition of the technical and political problems involved in deployment of nuclear weapons in Europe should be heeded:

The alliance today needs economic progress and political self-confidence more than it needs weapons, and among weapons, it needs conventional more than nuclear reinforcement.

I commend the full text of his address to my colleagues' attention.

The address follows:

REMARKS OF MCGEORGE BUNDY

My central proposition this evening is that in making our foreign policy choices we should think more about the interests and concerns of our friends and allies, and less about the Soviet menace, than seems to be the habit of the present Administration in Washington. My second proposition, which I shall argue much more briefly, is that getting these priorities right will also help us come to terms with ourselves in the reestablishment of some measure of natinal consensus on these hard questions. I do not mean that there is no Soviet threat, or that our allies are always right, or that there is a golden age of bipartisan virtue and wisdom just waiting for the President to flip the switch and turn up the lights. I do mean that if we can get a better understanding of our relations to those whom we see as friends and allies we shall also do better in our

relations with the Soviet Union and with ourselves.

Since I cannot hope to examine all of the relevant relationships, I propose to concentrate on one: the problem of our dealings with Western Europe in the field of nuclear weapons. The subject has the advantage for me that I have been concerned with it in one way or another for more than thirty years, so that if I get it wrong, it will not be for lack of experience. It has the advantage for you that it is now, as it has been recurrently, an issue of considerable immediate urgency. It has the advantage for all of us that it is critically important to the coherence and self-confidence of the strongest and most central of all the associations in which we have engaged ourselves since the end of the Second World War—the North Atlantic Alliance.

Last Saturday, October 11, there was a large political meeting in Bonn, perhaps the largest gathering of free Germans since John F. Kennedy went to Berlin in 1963. But whereas the people of West Berlin turned out to cheer an American leader who won their hearts by telling them he was proud to say "Ich bin ein Berliner," the 240,000 West Germans who gathered in Bonn were there to protest a plan to place new American nuclear missiles in Germany. Although the organizers of the meeting said it was aimed at both the Eastern and the Western sides of the nuclear arms competition, the major targets of crowd and speakers alike were the governments of the United States and West Germany. One does not have to agree with all that was said, or to sympathize excessively with a movement which does indeed exhibit some of the failures of political understanding that are commonly associated with the words pacifism and neutralism, to find this meeting deeply significant. Leadership in responding to the challenge this German movement presents must necessarily belong to Germans, including those in the movement itself, but this event, with the prospect of more like it in the future, gives us good reason to examine our own view of nuclear policy in relation to Western Europe.

The immediate cause and target of this powerful new tide of sentiment in Germany is the plan adopted by the NATO Council two years ago for the placement of 572 land-based mid-range thermonuclear missiles in Western Europe, some 200 of them in West Germany. These missiles are intended by their backers as a counter to Soviet deployment of new theater weapons, in particular what the West calls the SS-20, a modern, sophiscated mobile missile which can reach all of Western Europe, the Middle East, and much of Asia. According to Secretary of State Haig, speaking on arms control here in New York in July, there are already 750 warheads deployed on SS-20 launchers, and in his view—which deserves attention if not agreement not only because of his present assignment but also and perhaps still more because he was formerly Allied Commander of NATO—the SS-20 and other new theater systems have "presented the alliance with a threat of a new order of magnitude."

The missile systems designed for the new NATO force are now being built in the United States, but the plan has been the target of rising criticism in Europe. Moreover, still larger difficulties lie just ahead. At the end of next month American and Soviet negotiators will sit down in Geneva to negotiate on the question of the limitation or reduction of those systems and perhaps others that can reach Western Europe or the Soviet Union. This effort is the necessary twin to the plan for missile deployment. For the West German government and its public in particular, it is essential that both tracks be pursued with energy. In the words of Chancellor Schmidt, "Only a policy which aims at the necesary military balance at the lowest possible level—to be agreed upon jointly—can count on the public's full approval . . . Our people expect preparation for the stationing of American medium-range weapons to be accompanied by the active implementation of the second part of the dual decision" [1]—namely the arms control part.

Chancellor Schmidt does not overstate the desires and expectations of Europeans, and not only of those who openly oppose the proposed deployment. Given the strong European desire to see this question negotiated away, and the widespread belief that the new American Administration is unenthusiastic about arms control, there would be considerable danger of a split between Europeans and Americans even if the issues that will be put on the table were simple and even if the Soviet Government were full of eagerness to ensure the unity of NATO. Neither conditions holds. The Soviet desire to split the alliance is one of the most obvious and durable constants on the international political scene—not a cause for resentment, merely a fact of life—but what is more interesting is that as presently framed the Geneva negotiations will be extremely hard for our side, simply in terms what we and our allies can agree on.

Because there is indeed a substantial Soviet advantage in the special field of theater-range missiles, and because there is growing division among Europeans over the urgency and desirability of the new American weapons of this class, it will be very easy indeed for Moscow to make proposals that will be unacceptable to the American government and those who agree with it in Europe, but highly appealing to others.

Secretary Brezhnev has already offered a freeze on both sides; he could go further and propose some unilateral Soviet reduction in return for cancellation of the NATO plan. So great are his current numerical advantages within this particular field that he can easily design an offer bound to look generous to many in Europe and still retain such advantages that on its present premises Washington would feel bound to reject his proposal. It is not often that the alliance has offered so obvious an invitation for Soviet trouble-making. Only the considerable likelihood of Soviet rigidity and clumsiness currently stands between NATO and a substantial self-inflicted wound.

Paul Nitze, who will sit for the United States at Geneva, is a practiced and expert negotiator who can be relied on to point out the more obvious flaws in Soviet proposals, but as long as the negotiation remains framed as the NATO decision itself has framed it—limited to Soviet and American theater-range missiles—the prospect for an American position that is persuasive to European doubters will be poor. The very best we can look for, as matters stand, is a negotiation which will only slowly erode the NATO decision. If he is both lucky and skillful Mr. Nitze may be able to buy time. But unless the time is used to find a better posture, the prospects for maintaining NATO's unity on this issue are dim.

But if we are to do better, we must understand things better. We must go back and see what it is that the proposed new American missiles are supposed to do, how the original intent of the proposal has been lost sight of, and why it is that when carefully considered the proposal is neither necessary nor desirable for the safety of the alliance, unless the nations of Western Europe themselves clearly support it.

The basic premise for the proposed new force was that without it, primarily because of the new effectiveness of the SS-20, the Soviet Union would have a new capability for nuclear attack on Europe against which the West required a new and balancing counter. Without such a new counter, it was argued, and in particular without new American weapons clearly dedicated to this task and deployed on European soil, the Soviet Union would be able to threaten Europe, at a moment of intense crisis or of calculated Soviet aggression, in a way that would be politically effective because the Europeans would feel disconnected from the American nuclear protection which has been an essential element of the alliance for thirty years.

But this basic premise was quite simply wrong. The SS-20 did not and does not give the Soviet Union any nuclear capability against Europe alone that she did not have in overflowing measure before a single SS-20 was deployed. Not only were the existing SS-4s and 5s, though old and cumbersome, entirely adequate in themselves for threatening a nuclear attack on Europe, but what is much more important, every long-range Soviet strategic missile that can reach the United States can also hit Europe. There are so many of these missiles—some 2500—and they have so many large warheads—some 7000—that less than 10 percent of the force could produce all the results in Europe that could ever be feared from the SS-20. And this calculation, like the usual NATO discussion of the threat from the SS-20, leaves out of account three other new and mid-range systems now entering the Soviet inventory.

It is not clear to me why this obvious and wholly undeniable capability has been generally ignored by Western analysts. Possibly Americans have been blinded by their own natural preoccupation with what the Soviet long-range missiles mean as a threat to the United States, and still more possibly they may have supposed—and here they may even be right—that Soviet military planners would be bureaucratically disinclined to assign long-range weapons to short-range targets. And European analysts may have found it comfortable to assume that long-range missiles are simply not intended for them.

But whatever the cause of the omission, it is flagrant, and it has led to a gross exaggeration of the meaning of the SS-20. Quite without that weapon the nuclear armory of the Soviet Union is more than adequate for the execution of a separate nuclear attack on Western Europe, or any part thereof, while maintaining in reserve strategic forces fully adequate to balance those of the United States. If the Soviet Union should ever reach a political determination to strike Europe without striking the United States, it would have all the weapons it needed without the SS-20. Any danger there may be of any such action is quite literally independent of the existence of the weapon that the West has spent so much time advertising. Indeed the case is, if only marginally, stronger still. If the Soviet Union were ever really prepared to run the risk of general war that would accompany any major attack on Western Europe, might her leaders not suppose that conceivably their ability to persuade the Americans to hold back their own forces would be increased, not lessened, by diverting to Europe some of the long-range strategic missiles that have worried some of our own planners so much?

That is probably not the way the Soviet leaders think, you may reply, and I would agree with you; but all I am saying is that in terms of real forces and real risks the idea of a separate nuclear war with Western Europe must be just as attractive or unattractive to the Soviet leaders (and I believe it is most unattractive to them) without the SS-20 as with it. The SS-20 simply does not change the balance of danger in Europe.

The underlying reality is that the location, the range, and even the vulnerability of particular weapons systems do not define either

[1] Helmut Schmidt, "A Policy of Reliable Partnership," *Foreign Affairs*, Spring 1981, p. 748.

the capabilities or the intentions of any nation which, like the Soviet Union and the United States, has built multiple long-range nuclear systems with an enormous redundance of survivable warheads. For such nations, capabilities remain varied and overwhelming even when whole systems are subtracted (which is why the notion of any early "window of vulnerability" related to the U.S. Minuteman is quite simply inane). Moreover, the capabilities of strategic systems are defined not by the mindsets of their designers or advocates, nor by the planning processes at staff levels in Omaha or Brussels or Moscow or Washington. Capabilities are defined by what these systems, or parts of them, can actually do if they are so commanded. The ineluctable reality is that long-range systems can hit middle-range targets; they have that capability. Thus when you have vastly more than "enough" for intercontinental strategic deterrence, as both sides do today, you have more than enough for smaller assignments too. On this quite basic point the simplistic analyses of some nuclear planners, both in NATO and elsewhere, have been deeply misleading to their political superiors.

As with capability so with intent. In a world of strategic nuclear redundancy political intention is constrained not by the capabilities of particular opposing systems but by the absolutely inescapable risks attendant upon any use of nuclear weapons that might trigger a reply. No one can be absolutely sure that a major Soviet attack on Western Europe would provoke an American strategic reply—but no one, given the existing levels of American commitment and American troops in place, can possibly be certain that it would not. This uncertainty is absolutely inescapable, and in Europe it applies to a large-scale conventional encounter as well as to a Soviet nuclear attack. The certainty of this uncertainty is what deters the men of sanity on both sides, and if it needs some marginal reinforcement in NATO today, that need is mainly in the field of conventional troops and weapons.

But even if the SS–20 has changed nothing except perceptions that can themselves be changed by a more careful look, you may suggest to me that there can still be advantage in thickening the American nuclear presence in Europe. You may be right; even divorced from the SS–20, the argument can be made that the very presence of such weapons makes their possible use an additional deterrent—or that their presence would show to Europeans some new and comforting evidence of American determination—or that the emplacement of these weapons would confer some needed capability not otherwise available.

Let me begin with capabilities. Is there anything we want to be able to do that only these 572 warheads can do? The answer to this question is suggested in what I have already said about the extent of present Soviet and American capabilities. With a single important exception there is nothing the new warheads can do that cannot be done as well by other systems that we already have or plan to have. Like the Soviet Union, we have long-range weapons in numbers grossly beyond and basic deterrent need; we can assign a few of them to NATO missions just as readily as we might assign the new NATO missiles. Nor does the location of the weapons make any difference from the American standpoint. Whether they are based in Germany, or at sea, or in Nebraska, there will always be the same awful magnitude in any Presidential decision to use these weapons against anyone, and in particular against the Soviet Union, whose leaders know as well as we do whose command would send them, and where to direct the reply. Thus there can be no American interest in letting it be thought by anyone that we would ever find it easier to fire at the Soviet Union from Europe than from the United States. The misperception that we may think this way is fueling much of the current opposition in Europe.

There is indeed one thing some of the new missiles can do that no other weapon can do, but it is something we should not want to be able to do. The Pershing II missiles—there are 108 in the plan—can reach Russia from Germany in five minutes, thus producing a new possibility of a supersudden first strike—even on Moscow itself. That is too fast. We would not like it if a Soviet forward deployment of submarines should create a similar standing threat to Washington. It is not for us to be the ones who first put the decapitation of the great rival government on a hair trigger. It is deeply in the general interest of all that neither side should pose such threats to the other. The 1979 decision to place the Pershing II in Germany was a serious mistake. Either its range should be so reduced that it does not threaten Moscow, or it should be cancelled.

Leaving the new Pershing to one side because of this grave defect, there remains one important argument for the remainder of the new force, the ground-launched cruise missiles: our allies may in fact want them. These at least are not plausible first-strike weapons because they move at less than the speed of sound, and they can reasonably be seen as replacements for theater-based aircraft less able to reach their NATO targets than they once were. We have other systems that could do those jobs. Long-range missiles and aircraft could be assigned to NATO in wholly adequate numbers—as indeed five Poseidon submarines now are—with no harm to the basic deterrent strength of our enormous and still growing strategic triad. Still there is no decisive argument against the cruise missiles if in fact our European friends are sure they want them. We should not hold back on this part of the agreed deployment if that is indeed the settled will of our European allies.

But neither should we make the acceptance of these weapons a test of loyalty to the alliance. Because they are American weapons, there has been a natural requirement for American leadership in planning for their deployment, but it is quite another matter for Americans to presume to decide which systems and which locations are most needed to provide confidence to Europeans. Yet that is the way too many Americans, in and out of government, have been talking. One need not admire all the arguments of European opponents of this deployment to understand the resistance to any plan which comes to look like an American device for fighting a nuclear war in Europe alone. We cannot possibly adopt any such policy, of course—if only because of the certainty of uncertainty. But it is folly—political folly, the folly of forgetting how friends and allies may think and feel—to let it look as if we had any such idea.

If we must not presume to decide this question for our friends, neither should we presume that it is decided by a single rally in Bonn, however large and well organized. The Europeans who have supported the new deployment are neither few nor feeble, and the agreement of 1979 is not to be abandoned if indeed this new force, with the Pershing II modified or omitted, is still wanted by Europeans. But it would be all wrong for Americans to use the advantage of ownership to press for a single solution when there are many to choose from. We must think in terms of what Europe wants and needs, and not in those of a mechanical matching of every Soviet move. Soviet nuclear procurement policy is not so sensible that we should imitate it blindly, nor so threatening that we need to believe our own enormous forces are weak. A strategic modernization much more modest than President Reagan's recent proposals can meet the needs of both ourselves and our allies, with or without new land-based missiles in Europe.

There are, of course, other needs in the alliance, and other friends to be considered in our foreign affairs. The alliance today needs economic progress and political self-confidence more than it needs weapons, and among weapons it needs conventional more than nuclear reinforcement. The problem of making and keeping friends in the Middle East is even harder, and I doubt if we make progress by suggesting that we intend to control the internal choices of the peoples and leaders on the spot. There is also obvious peril in supposing that what should be decisive in every Central American policy choice is the presence or absence of Russians or Cubans. We have an interest in respecting what is though on such matters by friends in Mexico and France, and we should have learned long ago that merely to be anti-communist is not necessarily to be a good partner for this democracy. But these are topics for another time, and I will claim only that in varied ways the general moral I have drawn from the case of the nuclear defense of Europe applies more broadly: the real interests and concerns of our friends are a better guide to policy than the natural but childish desire to make a tit-for-tat response to everything the Russians do.

Such respect for friends and allies can also help us with ourselves. The challenge of foreign policy is not simply, as men and women have thought too often in the last four Administrations, to reverse the softness or hardness, or even the indecision, of predecessors. The challenge is rather to choose courses that can unite us by their visible combination of strength and restraint. There is no durable majority for any foreign policy based on simple single-minded hostility to, or accommodation with, the Soviet Union. We learned that lesson first when we wisely shifted our emphasis in moving from the Truman Doctrine to the Marshall Plan. The same imperative—and the same opportunity—lies open today.

There is one further point that may be appropriate to this anniversary celebration, with its combination of respect for the past and concern for the future. When we think about nuclear weapons, we must always remember that the object of the thought, for all of us of whatever opinion, must be to help to see to it that these weapons are not used. I entirely agree with my friend Dean Rusk who has recently remarked that the most important single fact in the history of the last thirty-six years is that these weapons have not been used since Nagasaki. The ugly paradox of making weapons so as not to have to use them—of strength for deterrence—I believe we must accept, but we do not for that reason have to think that more is always better. And beyond that, there is no safety in leaving the matter to specialists. The danger is a common danger, and there can be no escape in the end from the requirement of common understanding. I believe myself that when such understanding is achieved we shall find that this is not a time for panic, but rather for confidence, and that we are not about to enter a time of special danger—unless we lose our own nerve. What we need most is simply to understand these matters better, and so I do not apologize for having troubled you with them this evening.

Let me end with some words spoken by Robert Oppenheimer more than thirty years ago, at an earlier time of asserted crisis:

". . . wisdom itself cannot flourish, nor even truth be determined, without the give and take of debate or criticism. The relevant facts could be of little help to an enemy; yet they are indispensable for an understanding of questions of policy. If we are wholly guided by fear, we shall fail in this time of crisis. The answer to fear

cannot always lie in the dissipation of the causes of fear; sometimes it lies in courage." [2]●

SENATOR JOHN GLENN AND ARMS CONTROL

● Mr. TSONGAS. Mr. President, late last month, Senator JOHN GLENN visited my home State of Massachusetts as the Martin Weiner Distinguished Visiting Lecturer at Brandeis University. The subject of Senator GLENN's address was controlling the growth and spread of nuclear weapons.

His address is both thoughtful and timely. When our allies in Europe are growing restive with the administration's anemic arms control policy and confused NATO strategy, the Senator from Ohio speaks clearly and decisively on the urgent necessity of strategic and theater arms control agreements. On the perils of linking arms control with Soviet behavior, he is eloquent:

We cannot afford to wait for peace before seeking to control the weapons of war.

On nuclear proliferation, a subject he knows very well, Senator GLENN warns that:

Unless we act quickly to keep this deadly future from unfolding, our children will inherit a world where there is no rest, no stability and no real security.

This is an important speech. Mr. President. It sets out a compelling and convincing vision for U.S. policy on nuclear arms issues. I recommend it highly to my colleagues and request that it be reprinted in the RECORD at the conclusion of my remarks.

The address follows:

REMARKS OF SENATOR JOHN GLEEN

Tonight marks my first visit to the campus of Brandeis University. And I've truly been looking forward to it—not only because of your uniqueness in being America's only Jewish-supported nonsectarian university—but also because Brandeis has long been regarded as one of this Nation's most prestigious centers of higher education. Much of the credit for that reputation, of course, must go to men like Chairman Foster, Chancellor Sachar and President Bernstein, for they have tirelessly worked to perpetuate the lofty ideals upon which this school was founded. But tonight, let us also recognize the equally important contribution made by people like the late Martin Weiner, whose name is memorialized in the title of this lectureship series. For without their generous financial gifts, it would be extremely difficut to sustain the academic excellence that has been a Brandeis trademark since 1948.

So it's a very special honor to be here tonight, and I look forward to hearing—and learning—from you as we exchange ideas in the question and answer period that will follow my formal remarks.

Exactly one month ago today—on September 29th—a ram's horn was blown to signal the start of Rosh Hashana. In modern times, the blowing of the shofar reminds Jewish worshippers that the Day of Atonement is fast approaching. But in ancient times, the shofar also signalled an alarm to the Biblical tribes of Israel—warning them of the approach of an enemy. Tonight, I too wish to sound a warning—a warning not about the approach of an enemy, but about the growth and spread of nuclear weapons. Now I know that many people believe the subject of arms control to be complex, esoteric and what I sometimes describe as a "MEGO" issue—one on which "my eyes glaze over." But that is an intellectual luxury we cannot afford. Because in my opinion, the world today is literally sitting on a nuclear time bomb. And unless we act to defuse it, it may well explode, taking us and all of civilization with it.

Obviously, all sane men want to avoid such a catastrophe. But if we are to avoid stumbling into a nuclear nightmare, it will be necessary to come to grips with some very fundamental facts. Perhaps the most fundamental fact of all is that meaningful arms control negotiations will not result from luck or wishful thinking. Good intentions are not enough; they must be supplemented with a clear-eyed understanding of how arms control fits within a wider foreign policy agenda. So our first task is to construct something we have lacked for far too long in this country—a well-defined and coherent foreign policy—one that recognizes arms control as one of its most vital components.

What are some of the other elements of a comprehensive foreign policy? Well, in a frequently hostile and dangerous world, a strong military and a sound defense strategy must surely comprise one element. But military strength—important as it is—cannot be the only one. In today's world, effective and compassionate international economic programs must also be an integral part of U.S. foreign policy. So must consistent diplomatic efforts—and so must a reasonable plan for combatting the systematic violation of human rights—irrespective, I might add, of whether those violations are the work of "authoritarian" of "totalitarian" governments. And underlying all of these diverse considerations should be a realistic vision of what goals and objectives are desirable—and possible—in both the short and longer terms.

Peace, for example, is clearly a worthy foreign policy objective in and of itself. But is peace to become our sole international objective? Can it be our sole objective? Or does a single-minded effort to preserve the peace often generate the kinds of conditions that lead to war? Should we try to influence developing nations in the direction of democracy and market economies? Or has that become impossible in the modern world—and should we therefore merely sit as silent spectators to global change? These are difficult questions. In fact, many experts say that we can't possibly answer them. But if so, I believe that in itself is a crucial decision that must be made. And until our policy-makers begin grappling with issues like these, we will be condemned to a foreign policy future that remains confused, vacillating and unpredictable.

Nowhere would that be more dangerous than in the foreign policy area I want to explore tonight—controlling the growth and spread of nuclear weapons. For as long as these arsenals continue to multiply and become ever more available, each crisis of the moment could well become the last crisis for all mankind.

PAST ARMS CONTROL EFFORT

Now, I need not dwell this evening on the awesome destructive power of nuclear weaponry. Today's generation of college students has literally grown up in the shadow of the nuclear threat. You are familiar with the terminology—ICBMs, megatons, MIRVS and overkill. You have heard the casualty estimates: more than 100 million Americans—and at least that many Soviets—would die within the first 24 hours of a full-scale nuclear exchange. And you know that after a nuclear war, as former Soviet Chairman Khrushchev once put it, "The survivors would envy the dead." In short, the advent of atomic weaponry has fundamentally altered the parameters of warfare—and has raised the question of whether our politics can grow up to our technology.

Past efforts to control the weapons of war were generally unsuccessful. Disarmament and arms control were the stuff of which dreamers fantasized and fanatics dreamed. But as we move deeper into the nuclear age, arms control has become a necessity. And the fanatics are those who now talk of "winning" a nuclear war—as if the poisoned winds from an incinerated earth could somehow reveal a winner.

In the late 1940s, America moved—through the Baruch and Lilienthal proposals—to meet the nuclear challenge by proposing to place all atomic materials and technology under permanent international control. Unfortunately, the Soviet Union rejected that proposal, and soon detonated their own atomic device, thus ending America's short-lived nuclear monopoly. Within a few short years, Britain, France and China had also established their memberships in the nuclear club.

In short, the genie was now out of the bottle. And with the development of peaceful uses for atomic power, a growing number of other nations came to covet a nuclear capability. The problem, however, was quickly apparent: the only difference between atoms for peace and atoms for war is the intent of the user.

The danger of burgeoning nuclear stockpiles among the superpowers was now compounded by the danger of worldwide proliferation among smaller and smaller nations whose sense of restraint was highly suspect. This alarming prospect led, in the 1960s, to a second American initiative for international control—the Nonproliferation Treaty. 115 countries—including 112 nations that have not yet developed nuclear weapons—eventually signed the agreement. Nonweapons states which signed the Treaty agreed not to acquire them. In return for assistance in establishing peaceful atomic programs, they also agreed to open their facilities to inspection by the International Atomic Energy Agency. These inspections are designed to ensure that there is no diversion of nuclear materials to weapons production.

For their part, the United States and the Soviet Union agreed to begin negotiations to reduce their own nuclear arsenals. In other words, arms control is now proceeding along a dual track: Smaller states agree to forego the weapons option while the superpowers try to reduce their own nucelar stockpiles.

THE SALT PROCESS

It was that promise that led Washington and Moscow to begin the discussions that came to be known as SALT—the Strategic Arms Limitation Talks. By 1972, SALT had yielded its first major success; a treaty that sharply limited both the number of delivery vehicles each side could process, as well as the deployment of antiballistic missile systems. The SALT I Treaty was universally acclaimed not only for its specific benefits—important as they were—but also because it had finally demonstrated that meaningful arms control was both possible and practical.

The success of SALT I paved the way for SALT II—negotiations that optimistically aimed not just a capping—but at truly reversing—the nuclear arms race. That optimism, however, proved sadly premature, for technology again had set a blistering pace. Tremendous advances in missile modernization—such as the ability to equip single missiles with multiple warheads—outstripped the gains of further limits on strategic launchers.

[2] This statement was made on Mrs. Franklin Roosevelt's program "Round Table" on February 12, 1951, and reprinted in *The Bulletin of the Atomic Scientists*, Vol. 6, No. 3, March 1950, p. 75. I owe the quotation and the reference to Robert Gilpin, *American Scientists & Nuclear Weapons Policy*, 1962, p. 342.

But even more devastating for SALT II was the fact that we found ourselves unable to adequately verify or monitor Soviet compliance with the terms of the Treaty. For Senators like me, such a situation was simply unacceptable.

Unlike the United States—where foreign governments need only subscribe to the Congressional Record and Aviation Week Magazine to find out what we're up to, Soviet society is closed and their decision-making is secretive. That makes U.S. intelligence-gathering extremely difficult. And where America's existence may be at stake, I don't think we can afford to accept on faith that the Soviets won't cheat. As we seek to lower the nuclear danger, we must never lower our guard.

It was the issue of verification—combined with the discovery of Soviet combat troops in Cuba and the invasion of Afghanistan—that finally prompted President Carter to urge a delay in the Senate's consideration of the SALT II Treaty.

Today, SALT II remains in limbo—and the SALT process itself is being called into question. Former Senator Jacob Javits, for instance, expressed deep disappointment that SALT II accomplished so little. And he publicly warned that another protracted round of negotiations that did not result in significant arms reductions would meet certain defeat in the halls of Congress. I share Senator Javits' concern, for confidence is quickly eroded when herculean efforts give birth to marginal results.

ARMS CONTROL AND THE REAGAN ADMINISTRATION

But I am equally troubled by the present Administration's approach to arms control. Many of the President's advisors seem to believe that where strategic weapons are concerned, the only good negotiations are no negotiations. Other Administration officials claim to support negotiations, but at some point in the future and certainly not now. Still other Presidential advisors have advocated reductions so massive that the Soviets are sure to refuse. History has shown that true arms control progress requires time, patience and steadfastness of purpose. Grandstand plays to achieve overnight breakthroughs simply won't work. Indeed, they are usually counter-productive. Recently, the President himself has spoken of changing the name of the process from "SALT" to "START"—signifying Strategic Arms Reduction Talks. Obviously, only the President knows what he has in mind. But if by START he really means STOP, the outlook for progress is extremely grim.

I am also bothered by insistence on a strict linkage between arms control and Soviet international behavior. Please do not misunderstand me. I, too, am greatly concerned about growing Soviet adventurism. Indeed, it is difficult not to be concerned when you look at what the Soviets have recently been up to. First, there was Angola and the additional use of Soviet surrogates in Africa, Asia and the Middle East. Then came the Soviet takeover of the so-called "Northern Territories" just north of Japan. Finally, there was the full-scale invasion of Afghanistan—an act of aggression so naked that even socialists were outraged. And let us remember that most of these activities occurred before the Soviets achieved nuclear parity with us. We can only speculate on what new Soviet adventures are in the offing.

But while I am disturbed by Soviet aggression, I reject the notion that we must not negotiate until they learn to behave. Failing to discuss arms control with Moscow will not deter it from future transgressions. Only the military strength and the political resolve of potential victims can do that. But even more important, we cannot afford to wait for peace before seeking to control the weapons of war. And neither can we wait for good Soviet behavior, because bad behavior armed with increasing numbers of nuclear weapons is more dangerous still.

I am also unimpressed with Administration arguments that we must delay arms control until we have closed the so-called "window of vulnerability." In the first place, I seriously question whether our land-based strategic weapons are, in fact, vulnerable. But vulnerable or not, why must arms control and a strong military posture be regarded as mutually exclusive? In my view, they are mutually necessary. That is particularly true with regard to America's conventional forces, because years of neglect have reduced our preparedness to dangerous levels.

In that connection, let me say that I am greatly disappointed with this Administration's apparent willingness to continue playing budget games with national defense. Despite all campaign rhetoric to the contrary, the President seems intent on repeating the same kind of short-sighted mistakes committed by his predecessor. In fact, the 1982 Reagan defense budget is now perilously close to being even lower than that proposed by President Carter. Fiscal responsibility is surely important. But where America's national security is concerned, a balanced Federal budget is simply no substitute for an adequate defense.

So I am far from unmindful of our conventional and strategic requirements. But just as we cannot allow our defense needs to be determined by the size of the Federal deficit, neither should we allow arms control to languish until those needs have been met. Let us resolve to spend what we must—and negotiate what we can.

POLICY PRESCRIPTIONS

Let me illustrate what I have in mind by briefly outlining five recommendations on arms control policy.

SALT II

The first thing we must do is tell the Soviet Union that we want the SALT process to proceed—and that we want it to proceed now. This would doubtlessly require new negotiations to update the SALT II Treaty, but whatever modifications are necessary should be completed quickly. President Reagan should then move expeditiously to secure Senate ratification—something that should not be difficult if he energetically dedicates himself to the task. Without committing myself to support Treaty changes sight unseen, let me say that I am now inclined to support the SALT II agreement as previously negotiated. My earlier concerns regarding verification have largely been met through subsequent improvements in our monitoring capability. And so long as we can verify Soviet compliance, the strategic constraints imposed by SALT II comprise a necessary first step in our journey towards SALT III.

TNF

In addition to ratifying the SALT II Treaty regarding intercontinental missiles, we must move ahead next month with talks concerning intermediate range weapons—the so-called Theatre Nuclear Forces. Because these shorter-range missiles are located on European soil, it is imperative that we carefully coordinate our position with our NATO allies. Unfortunately, it appears that that coordination has so far been less than complete—and I strongly urge the Administration to take whatever steps necessary to resolve this problem before negotiations begin a month from tomorrow. For as the recent marches in Bonn, London, Rome and elsewhere have vividly demonstrated, the stability of the NATO alliance may hang in the balance.

CONVENTIONAL DEFENSES

Third, I believe it is vital that we and our allies work to build up our conventional defenses, for they are an important consideration in our strategy for nuclear weapons control. Halting the erosion in our non-nuclear military strength is crucial for a variety of reasons. But among the most important is that conventional weakness invites undue reliance on nuclear deterrence. Should conflict come—despite our best efforts to prevent it—we must not be forced to choose between surrender and annihilation. And neither should we forget that our success in persuading other nations not to acquire nuclear weapons largely rests on our willingness and ability to limit the possible use of our own.

NONPROLIFERATION

And that brings me to my fourth recommendation: A redoubled effort to halt the proliferation of nuclear weapons. The urgency of this effort cannot be overstated, for upon our success depends the only future our children will have.

Although international accords like the Nuclear Nonproliferation Treaty and U.S. laws like the Nonproliferation Act of 1978 were steps in the right direction, it is clear they have not solved the problem. Someone once said that the difference between idealists and pessimists is that idealists say all nations should share the atomic bomb, while pessimists fear that they will.

Well, these days there is surely ample reason for pessimism. Because in addition to the five "charter" members of the nuclear club, India has already exploded a nuclear device, Israel can, and Iraq, Libya and Pakistan are also apparently committed to bomb-building programs. Other countries with adequate technical know-how to pursue the nuclear option include South Africa, Taiwan, South Korea and Brazil.

Think what it would mean to have so many fingers grasping the nuclear trigger. Think of the unparalleled opportunities for irresponsibility; for terrorism; for accident; and for miscalculation. Unless we act quickly to keep this deadly future from unfolding, our children will inherit a world where there is no rest, no stability and no real security.

That's why I've made nonproliferation one of my top priorities since I came to the Senate almost seven years ago. I coauthored the Nuclear Nonproliferation Act of 1978. Last year, in the wake of India's refusal to abide by the provisions of that Act, I waged an unsuccessful fight on the Senate floor to stop President Carter from sending nuclear fuel to India's Tarapur atomic power plant. And this year, I am outraged that the Reagan Administration wants to weaken even further the nonproliferation laws we've fought so hard to achieve. So last week—over strenuous Administration opposition—I managed to push through an amendment to the Foreign Assistance bill that requires the termination of all foreign aid to India and Pakistan if they conduct any future nuclear explosions. In my view, the next five years are absolutely crucial. So rather than slacken our resolve, I believe that this is the time to stiffen it.

First, I propose that we immediately press for consultations among nuclear-exporting nations to establish truly meaningful restrictions on nuclear trade with potentially dangerous countries. Second, we must plan and call for a World Conference on Nuclear Energy Policy—and use this conference to find new agreements that could be incorporated into the existing Nonproliferation Treaty. Third, the United States must determine what restrictions on nuclear trade are minimally acceptable—and then use whatever leverage we have with other suppliers to obtain their adherence to those standards. And fourth, we must be prepared to use whatever measures necessary—including the possible termination of all foreign aid and economic assistance—against any nonweapons state that persists in developing a nuclear weapons program.

SALT III

But even if we prevent further scattering of nuclear weapons, ratify the SALT II Treaty, reduce Theatre Nuclear Forces and enhance our conventional military strength —even if we do all these things, our task still will not be complete. We must also devise a strategy that promises real long-term reductions in the nuclear stockpiles of the two superpowers. Without this, there will be steadily diminishing public support for arms control negotiations.

So my fifth and final recommendation is that we begin to think seriously about where the SALT process is going.

The SALT I and SALT II negotiations were conducted within a narrow conceptual framework—a framework that has now become outmoded by technological advancement. In the past, we have contended ourselves with counting reducing each side's missile launchers, while largely ignoring the qualitative improvements that have increased our collective capacity for destruction. Specifically, I am referring to the tremendous advancements in MIRV technology that have geometrically increased the number of warheads that each side can deliver. To paraphrase a popular bumper sticker, launchers don't kill people, warheads kill people. And if we can't find a way to significantly reduce them, future arms control efforts will bring forth little of consequence. So let us expand our vision, renew our approach and explore new directions. And then let us move boldly toward a SALT III agreement.

CONCLUSION

Let me conclude my remarks with one final thought. Tonight I have addressed a few of the challenges that confront us in the area of nuclear weaponry. That they are formidable goes without saying. Meeting them in a diverse and frequently hostile world will be far from easy. But we are not helpless before our task and need not be hopeless of our success. Because on the subject of nuclear war, there are common interests that bind friend and foe together. In the final analysis, as a young American President reminded us almost 20 years ago, we all inhabit the same small planet. We all breathe the same air. We all cherish our children's future. And we are all mortal.

So let us not despair. Peace need not be impractical and nuclear war need not be inevitable. Though mankind's future may lie beyond our vision, it is not completely beyond our control. Our fate—and that of other nations as well—is the work of our own hands, matched to reason and principle. So to paraphrase President Kennedy, let us go forward in the work of peace, asking His blessing and His help, but knowing that here on earth, God's work must truly be our own.

Shalom, my friends, and thank you.●

NOTICE OF DETERMINATION BY THE SELECT COMMITTEE ON ETHICS

● Mr. WALLOP. Mr. President, it is required by paragraph 4 of rule 35 that I place in the RECORD this notice of a Senate employee who proposes to participate in a program, the principal objective of which is educational, sponsored by a foreign government or a foreign educational or charitable organization involving travel to a foreign country paid for by that foreign government or organization.

The Select Committee on Ethics has received a request for a determination under rule 35 which would permit Mr. Thomas Melia of the staff of Senator MOYNIHAN to participate in a program sponsored by the Graduate School of American Studies of Tamkang University in the Republic of China from November 22 to December 2, 1981, to discuss matters of mutual interest and international relations.

The committee has determined that participation by Mr. Melia in the program in the Republic of China, at the expense of Tamkang University, is in the interests of the Senate and the United States.●

DR. THOMAS SOWELL

● Mr. EAST. Mr. President, there are few commentators on the American scene today who endow their remarks with as much logic and wit as Dr. Thomas Sowell. A senior fellow at the Hoover Institution, a nationally known scholar, and the author of brilliant books, Dr. Sowell is to be commended for his outspoken candor and his contributions to human knowledge.

Proponents of the free enterprise system are particularly indebted to him. More than any other living writer, Dr. Sowell has established that far from being an instrument of oppression, free enterprise has been an avenue of opportunity for all people—even for members of minority groups commonly regarded as its chief victims.

In one of his earlier works, "Classical Economics Reconsidered," Dr. Sowell emphasizes that "one of the curious facts about the classical economists is that most of them were members of minority groups." Adam Smith, Malthus, the two Mills, and J. R. McCulloch were Scotsmen who lived in England at a time when most Englishmen agreed with Samuel Johnson: "There is much that can be done with a Scotsman—if he be catched young." Similarly, David Ricardo was of Jewish ancestry, and Jean-Baptiste Say was descended from Huguenots who had fled France during religious persecutions.

In a recent "My Turn" column for Newsweek magazine, Dr. Sowell further elaborates on this point. I ask that this column be printed in the RECORD, and I would like to note at this time that Dr. Sowell is a native of Gastonia, N.C.—a fact of which the people of our State are proud.

The column follows:

WE'RE NOT REALLY "EQUAL"

(By Thomas Sowell)

As a teacher I have learned from sad experience that nothing so bores students as being asked to define their terms systematically before discussing some exciting issue. They want to get on with it, without wasting time on petty verbal distinctions.

Much of our politics is conducted in the same spirit. We are for "equality" or "the environment," or against an "arms race," and there is no time to waste on definitions and other Mickey Mouse stuff. This attitude may be all right for those for whom political crusades are a matter of personal excitement, like rooting for your favorite team and jeering the opposition. But for those who are serious about the consequences of public policy, nothing can be built without a solid foundation.

"Equality" is one of the great undefined terms underlying much current controversy and antagonism. This one confused word might even become the rock on which our civilization is wrecked. It should be worth defining.

Equality is such an easily understood concept in mathematics that we may not realize it is a bottomless pit of complexities anywhere else. That is because in mathematics we have eliminated the concreteness and complexities of real things. When we say that two plus two equals four, we either don't say two what or we say the same what after each number. But if we said that two apples plus two apples equals four oranges, we would be in trouble.

SENSE

Yet that is what we are saying in our political reasoning. And we are in trouble. Nothing is more concrete or complex than a human being. Beethoven could not play center field like Willie Mays, and Willie never tried to write a symphony. In what sense are they equal—or unequal? The common mathematical symbol for inequality points to the smaller quantity. But which is the smaller quantity—and in whose eyes—when such completely different things are involved?

When women have children and men don't how can they be either equal or unequal? Our passionate desire to reduce things to the simplicity of abstract concepts does not mean that it can be done. Those who want to cheer their team and boo the visitors may like to think that the issue is equality versus inequality. But the real issue is whether or not we are going to talk sense. Those who believe in inequality have the same confusion as those who believe in equality. The French make better champagne than the Japanese, but the Japanese make better cameras than the French. What sense does it make to add champagne to cameras to a thousand other things and come up with a grand total showing who is "superior"?

When we speak of "equal justice under law," we simply mean applying the same rules to everybody. That has nothing whatsoever to do with whether everyone performs equally. A good umpire calls balls and strikes by the same rules for everyone, but one batter may get twice as many hits as another.

In recent years we have increasingly heard it argued that if outcomes are unequal, then the rules must have been applied unequally. It would destroy my last illusion to discover that Willie Mays didn't really play baseball any better than anybody else, but that the umpires and sportswriters just conspired to make it look that way. Pending the uncovering of intricate plots of this magnitude, we must accept the fact that performances are very unequal in different aspects of life. And there is no way to add up these apples, oranges and grapes to get one sum total of fruit.

Anyone with the slightest familiarity with history knows that rules have often been applied very unequally to different groups. (A few are ignorant or misguided enough to think that this is a peculiarity of American society.) The problem is not in seeing that unequal rules can lead to unequal outcomes. The problem is in trying to reason backward from unequal outcomes to unequal rules as the sole or main cause.

There are innumerable places around the world where those who have been the victims of unequal rules have nevertheless vastly outperformed those who were favored. Almost nowhere in Southeast Asia have the Chinese minority had equal rights with the native peoples, but the average Chinese income in these countries has almost invariably been much higher than that of the general population. A very similar story could be told from the history of the Jews in many countries of Europe, North Africa and the Middle East. To a greater or lesser extent, this has also been the history of the Ibos in Nigeria, the Italians in Argentina, the Armenians in Turkey, the Japanese in the United States—and on and on.

CONFUSED TERMS

It would be very convenient if we could infer discriminatory rules whenever we found unequal outcomes. But life does not always accommodate itself to our convenience.

Those who are determined to find villains but cannot find evidence often resort to "society" as the cause of all our troubles. What do they mean by "society" or "environment"? They act as if these terms were self-evident. But environment and society are just new confused terms introduced to save the old confused term, equality.

The American environment or society cannot explain historical behavior patterns found among German-Americans if these same patterns can be found among Germans in Brazil, Australia, Ireland and elsewhere around the world. These patterns may be explained by the history of German society. But if the words "environment" or "society" refer to things that may go back a thousand years, we are no longer talking about either the causal or the moral responsibility of American society. If historic causes include such things as the peculiar geography of Africa or of southern Italy, then we are no longer talking about human responsibility at all.

This does not mean that there are no problems. There are very serious social problems. But that means that serious attention will be required to solve them—beginning with defining our terms.●

LAND AND WATER CONSERVATION FUND

● Mr. MOYNIHAN. Mr. President, I am extremely disappointed that the conferees on the Interior and related agencies appropriations bill agreed to eliminate all Land and Water Conservation Fund assistance for State and local governments in fiscal year 1982. Not reduce funding, mind you, from its 1981 level of $175 million, but eliminate it.

Funding for this vitally important component of the Land and Water Conservation Fund is being eliminated despite the fact that the Senate Appropriations Committee restored $102.3 million for State grants during its consideration of this bill. We are told that this is only a 1-year moratorium, but even a 1-year moratorium will disrupt the operations of State and local parks throughout the Nation.

New York has received $172 million from this program since 1965, and that money has been used to enhance recreational facilities from the Broadway malls in Manhattan to an ice skating rink in Fulton. The Land and Water Conservation Fund State assistance program is a partnership between the Federal Government and State and local governments, and the Federal Government's withdrawal from this partnership will have a profound effect on the quality of our Nation's parks. The impact of this cut, unfortunately, does not stop there. Over 1,000 New Yorkers are in danger of losing their jobs at various park sites around the State as a result of the action taken by the Interior conferees.

Although we have received assurances that this will only be a 1-year moratorium, the suspicion exists that the administration may not request funding for State and local participation in the Land and Water Conservation Fund for fiscal year 1983. This would be a tragic mistake, for the successes of this program are well documented. I fully expect, however, that this 1-year moratorium is just that; a 1-year suspension of State and local assistance and not a termination.

Mr. President, I ask that an article from the November 16 New York Times detailing the effect the elimination of these funds will have on the State of New York be printed in the RECORD.

The article follows:

FEDERAL FINANCING FOR STATE'S PARKS CUT FROM BUDGET

(By Deirdre Carmody)

All $15.4 million in Federal funds for New York State parks has been eliminated as part of the Reagan Administration's budget cuts, according to the State Parks and Recreation Commissioner.

"What is the degree of the cut?" said the Commissioner, Orin Lehman. "It isn't 30 percent, it isn't 50 percent. It's 100 percent."

The cuts, which Mr. Lehman described for the first time in an interview, have eliminated all four programs through which the state received Federal assistance for its parks in the past. Besides the $15.4 million received last year, the cuts will cost the state more than 1,000 federally financed park jobs, some of which have already been phased out.

JONES BEACH PROGRAM HARD HIT

One of the hardest-hit programs is the six-year, $26 million rehabilitation of Jones Beach that was announced by Governor Carey last year. The Federal Government had been scheduled to provide half the money. The Jones Beach project is considered important because facilities are deteriorating and badly in need of repair while attendance keeps growing.

Many other projects throughout the state will have to be abandoned or seek funds elsewhere. These include pocket parks, tennis courts, rehabilitation projects, sewer lines, swimming pools, dams and athletic fields.

Money provided by the Federal Land and Water Conservation Fund in the past ranged from $860,000 for rehabilitation of the Broadway malls in Manhattan to $360,000 for an ice skating rink for the town of Fulton in Oswego County.

The elimination of Land and Water Conservation Fund grants, which have provided New York State with $172 million since 1965, is the most drastic cut. Over the years, these funds have gone to more than 1,000 state and local parks and recreation projects. The money for these grants came from offshore oil leases.

"The fund was originally set up because Congress realized that most Americans use their own local parks or state parks more than they use the national parks; it was set up to help the states and communities and enhance outdoor recreation," Commissioner Lehman said in an interview. "It was considered a partnership between the Federal Government and the states."

Some of the programs, such as the Young Adult Conservation Corps, began being phased out several months ago. Other cuts went into effect on Oct. 1, with the start of the 1982 Federal fiscal year. The combination of budget cuts was completed Nov. 5, when a Senate-House conference committee eliminated the Land and Water Conservation Fund.

SEEKING A BOND ISSUE

Commissioner Lehman said that the cuts would be so detrimental to maintenance of the state parks system that he was "hopeful" the Governor and the Legislature could be persuaded to put a parks preservation bond issue on the ballot next year.

"We are hopeful that the Governor and the Legislature might see fit to have a park preservation bond act in 1982," Mr. Lehman said. "We've checked it with some of the people in the Governor's office. They've encouraged us to go ahead. They've said, 'Bring us your plan and we'll see.' "

He said that the proposed bond issue would be "in the $400 million area." Recreation bond issues have been approved by the voters of New York State since the first one was proposed by Gov. Alfred E. Smith in 1924.

In addition to the Land and Water Conservation Fund, the other programs that have been eliminated are:

The Urban Park and Recreation Recovery Program, which had awarded a total of $11.7 million in grants to New York State since 1978. Nineteen cities and five counties were eligible for these funds.

The Comprehensive Employment and Training Act, known as CETA, under which the State Parks Department was able to employ 650 workers, who were paid with Federal funds. These unskilled workers did painting, cleanup, conservation and restoration jobs.

The Young Adult Conservation Corps, a federally financed employment program that provided the state last year with 360 workers aged 16 to 33. These workers repaired structures, built camps, fixed picnic areas and did other similar jobs.

ASKING FOUNDATIONS TO HELP

To mitigate the effect of the cuts, Commissioner Lehman said, the state is now "going heavily after foundations, corporations, and friends' groups" to take over some of the projects.

He pointed out that the Reagan Administration had said from the beginning that little money would be available to build new parks. He said, however, that New York State had been way ahead of the Administration, having decided seven years ago not to spend money on acquiring new land, but to use funds to take care of the existing parks.

Parks officials point out that the parks have never been as popular as they are now, because people have more leisure time and are preoccupied with health.

BUILT DURING DEPRESSION

Many of the facilities in the state were built during the Depression and are in serious need of maintenance and repair, the officials said.

In addition, as the economy bites more and more into people's purses and it becomes more expensive to travel, people are staying home and using their local parks. Recreation has also become a year-round pastime. As a result, golf courses that were once deserted when they were covered with snow have now become cross-country skiing areas, and parks that were empty during the winter are now used year-around by joggers.

"We do understand the frustration of the American public with taxes, waste and inefficiency," Commissioner Lehman said. "I don't think anyone objects to eliminating that and we know that budgets have to be cut. What we object to is being shut out."●

A SALUTE TO HARBEL'S JODY LANDERS

● Mr. SARBANES. Mr. President, for the last decade one of Baltimore City's most successful community organizations has greatly benefited from the committed hard work and skill of a young man who has seen Harbel grow from what one writer called "a com-

munity's impossible dream to an organization composed of 81 neighborhoods, an areawide reputation and an $840,000 budget."

Joseph T. Landers, better known as Jody, has served Harbel in various capacities from volunteer to executive director. Many years ago, he was appointed to this important post in an organization uniting northeast Baltimore communities when he was only 24 years of age. Under his leadership, the revitalization of these communities has continued to grow and today Greater Northeast Baltimore is one of the finest places to live in the Nation.

To all who would understand how Baltimore has gained a national reputation for revitalization and community involvement I commend Jody Landers' comments when asked to what did he attribute his success:

If Harbel is successful, it's because this is a stable hardworking community.

The folks who live here care; they get involved with their neighborhood improvement associations and church groups. That's why it works: dedicated leaders, folks who come out of the woodwork with a commitment.

And if I'm successful, maybe it's because I'm never defensive; I'm willing and ready to accept anybody without preordained notions. There's no chip on my shoulder, I don't take criticism personally.

And I am really committed to this community. The northeast area is one of the finest places in which to live.

Mr. President, when asked in the same interview how he would like to be remembered Jody Landers replied "as a sincere person who was able to get things done." Fortunately for Baltimore Jody Landers has gotten things done and I am pleased to note that he will continue to get things done. While he is leaving Harbel, he will remain active in our community on the staff of the United Way, working for all of central Maryland on behalf of a number of worthwhile agencies and organizations.

Jody Landers is one of those especially committed and dedicated people who help to build strong communities. I join his many friends in thanking him for his extraordinary contribution.●

THE DISTRICT OF COLUMBIA APPROPRIATION BILL CONFERENCE AGREEMENT, 1982

● Mr. DOMENICI. Mr. President, the conference agreement on H.R. 4522, the District of Columbia Appropriation bill for fiscal year 1982, provides new budget authority of $0.6 billion. This level is identical to the Senate-passed bill level and $37 million above the House-passed level. It is consistent with both the District of Columbia Appropriation Subcommittee's allocation under the first budget resolution and the President's September request.

Mr. President, I ask that a table showing the relationship of the conference agreement to the congressional budget and President's budget request be printed in the RECORD at the conclusion of my remarks.

The table follows.

H.R. 4522, District of Columbia Appropriation Bill Conference Agreement, 1982

[In billions of dollars]

	Fiscal year 1982	
	BA	O
Outlays from prior-year budget authority and other actions completed	---	0.03

THE SOCIAL SECURITY NOTCH

● Mr. BAUCUS. Mr. President, recently one of the major newspapers in my home State of Montana printed an editorial on the social security notch and criticized Congress for creating an inequitable benefits formula in the social security program. This notch refers to the difference in benefits payable to retirees who were born before December 31, 1916, and those born after that date.

Because I share the concern of those editors that all Americans should be treated equally by Government programs, I asked the Congressional Research Service to analyze the situation. It is clear to me from that analysis that the discrepancy between benefits payable to retirees of different ages results from an effort by Congress to avoid punishing current recipients for the inadequacies of the pre-1977 benefit formula in the face of changing economic conditions.

Mr. President, I ask that the editorial, from the Billings Gazette, September 22, 1981, and the report by CRS be printed in the RECORD.

The material follows:

AN EQUAL TREATMENT FARCE

If Congress makes any pretense at equal treatment under the law it will do something immediately to correct a gross injustice it committed in 1977.

That injustice was done in one of its Social Security revisions which put the royal shaft to those persons who were born after Dec. 31, 1916.

With equal earnings, the worker born Jan. 1, 1917 and thereafter will be drawing about $1,300 a year less in Social Security than the one who was born Dec. 31, 1916.

It wasn't budget hatchet man David Stockman or President Ronald Reagan who performed this highly discriminatory deed. It was the Congress of the U.S. which allowed such a one-sided bill to become law.

Who are these discriminated against American wage earners? They are the kids who grew up in the depression only to be the first to be drawn into World War II. They are the ones who were called back on active duty to serve in the Korean War.

They have paid Social Security all of their working lives only to find when retirement faces them the Congress kicked dirt in their faces.

The Congress allows pay bills to pass which increase those of the military on active duty—a move which automatically gives monthly pension and retirement check increases to the career soldier and the reservist who has reached 60.

President Reagan wants an increase for civilian federal employees, a move which will correspondingly boost the pay of retired government workers.

None of this sits too well with the private sector worker who now is told he or she will get only 86 percent of the Social Security retirement pay of somebody born a year or two before. And it gets more unfair in subsequent years as more and more is taken out of the paycheck.

If cuts must be made in the Social Security system to keep it solvent then at least let them be shared equally by all recipients.

As stated earlier, Congress enacted the laws creating this monstrous inequity. We call upon Montana's Congressional delegation to take a lead in correcting this injustice.

THE SOCIAL SECURITY NOTCH

As a result of changes made to the social security benefit formula in the 1977 Social Security Amendments, the initial benefit amount for some persons who reach age 62 after 1978 might be somewhat lower than for workers with similar earnings histories who reached age 62 in 1978 or earlier. The term "social security notch" refers to a substantial difference in initial benefit levels that sometimes occurs because of a small difference in age, i.e., between workers who become eligible before and after the new changes went into effect.

In the Social Security Amendments of 1977, Congress took steps to prevent social security benefits from rising to excessive levels in the future. If the old benefit computation rules had been left unchanged, benefit levels eventually would have exceeded pre-retirement earnings levels for many individuals retiring in the future. This rise in the level of newly awarded benefits that began after the automatic benefit increase provision was enacted in the early 1970's and which was projected to continue in the future, was largely unintended. In 1977, Congress made substantial changes in the way social security benefits would be computed in the future to prevent this situation from continuing.

In recognition of the fact that some individuals would be disadvantaged by the remedial provisions, Congress did not change the computation rules for persons who had already become eligible. Further, Congress allowed for a transitional period during which individuals becoming eligible for retirement benefits in the near future would receive benefits computed under the old rules (with some limitations) if they would be higher than benefits arrived at under the new rules. This transition guarantee applies to all individuals who became age 62 during the period 1979 to 1983.

One of the transition limitations was a

provision that for people entitled to the guarantee, any earnings after age 61 would not be considered in determining benefit amounts under the old method. Those earnings would be considered if the new method were used.

The so-called "notch" usually refers to the difference between benefits for (1) individuals who turned 62 before 1979 and continued to work beyond their 62nd birthday, and (2) those who turn 62 after 1978 and also continue to work beyond their 62nd birthday. The former individual has his benefits computed under the old rules and his earnings after age 61 factored into the benefit formla (which results in higher benefit amounts). The latter individual has his benefits computed under the new rules, or under the old rules if higher, but without having his earnings after age 61 taken into account (resulting in lower benefit amounts). Thus, to take an extreme case, an individual who retires on December 31, 1981, on his 65th birthday, would get higher benefits than an individual who retires on January 2, 1982, on his 65th birthday, even if the two had the same earnings throughout their working lives. The difference between benefits computed under the old rules and the new rules will be greatest for workers who delay their retirement until well after age 62 (see chart).

The fact that these people are entitled to noticeably different benefit levels simply because of their small difference in age, is often referred to as a "notch" effect. In other words, because the affected worker happens to be one month or maybe one year younger than another similarly situated worker, his benefits might be lower, and he usually argues that this is unfair. However, it should be noted that the "notch" has resulted from a conscious decision on the part of Congress to reduce benefit levels below those which would otherwise have been payable, and the lower benefit levels that now prevail were not unexpected. What was unexpected is that benefit levels for individuals whose benefits are computed under the old rules would have risen as much as they did in the last few years, making the "notch" somewhat greater than had been anticipated when the benefit computation changes were enacted in 1977. This is primarily the result of the recent adverse economic conditions under which inflation has been driving up benefits for people covered by the old rules by much higher amounts than anticipated. In effect, people whose benefits are computed under the old rules have a greater than intended advantage over those who have to use the "transitional" or new computation rules.

COMPARISON OF INITIAL SOCIAL SECURITY BENEFIT AMOUNTS FOR VARIOUS RETIRED WORKERS IN IDENTICAL CIRCUMSTANCES EXCEPT DATE OF BIRTH[1]

	Born in December 1916 (subject to old rules)	Born in January 1917 (subject to new rules)	Difference
Workers retiring at age 62 in January 1979:			
Minimum wage	$206.70	$203.50	−$3.20
Average wage	312.80	306.50	−6.30
Maximum wage	395.70	388.90	−6.80
Workers retiring at age 63 in January 1980:			
Minimum wage	254.00	242.30	−11.70
Average wage	388.90	365.00	−23.90
Maximum wage	493.50	463.10	−30.40
Workers retiring at age 64 in January 1981:			
Minimum wage	324.00	298.20	−25.80
Average wage	500.30	449.40	−50.90
Maximum wage	635.70	570.10	−65.60
Workers retiring at age 65 in January 1982:			
Minimum wage	400.10	355.30	−44.80
Average wage	623.70	535.40	−88.30
Maximum wage	789.90	679.30	−110.60
Workers retiring at age 66 in January 1983:			
Minimum wage	459.10	401.90	−57.20
Average wage	731.60	605.10	−126.50
Maximum wage	920.00	771.60	−148.40
Workers retiring at age 67 in January 1984:			
Minimum wage	534.00	458.70	−75.30
Average wage	836.80	691.50	−145.30
Maximum wage	1,065.70	890.00	−175.70

[1] Future benefit amounts shown have been calculated under Intermediate II-B assumptions from the 1981 report of the Board of Trustees of the social security system. All benefit amounts have been rounded according to rounding rules in effect before the Omnibus Budget Reconciliation Act of 1981. Under new rounding rules all benefit amounts will be somewhat smaller; however, differences between benefits to workers born before and after Jan. 1, 1917, will not change significantly.

OPPOSING ELIMINATION OF HOME MORTGAGE DEDUCTIBILITY

● Mr. HEFLIN. Mr. President, I today speak out in favor of Senate Resolution 238, the sense of the Senate resolution sponsored by Senator LLOYD BENTSEN that urges the Senate Finance Committee to reject any attempt to eliminate or limit the deductibility of home mortgage interest payments.

I commend my friend and colleague from Texas for his foresight and leadership in this matter and I am pleased to be a prime cosponsor of this important measure.

Mr. President, I am strongly and unalterably opposed to any change in the current tax laws on interest deductibility for home mortgages. Any such proposal would have a devastating effect on the housing industry and on millions of Americans who dream of one day owning their own homes.

This ill conceived and dangerous proposal is making its presence known by rather ominous rumblings within the walls of this Chamber and from within the White House.

With mortgage interest rates at 17 percent and rising, fewer than 5 percent of the potential home-buying market in this country can afford to purchase a home today. This is threatening the average citizen's chances of ever fulfilling the American dream—especially those millions of young people who are just entering the work force and are beginning their families.

Throughout our history owning one's own home—a decent place to live and raise a family—has been a cherished part of the American dream. Tragically, for millions of young people in this country today, that dream of homeownership has turned into a nightmare.

Mr. President, the extremely wealthy will always be able to purchase their own homes. Any proposal to eliminate the tax deductibility of home mortgage interest payments will severly punish the average middle-income American who needs the tax break owning a home offers to be able to afford to purchase his or her own house.

Mortgage interest deductibility is the only real tax break available to the average middle-income American. This proposal would have a devastating effect on the average American citizen who has scrimped and saved to come up with a downpayment and who is now struggling to meet monthly payments swollen by inflation and high interest rates.

If the tax break for homeownership was eliminated, million of Americans now purchasing homes would not be able to survive financially and those who want to buy a home would never be able to fulfill their dreams.

Mr. President, we are in the midst of the deepest and most prolonged housing slump since the 1940's. Unemployment among construction workers and others involved in homebuilding is now at 17 percent—twice the national unemployment average. Any proposal that would eliminate this crucial tax deduction would deal a death blow to the important housing industry.

The tax break for homeownership is an integral part of our Federal tax policy—and represents a longstanding national commitment to homeownership for nearly 70 years. This is a commitment to the average middle-income American that we simply cannot afford to risk.

Mr. President, I strongly support Senate Resolution 238 which instructs the Senate Finance Committee to refuse to even consider any proposal which would eliminate or limit the tax deductibility of home mortgage interest payments.

Again, I commend and thank my friend and colleague from Texas for his leadership in this important matter and I urge the immediate consideration and passage of Senate Resolution 238.

Thank you, Mr. President.●

JUDICIAL INDEPENDENCE: PART I

● Mr. BAUCUS. Mr. President, the genius of America's form of government is its complex system of checks and balances. By creating three independent branches in their new government—Congress, the courts, and the executive—the Founding Fathers tried to make sure no single person or group could ever gain absolute control over the entire government.

This principle has survived two turbulent centuries in a growing nation. Now, however, a disturbing threat has appeared. The separation of powers between the three branches is being challenged by some who disagree with recent Supreme Court decisions on the

so-called social issues: abortion, school prayer, and school busing.

Opponents of these decisions, chiefly the new right, thus far have failed to gain passage of constitutional amendments overruling the Court. So, they are trying to remove these issues from the jurisdiction of the Supreme Court and lower Federal courts.

More than 20 such bills are before Congress this year. One would prohibit Federal courts from deciding abortion cases. Another would take away the Supreme Court's jurisdiction over cases involving school prayer. A third would prevent court action on school busing disputes.

Contrary to the claims of their proponents, these measures would not outlaw abortion and school busing or legalize school prayer. The only result would be the Supreme Court would no longer provide a uniform, national interpretation of the Constitution. Instead, State courts would be given the last word on these matters.

Supporters of these bills argue that the Supreme Court acted unconstitutionally in deciding these cases by usurping congressional authority. However, I believe these bills are an unconstitutional attempt to address that concern. Even if the Supreme Court acted unconstitutionally, Congress should not prescribe an unconstitutional cure. After all, two wrongs do not make a right.

The critical question is not whether a Supreme Court decision is constitutional, but who decides whether it is. Since 1803, the Court has fulfilled that function.

The court jurisdiction bills are a radical departure from that basic American tradition. They are based on the theory that simple majorities of Congress should be able to determine which constitutional rights are to be protected. That is not what our Founding Fathers had in mind.

Mr. President, these court jurisdiction bills raise very serious constitutional and public policy concerns. Many of these concerns have not been adequately considered by the Congress. Over the next few weeks, I hope to raise some of these concerns and share with my colleagues materials that I believe should be reviewed before they take further action in this area.

Today I wanted to share the official views of the American Bar Association. Earlier this year, the ABA resoundingly endorsed a resolution opposing these court jurisdiction proposals. The statement in support of their position is an excellent analysis of the impact of these bills on our system of government. I ask that the report be made a part of the RECORD at this point.

The report follows:

REPORT WITH RECOMMENDATION

RECOMMENDATION

Be it resolved, that the American Bar Association opposes the legislative curtailment of the jurisdiction of the Supreme Court of the United States or the inferior federal courts for the purpose of effecting changes in constitutional law.

Report

Before the 97th Congress are more than a score of bills which would strip from the original jurisdiction of the lower federal courts certain subject areas involving controversial decisions of the Supreme Court of the United States, notably abortion, school prayers, and busing. Enactment of such legislation would require persons claiming rights under one or another of these decisions to bring suit in state courts. Moreover, several of these bills would deny the Supreme Court appellate jurisdiction to review the decisions of the state courts with respect to those issues that could be brought only in the state courts.

Sponsors of these bills clearly avow that their purpose is to bring about an altering of the constitutional interpretations that now prevail. The belief is apparently that state courts, if given exclusive power to decide such suits without fear of Supreme Court review, will not follow the precedents established in these areas by the Nation's highest Court.

The Committee recommends to the Association the adoption of this resolution because of one overriding conviction: the necessity to protect the integrity of the courts of this Nation, federal and state, from misdirected legislative efforts to achieve something that can be done only through constitutional amendment. The issue is not abortion; it is not busing; it is not prayer in the public schools; it is not any of a number of things that may occasion dissatisfaction with particular decisions. We are sure that the Members of the Association have many various positions on these substantive questions, as we do. But the real issue, the only issue, is whether, as a matter of policy and of constitutional permissibility, this Nation is going to adopt a device whereby each time a decision of the Supreme Court or a lower federal court offends a majority of both Houses of Congress the jurisdiction of the Federal Courts to hear that issue will be stripped away. We do not believe that is a system the Framers intended nor one that we should strive to institute.

Supreme Court decisions interpreting the Constitution establish binding precedents which are subject to alteration by the people through the process of constitutional amendment. The Framers provided in Article V a means of changing the Constitution and deliberately made it difficult to achieve. The "leaden-footed process of constitutional amendment," as Justice Frankfurter called it, with the requirement of extraordinary majorities in Congress and among the States, was designed to make sure that transient majorities could not easily change our fundamental law. Are we to believe that after constructing this formidable barrier to easy change, the Framers intentionally or inadvertently also put in place a system in which simple majorities could bring about a rewriting of constitutional law?

The American Bar Association has long opposed efforts, from whatever spectrum of the political scene, to alter constitutional interpretation through means other than constitutional amendment. We stood in opposition to the "Court-packing" plan of the later 1930's, which would have altered prevailing law by stacking the Court's membership. More than thirty years ago we called for the adoption of assurance that jurisdictional manipulation would not and could not be used to work substantive changes in the Constitution. In 1958, the Association opposed bills pending in Congress that would have denied the Supreme Court of decisions involving alleged subversives in various fields. That policy is Association policy today and the Committee calls on the House to reaffirm it and extend it.

Central to this position is recognition of the great power which Congress possesses under the Constitution to structure and to allocate the jurisdiction of the Supreme Court to hear appeals and the jurisdiction of the lower federal courts—and of the limits on that power. Article III stipulates that the High Court has appellate jurisdiction over practically the entire range of federal judicial matters, subject to such "exceptions and regulations" as Congress provides. Clearly, then, Congress may regulate how cases come to the Court and could deny the Court appellate jurisdiction over some classes of cases altogether, as in fact it has historically done. It could, for example, make a lower federal court's decisions with respect to interpretation of the tax laws or admiralty issues final.

Even greater is Congress' power with respect to the lower federal courts. The compromise at the Constitutional Convention was to create "one Supreme Court" and to leave in legislative discretion whether and when to create and to do away with any "inferior" federal courts. Some of the Framers wanted constitutional assurance of lower courts, but the prevailing number thought that Congress should be able to leave to state court adjudication matters of national interest, subject to Supreme Court review. And to safeguard the national interest and the integrity of constitutional rights, the Framers wrote in Article VI, the "Supremacy Clause," the guarantee that the Constitution, federal laws, and treaties would be the "supreme law of the land" and that "the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding." Moreover, the same Article requires state judges, as well as all other state officers, to be bound by oath or affirmation to support the Constitution of the United States.

Necessarily, it follows that if the Constitution empowers Congress to provide or not to provide for lower federal courts, it empowers Congress to vest in such lower federal courts that it creates all or only some of the jurisdiction it could give and thus to allocate between state and federal courts the judicial power of the Nation in such ways as it deems to serve the best interests of the States and the Nation. That has been the understanding from the beginning on which Congress has acted and the decisions of the United States Supreme Court are consistent in affirming the correctness of that understanding.

It is thus not with any reservations with respect to congressional power generally that the Committee recommends this resolution. Rather, we are actuated by specific constitutional reservations, more substantial as to Supreme Court appellate jurisdiction than as to lower federal court jurisdiction, and by what we believe to be compelling policy considerations against the propriety and desirability of the bills now pending before Congress.

Even were the constitutional considerations compellingly clear in favor of the validity of these bills, as they are not, we would urge opposition.

First, if it is likely, as we by no means concede it is, that the meaning ascribed to a constitutional provision can be changed by the simple device of divesting jurisdiction from one set of courts and giving it to another, then indeed we have a Constitution writ on sand and the integrity of our amending process is eroded. It is central to our fundamental Charter that ordinary legislation can be changed through ordinary legislation and the Constitution only through amendment. We should resoundingly reject the counsel of those who tell us there is another way. Down that route lie barely-hidden hazards to constitutional governance.

Second, to accept the explicit judgment of the sponsors of these bills that shifting jurisdiction will result in substantive change requires us to dishonor the thousands of state judges who by oath and conscience are bound to adhere to established precedent enunciated by the Supreme Court. We do not doubt that the great majority of state judges

will do their duty. Nonetheless, this legislation is pernicious in concept even if it does not achieve its purpose.

It is bad because it suggests state judges will depart from their oaths. It is bad because it constitutes a congressional invitation to them to depart from their oaths; it says to state judges that Congress believes some decisions are so wrong they ought to be changed and those judges should do it. It is wrong because hundreds or thousands of state judges who are subject to periodic elections will be put in peril. The same interest groups that extract from an elected Congress jurisdictional alterations will demand from elected state judiciaries that they accept the congressional invitation to change. Federal judges are insulated from this and other pressures; the Framers deliberately provided for independence to prevent just these pressures. Congress should not subject state judges to often hard choices between oath and career.

Finally, if most state judges honor their oaths, the status of the objected-to constitutional decisions will be frozen in place. The Supreme Court cannot hear such cases and perhaps overrule them or alter them in any way. And as new fact situations arise, state court interpretations will begin to create somewhat different rules which will vary from State to State.

Third, either because of disagreement with the substance of these decisions or because of electoral pressures, some state judges may indeed accept the invitation of Congress and refuse to follow Supreme Court precedent. Because there would be no Supreme Court review, in those States federal constitutional law would change and the Constitution would mean something different from State to State.

This result would be pernicious because fundamental liberties—whether the ones which are the subjects of these bills or others in the future if these succeed—will have been altered in some States and depreciated in all because of the demonstration that, contrary to what we have always believed, constitutional rights are subject to evanescent majority opinion. While the constitutional rights at peril today may not be valued by some, those at peril tomorrow may be freedom of speech, or just compensation for property taken for public use, or the guarantee against impairment of the obligation of contracts.

Even were Congress to adopt an approach, which is found in a few of the pending bills, of depriving the lower federal courts of jurisdiction and continuing Supreme Court review of state court decisions in those areas, we believe that should be opposed as well. Basic to that effect would be a conclusion that alteration of substantive law could still be achieved which contains the same insult to state judges and the same possible injury to them. Supreme Court review could always alleviate some of the problem should some state judges depart from precedent, but the High Court's caseload is such that it could insure adherence to precedent only by taking an inordinate number of state cases in these areas to the neglect of its many other functions in interpreting national law.

Certainly, in the absence of Supreme Court review, the command of the Supremacy Clause that the Constitution be the "supreme law of the land" could become a nullity. Since the adoption of the Judiciary Act of 1789, a constant feature of the history of federal court jurisdiction in this country, upon which the Nation continues to depend, has been the review by the United States Supreme Court of state court interpretations on questions of federal constitutional law. If, as Justice Holmes reminded us, a page of history is worth a volume of logic, that singular fact stands as a practically unanswerable argument against jurisdictional legislation that would remove Supreme Court review of state court interpretation of the Constitution.

With regard to the constitutional validity of these bills, the Committee doubts that, with respect to the Supreme Court's appellate jurisdiction, they can be sustained as proper "exceptions and regulations" and we have reservations about the bills' divestitures of lower federal court jurisdiction as well.

Numerous arguments have been addressed to the question, some based on theories of the "essential functions" of the federal courts, some on equal protection concepts governing the decision to restrict jurisdiction over certain disfavored issues, but we believe the correct analysis to be grounded upon what limits the Constitution itself places upon congressional exercise of any of its granted powers. The Constitution explicitly authorizes Congress to make exceptions to the Supreme Court's appellate jurisdiction and implicitly to determine what, if any, jurisdiction the lower federal courts are to have. Proponents of these bills read these authorizations not only as if they are plenary powers but as if they are completely unrestrained. But this cannot be so. The Constitution authorizes Congress to regulate interstate commerce, to tax, to spend money, to create a postal system. None of these powers is conferred in language that then says, "but you cannot regulate commerce to deny the right to transport political literature across state lines," or "but you cannot bar from the mails newspapers that oppose the position of the majority in Congress." Rather, these powers are conferred in the manner in which Chief Justice Marshall described the commerce power in *Gibbons* v. *Ogden*. "This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations, other than are prescribed in the constitution."

Just so is the power to structure jurisdiction. It is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations, *other than are prescribed in the Constitution*. And what is prescribed in the Constitution? The First Amendment, the Fourth Amendment, and the Fifth Amendment, and all the other limitations upon the powers conferred on Congress in other parts of the Constitution obviously are those limitations. They restrain the power of Congress to legislate with respect to other constitutional provisions under granting clauses which would appear on their face to be unlimited. To construe the congressional power to structure jurisdiction the way the proponents would construe it would be to make it the only power conferred on Congress that is beyond the constraints of other provisions of the Constitution. Obviously, this cannot be so.

Important to this issue is the fact that while the authorization to Congress to structure the jurisdiction of the courts is contained in the body of the Constitution adopted in 1789, the relevant limitations are in the Bill of Rights, proposed and adopted in 1791, which are operative as to all of Congress' powers conferred in the Constitution itself. Thus, even if the Framers in the Convention did not conceive of the jurisdictional powers being limited, although it is likely they did, adoption of the Bill of Rights did so limit them. Madison, we must remember, stated in the House of Representatives on June 8, 1789, that the amendments he proposed would not be "parchment barriers" to federal action, because "independent tribunals of justice will consider themselves in a peculiar manner the guardians of those rights."

No Supreme Court precedent stands in the way of this reading. The *McCardle* case (1869) is of limited value, not only because it arose in the context of post-Civil War radicalism, but because, as the Court plainly stated, it did not bar all access to the Supreme Court but only one avenue of appellate review. Within three years of *McCardle* the Court in the *Klein* case (1872) held unconstitutional an attempted exercise of congressional power over its jurisdiction for the purpose of nullifying the President's pardoning power. Certainly, *McCardle* lends support to the proponents of these bills but far less support than they pretend.

The only complexity that enters into the argument is that when Congress removes from the jurisdiction of the federal courts an issue it does not by that act alone violate one of the constitutional constraints. That is to say, when it denies to the lower federal courts and to the Supreme Court authority to hear a suit arising out of the institution of a prayer in the public schools, it does not establish a religion. The establishment clause is violated when some state or local authority imposes a prayer requirement and a state court refuses to follow Supreme Court precedent and to strike down the imposition. But just as Congress could not itself violate the establishment clause it cannot authorize the States to violate the establishment clause. The authorization when acted on in the jurisdictional context would violate the establishment clause and could not validly prevent exercise of the Supreme Court's appellate jurisdiction to give a remedy for the violation. The congressional jurisdiction provision would be void.

We think it plain that the Constitution thus bars a manipulation of the Supreme Court's appellate jurisdiction for the purpose of effecting substantive changes in constitutional law. More difficult is resolution of the issue when what Congress enacts takes from the federal and gives to the state courts jurisdiction to entertain such suits subject to Supreme Court review. Theoretically, High Court review should prevent effectuation of the forbidden constitutional change and save the statute. But it may be that the practical difficulties of Supreme Court review do not allow for adequate protection of constitutional rights under the circumstances. It may be that state legislatures would restrict state court jurisdiction and powers to afford adequate relief or to process cases that can be taken to the Supreme Court with sufficient promptness to protect rights. It may be that other unforeseen situations arise. In that eventuality, can it be doubted that serious constitutional questions would arise?

Because the policy considerations are so substantial and because the constitutional propriety of these bills is open to such serious reservations, we urge the House to adopt as the position of the Association a simple, forthright policy: to oppose the curtailment of the jurisdiction of the federal courts for the purpose of effecting constitutional change that is properly the province only of the amending process. Irrespective of the subject involved and regardless of our individual beliefs with respect to any of them, the overriding consideration is that we support the integrity and independence of federal courts, whether we agree with particular decisions or not, and that we support the integrity and inviolability of the amending process.

We ask reaffirmation of the principle that Elihu Root, leader of the American bar, enunciated in 1912. "If the people of our country yield to the impatience which would destroy the system that alone makes effective these great impersonal rules and preserves our constitutional government, rather than endure the temporary inconvenience of pursuing regulated methods of changing the law, we shall not be reforming, we shall not be making progress, but shall be exhibiting . . . the lack of that self-control which enables great bodies of men to abide the slow process of orderly government rather than to break down the

barriers of order when they have struck the impulse of the moment."

In Number 78 of *The Federalist*, Alexander Hamilton explained that federal judges had been given the maximum degree of independence and protection possible because they had a critical function to perform. They must assure, he said, that the limitations on legislative authority are enforced. "Limitations of this kind can be preserved in practice no other way than through the medium of the courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this, all the reservations of particular rights or privileges would amount to nothing."

We do not believe the great rights set out in the First, Fourth, Fifth, and other provisions of the Constitution "amount to nothing." We deem it critical to their continued meaningfulness that these bills under consideration and others like them be defeated.

Respectfully submitted

GANNETT CANADIAN OPERATIONS

● Mr. SYMMS. Mr. President, on November 7 the Wall Street Journal published an article detailing some information about the Gannett Co.'s acquisition of certain Canadian firms. The New York-based Gannett Co. owns and operates the Idaho Statesman in Boise, Idaho. Since the details of the agreements reached with the Canadian Government by Gannett, the largest newspaper publisher in the United States, have not received wide coverage in the Idaho media, it is likely that many Idahoans would find the Wall Street Journal article of some interest.

I ask that the article be inserted in the RECORD.

The article follows:

[From the Wall Street Journal, Nov. 2, 1981]

GANNETT MAKES CANADIAN COMMITMENTS IN RETURN FOR ACQUIRING TORONTO FIRMS

OTTAWA.—Canada's government authorized Gannett Co. to acquire a large Canadian outdoor billboard enterprise after the U.S. company made some potentially far-reaching Canadian business commitments.

The transaction is expected to rankle Washington, which has protested that the Canadian government is unfairly extracting undertakings from non-Canadian companies as the condition for allowing them to make investments in Canada.

The Gannet transaction involves three Toronto-based companies, Mediacom Industries Inc., Mediacom Inc. and C. D. Maintenance Services Ltd. The companies were owned by Combined Communications Corp., a Phoenix-based company that was acquired by Gannett in 1979.

The takeover of the three Toronto companies was subject to review under Canada's Foreign Investment Review Act even though Gannet had acquired their parent company.

The government rejected two earlier applications by Gannett to take over the companies, which are known as the Mediacom Group and which the U.S. concern said form the largest outdoor billboard advertising enterprise in Canada.

The government said it approved Gannett's third application after the company improved previously proposed undertakings. The company's commitments include a pledge to buy from Canadian suppliers for three years the bulk of the newsprint required for a new U.S. national newspaper.

Gannett, a communications company, ranks itself as the largest newspaper publisher in the U.S. in both circulation and in total number of newspapers. It currently has 84 daily newspapers and is in the process of acquiring the 85th.

A Gannett spokesman in Washington said a final decision on whether to produce the new national general-interest paper won't be made for two or three months. It would be launched in 1982 and would be printed at several locations by satellite-linked plants.

The company also pledged to work with the federal government's Department of Industry, Trade and Commerce to identify Canadian companies able to supply Gannett's needs for other goods and services on a competitive basis.

The government said Gannett will study the feasibility of a "major investment" in a Canadian newsprint mill. The Gannett spokesman declined to elaborate on the project.

Another commitment requires the company to study for possible use the Telidon communications system which was developed by the federal government. Such systems allow subscribers to summon a wide variety of information stored in computer data bases for display on slightly modified television screens. Gannett has promised not to purchase any competing system until it has completed its study of Telidon.

In yet another commitment, Gannett will transfer to General Systems Research Ltd., Edmonton, Alberta, all of its patents, drawings and equipment relating to laser technology developed by a Gannett subsidiary. Gannett will receive about $14 million in return.

The government said the transaction will advance GSR's laser research programs by at least two years, permitting earlier development of sophisticated laser equipment for industrial use.

The government said Gannett also has promised to maintain its extensive relationship with Canadian financial institutions.

A U.S. government official noted that the Gannett transaction was the latest in a succession of announcements involving heavy obligations by non-Canadian companies as the price for their access to Canada. Apple Computer Inc. was allowed to establish operations in Canada last month only after it promised to look for competitive Canadian-made parts for use in Apple's world-wide production.●

THANKSGIVING TURKEY FOR THE FIRST FAMILY

● Mr. PRYOR. Mr. President, I wish to take this opportunity to call attention to a presentation made today at the White House. The National Turkey Federation, whose national president this year is Hugh McClain from Mountain Home, Ark., presented President Reagan with a Thanksgiving turkey for the first family.

I think it fitting that this component of the agricultural sector of our economy should be recognized during this holiday season. It is a component, I might add, that does not participate in any kind of legislated Government set-asides, diversion payments, or subsidies.

And it is fitting at this time to call attention to the fact that—like other agricultural commodities—while enjoying a record production year, the turkey industry is also suffering financially. Uncertain markets and ever-increasing production costs have plagued this sector of our agricultural economy to as great a degree as these factors have impacted the entire agricultural community.

I hope while Americans are enjoying their Thanksgiving bird this year that they will not forget from whence that meal came. It came from the American farmer. And the American farmer, Mr. President, needs and rightfully deserves the support of the Federal Government in insuring an atmosphere whereby those who choose to till the soil to meet the food and fiber needs of the Nation can do so at a reasonable profit.●

AGING IN THE EIGHTIES: AMERICA IN TRANSITION

● Mr. CHILES. Mr. President, today the preliminary results of "Aging in the Eighties: America in Transition," a survey conducted by Louis Harris and Associates for the National Council on Aging were released.

This is the most extensive study of the conditions and concerns of older people, as well as of the perceptions of the aged by adult Americans, undertaken in recent times. This study will have particular value for the Congress and for the delegates preparing for the 1981 White House Conference on Aging.

The study underscores considerable progress which is being made by great segments of the aged. But it also underscores the remaining numbers of the aged which are in continuing need, in ill health and economic straits. This study is significant in that it documents the great concern of younger Americans for those which are already old and the willingness of younger Americans to contribute to the economic and health security of the aged.

While this is not the final and complete report, I feel that it is of sufficient importance to bring it to the attention of my colleagues at this time and I request that it be printed in the RECORD for that purpose.

The remarks follow:

REMARKS BY LOUIS HARRIS, CHIEF EXECUTIVE LOUIS HARRIS AND ASSOCIATES AT A CONGRESSIONAL BRIEFING IN WASHINGTON, D.C. ON NOVEMBER 18, 1981

Let me say at the outset that the ground rules for the conduct of this second major study our firm has had the privilege of carrying out are almost as important as the findings themselves. Our sponsors—primarily the Atlantic Richfield Foundation, but also the funding arms of Exxon, Equitable and Colonial Penn—our sponsoring organization, the National Council on Aging, and our distinguished panel of advisors all were agreed that the research effort should not be out to prove anyone's pet nostrums, nor was anything to deter us from generating the facts to let the chips fall where they may. Those were the only ground rules which could apply to a study of where the aging are today, where they are headed, and what should be the role of government, the private sector, and the aging themselves in enhancing the lot and contribution to society of those 65 and over.

I would also like to pay tribute here today to the positive contributions of William Kieschnick and Phyllis Quan of the ARCO Foundation, Jack Ossofsky and Hal Sheppard of the NCOA, and Liz Montgomery and Garry Nelson of our own organization. Without them, there would have been no study at all.

AGING

Now let me report some of the fascinating results of this study. First, its scope. In all, we interviewed, in person, a cross-section of 2,429 adults between 18 and 54 years of age, 468 between the ages of 55 and 64, and 540 65 years and older. Including in the sample are 359 blacks and 190 Hispanics in the aging category. Those 55 and over, blacks and Hispanics were oversampled in order to have adequate bases to break out key groups of older people, including those in the 70–79 and 80 and over categories. However, in reporting nationwide totals, all oversampled groups are weighted back to their proper and correct proportions.

It comes as no surprise that for the country as a whole, the dominant issues of concern are economic. Our people are living in singularly hard times. We asked people about the major issues facing the elderly. At the top of the list is inflation, volunteered by 22 percent as the greatest problem, with 13 percent who said lack of money, 10 percent financial problems, 9 percent not being able to make ends meet, 10 percent inadequacy of retirement income, 9 percent worry over Social Security, 8 percent how to live on fixed incomes, 7 percent indebtedness, 5 percent not enough jobs. Two out of three problems facing older people, cited by those under 65 and those 65 and over, center on these economic issues.

Myth and reality about the aging

However, even though there is remarkable agreement on the types of problems believed to be plaguing the elderly, the same pattern we found between the myth and reality about the aging 7 years ago has hardly changed at all. Let me call a roll on some of the key items tested:

Sixty-eight percent of those under 65 say a "very serious problem" for the elderly is "not having enough money to live on." Fifty percent of the elderly say the same about their peer group. Yet, when we asked both those over and under 65 how serious a problem "not having enough money to live on" was for them personally, no more than 17 percent of the elderly reported this a "very serious" problem. Thus, 68 percent of the 18–64 age group say not having enough money to live on is a "very serious" problem for most older people, but only 17 percent of the elderly themselves say that this is the case with them. Ironically, a higher 22 percent of the under 65 age group report this as a serious problem for them personally.

Sixty-five percent of those under 65 feel "loneliness" is a very serious problem for most of the aging and 45 percent of those 65 and over agree with them. But only 13 percent of the elderly feel "loneliness" is a very serious problem for them personally. This is only 6 points higher than the 7 percent of those under 65 who report "loneliness" a very serious problem for them personally.

Or take the issue of "fear of crime"; 74 percent of those under 65 say it is a "very serious" problem for most elderly. However, a much smaller 25 percent of those 65 and over report that they are personally very seriously beset by this problem. Only a slightly lower 20 percent of those under 65 report feeling that way themselves.

What in the world is going on here? Basically, on every single issue tested, the elderly are perceived as being in much more desperate shape than they actually are. On the impact of inflation, coping with energy, loneliness, poor health, fear of crime, poor housing, not enough job opportunities, not enough medical care, getting transportation to stores, to doctors, to recreation, on all of these, much larger numbers of the nonelderly are convinced older people are in more desperate shape than the elderly themselves report they are. Indeed, the under 65 group, in many cases, report themselves to be just as beset by these problems as those 65 and over. Sadly, large numbers of the elderly themselves buy the libel about their fellow senior citizens.

These results, which first surfaced in our 1974 study, should explode the myth that most elderly people in this country are a hopeless, inert mass teetering on the edge of senility, simply waiting out their time to die. Mark it well, the elderly in our society are survivors, resilient and very much alive, who want to make a major contribution to the mainstream of life in the work they do and are capable of doing. This study sheds special light on this singular mark of the elderly.

By the same token, however, these results cannot and should not be taken as a signal that governmental help for the elderly can be allowed to wither away, and that they will not suffer from the cutbacks. Between 20 and 25 percent of the elderly in this country are in deep trouble.

To those who might view these results as a sign that the bulk of the elderly really are fair game for major cutbacks in federal programs, this survey documents fully just why the reaction to proposed cuts and changes in Social Security have been so fierce.

Satisfaction and optimism

Underneath it all, the elderly want to be in the process, not cut out of it. Two real signs: By 83–12 percent, an overwhelming majority of the public feels "older people today are better educated than 10 or 20 years ago." An even high 87–8 percent of those 65 and over share this view. By 64–28 percent, a majority of the total public also believe "older people today are healthier than 10 to 20 years ago." By a higher 71–19 percent, those 65 and over agree. However, there is one serious demur: By 54–38 percent, a majority of the total public is convinced "older people today are worse off financially than they were 10–20 years ago," a turnaround from a 52–40 percent majority who denied this back in 1974.

But, those 65 and over do not think they are worse off financially by a narrow 47–43 percent. Seven years ago, a much more substantial 58–31 percent majority of the elderly felt they were not worse off financially. So some visible erosion has taken place.

Much the same pattern emerges in the case of a battery of 18 life satisfaction statements that Professor Robert Havighurst came up with in 1974:

By 8–1 today and 7 years ago a big majority agree "as I look back on my life, I am fairly well satisfied." Comparatively, by 12–1, unchanged, they feel "compared to other people my age, I make a good appearance." And, by 6–1, unchanged, they say "I've gotten pretty much what I expected out of life." By close to 3–1, not much changed in 7 years, they feel "the things I do are as interesting to me as they ever were." By 2–1, also unchanged, most agree, "I've gotten more of the breaks in life than most people I know."

Again, by an unchanged 2–1, a majority still say, "I would not change my past life even if I could." And, by an unchanged 2–1, a majority of the elderly agree, "I expect some interesting and pleasant things to happen to me in the future." Clearly, hope and optimism spring eternal. Indeed, this is evident in an unchanged 51–45 percent majority who continue to deny that "I feel old and somewhat tired."

Despite this seemingly unquenchable optimism, there is also solid evidence of the troubles the elderly carry with them:

While it is true that a 53–38 percent majority feels, "As I grow older, things seem better than I thought they would be," an 11 point higher 64–26 percent majority felt that way 7 years ago. And by 2–1, most deny "these are the best years of my life" as was the case in 1974. Added to this, a 55–40 percent majority feels "my life could be happier than it is now," a turn-around from 7 years ago. And by 4–3, most feel that "in spite of what some people say, the lot of the average person is getting worse," a reversal of a 4–3 plurality who did not feel that way 7 years ago. So some of the edge is off. Nonetheless, a resilient almost 2–1 deny "when I think back over my life, I didn't get most of the important things I wanted." By almost 3–1 or better, 70 percent or more deny "this is the dreariest time of my life," "most of the things I do are boring or monotonous," and "compared to other people, I get down in the dumps too often." Clearly, these elderly are not about to give up—by a long shot.

Groups with problems

However, there are four critical groups of older people who consistently are not nearly as optimistic about their old age status and who in the aggregate report living a miserable, dismal existence: blacks, Hispanics, those with incomes under $10,000 and women.

This study poignantly spells out their plight and underscores the bad times they are living through. Life for them is by and large a never-ending succession of miseries.

This is especially evident in the health care area, where by 56–43 percent, a majority of the elderly are positive about the status of their health. However, by 63–37 percent elderly blacks say their health is in bad shape, as does an almost identical 62–38 percent majority of older Hispanics. They belong to the "living sick" by their account. The elderly complain less about the quality of their medical treatment, but more about the cost of doctors' visits, the high cost of prescriptions, the rocketing expense of hospitalization, the lack of home care, and the short falls of Medicare coverage. While 46 percent of all those 65 and over say poor health is a serious problem, a much higher 67 percent of elderly blacks and 72 percent of older Hispanics feel that way as do 62 percent of those in the under $5,000 income group. While only 21 percent of all people 65 and over say not enough medical care is a serious problem, a much higher 54 percent of Hispanics feel this way; and, compared to 25 percent of all elderly who feel lack of transportation is a serious problem for them, 59 percent of elderly Hispanics feel this way.

Health care

Two ideas in the health delivery area emerge as steps whose time has come:

First, by 87–8 percent, the public nationwide favors having Medicare cover more health care services provided at home. At a time when medicine generally has been turning to outpatient care as a sound direction for cost containment measures, the specific application to elderly health is widely supported. Indeed, by 85–8 percent, the elderly who want to keep their health bills down and have little appetite for hospital confinement strongly support such at-home services.

Then, by 90–7 percent among the public and 86–7 percent among those 65 and over, big majorities back giving a tax break to families that provide health care at home to the elderly. The outpatient and in-home thrust to health services comes through loud and clear as a major mandate for health care for the elderly.

Of course, the role of Medicare, Medicaid, VA benefits or HMO membership can be seen graphically as it impacts on health care for the elderly. For example, among those aged 18–54, 81 percent have Blue Cross or another private plan, while only 6 percent are covered by a government plan and 4 percent by an HMO. By contrast, among those 65 and over, 75 percent are covered by a private plan, but almost as many, fully 78 percent, are also covered by a government plan. Among the under $10,000 income group, 61 percent are in some private plan, but a much higher 83 percent are covered by a government program.

Among the elderly black, only 45 percent have private health coverage, compared with 79 percent covered by a governmental program. Among older Hispanics, only 18 percent have private health coverage, with 63 percent in a government plan, but 19 percent of this group have no health coverage at all. Among all the elderly, only 5 percent are not covered by either a public or private plan.

Income

Now let me deal with basic facts about income. The mean income for all households in our sample was $22,000 annually. Among those 65 and over, it is a much lower $12,000, dipping to $9,500 for those over 80, $9,800 for older women, $11,700 for the elderly retired, $7,200 for older Hispanics and $6,900 for the elderly blacks.

When asked to describe the adequacy of their income, by only a bare 50–49 percent of all people say they are making it: 13 percent say they just cannot make ends meet, 36 percent that they can just scrape by, 37 percent say they have enough to get along and even a little extra, while 13 percent report they can buy pretty much anything they want. Among the elderly, the division is 50–48 percent that they cannot make it. However, only 10 percent say they are below water, 40 percent are barely scraping by, 30 percent have a few extras, while 18 percent say they can buy just about anything.

Those elderly really hurting are women, those with incomes under $10,000, those without pensions, those in poor health, blacks and Hispanics. They are the elderly poor, who literally are flattened out at the bottom of the economic heap.

In many ways, however, it is striking that the elderly with incomes that are literally only 50 percent as great as those between 18 and 54 report they are coping almost as well. How come? First, 66 percent of those 65 and over own their houses free and clear, while this is the case with only 12 percent of those between 18 and 54. Second, by any measure, the elderly are far more frugal and experienced in the handling of their money. For example, in the last year, only 39 percent of elderly had to draw down on their savings to pay bills, while a much higher 52 percent of those under 65 had to do the same, even though both groups have the same number, 88 percent, who have a savings account.

Social security

The central role of Social Security benefits as a source of income for the elderly emerged stark and clear from this survey. Fully 93 percent of those 65 and over receive Social Security checks, compared to 32 percent who have income from a private or public pension fund, 33 percent with income from savings, 22 percent with income from investments, 13 percent from earnings on a job, 7 percent income from renters or boarders, 7 percent who receive SSI benefits and 5 percent who are helped financially by their children.

When older people are asked which one source of income provides the largest part of their income, Social Security won hands down, cited by 61 percent. Without doubt, Social Security is the vital financial link to survival for a sizable majority of older Americans.

So, the American people want desperately to not only continue Social Security, but to put it on a sound footing. By 68–29 percent a big majority of people between 18 and 54 say they have "hardly any confidence" that the Social Security system will have the money to pay them when they retire. Thus, we can understand why a substantial majority of the American people, 63–31 percent, are opposed to cutting the current Social Security taxes. Indeed, by 51–39 percent, a majority would favor even higher Social Security taxes if necessary to provide adequate income for older people.

However, there is an extensive litany of caveats the people raise about how to save Social Security:

By 92–6 percent, they would disapprove "reducing benefits for people already retired."

By 85–11 percent, they would disapprove "reducing benefits only for people who retire in the future."

By 59–35 percent, they oppose "gradually raising the retirement age for full Social Security benefits fom 65 to 68 years of age."

By 62–29 percent, they disapprove eliminating "benefits for minor children of retired workers."

By 64–32 percent, they also disapprove "giving Social Security benefits only to elderly people who can prove they have little or no other income."

And by 73–21 percent, they do not want to cut "the cost-of-living adjustments in retirement benefits."

However, by 56–26 percent, a better than 2–1 majority would approve of "basing cost-of-living adjustments on increases in either wages or prices, whichever is lower." All groups under and over 65 feel that way.

By 62–30 percent, another 2–1 majority also say they would look with favor on "using federal monies such as income taxes to pay for part of Social Security."

And by a big 76–18 percent, a majority would back "requiring workers who do not pay Social Security taxes now—for example, employees of the federal government—to pay these taxes."

Both in this study and in numerous other studies we have conducted over the past several years, two inescapable facts emerge. First, that the Social Security system is inviolate and is viewed as a bedrock financial institution that must be preserved at all costs. Second, that people will not tolerate many cuts on the benefit side, but are willing to pay more on the revenue side to make the system sound and whole. The only exception to an unbroken pattern of support for this dominant position are those in the highest income brackets, $35,000 and over, who oppose paying more for Social Security by 49–43 percent.

This study also probed to find out which types of institutions should assume more responsibility than they now have for the elderly. For the public as a whole, at the top of the list came government, cited by 54 percent, followed by children of the elderly (46 percent), the elderly themselves (23 percent), employers (19 percent), and religious and charitable organizations (14 percent). However, a lower percentage of the elderly opted for government, children, employer, and charitable help—and a higher percentage would like the elderly themselves to move into the breach.

Jobs for the elderly

Part of the way the elderly hope to fend better in the future is to keep on working. Among all those now working in the key pre-retirement age between 55 and 64, a majority of 79–18 percent are opposed to stop working completely when they retire. Indeed, by 49–45 percent, most Americans don't look forward to retirement at all. Instead, they want at least part-time paid work. Of real help to the 55 to 64 age group would be the following: By 73–21 percent to have "greater availability of part-time work," by 66–30 percent, a "job shared with someone else so that each person can take more time away from work but the job still gets done," and by 68–27 percent, "a job that allows a day or two a week to work at home." Obviously, big majorities of those who will next retire from their present work do not want to just drop out of the job market.

Aging

In a time when labor supply shortages will loom in the next decade, the challenge to the American economy is to find a way to tap the elderly pool of workers, to find ways to utilize them part-time, and to apply new flex-time working conditions. Ironically, such continued working by the elderly in one fell swoop could help them survive through tough economic times, satisfy their psychological needs to contribute to the mainstream of society and even help relieve the financial strain on the Social Security system.

Mark it well, by a nearly unanimous 90–9 percent, a majority of all ages feel that "nobody should be forced to retire because of age, if he or she wants to continue working and is still able to do a good job." Clearly, the days of mandatory retirement, other than that based on health or inability to do the job, are numbered. The elderly want to work and must be given that chance.

By the same token, by another lopsided margin, 79–15 percent among the entire population and by 73–16 percent among those 65 and over, people are convinced that "most employers discriminate against older people and make it difficult for them to find work." High up on this list of priorities for older people must be a vigorous campaign by both the public and private sector that discrimination against the elderly be ended.

Now whenever the subject of the elderly working bevond 65 is raised, invariably some feel compelled to point out the consequent injustices to the younger generation. A whole host of articles have painted a picture of octogenarians holding onto their jobs long after they should have relinquished them. In turn, it is claimed, younger people will have to wait endless years for the better jobs to open up. This supposed conflict has been portrayed as a long generational war between selfish elderly clinging to their jobs on the one hand, and frustrated younger people blocked off from promotion on the other.

Back in 1974, by a narrow 49–46 percent, a plurality of the entire public agreed with the view that "older people should retire when they can to give younger people more of a chance on the job." Well, now attitudes have changed dramatically. By a decisive 59–37 percent, a majority of the entire adult population disagrees with that claim. Indeed, among the group 18–64, a decisive 62–34 percent do not buy that proposition at all.

Among those young people 18–24 years of age, an even higher 68–30 percent majority rejects the view that the elderly have an obligation to the younger to get out of the work force as fast as possible. Ironically, among those 65 and over, undoubtedly reflecting some of the spate of articles on the subject, a 50–44 percent plurality expresses guilt about older people holding down jobs too long. As happens so often, prevailing wisdom on this score is just plain dead wrong. Older people want to work, and younger people think it is a great idea.

A growing political force

In analyzing and reporting these results, it surely must be evident that this is not an inert, hopeless group of older people, simply waiting out their time to die. To the contrary, these elderly are vibrant, alive, and want most of all to make their contribution to society for a long time to come. They are growing in number and in vitality. But they can feel the pressures from the rest of society.

Note well that by a clear 55–35 percent, a majority feel that retired older Americans "have too little influence in this country today," as though they can sense a new force growing in the U.S., an even bigger 58–27 percent of those under 65 feel the same way as the elderly. The 65 and over group today is 16 percent of the population. But let it be noted well that the elderly are a larger 18 percent of the vote. For example, while 80 percent of those 65 and over vote, only 45 percent of those 18–25 years of age vote.

It is not overstating the case to say that the elderly from now on will be a major component in our politics and in our economy. They do not want to be pitied. They do not want to be neatly tucked away and forgotten. Above all else, they want into the process, not because they are special, but because they share the universal desire to be active and respected members of the human race.

Thank you.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, if I could inquire of the distinguished assistant minority leader, I have a number of items to take care of that I believe have been cleared on his side as well as our own. Let me first put three unanimous-consent requests that I hope he is in a position to agree to.

Mr. CRANSTON. Mr. President, I understand those have all been cleared on this side of the aisle.

Mr. BAKER. I thank the distinguished acting minority leader.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, there are certain other items that are cleared on our calendar. I would especially invite the attention of the acting minority leader to calendar order No. 376, S. 1493. I inquire of the minority leader if he is in a position to proceed to the consideration of that item at this time.

Mr. CRANSTON. Yes.

DEAUTHORIZATION OF SEVERAL CORPS OF ENGINEERS PROJECTS

Mr. BAKER. Mr. President, in view of that, I ask that the Chair lay before the Senate Calendar Order No. 376, S. 1493.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

A bill (S. 1493) to deauthorize several projects within the jurisdiction of the Army Corps of Engineers.

The Senate proceeded to consider the bill which had been reported from the Committee on Environment and Public Works with amendments as follows:

On page 2, line 7, strike "five", and insert "two";

On page 2, line 17, strike "(80 Stat. 1421),", and insert "(Public Law 89-789),";

On page 2, line 24, strike "Act.", and insert "this section.";

On page 4, beginning on line 22, strike "at the price paid to them by the Government or";

On page 4, line 23, after "at", insert "the";

On page 4, line 24, strike "whichever is less";

On page 6, line 4, after "section,", insert "at";

On page 6, line 9, strike "(82 Stat. 739)", and insert "(Public Law 90-483)";

On page 6, line 17, after "of" insert "the Flood Control Act of 1968";

On page 7, beginning on line 1, strike "795 Stat. 1081)";

On page 7, line 18, strike "201", and insert "204";

On page 7, after line 19, insert the following:

(h) DELAWARE-MARYLAND-VIRGINIA INTRACOASTAL WATERWAY.—The project for the Delaware Bay, Delaware, to Cape Charles, Chesapeake Bay, Virginia, Intracoastal Waterway, authorized under the terms of section 201 of the Flood Control Act of 1965 (Public Law 89-298).

(i) MARYLAND: SIXES BRIDGE.—The project for Sixes Bridge Dam and Lake, Maryland, authorized by section 85 of the Water Resources Development Act of 1974 (Public Law 93-251).

SEC. 4. (a) The consent of Congress is hereby given to the City of Boston to construct, maintain, and operate a fixed-span bridge in and over the water of the Fort Point Channel, Boston, Massachusetts, lying between the northeasterly side of the existing Summer Street Bridge and the northeasterly side of the existing Northern Avenue Bridge.

(b) Work shall not be commenced on such bridge until the location and plans therefor are submitted to and approved by the Secretary of Transportation.

(c) Any project heretofore authorized by an Act of Congress, insofar as such project relates to the above described portions of Fort Point Channel, is hereby abandoned.

(d) In approving the location and plans of any bridge, the Secretary of Transportation may impose any specific conditions relating to the maintenance and operation of the structure which may be deemed necessary in the interest of public navigation.

SEC. 5. The plan for the project for Ellicott Creek, New York, authorized in section 201 of the Flood Control Act of 1970 (Public Law 91-611) is hereby modified in accordance with the recommendations of the Chief of Engineers in a report dated April 2, 1979: *Provided*, That local interests agree to meet local assurance requirements set forth in section 3 of Public Law 738 of the Seventy-fourth Congress (33 U.S.C. 701c).

SEC. 6. (a) The lock authorized by section 114 of the Water Resources Development Act of 1976 (Public Law 94-587), as a replacement for Vermilion Lock, Louisiana, shall hereafter be known as Leland Bowman Lock. Any law, regulation, map, document, or record of the United States which refers to such lock shall hereafter be held and considered to refer to such lock as "Leland Bowman Lock".

(b) The dam and reservior on the Salt River, Missouri, known as the Clarence Cannon Dam and Reservoir, authorized by section 203 of the Flood Control Act of 1962 (Public Law 87-874) as the Joanna Reservoir, shall hereafter be known as the Clarence Cannon Dam and Mark Twain Lake. Any law, regulation, map, document, or record of the United States in which such dam and reservoir are referred to shall be held and considered to refer to such dam as the Clarence Cannon Dam and to such reservoir as the Mark Twain Lake, respectively.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 204 of the Flood Control Act of 1965 (Public Law 89-298) is amended as follows: "The Dickey-Lincoln School Lakes project, Saint John River, Maine, is hereby modified to deauthorize that component of the project known and referred to as the Dickey Dam and its associated transmission facilities.".

(b) No Federal agency or department shall consider any license application relating to hydropower projects above the site of the Lincoln School Dam on the Saint John River and its tributaries, Maine, for a period of two years after the enactment of this Act.

SEC. 2. (a) The authorization for the Meramec Park Lake (hereinafter in this section refered to as the "project") contained in that portion of the general comprehensive plan for flood control and other purposes in the Upper Mississippi River Basin, which plan was authorized by section 4 of the Act entitled "An Act authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes", approved June 28, 1938 (52 Stat. 1218), as modified by section 203 of the Flood Control Act of 1966 (Public Law 89-789), is hereby terminated.

(b) The Secretary of the Army, acting through the Chief of Engineers (hereinafter in this section referred to as the "Secretary"), shall immediately undertake interim management and maintenance of works, structures, and interests in lands related to the project pending the implementation of the subsequent provisions of this section.

(c) The Secretary shall dispose of works, structures, and interests in lands related to the project as follows:

(1) To the State of Missouri, all right, title, and interest in and to—

(A) Meramec State Park extension, consisting of three thousand eight hundred and twenty-three acres.

(B) Onondaga Cave State Park extension, consisting of one hundred and twenty-four acres.

(C) Huzzah State Wildlife Management Area extension, consisting of nine hundred and forty-five acres.

(D) Endangered species sites, consisting of not more than two hundred acres.

(E) Campbell Bridge access, consisting of not more than ten acres.

(F) Sappington Bridge access, consisting of not more than ten acres.

(G) Liberty Road access, consisting of not more than ten acres.

(2) A perpetual easement sufficient to safeguard for the river user the natural, cultural, and visual resources of the Meramec River and Huzzah and Courtois Creeks shall be conveyed to the State of Missouri within nine months from the date of this Act. The Secretary is hereby directed to establish such easements in conjunction with the State of Missouri. Said easements shall be not less than one hundred feet nor more than one-quarter mile as measured from the normal high-water mark of said river and creeks, taking into consideration the varying terrain of such lands and the best public interest.

(3) A perpetual easement sufficient to provide for and allow pedestrian use of a corridor of land connecting Meramec State Park with the Huzzah State Forest shall be conveyed to the State of Missouri within nine months from the date of this Act. The Secretary is hereby directed to establish such easement in conjunction with the State of Missouri. Said easement shall be not less than one hundred feet in width and shall be used for the development of the Ozark Trail, which will be constructed and maintained by the State of Missouri.

(4) The remainder of the works, structures, and interests in lands related to the project shall be offered, within a period of one year from the date of enactment of this Act, for sale to the previous owners at the current appraised value. Such former owners shall have a period of one year in which to enter a contract for the repurchase of such properties, after which any remaining works, structures, and interests in lands shall be sold at a public auction, or a series of public auctions, to be conducted following reasonable public notice and advertising of the time and place of such auction or auctions, until such time as all remaining works, structures, and interests in lands have been disposed of.

(d) The Secretary is authorized either to comply with or to enter into a mutual agreement to cancel any executory contract the United States has entered for the purchase of lands for the project at the request of any landowner who is a party to such a contract, within six months after the date of enactment of this Act.

(e) Nothing in this section shall terminate the authority or responsibility of the United States to satisfy, pursuant to the provisions of the Uniform Relocation Assist-

ance and Real Property Acquisition Policies Act of 1970 (49 U.S.C. 4601 et seq.) and any other applicable provision of law, all relocation assistance, and other obligations arising out of the acquisition, prior to the date of enactment of this Act, of any interest in real estate for the project.

(f) There are authorized to be appropriated such amounts as may be necessary to carry out this section. Funds available for the project deauthorized by this section may be used to carry out the provisions of this section.

SEC. 3. The authorizations for the projects described in this section, at the locations described, are terminated upon the date of enactment of this Act:

(a) ILLINOIS: HELM RESERVOIR.—The project for Helm Reservoir, Skillet Fork of the Wabash River, Illinois, authorized by section 203 of the Flood Control Act of 1968 (Public Law 90–483), as part of the Wabash River Basin comprehensive plan.

(b) ILLINOIS: LINCOLN DAM.—The project for Lincoln Dam and Reservoir, Wabash River, Illinois and Indiana, authorized by section 204 of the Flood Control Act of 1965 (Public Law 89–298).

(c) INDIANA: BIG BLUE DAM.—The project for Big Blue Dam, Big Blue River, Indiana, authorized by section 203 of the Flood Control Act of 1968 (Public Law 90–483).

(d) ILLINOIS: ILLINOIS RIVER DUPLICATE LOCKS.—The project for the Illinois Waterway, Illinois and Indiana, authorized by section 101 of the River and Harbor Act of 1962 (Public Law 87–874).

(e) INDIANA: LAFAYETTE DAMS.—The project for the Lafayette Dam and Reservoir, Wild Cat Creek of the Wabash River, Indiana, as authorized in section 204 of the Flood Control Act of 1965 (Public Law 89–298).

(f) VIRGINIA: NANSEMOND RIVER.—The portion of the project for the Nansemond River, Virginia, from the United States Highway 640 Bridge at Suffolk, Virginia, to the upstream project limits at river mile 18.66, a distance of approximately two thousand five hundred feet, authorized by the first section of the Act entitled "An Act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and other purposes", approved August 11, 1888 (25 Stat. 410), and modified by the first section of the Act entitled "An Act authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes", approved July 3, 1930 (46 Stat. 922).

(g) INDIANA: CLIFTY CREEK DAM.—The project for the Clifty Creek Dam, Clifty Creek, Indiana, authorized by section 204 of the Flood Control Act of 1965 (Public Law 89–298).

(h) DELAWARE-MARYLAND-VIRGINIA: INTRACOASTAL WATERWAY.—The project for the Delaware Bay, Delaware, to Cape Charles, Chesapeake Bay, Virginia, Intracoastal Waterway, authorized under the terms of section 201 of the Flood Control Act of 1965 (Public Law 89–298).

(i) MARYLAND: SIXES BRIDGE.—The project for Sixes Bridge Dam and Lake, Maryland, authorized by section 85 of the Water Resources Development Act of 1974 (Public Law 93–251).

SEC. 4. (a) The consent of Congress is hereby given to the City of Boston to construct, maintain, and operate a fixed-span bridge in and over the water of the Fort Point Channel, Boston, Massachusetts, lying between the northeasterly side of the existing Summer Street Bridge and the northeasterly side of the existing Northern Avenue Bridge.

(b) Work shall not be commenced on such bridge until the location and plans therefor are submitted to and approved by the Secretary of Transportation.

(c) Any project heretofore authorized by an Act of Congress, insofar as such project relates to the above described portions of Fort Point Channel, is hereby abandoned.

(d) In approving the location and plans of any bridge, the Secretary of Transportation may impose any specific conditions relating to the maintenance and operation of the structure which may be deemed necessary in the interest of public navigation.

SEC. 5. The plan for the project for Ellicott Creek, New York, authorized in section 201 of the Flood Control Act of 1970 (Public Law 91–611) is hereby modified in accordance with the recommendations of the Chief of Engineers in a report dated April 2, 1979: *Provided*, That local interests agree to meet local assurance requirements set forth in section 3 of Public Law 723 of the Seventy-fourth Congress (33 U.S.C. 701c).

SEC. 6. (a) The lock authorized by section 114 of the Water Resources Development Act of 1976 (Public Law 94–587), as a replacement for Vermilion Lock, Louisiana, shall hereafter be known as Leland Bowman Lock. Any law, regulation, map, document, or record of the United States which refers to such lock shall hereafter be held and considered to refer to such lock as "Leland Bowman Lock".

(b) The dam and reservoir on the Salt River, Missouri, known as the Clarence Cannon Dam and Reservoir, authorized by section 203 of the Flood Control Act of 1962 (Public Law 87–874) as the Joanna Reservoir, shall hereafter be known as the Clarence Cannon Dam and Mark Twain Lake. Any law, regulation, map, document, or record of the United States in which such dam and reservoir are referred to shall be held and considered to refer to such dam as the Clarence Cannon Dam and to such reservoir as the Mark Twain Lake, respectively.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments.

The committee amendments were agreed to.

UP AMENDMENT NO. 660

(Purpose: To clarify the budget implications of a provision in the bill)

Mr. BAKER. Mr. President, on behalf of Mr. ABDNOR, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from Tennessee (Mr. BAKER), for the Senator from South Dakota (Mr. ABDNOR), proposes an unprinted amendment numbered 660.

Mr. BAKER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Beginning on page 5, line 23, strike all through line 2 on page 6, and insert in lieu thereof the following:

"(f) Funds authorized prior to enactment of this Act for the project specified in this section may be utilized by the Secretary, as necessary, to carry out the provisions of this section to deauthorize the project."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Tennessee (Mr. BAKER).

The amendment (UP No. 660) was agreed to.

Mr. ABDNOR. Mr. President, I wish to state my support for this bill. Each provision in this bill is supported by both Senators from the affected State. For most of these projects, State and local support has been officially withdrawn. And in every case but one, construction has not proceeded beyond the land acquisition phase.

The project deauthorizations included in S. 1493 will reduce the backlog of unconstructed projects by over $2 billion. In some cases, deauthorization will eliminate continued Federal land maintenance expenditures; in others, it will also allow other proposed activities to occur on the site of the proposed project.

I introduced this bill, along with my good friend, the ranking minority member on the Subcommittee on Water Resources (Mr. MOYNIHAN), because I believe we must begin to address the need to define project priorities. We established some very basic criteria for inclusion in this bill—endorsement by both Senators in the affected State—and I hope we will be able to establish criteria for other deauthorizations, as well as new authorizations. Only when we begin to develop criteria to assign priorities will we be able to authorize the most needed projects.

Mr. President, there are 11 projects which would be deauthorized under this bill: the Dickey Dam in Maine; Meramec Park Lake in Missouri; Helm Reservoir, Lincoln Dam, and the Illinois River duplicate locks in Illinois; Big Blue, Lafayette, and Clifty Creek Dams in Indiana; the Delmarva Intracoastal Waterway in Delaware, Maryland, and Virginia; Sixes Bridge Dam in Maryland; and Sandridge Dam in New York. In addition, the bill allows the corps to abandon navigation authority for sections of the Nansemond River in Virginia and Fort Point Channel in Massachusetts. Finally, it includes two name changes.

I would ask that my colleagues give it their unanimous support.

Mr. DANFORTH. Mr. President, the consideration of this legislation is a happy occasion for me. When I ran for the Senate in 1976, I compaigned against the Meramec Dam. I saw it then and still see it today as a prime example of wasteful Federal spending—of a pork-barrel government out of control—of a boondoggle that simply refuses to die. Now we have an opportunity to drive a stake through the heart of this vampire and kill this unneeded project once and for all.

The cost of the Meramec Park Lake project is put at $220 million. That is $20 million more than the critically needed second lock at locks and dam 26 will cost. And what would be the benefits of this hemorrhage of taxpayer dollars?

Flood control was considered a major benefit. But the dam would have flooded 12,600 acres upstream in order to provide a high degree of flood protection for just 11,800 acres downstream.

Recreation was considered a major benefit. But the dam would have inundated one of Missouri's most prized recreational areas—an area of free-flowing streams and creeks that canoeists cherish, dotted with a labyrinthine network of remarkable caves.

Water supply was considered a bene-

fit. But there is no foreseeable need for additional water supply in the vicinity of the reservoir. The only area with such a need lies downstream, near the confluence of the Missouri and the Mississippi Rivers, and surely a dam on the Meramec is not the answer to its concerns.

When I ran for the Senate in 1976, I told the people of Missouri that the benefits of this project just did not add up. When I arrived in the Senate in 1977, I succeeded in having the funding for this project removed from the Corps of Engineers' budget. And in 1978 the voters of Missouri made their sentiments known in no uncertain terms: In a special 13-county referendum, the project was rejected almost 2 to 1.

Three years have passed since that date—3 years in which the people of Missouri have patiently waited for a response to their vote. Today we have a chance to provide that response.

The provisions of S. 1493 relating to the Meramec Dam were developed by both Senators from Missouri, working closely with the Governor. Approximately 19 percent of the land now held by the corps will be conveyed to the State in order to preserve the recreational, environmental, and historical values of the river. The rest of the land will be sold back into private hands and put back onto the local tax rolls, and millions of dollars will be returned to the Federal Treasury.

We have before us today a proposal that, in my judgment, sensitively balances the interests of all the parties involved. I commend the Senator from South Dakota for his prompt and attentive action on this legislation, and I urge its passage. Let us put this boondoggle behind us.

Mr. STAFFORD. Mr. President, this legislation reported by the Committee on Environment and Public Works deserves the full support of the Senate.

I particularly wish to recognize the leadership of Senator ABDNOR, as well as the ranking minority member on the Subcommittee on Water Resources (Mr. MOYNIHAN), in developing this bill. Senator ABDNOR has been an excellent and responsible chairman, addressing policy needs as they arise. He is charged with a difficult task; steering the development of water resources development during a time of severe fiscal constraint. I commend the Senator in realizing that we must not only be concerned with new development, but that we must also begin to reduce the number of projects which were authorized in the past, but which are no longer viable.

Senator ABDNOR's introduction of this bill reminds all of us that before we address new project needs, we must define priorities among existing authorizations. In the case of these projects, deauthorization was required. In others, we will have to establish criteria that will define those priorities. His task in leading us to define these priorities is not an easy one. But I am confident that he will be able to meet this serious challenge.

I urge the Senate's approval of this legislation.

Mr. TSONGAS. Mr. President, I rise in strong support of section 4 of S. 1493, which grants the consent of Congress to the city of Boston to construct, maintain, and operate a causeway and fixed-span bridge over the Fort Point Channel. This would replace the present movable span bridge, which was built in 1907.

The bridge is now deteriorating rapidly. It costs Boston several hundred thousand dollars to maintain and operate it.

This legislation is essential to deal with local problems related to growth and transportation. The problems have gone unmet for the past decade. This session of Congress must take the first, important step toward their solution.

Mr. President, I want to thank the distinguished Senator from South Dakota (Mr. ABDNOR) and the distinguished Senator from New York (Mr. MOYNIHAN) for their assistance on this issue. I also thank my distinguished colleague from the Ninth Congressional District of Massachusetts (Mr. MOAKLEY) who authored the Fort Point Channel legislation and has worked so hard and long for its enactment.

Mr. President, I urge my colleagues to support this legislation, so that the economic development of this part of Boston may continue without further delay.

Mr. EAGLETON. Mr. President, I commend the Senate for its swift action in approving the deauthorization of Meramec Park Lake. I also applaud the Senator from South Dakota (Mr. ABDNOR) for his resolute action as chairman of the Water Resources Subcommittee which separated projects like the Meramec Dam, on which there is a consensus that they should be taken off the books, from all other water policy issues. Finally, I wish to commend the Senator from Vermont (Mr. STAFFORD) for his efforts on behalf of this deauthorization as chairman of the Senate Committee on Environment and Public Works.

As a cosponsor of the deauthorization of Meramec Dam along with my colleague from Missouri, this action brings me a sense of great relief that the long and controversial history of this project is drawing to a close. It has been almost 3 years since 64 percent of the people in Missouri voted in an advisory referendum not to proceed with this multimillion dollar project. In the 96th Congress, legislation I offered with Senator DANFORTH failed to win final approval because it was attached to an omnibus bill that became ensnarled in controversy.

I am deeply gratified to see this deauthorization bill win passage in the Senate because it is essential that the lands at the project site, which amount to 28,000 acres, be put back on the tax rolls. As part of this process, the State of Missouri would receive a portion of the land for recreation and conservation purposes and the former landowners would have the opportunity to purchase back the lion's share of the land, among other provisions.

The people of Missouri have made their wishes known in a loud and clear manner concerning the deauthorization of Meramec Dam. In the years since Missourians rejected the Meramec Dam, six studies were performed by various independent groups and the Missouri Department of Natural Resources. These studies were consulted in developing the plan for disposing of the lands. They were consulted by State officials in charge of administering recreation and conservation resources and the plan was endorsed by Governor Bond. I believe that the plan we have put forth addresses the concerns of hundreds of Missourians who have written to me on the complex issues involved in this deauthorization. And, I believe it is in the best interests of the taxpayers.

Again, let me commend the Senate for bringing the long story of the Meramec Dam to a close.

Mr. MOYNIHAN. Mr. President, I rise to support the passage of S. 1493, a bill to deauthorize several Corps of Engineers water projects. Senator ABNOR and I sponsored this bill with the full knowledge that we were doing something not often done in this body, and that was to cease the Federal Government's obligation to construct projects that no longer serve any useful purpose. The projects deauthorized in this bill would have cost the Federal Government over $2 billion.

There is one item in S. 1493 that is of particular interest to me—the Ellicott Creek flood control project in Amherst, N.Y. The project was originally authorized in 1970. One of the features of the authorized project was the Sandridge Dam. Since the time of authorization, the local sponsors of the project, with the concurrence of the Corps of Engineers, have concluded that construction of the Sandridge Dam would create more problems than it would solve. However, the local sponsors strongly support the remainder of the authorized project. According to the Corps of Engineers, the project would not be compromised in the absence of the dam.

The language included in S. 1493 will clear the way for construction of the remaining portion of the flood control project. Some construction funds have already been appropriated but progress on the project could not proceed in the absence of this modification to the original authorization. The modified project will cost $16 million instead of the original estimate of $23 million.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1493

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 204 of the Flood Control Act of 1965 (Public Law 89–298) is amended as follows: "The Dickey-Lincoln School Lakes project, Saint John River, Maine, is hereby modified to deauthorize that component of the project known and referred to as the Dickey Dam and its associated transmission facilities.".

(b) No Federal agency or department shall consider any license application relating to hydropower projects above the site of the Lincoln School Dam on the Saint John River and its tributaries, Maine, for a period of two years after the enactment of this Act.

SEC. 2. (a) The authorization for the Meramec Park Lake (hereinafter in this section re-

ferred to as the "project") contained in that portion of the general comprehensive plan for flood control and other purposes in the Upper Mississippi River Basin, which plan was authorized by section 4 of the Act entitled "An Act authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes", approved June 28, 1938 (52 Stat. 1218), as modified by section 203 of the Flood Control Act of 1966 (Public Law 89-789), is hereby terminated.

(b) The Secretary of the Army, acting through the Chief of Engineers (hereinafter in this section referred to as the "Secretary"), shall immediately undertake interim management and maintenance of works, structures, and interests in lands related to the project pending the implementation of the subsequent provisions of this section.

(c) The Secretary shall dispose of works, structures, and interests in lands related to the project as follows:

(1) To the State of Missouri, all right, title, and interest in and to—

(A) Meramec State Park extension, consisting of three thousand eight hundred and twenty-three acres.

(B) Onondaga Cave State Park extension, consisting of one hundred and twenty-four acres.

(C) Huzzah State Wildlife Management Area extension, consisting of nine hundred and forty-five acres.

(D) Endangered species sites, consisting of not more than two hundred acres.

(E) Campbell Bridge access, consisting of not more than ten acres.

(F) Sappington Bridge access, consisting of not more than ten acres.

(G) Liberty Road access, consisting of not more than ten acres.

(2) A perpetual easement sufficient to safeguard for the river user the natural, cultural, and visual resources of the Meramec River and Huzzah and Courtois Creeks shall be conveyed to the State of Missouri within nine months from the date of this Act. The Secretary is hereby directed to establish such easements in conjunction with the State of Missouri. Said easements shall be not less than one hundred feet nor more than one-quarter mile as measured from the normal high-water mark of said river and creeks, taking into consideration the varying terrain of such lands and the best public interest.

(3) A perpetual easement sufficient to provide for and allow pedestrian use of a corridor of land connecting Meramec State Park with the Huzzah State Forest shall be conveyed to the State of Missouri within nine months from the date of this Act. The Secretary is hereby directed to establish such easement in conjunction with the State of Missouri. Said easement shall be not less than one hundred feet in width and shall be used for the development of the Ozark Trail, which will be constructed and maintained by the State of Missouri.

(4) The remainder of the works, structures, and interests in lands related to the project shall be offered, within a period of one year from the date of enactment of this Act, for sale to the previous owners at the current appraised value. Such former owners shall have a period of one year in which to enter a contract for the repurchase of such properties, after which any remaining works, structures, and interests in lands shall be sold at a public auction, or a series of public auctions, to be conducted following reasonable public notice and advertising of the time and place of such auction or auctions, until such time as all remaining works, structures, and interests in lands have been disposed of.

(d) The Secretary is authorized either to comply with or to enter into a mutual agreement to cancel any executory contract the United States has entered for the purchase of lands for the project at the request of any landowner who is a party to such a contract, within six months after the date of enactment of this Act.

(e) Nothing in this section shall terminate the authority or responsibility of the United States to satisfy, pursuant to the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (49 U.S.C. 4601 et seq.) and any other applicable provision of law, all relocation assistance, and other obligations arising out of the acquisition, prior to the date of enactment of this Act, of any interest in real estate for the project.

(f) Funds authorized prior to enactment of this Act for the project specified in this section may be utilized by the Secretary, as necessary, to carry out the provisions of this section to deauthorize the project.

SEC. 3. The authorizations for the projects described in this section, at the locations described, are terminated upon the date of enactment of this Act:

(a) ILLINOIS: HELM RESERVOIR.—The project for Helm Reservoir, Skillet Fork of the Wabash River, Illinois, authorized by section 203 of the Flood Control Act of 1968 (Public Law 90-483), as part of the Wabash River Basin comprehensive plan.

(b) ILLINOIS: LINCOLN DAM.—The project for Lincoln Dam and Reservoir, Wabash River, Illinois and Indiana, authorized by section 204 of the Flood Control Act of 1965 (Public Law 89-298).

(c) INDIANA: BIG BLUE DAM.—The project for Big Blue Dam, Big Blue River, Indiana, authorized by section 203 of the Flood Control Act of 1968 (Public Law 90-483).

(d) ILLINOIS: ILLINOIS RIVER DUPLICATE LOCKS.—The project for the Illinois Waterway, Illinois and Indiana, authorized by section 101 of the River and Harbor Act of 1962 (Public Law 87-874).

(e) INDIANA: LAFAYETTE DAMS.—The project for the Lafayette Dam and Reservoir, Wild Cat Creek of the Wabash River, Indiana, as authorized in section 204 of the Flood Control Act of 1965 (Public Law 89-298).

(f) VIRGINIA: NANSEMOND RIVER.—The portion of the project for the Nansemond River, Virginia, from the United States Highway 640 Bridge at Suffolk, Virginia, to the upstream project limits at river mile 18.66, a distance of approximately two thousand five hundred feet, authorized by the first section of the Act entitled "An Act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and other purposes", approved August 11, 1888 (25 Stat. 410), and modified by the first section of the Act entitled "An Act authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes", approved July 3, 1930 (46 Stat. 922).

(g) INDIANA: CLIFTY CREEK DAM.—The project for the Clifty Creek Dam, Clifty Creek, Indiana, authorized by section 204 of the Flood Control Act of 1965 (Public Law 89-298).

(h) DELAWARE-MARYLAND-VIRGINIA: INTRACOASTAL WATERWAY.—The project for the Delaware Bay, Delaware, to Cape Charles, Chesapeake Bay, Virginia, Intracoastal Waterway, authorized under the terms of section 201 of the Flood Control Act of 1965 (Public Law 89-298).

(i) MARYLAND: SIXES BRIDGE.—The project for Sixes Bridge Dam and Lake, Maryland, authorized by section 85 of the Water Resources Development Act of 1974 (Public Law 93-251).

SEC. 4. (a) The consent of Congress is hereby given to the City of Boston to construct, maintain, and operate a fixed-span bridge in and over the water of the Fort Point Channel, Boston, Massachusetts, lying between the northeasterly side of the existing Summer Street Bridge and the northeasterly side of the existing Northern Avenue Bridge.

(b) Work shall not be commenced on such bridge until the location and plans therefor are submitted to and approved by the Secretary of Transportation.

(c) Any project heretofore authorized by an Act of Congress, insofar as such project relates to the above described portions of Fort Point Channel, is hereby abandoned.

(d) In approving the location and plans of any bridge, the Secretary of Transportation may impose any specific conditions relating to the maintenance and operation of the structure which may be deemed necessary in the interest of public navigation.

SEC. 5. The plan for the project for Ellicott Creek, New York, authorized in section 201 of the Flood Control Act of 1970 (Public Law 91-611) is hereby modified in accordance with the recommendations of the Chief of Engineers in a report dated April 2, 1979: *Provided*, That local interests agree to meet local assurance requirements set forth in section 3 of Public Law 738 of the Seventy-fourth Congress (33 U.S.C. 701c).

SEC. 6. (a) The lock authorized by section 114 of the Water Resources Development Act of 1976 (Public Law 94-587), as a replacement for Vermilion Lock, Louisiana, shall hereafter be known as Leland Bowman Lock. Any law, regulation, map, document, or record of the United States which refers to such lock shall hereafter be held and considered to refer to such lock as "Leland Bowman Lock".

(b) The dam and reservoir on the Salt River, Missouri, known as the Clarence Cannon Dam and Reservoir authorized by section 203 of the Flood Control Act of 1962 (Public Law 87-874) as the Joanna Reservoir, shall hereafter be known as the Clarence Cannon Dam and Mark Twain Lake. Any law, regulation, map, document, or record of the United States in which such dam and reservoir are referred to shall be held and considered to refer to such dam as the Clarence Cannon Dam and to such reservoir as the Mark Twain Lake, respectively.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I inquire of the acting minority leader about the status of calendar order No. 379, Senate Joint Resolution 57, on his calendar. It is cleared on ours.

Mr. CRANSTON. That has been cleared on our side, also.

Mr. BAKER. I thank the acting minority leader.

NATIONAL SCLERODERMA WEEK

Mr. BAKER. Mr. President, I ask that the Chair lay before the Senate calendar order No. 379, Senate Joint Resolution 57.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

A joint resolution (S.J. Res. 57) to provide for the designation of February 7 through 13, 1982, as "National Scleroderma Week."

Mr. SYMMS. Mr. President, the joint resolution authorizes the President to designate the week of February 7–13, 1982, as "National Scleroderma Week."

Scleroderma is a painful and debilitating disease which affects the skin and multiple organs of the body, and can in its most serious form result in the death of the scleroderma patient.

Approximately 300,000 people are affected by scleroderma, and yet it remains a little-known and often misdiagnosed illness. There is not any known cure for the disease, and due to the lack of public awareness there has been a severe shortage of funding for research into possible cures and treatments.

Since public funding at this time is being reduced for the research of various illnesses, it is vitally important to encourage private funding, and that is specifically why it is necessary to raise the awareness level of the public in recognizing the existence of scleroderma.

I believe that National Scleroderma Week will focus the necessary attention on this disease.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S.J. RES. 57

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President shall issue a proclamation designating February 7 through 13, 1982, as "National Scleroderma Week", and calling upon the people of the United States to observe such week with appropriate ceremonies and activities.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the joint resolution was agreed to.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, could I inquire of the acting minority leader if he is in a position to clear Senate Resolution 98 for passage at this time?

Mr. CRANSTON. Yes.

AMERICAN HISTORY MONTH

Mr. BAKER. Mr. President, I ask that the Chair lay before the Senate, Senate Resolution 98.

The PRESIDING OFFICER. The clerk will report.

The assistant legislation clerk read as follows:

A resolution (S. Res. 98) to designate February of each year as "American History Month."

Without objection, the Senate proceeded to consider the resolution which had been reported from the Committee on the Judiciary, with amendments, as follows:

On page 2, line 1, strike "each year", and insert "1982"; and

On page 2, line 3, strike "annually".

Mr. CRANSTON. Mr. President, on behalf of Senator BENTSEN, I ask unanimous consent that Senators THURMOND and GOLDWATER be added as additional cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the amendments be considered and agreed to en bloc.

The PRESIDING OFFICER. Without objection, the amendments are considered en bloc and agreed to en bloc.

The resolution, as amended, was agreed to.

The preamble was agreed to.

The resolution, as amended, with its preamble reads as follows:

S. RES. 98

Whereas the study of history not only enlivens appreciation of the past but also illuminates the present and gives perspective to our hopes for the future;

Whereas the study of American history leads to a greater understanding of our national heritage; and

Whereas it is appropriate to encourage a deeper awareness of the great events which have shaped America, and a renewed dedication to the ideals and principles we hold in trust: Now, therefore, be it

Resolved, That February 1982 is designated as "American History Month", and the President is authorized and requested to issue a proclamation to call upon Federal, State, and local government agencies, and the people of the United States to observe with appropriate programs, ceremonies, and activities.

The title was amended so as to read "Resolution to designate February 1982, as 'American History Month'.".

Mr. BAKER. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I have two other matters. First, Mr. President, a House message on S. 1211.

EXTENSION OF TOXIC SUBSTANCES CONTROL ACT

Mr. BAKER. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on S. 1211.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the bill from the Senate (S. 1211) entitled "An Act to extend the Toxic Substances Control Act for one year", do pass with the following amendments:

Strike out all after the enacting clause, and insert: That (a) the first sentence of section 28(d) of the Toxic Substances Control Act is amended to read as follows: "For the purpose of making grants under subsection (a), there are authorized to be appropriated $1,500,000 for each of the fiscal years 1982 and 1983.".

(b) Section 29 of the Toxic Substances Control Act is amended by striking out "$10,100,000" and all that follows through "1979" and inserting in lieu thereof the following: "$62,000,000 for each of the fiscal years 1982 and 1983".

Amend the title so as to read: "An Act to amend the Toxic Substances Control Act to authorize appropriations for fiscal years 1982 and 1983.".

Mr. GORTON. Mr. President, S. 1211, now before the Senate reauthorizes the Toxic Substances Control Act. As it was amended by the House of Representatives, it authorizes $63.5 million for each of the fiscal years 1982 and 1983. The bill makes no substantive amendment to the act.

This is the second time that the Senate has acted on S. 1211. The bill was passed by the Senate on June 2, 1981. Then, it authorized $59,646 for fiscal year 1982 only. The bill was amended by the House of Representatives and returned to the Senate on September 29, 1981 with the longer and higher authorization.

President Reagan's request for authorization to the Environmental Protection Agency for administration of the Toxic Substances Control Act was $60,146,000. That amount represents a decrease of $8.3 million from the 1981 resource level. The proposed authorization level would support TSCA abatement and control activities in the Office of Pesticides and Toxic Substances, sustain the TSCA information integration program, while eliminating the intervenor and public participation grants portions of that latter program.

Mr. BAKER. Mr. President, I move that the Senate disagree to the House amendments and request a conference with the House, and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. SIMPSON) appointed Mr. GORTON and Mr. BAUCUS conferees on the part of the Senate.

INTELLIGENCE AUTHORIZATION ACT FOR FISCAL YEAR 1982—CONFERENCE REPORT

Mr. BAKER. Mr. President, I submit a report of the committee of conference on H.R. 3454 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3454) to authorize appropriations for fiscal year 1982 for the intelligence and intelligence-related activities of the United States Government, for the Intelligence Community Staff, and for the Central Intelligence Agency Retirement and Disability System, to authorize supplemental appropriations for fiscal year 1981 for the intelligence and intelligence-related activities of the United States Government, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

Mr. WALLOP. Mr. President, it is a privilege to submit the intelligence authorization conference report authorizing appropriations for U.S. intelligence activities for fiscal year 1982.

The Senate Select Committee on Intelligence views the annual budget authorization process as one of the principal means of strengthening and improving the U.S. intelligence system. The

committee has devoted a great deal of time and effort over the past 5 years examining how well the intelligence community is able to meet its responsibilities, and identifying areas where improvement is needed. We have made important progress through the budget authorization process in preparing the intelligence system to cope with the diversity of policy concerns our Nation is likely to face in the years ahead.

The fiscal year 1982 intelligence authorization bill continues the committee's goal of revitalizing our intelligence capabilities. We have provided for improvements in a number of key areas, and have taken the initiative to insure new capabilities are available to deal with emerging problems that will confront policymakers in the future. Unfortunately, two important legislative proposals contained in the Senate bill were not sustained in conference. These proposals would have further strengthened civilian personnel management within the Defense Intelligence Agency, and established criminal penalties for assaults on intelligence personnel. The House has agreed, however, to consider these proposals in separate legislation, and I intend to introduce such legislation shortly.

Our work is by no means complete; further improvement and investment are necessary in a number of areas, such as analysis and counterintelligence. We must also insure sufficient flexibility in the intelligence system to respond to multiple crisis without diverting resources from other high-priority missions, and to be able to recoup from unexpected compromise or loss of important capabilities.

I would like to take this opportunity to commend the members of the Senate Select Committee on Intelligence, and our colleagues on the House committee, for their diligence and strong support for the goals we have set. There is unanimous agreement between the two committees that we must have a first-rate intelligence service to compete effectively in world affairs in the years ahead. After all, intelligence is the Nation's first line of defense.

Mr. President, I strongly urge my colleagues in the Senate to support this important legislation.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

(The conference report is printed in the House proceedings of the RECORD of November 16, 1981.)

Mr. BAKER. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I have no further items of business to transact. I inquire of the acting minority leader if he has any other business to transact.

Mr. CRANSTON. I have none.

Mr. BAKER. I thank the acting minority leader.

PROGRAM

Mr. BAKER. Mr. President, tomorrow the Senate will convene at 10 o'clock. After the recognition of the two leaders under the standing order and the recognition of Senator BIDEN on a special order, there will be a brief period for the transaction of routine morning business. At the hour of 10:30 a.m., the Senate will turn to the consideration of the Alaska Natural Gas Transportation Act of 1976, on which there is a statutory time limitation. After disposition of that matter, Mr. President, the Senate will resume consideration of the continuing resolution making appropriations for the several agencies and departments of the Government.

It is expected, Mr. President, that tomorrow will be a late day, running well into the evening. It is the hope of the leadership that the Senate will be in a position to finish the continuing resolution tomorrow night. It appears almost imperative that we do so in order to permit the House and Senate to meet in conference, if need be, to agree to a report to be considered by the two bodies and transmitted to the President in advance of the time of the expiration of the present continuing resolution, which is midnight on Friday night.

RECESS UNTIL 10 A.M. TOMORROW

Mr. BAKER. Mr. President, I see no other Senator seeking recognition. If there is no further business to be transacted by the Senate, I move, in accordance with the order previously entered, that the Senate now stand in recess until the hour of 10 o'clock a.m. on tomorrow.

The motion was agreed to, and, at 7:08 p.m., the Senate recessed until Thursday, November 19, 1981, at 10 a.m.

NOMINATIONS

Executive nomination received by the Senate November 18, 1981:

THE JUDICIARY

Ralph K. Winter, Jr., of Connecticut, to be U.S. circuit judge for the second circuit, vice Walter R. Mansfield, retired.

CONFIRMATIONS

Executive nominations confirmed by the Senate November 18, 1981:

THE JUDICIARY

Lawrence W. Pierce, of New York, to be U.S. circuit judge for the second circuit.

Emmett Ripley Cox, of Alabama, to be U.S. district judge for the southern district of Alabama.

Cynthia Holcomb Hall, of California, to be U.S. district judge for the central district of California.

Clarence A. Beam, of Nebraska, to be U.S. district judge for the district of Nebraska.

John Bailey Jones, of South Dakota, to be U.S. district judge for the district of South Dakota.

DEPARTMENT OF JUSTICE

Robert J. Wortham, of Texas, to be U.S. attorney for the eastern district of Texas for the term of 4 years.

Alan H. Nevas, of Connecticut, to be U.S. attorney for the district of Connecticut for the term of 4 years.

John W. Gill, Jr., of Tennessee, to be U.S. attorney for the eastern district of Tennessee for the term of 4 years.

Joseph P. Russoniello, of California, to be U.S. attorney for the northern district of California for the term of 4 years.

Philip N. Hogen, of South Dakota, to be U.S. attorney for the district of South Dakota for the term of 4 years.

J. Jerome Perkins, of Indiana, to be U.S. Marshall for the northern district of Indiana for the term of 4 years.

Denny L. Sampson, of Nevada, to be U.S. Marshal for the district of Nevada for the term of 4 years.

WITHDRAWAL

Executive nomination withdrawn from the Senate November 18, 1981:

Norman Braman, of Florida, to be Commissioner of Immigration and Naturalization, vice Leonel J. Castillo, resigned, which was sent to the Senate on September 29, 1981.

HOUSE OF REPRESENTATIVES—*Wednesday, November 18, 1981*

The House met at 10 a.m.

The Reverend Vilis Varsbergs, pastor, Chicago Latvian Zion Evangelical Lutheran Church, Chicago, Ill., offered the following prayer:

Almighty God, Father of peoples and Lord of nations: constantly remind us, we pray, that history is Your story which tells us that You desire freedom and justice even for the small and weak. Help us, therefore, to hasten the day when no man and no people will be oppressed and exploited. This day we especially ask Your favor upon Latvia and her neighbors Estonia and Lithuania. As You had given them a brief day of freedom, so do not now disappoint their hope that the good will prevail, that justice will soon triumph, that freedom will return on the wings of peace to them and to all Your children—through Jesus Christ, our Lord. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 3210. An act to amend the Surface Transportation Assistance Act of 1978, to establish obligation limitations for fiscal year 1982, and for related purposes.

PASTOR VILIS VARSBERGS

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute.)

Mr. ANNUNZIO. Mr. Speaker, it is a genuine pleasure to welcome to our Nation's Capitol, Pastor Vilis Varsbergs, who offered the opening prayer today. It is fitting that he joins us here today, for November 18 marks the 63d anniversary of Latvian Independence Day.

Pastor Varsbergs is the pastor of the Chicago Latvian Zion Evangelical Lutheran Church located in the 11th District I am honored to represent. He was born in Latvia, and at the end of World War II, was sent with his family to a displaced persons camp in West Germany, where he received his high school diploma.

In 1949, the family emigrated to the United States, where they became sharecroppers in Mississippi. In 1950, Pastor Varsbergs entered Midland College in Nebraska on a $500 scholarship, and after graduation, he attended the Lutheran School of Theology in Chicago where he graduated in 1957.

Pastor Varsbergs founded a summer camp for children and families, and pioneered its summer high school program devoted to Latvian language, cultural heritage, history, and religion. He has been pastor of the Chicago Latvian Zion Evangelical Lutheran Church since 1973.

I want to thank Pastor Varsbergs for being with us today and to wish him continuing success in his dedicated work in the church.

PRESIDENT PROPOSES NEW PEACE INITIATIVE

(Mr. WRIGHT asked and was given permission to address the House for 1 minute.)

Mr. WRIGHT. Mr. Speaker, at this very moment the President of the United States is making an address at the National Press Club in which he is releasing a portion of a communication that he has sent to President Brezhnev of the Soviet Union. In a dramatic peace gesture, President Reagan is proposing that the United States will be prepared to cancel the deployment of the Pershing II and ground launched cruise missiles in Western Europe if the Soviets will dismantle their SS-20's, SS-4's, and SS-5 missiles.

This is a useful and bold initiative which I think all of us in the House, Democrats and Republicans alike, do and should support. Together we implore the Soviet Union to act with favor upon this peace initiative which could reduce to zero in Europe the number of warheads and missiles that may be aimed from one side of the Iron Curtain to the other. The President's initiative could remove the dark cloud that hangs over Europe and restore some semblance of renewed hopes for progress toward a lasting peace to that continent.

PRODUCTION OF B-1B BOMBER URGED

(Mr. SHAMANSKY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SHAMANSKY. Mr. Speaker, I have been a consistent supporter of the modernized manned penetration bomber called the B-1B by the Air Force. I wrote the President twice urging him to consider the B-1B as replacement for our aging B-52 fleet. I cited the endorsement of the plane made by JOHN GLENN, Ohio's senior Senator, whose aviation expertise is well known.

Opponents claim the new plane would be nearly as vulnerable to Soviet radar as the B-52's. In fact, the CIA information they cite was based on the original B-1 design. The modernized B-1B will have a radar profile 10 times smaller than the prototype.

Critics also insist the cost of the 100-plane fleet would be $39 billion. Yet Defense Secretary Weinberger has placed the bill at $28 billion, including inflation. Critics do not mention the billions required to maintain and modify B-52's for additional service. No one can say when Stealth technology bombers will be available and such uncertainty reinforces the need to construct the B-1B.

Although this project could mean much for my district, the question is national, one of assuring America's strategic nuclear deterrence in this decade and the next.

YESTERDAY'S ROLLCALL VOTES UNCALLED FOR

(Mr. PEASE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PEASE. Mr. Speaker, I take this time merely to express my disappointment that one of our colleagues saw fit yesterday to force four or five rollcall votes when most Members on both sides of the aisle had been assured previously that there would not be any votes before 4 p.m. As a result, a number of Members missed votes, and that is a shame. That will certainly be reflected in their records.

It is a pity that the gentleman who requested those votes could not have been with the Ways and Means Committee in Baltimore to listen to witness after witness testify as to the problems caused by the budget cuts forced earlier this year. I think it would have been a more productive use of his time.

WAYS AND MEANS COMMITTEE GOES TO BALTIMORE

(Mr. ROSTENKOWSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROSTENKOWSKI. Mr. Speaker, yesterday the Committee on Ways and Means went to Baltimore to assess the impact on a major urban center, a State and its people of the budget cuts this Congress enacted last summer. Because it is within our jurisdiction, we were especially interested in the effect of major reductions in title XX funding on the human services and programs involved.

We heard from the Governor, the mayor, a county executive, persons involved in volunteer efforts within the business community, and some—for want of a better term—"real people" who are feeling the effects of Federal funding reductions. We took the committee to a major, and largely federally funded, center for the specialized treatment of children with severe handicaps. We learned from this visit two important points: First, there is a general willingness on the part of people to recognize that the Federal Government must rein itself in and get control of its expenditures; and second, there is disbelief, disappointment and, not just a little bitterness at the results of taking a meat-ax approach to budget cutting.

Time and again we were told that in no way were people at the local level—those who are fighting the trench warfare against the effects of being poor, sick, or elderly—given enough time, or enough resources to cope with the immense problems which the Federal Government has basically walked away from. Some of our witnesses questioned the sense of priorities which would allow a facility to possibly close its doors—a facility which trains handicapped children to go out into the community as participants. And we were asked where is the commonsense in forcing those same children into State-run institutions for warehousing at much greater cost in the long run to taxpayers.

I regret our Republican colleagues chose to boycott our hearing. They would have heard, among other things, support for the President's overall budget goals. They would have heard a real willingness to work together to reform budget cuts so as to make more sense in fiscal and humane terms. Instead, I understand the hearing itself was subjected to mischief on the floor.

Perhaps, if we concentrated less on political gain or loss, the suffering going on out there right now would not be so intense. That is what the Committee on Ways and Means tried to prevent last summer when it humanely cut its jurisdictional programs. It is truly unfortunate we did not prevail.

BILL INTRODUCED TO EXTEND LOANS AND MORTGAGE INSURANCE PROGRAMS TO TERRITORY OF AMERICAN SAMOA

(Mr. SUNIA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SUNIA. Mr. Speaker, I am today introducing a bill, together with some of our colleagues, to amend the National Housing Act to extend certain loan and mortgage insurance programs to the territory of American Samoa.

The bill seeks to amend sections 9, 201(d), and 207(a)(7) of the National Housing Act to make the territory of American Samoa eligible under these three particular programs. All other U.S. territories are eligible.

When the National Housing Act was considered by Congress, there was very little information available as to the landownership system in the territory, and Congress very wisely left American Samoa out from participating under these programs of the act. Through actions of our local legislature and the court in recent years, many of the heretofore unique aspects of the communal landownership has been clarified, and made compatible with the programs to which we now seek participation.

If these programs are to be extended to American Samoa, the residents will be provided with a new resource in the area of home financing—the second most serious problem in the territory today. I respectfully urge my colleagues to support this legislation. Thank you.

IN PRAISE OF DAVID STOCKMAN

(Mr. MITCHELL of Maryland asked and was given permission to address the House for 1 minute.)

Mr. MITCHELL of Maryland. Mr. Speaker, I read with some concern in the morning press that Mr. Stockman's job is not necessarily secure in the administration. I think we have gone a bit too far in the criticisms of David Stockman. I want to point a finger at my Democratic colleagues for their harsh criticisms of Mr. Stockman.

I stand in this well today to praise David Stockman. I stand to praise a man who displayed a rare kind of intellectual honesty that is so often missing at the highest levels of government. I stand to praise a man whose own intellectual integrity in his given profession of economics forced him to speak the truth.

To my Democratic friends, I say you ought to be praising this man. I come not to bury David Stockman but to praise him. I urge him to continue to speak out through his own intellectual honesty, to speak out against deception, duplicity, and deviousness.

□ 1015

THE PRESIDENT'S BOLD AND SERIOUS STRATEGY

(Mr. BROOMFIELD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROOMFIELD. Mr. Speaker, early this morning, I was privileged to participate with the leadership in a briefing on the President's bold and serious strategy with regard to limited- and medium-range nuclear missiles.

I want to warmly commend President Reagan for seizing the initiative in advance of the upcoming Geneva negotiations.

His decision to push for the zero option, or at least the minimal possible number of missiles in Europe, is the right thing to do. This strategy clearly establishes that it is the United States that wants peace in Europe, and it is the United States that seeks to avoid escalation of the world's nuclear arsenals.

As the President said:

> Today I have outlined the kinds of bold, equitable proposals which the world expects of us. But we cannot reduce arms unilaterally. Success can only come if the Soviet Union will share our commitment; if it will demonstrate that its often-repeated professions of concern for peace will be matched by positive action.

The onus has been squarely placed on the Soviet Union to justify why it needs to retain its existing nuclear missiles in Europe.

We have again reached a vital crossroad in our relationship with the Soviet Union. We have an opportunity between us to reduce the level of tension in the world or to escalate the armaments race.

The President pointed out that the benefits of progress in arms control extend far beyond a reduction in military hardware. The President said:

> The American concept of peace goes well beyond the absence of war. We foresee a flowering of economic growth and individual liberty in a world at peace.

Peace is what we seek. Not a peace at any price that leads to war, but a stable peace that protects the interests of all parties. The President said:

> Deterring war depends on the perceived ability of our forces to perform effectively. The more effective our forces are, the less likely it is that we will have to use them. So, we and our allies are proceeding to modernize NATO's nuclear forces of intermediate range—to meet the increased Soviet deployments of nuclear systems threatening Western Europe.

President Kennedy once said that we should never negotiate out of fear,

but we should never fear to negotiate. That was a wise policy then, and it is a wise policy today. President Reagan is following in this tradition. I know that the Nation is with him in this endeavor.

DEFENSE APPROPRIATIONS

(Mr. HUNTER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUNTER. Mr. Speaker, today the Appropriations Committee will submit a defense bill which is approximately $4.4 billion below the President's request. I understand the combination of forgetfulness and shortsightedness that the committee appears to have displayed in cutting this crucial area. We forget a Soviet machine which has outspent the United States by $240 billion in the last decade. We forget the Soviet missile development of the 1970's which produced four new ICBM's since our minuteman three. We forget a Soviet production base which outproduces us 18 to 1 in surface-to-air missiles, 11 to 1 in armor, 3 to 1 in helicopters, and 2 to 1 in tac aircraft, surface ships, and submarines. And, Mr. Speaker, our shortsightedness prevents us from looking into the decade of the 1990's, which under our present course will find us with a minuscule production base, and a giant quantitative, as well as qualitative gap between us and the Soviet Union.

Mr. Speaker, the American people want a strong national defense. If this Congress will not give them one, they will elect a Congress that will.

AGAINST REDUCTIONS IN DEFENSE SPENDING

(Mr. HARTNETT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HARTNETT. Mr. Speaker, I am concerned that we have forgotten so quickly some of the events of the recent past.

The appropriations bill before us would cut the President's budget request for defense by $4.4 billion—a reduction over and above the reductions made by the President only last month.

Let me remind my colleagues that it was less than a year ago, in January 1981, that the hostages came home from Iran and the frustration we all felt at the inability of the United States to deter such an act by Iran or to effectively act after the event.

Let me remind my colleagues that Soviet troops are still in Afghanistan and still fighting there.

Let me remind my colleagues that the United States, 7 years after the oil crisis of 1974, is still dependent upon foreign sources of oil, and the safe transport of that oil to the United States across oceans that are increasingly patrolled by ships of the Soviet Navy.

I urge my colleagues to not forget the painful lessons of the recent past and to vote for an adequate defense budget today.

CARPING, CRITICISM, AND COMPLAINING

(Mr. DREIER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DREIER. Mr. Speaker, we are told by our friends on the other side of the aisle that the Reagan economic plan is untested and novel. They refer to it as an experiment.

Looking at it from their point of view, they have good reason to look upon this program as a novelty.

Cutting taxes probably does seem novel to those responsible for raising taxes higher than they have ever been.

Making each department and agency of Government live within its means probably does seem like an experiment to those who have been eager to let the bureaucracy expand.

The last time they had power, under the leadership of their hero, Jimmy Carter, they gave us double-digit inflation, 20 percent interest rates, and low productivity.

Now that President Reagan is trying to clean up the mess they made, all they have to offer is carping, criticism, and complaining.

When is the Democratic leadership going to stop criticizing and start saying what they want to do? Or do they really know what they want to do?

MACHO MAN

(Mr. DUNN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DUNN. Mr. Speaker, United Press International has quoted the distinguished majority leader, the gentleman from Texas, as saying President Reagan is likely to exercise his veto power in the near future.

The majority leader then stated:

> The theatrics are almost irresistible. To go on TV and thrash the Congress about the cheek and jowl. It makes him look like a macho man.

After the kind of weak, spineless, drifting leadership this country endured under a Democratic President from January 1977 to January 1981, just about any real leader would look like a macho man without trying.

The distinguished majority leader supported the alleged leadership of Mr. Jimmy Carter. That is his privilege.

But let us not criticize a great President like President Reagan by making disparaging remarks.

Instead of making these slighting remarks on this great President, the majority leader should cut out the one liners and start cooperating with the President.

Mr. Reagan cannot help it if he does not live down to the low standards set by his predecessor.

A DIFFERENCE IN ECONOMIC PHILOSOPHIES

(Mr. WALKER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WALKER. Mr. Speaker, yesterday, Americans were given a preview of the differing economic philosophies of Democratic and Republican parties. As the Speaker of the House addressed the AFL-CIO convention at what has been described as a lovefeast, that convention proposed dealing with the recession by raising taxes and increasing Federal spending. No one since Herbert Hoover has raised taxes in the midst of a recession; yet that is what the labor unions are proposing and I think we can expect the Democratic party to fall in lockstep behind that suggestion.

At the same time that Speaker was addressing the labor convention, a group of House Republicans held a press conference and suggested accelerating next year's tax cuts. We said the way to economic recovery is through economic growth. We believe that what is best for labor is jobs. And we believe that cutting taxes and spending will produce new jobs.

That is the difference. The Democratic leadership continues to want more taxes and more spending. Republicans want lower taxes and less spending. That is a difference that should allow Americans to decide what they want.

YESTERDAY'S BREAK FOR A COMMERCIAL

(Mr. MORRISON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MORRISON. Mr. Speaker, yesterday we paused in the midst of congressional action for a commercial. Our Democrat colleagues on the Ways and Means Committee wanted to let the folks in Baltimore hear how it is—an admission that they would rather talk about the economy than stay here and solve the mess they themselves have created over the past quarter century.

This commercial break lasted until 4 o'clock yesterday afternoon and precious hours were lost. I consider the re-

covery of America much more important than a political road show.

This Congress should have been at work yesterday, so that our constituents can get back to work tomorrow.

NUCLEAR WASTE

(Mrs. BOUQUARD asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. BOUQUARD. Mr. Speaker, today I will be introducing a comprehensive nuclear waste bill which our Science and Technology Committee will soon act upon. This bill has overwhelming support on the committee and will be consponsored by roughly half of the Members. It authorizes a constructive program with the Department of Energy research and development activity fully integrated. When implemented, this bill will assure the operation of a permanent repository before the end of the century building on technical and public confidence obtained in the research and development phase. Both I, Chairman FUQUA, Mr. LUJAN, and much of the bipartisan leadership of the committee look forward to working with the Commerce and Interior Committees in arriving at a compromise vehicle which should be taken to the floor of the House early in the next session of this Congress which I believe will have overwhelming approval.

U.S. CIVIL RIGHTS COMMISSION THREATENED BY NEW WHITE HOUSE ACTION

(Mrs. COLLINS of Illinois asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. COLLINS of Illinois. Mr. Speaker, when I turned on my TV this morning and learned that the President has called for the resignation of Arthur Flemming, Chairman of the U.S. Civil Rights Commission, I felt a real sense of outrage.

This action on the part of the President serves to further reveal the insensitivity of this administration's attitude toward civil rights. It is clearly an attempt to wrest control of one of the strongest reporting arms of the Congress. Not only is such action unwise, it threatens the independence of a highly competent nonpartisan unit.

The Commission, as it is currently constituted, had done its job well. It has released positive and progressive recommendations on such topics as day care, voting rights, police brutality, and infinitum.

Obviously this administration is attempting to turn the Commission's focus from serving the just cause of equal rights to serving their political philosophy of turning the wheels of progress back.

It is not enough that the administration is trying to dispose of regulations and weaken laws that will enforce the fair treatment of all American citizens.

It is not enough that the administration has already budget cut agencies to death—thereby rendering their enforcement of antidiscriminatory laws impotent.

It is not enough that if the Congress passes the second round of budget cuts, the U.S. Civil Rights Commission will have to RIF 20 or 30 staffers, which essentially means that they will no longer have the manpower to conduct investigations and report their findings to the Congress.

This administration keeps adding insult to injury. It has set out to maim and to eventually destroy a Commission whose work does not fit their ideology. In this instance, the Nation would be better served if President Reagan would just hop on his Trojan horse and ride off into the sunset.

REDRESSING OUR INADEQUACY IN MANNED BOMBER CAPABILITY

(Mr. LUNGREN asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. LUNGREN. Mr. Speaker, after reading the newspaper today, I thought I might discuss this morning the subject of Tiponomics, but because we have the extremely important subject of defense on our schedule, I will leave that for another time.

Today this body will have the opportunity to redress the folly of the past few years that will leave open a window of vulnerability in our defense throughout the 1980's.

The best way to address this problem is to initiate production of the new B-1 manned strategic bomber. Between today and the eventual deployment of the MX missile in the late 1980's, we must be protected.

The Soviets have deployed three new generations of intercontinental and submarine-launched ballistic missiles during the last decade. They have introduced the Backfire bomber as part of their air and naval forces, and have thus far produced about 200 of these intercontinental aircraft.

In comparison, we have spent $7 billion since 1962 on development of a manned bomber to penetrate Soviet defenses, and all we have to show for this investment are four B-1 research and development craft and a B-70 museum piece.

Mr. Speaker, we need the B-1, and we need it as soon as possible. I ask my colleagues to remember this today as we debate the defense appropriations bill for fiscal year 1982.

COURT OF APPEALS FOR THE FEDERAL CIRCUIT ACT OF 1981

The SPEAKER. Pursuant to the provisions of clause 5 of rule I, the unfinished business is the question of suspending the rules and passing the bill, H.R. 4482, as amended.

The Clerk read the title of the bill.

The SPEAKER. The question is on the motion offered by the gentleman from Wisconsin (Mr. KASTENMEIER) that the House suspend the rules and pass the bill, H.R. 4482, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 321, nays 76, not voting 36, as follows:

□ 1045

The Clerk announced the following pairs:

On this vote:

Mr. Breaux and Mr. Mattox for, with Mr. McDonald against.

Until further notice:

Mr. Danielson with Mr. Duncan.

Mr. Ford of Michigan with Mr. Vander Jagt.

Mr. Leland with Mr. Rhodes.

Mr. Wright with Mr. Forsythe.

Mr. Dellums with Mr. Martin of New York.

Mr. Ford of Tennessee with Mr. Dougherty.

Mrs. Chisholm with Mr. Hagedorn.

Mr. Gray with Mr. Dornan of California.

Mr. Neal with Mr. McCloskey.

Mr. Traxler with Mr. Goldwater.

Mr. Rangel with Mr. Pritchard.

Mr. Santini with Mr. Michel.

Mr. Bedell with Mr. Madigan.

Mr. Gramm with Mr. Pashayan.

Mr. Beard with Mr. Lowery of California.

Mr. Daschle with Mr. Johnston.

Messrs. LEWIS, FOUNTAIN, and EVANS of Georgia changed their vote from "yea" to "nay."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 3454, INTELLIGENCE AUTHORIZATION ACT FOR FISCAL YEAR 1982

Mr. BOLAND. Mr. Speaker, I call up the conference report on the bill (H.R. 3454) to authorize appropriations for fiscal year 1982 for the intelligence and intelligence-related activities of the U.S. Government, for the intelligence community staff, and for the Central Intelligence Agency retirement and disability system, to authorize supplemental appropriations for fiscal year 1981 for the intelligence and intelligence-related activities of the U.S. Government, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. MURTHA). Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of November 16, 1981.)

Mr. BOLAND (during the reading). Mr. Speaker, I ask unanimous consent that the statement be considered as read.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The SPEAKER pro tempore. The gentleman from Massachusetts (Mr. BOLAND) will be recognized for 30 minutes, and the gentleman from Virginia (Mr. ROBINSON) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report which the House conferees bring back on the intelligence authorization bill resolves the differences between the two Houses on all those budgetary authorization issues concerning the intelligence and intelligence-related activities of the Government. Agreements on budgetary figures are fully incorporated into the Defense Authorization Act for fiscal year 1982 as well as this bill. The House conferees, from both the Intelligence and Armed Services Committees, worked closely to insure complete congruence between the two bills.

Mr. Speaker, I would like to summarize briefly the organization of the conference report.

Title I provides for the bulk of our intelligence and intelligence-related activities. Funds and program details are in the classified schedule of authorizations and the annex to the report. One exception is the authorization for the counterterrorism program of the FBI which is unclassified. The conference report provides $11.9 million for this function.

Title I also contains a provision insuring that funds may not be spent for any intelligence activity unless it is authorized or unless both the authorizing and appropriations committees have been notified in advance of intent to provide funds by transfer.

Title II provides for the intelligence community staff, whose function is to assist the Director of Central Intelligence with his responsibilities for overall coordination of intelligence and preparation of the budget. An authorization of 220 personnel and of $13.6 million is recommended which is 25 fewer personnel and $1.8 million less than requested. The reduction is in the area of external contracts and in consequence of an ongoing reorganization and consolidation of the staff.

Title III provides authorization of $84.6 million for the Central Intelligence Agency retirement and disability system. This is a program established by Congress in 1964 to provide for those CIA personnel who perform hazardous duties or are in special situations, usually abroad, which may limit the length of their careers.

Title IV authorizes additional intelligence and intelligence-related expenditures in fiscal year 1981. The details of this supplemental authorization are found in the classified schedule of authorizations and in the accompanying classified annex to the committee's report.

Title V contains legislative provisions relating to the CIA. Section 501 authorizes payment of allowances and benefits comparable to those provided the Foreign Service and for special intelligence purposes and provides for special travel costs. Section 502 grants authority for designated personnel to

carry firearms in performing specified duties. Section 503 prohibits misuse of the Agency name, initials, or seal. Section 504 authorizes payments to members of intelligence advisory committees at the daily rate of a GS–18.

Title VI contains legislative provisions related to the National Security Agency. Section 601 provides for comparability of benefits and allowances with the Foreign Service and CIA. Section 602 provides for language training and linguist reserve programs. Section 603 establishes a Senior Cryptologic Executive Service similar to the Senior Executive Service, makes special provision for research grants and procurement and prohibits misuse of the Agency name, initials, and seal.

Title VII provides for a senior executive service and merit pay system for the Defense Intelligence Agency.

Title VIII provides additional conforming personnel authorities applicable to several intelligence agencies regarding veterans preferences, annual leave, early retirement, and increases in employee benefits. It also provides that the conference report's authorization of appropriation does not constitute authority to engage in intelligence activities not otherwise authorized by the Constitution or law.

Mr. Speaker, I wish to note that this conference report represents the combined input on the House side, not only of the Permanent Select Committee on Intelligence and the Committee on Armed Services, but also of the Committee on Post Office and Civil Service and the Committee on the Judiciary. Both of these latter committees had concerns about Senate amendments affecting matters within their jurisdiction. By dint of close consultation and accommodation, the House conferees were able to resolve these concerns and reaffirm the jurisdictional perogatives of these committees. As long as I remain chairman of the Permanent Select Committee on Intelligence, the committee will attempt to work closely with the other committees of the House with which it shares jurisdiction. I believe that such was the clear intent of the House in establishing the Intelligence Committee and it is the only way to achieve sensible and coherent legislative results.

Mr. Speaker, I believe that this conference report is a good one. It provides the administration with almost everything that it asked for. It contains important legislative provisions to reduce inequities in benefits and other matters.

Mr. Speaker, I urge adoption of the conference report on H.R. 3454.

Mr. ROBINSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. ROBINSON. Mr. Speaker, I rise in support of the conference report on H.R. 3454.

This bill would authorize appropriations for intelligence activities of the United States and is the result of many months of exhaustive examination of the intelligence needs of our Government.

The chairman has summarized the eight titles of the bill and I will not repeat that summary. I have participated in consideration of every item in the conference report and I fully support it. I believe it is a good conference report and urge its adoption.

The conference recommendation is a compromise which I believe represents a nearly optimum reconciliation of the two authorization bills. Moreover, it provides for real growth in intelligence programs over last year's levels and supports those intelligence programs and activities essential to our national security and foreign policy. I want to emphasize that the programs authorized by the bill are very close to the requests of the President.

Intelligence continues to receive the strong bipartisan support it needs and deserves. I am particularly pleased that this bill provides for acquisition of a new classified technical collection capability which I believe will be of great benefit to our country.

Details of all of these matters are contained in the classified Schedule of Authorization and a classified annex to the joint explanatory statement. These documents are available for review by Members in the committee offices in the Capitol.

Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. McCLORY).

Mr. McCLORY. Mr. Speaker, I rise in support of the conference report on H.R. 3454, the Intelligence Authorization Act for fiscal year 1982.

The conferees have reached a strong consensus as embodied in the report now before the House. And, it was no small effort to do so. After all, due to the nature of the legislation, the committee members have an increased responsibility in scrutinizing the programs which are being authorized. With almost all matters under consideration being of a classified nature, the extensive meetings which took place during the legislative process on H.R. 3454 must necessarily have been conducted in secret—without the public scrutiny which normally is present, and helpful. With this in mind, I believe that the committee has carried out its responsibilities to the fullest.

Some aspects of H.R. 3454 can be discussed in this open forum, and I would like to draw attention to one for which I was named as a conferee as ranking minority member of the Judiciary Committee:

The Senate amendment contained a provision which would have established new substantive criminal proscriptions in title 18 of the United States Code. The provision would have made it a crime to kill or attempt to kill CIA personnel acting in the line of duty, intelligence defectors, or certain foreign visitors. The conferees, while agreeing that this provision has clear merit, decided to defer action until hearings could be conducted in the House on the provision embodied in a separate piece of legislation. Indeed, the gentleman from Massachusetts (Mr. BOLAND) just last Thursday introduced H.R. 4940 addressing this very matter, and the bill has been referred to the Judiciary Committee. It is my sincere hope, that the gentleman from New Jersey (Mr. RODINO) and the gentleman from California (Mr. EDWARDS) will share my views on this, so that this legislation will be scheduled for early consideration by the Judiciary Committee.

Mr. Speaker, I ask my colleagues to support this very vital piece of legislation.

Mr. ROBINSON. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Speaker, as a member of the permanent Select Committee on Intelligence and one of the conferees on this bill, I would just like to rise in strong support of the conference report and associate myself with the words of the chairman, the gentleman from Massachusetts (Mr. BOLAND), and the words of our ranking minority member, the gentleman from Virginia (Mr. ROBINSON).

Mrs. SCHROEDER. Mr. Speaker, the conference report on the intelligence authorization bill provides for the establishment of personnel systems comparable to the Senior Executive Service at the Defense Intelligence Agency (DIA) and at the National Security Agency (NSA). For DIA, merit pay is also provided.

Merit pay and the Senior Executive Service were both products of the Civil Service Reform Act of 1978. For the most part, the intelligence agencies of Government were excluded from coverage under the Civil Service Reform Act because they objected to oversight of the Office of Personnel Management. The provisions in this conference report allow these agencies to set up their own independent systems, subject to the same statutory limitations as apply to the rest of the Government, but without the danger of interference from OPM. Two years ago, we did the same thing for the General Accounting Office.

Both merit pay and the Senior Executive Service have faced enormous problems in their short lives. Some of the problems stem from the basic concept, but most are caused by external factors, such as pay caps, limitations on bonuses, and poor implementation

by OPM. I sincerely hope that DIA and NSA can do better with the performance-based personnel systems established by the Civil Service Reform Act.

Mr. BOLAND. Mr. Speaker, I have no further requests for time.

Mr. ROBINSON. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. BOLAND. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WEISS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently, a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 379, nays 22, not voting 32, as follows:

□ 1100

The Clerk announced the following pairs:

On this vote:

Mr. Young of Missouri for, with Mr. Leland against.

Mr. Dan Daniel for, with Mrs. Chisholm against.

Until further notice:

Mr. AuCoin with Mr. Vander Jagt.

Mr. McDonald with Mr. Rhodes.

Mr. Ford of Michigan with Mr. Dornan of California.

Mr. Santini with Mr. Beard.

Mr. Neal with Mr. Ritter.

Mr. Breaux with Mr. Pritchard.

Mr. Mazzoli with Mr. Dougherty.

Mr. Mattox with Mr. McCloskey.

Mr. Danielson with Mr. Martin of New York.

Mr. Aspin with Mr. Duncan.

Mr. Gray with Mr. Forsythe.

Mr. Bedell with Mr. Goldwater.

Mr. Madigan with Mr. Hagedorn.

Mr. RODINO changed his vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

□ 1115

PERMISSION FOR COMMITTEE ON ENERGY AND COMMERCE TO SIT THIS AFTERNOON AT 2 O'CLOCK P.M. AND TOMORROW AT 2 O'CLOCK P.M. UNDER 5-MINUTE RULE

Mr. SHARP. Mr. Speaker, I ask unanimous consent that the Committee on Energy and Commerce be allowed to sit this afternoon at 2 o'clock and tomorrow afternoon at 2 o'clock if the House should be under the 5-minute rule.

The SPEAKER pro tempore (Mr. FUQUA). Is there objection to the request of the gentleman from Indiana?

There was no objection.

CONFERENCE REPORT ON H.R. 4522, DISTRICT OF COLUMBIA APPROPRIATIONS, 1982

Mr. DIXON. Mr. Speaker, I call up the conference report on the bill (H.R. 4522) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1982, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Pursuant to the rule, the conference report is considered as having been read.

(For conference report and statement, see proceedings of the House of November 12, 1981.)

The SPEAKER pro tempore. The gentleman from California (Mr.

DIXON) will be recognized for 30 minutes, and the gentleman from Pennsylvania (Mr. COUGHLIN) will be recognized for 30 minutes.

The Chair now recognizes the gentleman from California (Mr. DIXON).

GENERAL LEAVE

Mr. DIXON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. DIXON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, today we bring to the House the conference agreement on the District of Columbia appropriation bill for fiscal year 1982. This bill was passed by the House on September 22 and by the Senate on October 30. The joint conference committee met last Thursday, November 12, and completed action on the 42 Senate amendments to the bill and filed the conference report that evening.

COMPARISON WITH PRESIDENT'S BUDGET AND BUDGET RESOLUTION

Let me point out at the very beginning that this conference agreement is $13 million below the President's amended budget for fiscal year 1982, and $13 million below the allocations for budget authority and outlays established under section 302 of the Budget Act. The House-passed bill was $50 million under the budget and the section 302 allocations.

FEDERAL FUNDS

The Federal payment agreed upon by the conferees totals $336.6 million, the same as the budget request and the Senate proposal, but $36.6 million in the Federal payment was enacted too late for consideration of the appropriation request by the House, resulting in the conference agreement being above the House level. The House agreed to the additional $36.6 million Federal payment in conference to meet mandatory costs of the District government—$21.1 million for cost-of-living salary increases for District employees, and $15.5 million to fund costs associated with the Retirement Reform Act of 1979.

Aside from the Federal payment, there were no differences in the House and Senate levels in the other categories of Federal funds for the District government. These Federal funds total $557,170,000 and reflect a reduction of $13 million below the budget estimates and, as I mentioned a moment ago, $36.6 million above the House allowance.

DISTRICT FUNDS

Appropriations from District funds total $1.9 billion, the same as the budget request and the Senate allowance, but $36.6 million above the House allowance. This increase above the House allowance covers the cost-of-living salary increase and funding for the retirement system. Of the $1.9 billion total, $1.6 billion is for operating expenses, $212 million is for the city's construction program, and $107 million is for the enterprise funds.

SIZE OF POLICE FORCE

Mr. Speaker, as many of our colleagues will recall the House bill included funding for 3,800 police officers. The Senate provided funding for 3,800. The conferees agreed to accept the House figure of 3,800 uniformed officers and have provided the increased funding to keep the strength of the police force at that level for the balance of fiscal year 1982. The Mayor has made a commitment to hire at least 200 police officers and bring the police force up to 3,800 by February 1, 1982. Language is included in the conference report directing the Mayor to bring the police strength up to 3,800 officers by March 31, 1982, and to maintain the force at that level for the balance of fiscal year 1982.

LOTTERY BOARD

Another important issue in conference was the lottery and Charitable Games Control Board. The conferees were very cautious in their approach to the District's $628,000 request for this Board, which was established as a result of a local initiative approved by the voters of the city. The conferees were sensitive to the need for restrictions in carrying out this program, and language is included in the bill, and will be considered in the motion for amendment No. 11, prohibiting advertising on public transportation, at stations, and at stops. Bill language is also included prohibiting these activities on the Federal enclave and in certain other areas of the city. In addition to requiring the District of Columbia auditor to conduct a comprehensive audit annually, we have also directed the Board to submit an annual report on its activities. I firmly believe that in funding this Board and placing this language in the bill, the Congress is moving in the proper direction in its efforts to balance the rights of local residents granted under the home rule legislation passed by this body in 1973, and at the same time address the concerns which are inherent in the District being the Nation's Capital.

I want to take this opportunity to thank the two members of our subcommittee who are most responsible for having this language placed in the bill; the gentleman from Pennsylvania (Mr. COUGHLIN), and the gentleman from Illinois (Mr. PORTER). Although all of the subcommittee members were very much interested in this program, these two gentlemen made a special effort to insure that this language would be carried in the bill.

HOUSING

For the Department of Housing and Community Development, the conferees have approved $2 million to cover the expenses of issuing $100 million in single-family mortgage revenue bonds to assist in making financing available to low- and moderate-income residents of the District. Proceeds from the sale of these tax-exempt bonds will provide mortgage funding for owner-occupied housing, including single-family dwellings, condominiums, and tenant-sponsored cooperatives. These funds are vital to the city's housing program.

EDUCATION AND HUMAN SUPPORT SERVICES

For the public education system, the conference action provides $378 million, including $253.8 million for the public school system and $784,100 for the Commission on the Arts and Humanities.

In the area of human support services a total of $397.3 million will be available. This includes $286.3 million for the Department of Human Services which provides funding for the District's medicaid program as well as many other programs that benefit local residents.

PAY COSTS

Mr. Speaker, a total of $36.3 million is included to cover increased pay costs for District employees. Let me mention at this point that the pay rates for 80 percent of all District employees will be determined by collective bargaining which is now underway.

GENERAL PROVISIONS

The conferees have also agreed to authorize the Mayor, under amendment No. 42, to set the salary of the city administrator at a rate not to exceed the maximum statutory rate established for level IV of the Federal Executive Schedule under 5 U.S.C. 5315, and language in the bill provides that this salary may be payable to the city administrator during fiscal year 1982. We have also included language authorizing the Mayor to set the per diem rate for board members of the Redevelopment Land Agency consistent with his authority to set these rates for members of other boards and commissions of the District government.

Language is included in the bill establishing the ceiling for full-time employment at 32,950 personnel. This reflects a reduction of 4,936 or 13-percent below the level 2 years ago, and very clearly demonstrates the commitment District officials have made to streamline their operations and improve their financial situation.

At this point in the RECORD, Mr. Speaker, I will insert a tabulation summarizing the conference action.

The table referred to follows:

DISTRICT OF COLUMBIA APPROPRIATION BILL, 1982 (H.R. 4522)—CONFERENCE SUMMARY

Item	New budget (obligational) authority, fiscal year 1981	Budget estimates of new (obligational) authority, fiscal year 1982	New budget (obligational) authority, House bill	New budget (obligational) authority, Senate bill	New budget (obligational) authority, Conference	Conference action compared with—

Mr. Speaker, this is a good conference report. There was give and take by both sides—by the House conferees and by the Senate conferees—and the conference agreement we bring to the House today is one that we believe should meet the many demands placed on the District of Columbia government by its residents and by others.

Mr. Speaker, I reserve the balance of my time.

Mr. WALKER. Mr. Speaker, will the gentleman yield?

Mr. DIXON. Yes; I will be glad to yield to the gentleman from Pennsylvania.

Mr. WALKER. I thank the gentleman for yielding.

I have a question on the pay cap issue for the city administrator.

As I understand it, the effect of what is in the technical amendment in disagreement is that we would lift the pay cap for the city administrator and this would enable the Mayor to raise his salary from the current $52,750 to $64,300 and that this would be the only one of 49,000 employees to be exempted and that his salary would, therefore, exceed that of Members of Congress and it would be my understanding that that would also exceed the level that we are paying top administrators throughout the Federal Government.

Mr. DIXON. Mr. Speaker, the gentleman from Pennsylvania (Mr. WALKER) is absolutely correct, but there is a good rationale for our action. There are several chief administrative officers of municipalities in the immediate jurisdiction whose pay exceeds that of Members of Congress as well as the top pay of senior Federal employees.

The issue is whether a good city administrator can be attracted and retained in this community at the low level of compensation established for the position when compared to the salary other top city administrators are getting around this country.

I do not think it is any secret that in order to attract competent and capable people in the city of Washington, D.C., or in any other city, you have to pay a competitive salary. If you look at the salary for chief administrative officers in adjacent communities you will find that the average is around $65,000. In fact in two of those jurisdictions the salary is $70,000 and in a third one the pay is $68,750. It is no secret that this city administrator, and let me say that I believe he is a very competent city administrator, has had three other job offers.

It seems to me that in order to have a good city administrator here in the Nation's Capital and to maintain the high level of efficiency expected by this body and by others, the District government must be competitive as far as salary is concerned.

Mr. WALKER. Mr. Speaker, will the gentleman yield further?

Mr. DIXON. Yes; I will be happy to yield to the gentleman.

Mr. WALKER. I thank the gentleman for yielding.

The problem that I have with this is that just the other day we approved a continuing resolution in this House that contained a pay cap in it for members of the Federal bureaucracy, some of them highly talented, some of them who received job offers that far exceed what they can get in the Federal Government; but we have made a specific determination in this Congress that for a variety of reasons we are going to maintain that kind of a pay cap in the Federal Government and suffer whatever consequences may flow from keeping people at salary levels somewhere under $60,000 a year.

It seems to me that we refute what we have done in that continuing resolution over the last couple years if we, indeed, in this appropriations bill lift that pay cap for this particular employee.

I highly question whether or not that is an appropriate action to be taking when we are sending precisely opposite signals to other highly talented people within the Federal Government.

Mr. DIXON. I think the gentleman from Pennsylvania makes my point exactly.

First of all, I have some real serious questions as to whether the Congress should continue to keep District employees under the pay cap, especially since the city now has its own merit personnel system. At the time District employees were placed under the pay cap back in fiscal year 1977, they were part of the Federal personnel system according to the definition of a Federal employee carried in title V of the United States Code. At the present time they are not included in that definition. And yes, it is true that a lot of people are leaving the Federal Government for higher paying jobs outside; but the point is that if we, in fact, are to maintain a high level of efficiency in the District government, we have to pay a wage comparable to that of other jurisdictions.

And while the gentleman is absolutely correct when he says that many people are contemplating leaving the Federal Government, the District of Columbia government does not happen to be the Federal Government. I believe we should provide as much assistance as necessary to the District government to insure that it will have competent administration, and in order to do that, we have to pay a wage that is fair and competitive.

□ 1130

Mr. WALKER. If the gentleman will yield further, my point, though, is that Congress ends up sending very mixed signals out of this. Within the same week, we are going to send two different signals.

Now, the gentleman may be perfectly right that the District of Columbia government should have the ability to make these decisions without coming to Congress for them. I think we could have a discussion of that particular proposal. However, the fact is that they do now have to come to Congress for it, and Congress in this instance is going to say that we are going to be willing to violate the pay cap in order to pay this one employee a level even higher than Members of Congress.

I just suggest that that is not something that we want to do within the same week in which we have put a pay cap on all the rest of the Federal employees and decided that that was a proper and appropriate action to take.

Mr. DIXON. Let me say that I understand how the pay of Members of Congress may tend to excite some people here, but I suggest to you that the salary we pay the chief administrative officer of the District of Columbia has nothing to do with the salaries of Members of Congress. That is an independent issue entirely. As I indicated earlier, I think there are serious reservations as to whether the District, which now has its own merit personnel system, should be included in the pay cap. But certainly as it relates to our demand that the city be run properly, we have to be able to attract somebody who is capable, and the somebody who can do that in this particular case now has three other job offers. I think that when you look at all the other people in this area who receive a higher salary than Members of Congress, that argument is not logical.

Mr. WALKER. I thank the gentleman for yielding.

Mr. COUGHLIN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this may be the only appropriations bill that the President will sign; it is at the September budget request level.

The conference report approves a $1.9 billion budget for the District of Columbia. Included in that amount is a $336 million Federal payment. This is the full authorized amount and the highest amount ever provided.

The House originally approved a Federal payment of $300 million. This was the full authorized amount when the committee marked up. A subsequent $36 million increase in authorization was included by the other body and agreed to by House conferees.

Although the District enjoys limited home rule, article I, section 8 of the U.S. Constitution still provides Congress some control over such District as may become the seat of the Government of the United States. Subcommittee Chairmen JULIAN DIXON and ALFONSE D'AMATO have done an excellent job of balancing competing interests and producing a conference report all may support.

I note that the conference report directs the hiring of enough uniformed police officers to bring the force up to the level of 3,880 by March 31, 1982. This will not be done by lottery.

Contained in the conference report are funds for a lottery and charitable games control board. This will allow gambling to go forward in D.C. The conferees have, however, placed restrictions on where gambling may take place and where it may be advertised. This answers my principal objection that the Federal City not be degraded with offensive lottery signs.

The conference report contains the full budget request for contributions to police and fire and teachers retirement funds.

Approval is given to changing the submission date for the District of Columbia budget from February 1, 1982, to April 15, 1982. This is a one-time experiment to see if the Mayor/City Council/Congress budget cycle may be improved with more accurate data.

Mr. Speaker, I urge adoption of the conference report.

Mr. FRENZEL. Mr. Speaker, will the gentleman yield?

Mr. COUGHLIN. I yield to the gentleman from Minnesota.

Mr. FRENZEL. Can the gentleman tell us what the $36 million added by the Senate is? Is it a specific item or is it a variety of items?

Mr. COUGHLIN. It is a variety of items that were included by the House authorizing committee subsequent to the passage of the bill by the House in March.

Mr. FRENZEL. And did the House accept the total amount of the Senate bill?

Mr. COUGHLIN. The House accepted the total amount of the Senate bill, which was the amount authorized and the amount requested by the administration.

Mr. FRENZEL. I thank the gentleman.

Mr. DIXON. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. COUGHLIN. Mr. Speaker, I yield 5 minutes to the distinguished gentleman from Illinois (Mr. PORTER).

Mr. PORTER. Mr. Speaker, I rise in support of the conference report on appropriations for the District of Columbia.

One matter of particular interest in the report is funding for the District's Lottery and Charitable Games Control Board. The conferees agreed on full funding of $628,000 for this activitity for fiscal year 1982, accepting the Senate's position and relinquishing that of the House which had provided no funds for the Board.

Agreement was predicated upon protection of the Federal enclave, adjacent public buildings, and District historic areas—places visited by millions of Americans and hundred of thousands of foreign visitors each year—from the selling or advertising of D.C. lottery or number games tickets. Conferees agreed that as a matter of home rule the District might pursue these methods of raising revenue if they deemed it wise policy to do so, but that there existed a Federal interest deserving protection from such activities.

I, personally, Mr. Speaker, continue to feel that this is a unworthy activity for Government to sponsor, an invitation to fraud and organized crime infiltration, and a regressive tax on those least able to afford it. Nevertheless, I agree that these policy questions are ones for the District's elected representatives and not for the Congress, provided they do not impinge on the federal interest.

Language has been included in the Report to insure this, and I and the committee will carefully monitor the District's observance of it.

Also addressed by Report language is the long-overdue comprehensive plan for the District and, again, the committee will carefully monitor progress in this important area.

Finally, the report, as agreed to, fully approves the substance of the District's budget and fully funds the Federal payment. As such, it provides the District administration with a firm foundation from which to address its serious financial problems that I have detailed to the House on numerous occasions. We will watch progress in this area carefully as well. The Federal interest in sound and well-managed District finances is an obvious and abiding one.

Mr. Speaker, I commend the fine work of my chairman, the gentleman from California, and my ranking member, the gentleman from Pennsylvania, the other members of the committee, and the staff.

Mr. COUGHLIN. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. DIXON. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. FRENZEL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 228, nays 174, not voting 31, as follows:

The Clerk announced the following pairs:

On this vote:

Mr. Richmond for, with Mr. McDonald against.

Mr. Hawkins for, with Mr. Breaux against.

Mrs. Chisholm for, with Mr. Dornan of California against.

Mr. Leland for, with Mr. Forsythe against.

Mr. Green for, with Mr. Wampler against.

Mr. Pritchard for, with Mr. Duncan against.

Until further notice:

Mr. Ford of Michigan with Mr. Dougherty.

Mr. Shelby with Mr. Ritter.

Mr. Weaver with Mr. Rhodes.

Mr. Foley with Mr. Madigan.

Mr. Mattox with Mr. Johnston.

Mr. Bedell with Mr. Martin of New York.

Mr. Mazzoli with Mr. McCloskey.

Mr. Deckard with Mr. Goldwater.

Mr. Beard with Mr. Hagedorn.

Mr. WHITLEY, Mr. ROTH, Mrs. ROUKEMA, Mr. MOORE and Mr.

BROWN of Ohio changed their votes from "yea" to "nay."

Mr. GINGRICH and Mr. GONZALEZ changed their votes from "nay" to "yea."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will designate the first amendment in disagreement.

Mr. DIXON. Mr. Speaker, the House conferees plan to recede and concur in Senate amendments numbered 4, 5, 30, and 41. I know of no controversy over these amendments.

Mr. Speaker, I ask unanimous consent that Senate amendments 4, 5, 30, and 41 be considered en bloc and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The SPEAKER pro tempore. The Clerk will designate the amendments in disagreement.

Senate amendment No. 4 reads as follows:

Senate amendment No. 4: Page 3, line 11, strike out "Columbia" and insert "Columbia, and $2,500 for the City Administrator".

Senate amendment No. 5 reads as follows:

Senate amendment No. 5: Page 4, line 2, after "That" insert "notwithstanding any other provision of law,".

Senate amendment No. 30 reads as follows:

Senate amendment No. 30: Page 19, line 5, strike out "February 1" and insert "April 15".

Senate amendment No. 41 reads as follows:

Senate amendment No. 41: Page 21, line 9, strike out "Virginia." and insert "Virginia, until the appropriate State agency has issued the required permits.".

MOTION OFFERED BY MR. DIXON

Mr. DIXON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DIXON moves that the House recede from its disagreement to the amendments of the Senate numbered 4, 5, 30 and 41 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will designate the next amendment in disagreement.

The amendment reads as follows:

Senate amendment No. 7: Page 4, line 6, strike out "$1,035,600" and insert "not to exceed $674,300".

MOTION OFFERED BY MR. DIXON

Mr. DIXON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DIXON moves that the House recede from its disagreement to the amendment of the Senate numbered 7 and concur therein with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following: "not to exceed $1,035,600".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will designate the next amendment in disagreement.

The amendment reads as follows:

Senate amendment No. 11: Page 5, line 11, after "payments" insert ": *Provided further*, That the District of Columbia will establish a special fund to assure that any moneys available to the Lottery and Charitable Games Control Board shall be derived from District of Columbia revenues".

MOTION OFFERED BY MR. DIXON

Mr. DIXON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DIXON moves that the House recede from its disagreement to the amendment of the Senate numbered 11 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert the following: ": *Provided further*, That the District of Columbia will establish a special fund to assure that any moneys available to the Lottery and Charitable Games Control Board shall be derived from non-Federal District of Columbia revenues.

"LOTTERY AND CHARITABLE GAMES ENTERPRISE FUND

"For establishment of the Lottery and Charitable Games Enterprise Fund for the purpose of implementing D.C. Law 3-172 and for the budgeting and accounting of all revenues and expenses of the Lottery and Charitable Games Control Board, $628,000, to be derived from non-Federal District of Columbia revenues: *Provided*, That the District of Columbia will identify the source of funding for this appropriation from its own locally generated revenues when the Enterprise Fund is established and that no revenues from Federal sources shall be used to support the operations of the Lottery and Charitable Games Control Board: *Provided further*, That the level of administrative expenses to be incurred by the Board shall be appropriated in the District's General Fund budget as a transfer from locally generated revenues; administrative expenses being defined as all anticipated expenses of the Board for the coming fiscal year excluding moneys necessary for the payment of prizes to the winners of the games specified in D.C. Law 3-172: *Provided further*, That the Board shall have the authority to expend, from revenues generated by its operations, funds necessary for the payments of prizes: *Provided further*, That the annual expenses for prizes and administration of the Board shall not exceed resources available to the Board from appropriated authority or revenues generated by the operations of the Board: *Provided further*, That all revenues received by the Board in excess of the funds used by the Board for prize money in a given month shall be transferred to the General Fund from the Lottery and Charitable Games Enterprise Fund through a general operating transfer, promptly after the first of the month for the preceding month: *Provided further*, That the Board may establish a reserve not to exceed 2 percent of projected annual prize payments to provide for prizes awarded in any month which may exceed the revenue generated during that month: *Provided further*, That the Mayor may approve a change in the reserve limit, as necessary, upon the request of the Board: *Provided further*, That the financial operations of the Board with respect to the amount appropriated for administrative expenses shall be in accordance with all laws, regulations and policies of the District of Columbia government regarding appropriated funds: *Provided further*, That for the fiscal year ending September 30, 1982 and for each fiscal year thereafter, the District of Columbia Auditor shall conduct a comprehensive audit on the financial status of the Fund, including but not limited to all appropriations, revenues and transfers to the Fund, and provide such report to the Mayor, Chairman of the District of Columbia Council, and to the Subcommittees on District of Columbia Appropriations of the House of Representatives and the Senate: *Provided further*, That in addition to current restrictions, advertising on public transportation and at stations and stops is prohibited: *Provided further*, That the advertising, sale, operation, or playing of the lotteries, raffles, bingos, or other games authorized by D.C. Law 3-172 is prohibited on the Federal enclave, and in adjacent public buildings and land controlled by the Shipstead-Luce Act as amended by 53 Stat. 1144, as well as in the Old Georgetown Historic District: *Provided further*, That the Board shall make an annual report to the Subcommittees on District of Columbia Appropriations of the House of Representatives and the Senate at the end of each year detailing the receipts and disbursements of the Board and summarizing measures of regulation and enforcement enacted as well as other information and recommendations deemed of value or which may be requested".

Mr. DIXON (during the reading). Mr. Speaker, I ask unanimous consent that the motion be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will designate the next amendment in disagreement.

The amendment reads as follows:

Senate amendment No. 12: Page 5, line 17, strike out "$363,811,900" and insert "$365,258,900".

MOTION OFFERED BY MR. DIXON

Mr. DIXON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DIXON moves that the House recede from its disagreement to the amendment of the Senate numbered 12 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$366,396,200".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will designate the next amendment in disagreement.

The amendment reads as follows:

Senate amendment No. 22: Page 10, line 7, strike out "$19,625,800" and insert "$34,801,100".

MOTION OFFERED BY MR. DIXON

Mr. DIXON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DIXON moves that the House recede from its disagreement to the amendment of the Senate numbered 22 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$36,279,100".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will designate the next amendment in disagreement.

The amendment reads as follows:

Senate amendment No. 42: Page 21, after line 9, insert:

SEC. 123. Notwithstanding section 422(7) (D.C. Code, sec. 1-67(7)) and (D.C. Code, sec. 5-703(a)) the City Administrator and the board members of the Redevelopment Land Agency shall be paid at a rate established by the Mayor.

MOTION OFFERED BY MR. DIXON

Mr. DIXON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DIXON moves that the House recede from its disagreement to the amendment of the Senate numbered 42 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert the following:

Sec. 123A. (a) Notwithstanding section 422(7) of the District of Columbia Self-Government and Govermental Reorganization Act (D.C. Code 1-242(7)), the City Administrator shall be paid, during any fiscal year, a salary at a rate established by the Mayor, not to exceed the rate established for level IV of the Executive Schedule under section 5315 of title 5, United States Code.

(b) For purposes of applying any provision of law limiting the availability of funds for payment of salary or pay in any fiscal year, the highest rate of pay established by the Mayor under subsection (a) for any position for any period during the last quarter of calendar year 1981 shall be deemed to be the rate of pay payable for that position for September 30, 1981.

(c) Notwithstanding section 4(a) of the District of Columbia Redevelopment Act of 1945 (D.C. Code 5-803(a)), the board members of the Redevelopment Land Agency shall be paid, during any fiscal year, a per diem compensation at a rate established by the Mayor.

□ 1200

PREFERENTIAL MOTION OFFERED BY MR. WALKER

Mr. WALKER. Mr. Speaker, I offer a preferential motion.

The Clerk read as follows:

Mr. WALKER moves that the House recede from its disagreement with the Senate on Senate amendment numbered 42 and concur therein.

Mr. DIXON. Mr. Speaker, I demand a division of the question.

The SPEAKER pro tempore. The question will be divided.

The gentleman from California (Mr. DIXON) is recognized for 30 minutes.

Mr. DIXON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this issue relates to a provision that would allow the Mayor of the District of Columbia to establish the rate of pay for the city administrator who is the chief administrative officer of the city, at a rate not to exceed level IV of the Federal Executive Service salary scale.

The reason we have included this provision in the bill is that in order to maintain a quality city administrator here in the District, the District has to be competitive in setting the salary for that person. I would point out that the average salary in surrounding jurisdictions exceeds $65,000, and at a time when we need highly skilled and qualified people here in the District, to arbitrarily establish a ceiling approximately $50,000 will not allow the District government to retain a person who can provide the high level of competency that is required for the job.

It is no secret, as I indicated before, that the person involved, the current city administrator, has received three higher salary offers to be a city administrator in other parts of the country.

And while we do have a cap on Federal employees, I would point out that the city administrator of the District of Columbia is not a Federal employee, and the salary range we are authorizing and which the mayor cannot exceed when he sets the city administrator's salary level, is not out of line with the average salary that city administrators around this country are receiving.

Mr. Speaker, I ask for an aye vote on the motion to recede, and if the motion carries, I will then offer a preferential motion to concur with an amendment as set forth in the joint explanatory statement of the committee of conference.

The SPEAKER pro tempore. The gentleman from Pennsylvania (Mr. COUGHLIN) is recognized for 30 minutes.

Mr. COUGHLIN. Mr. Speaker, I yield 5 minutes to the gentleman from Pennsylvania (Mr. WALKER).

Mr. WALKER. Mr. Speaker, I thank the gentleman for yielding me this time.

The reason why I have put forth this motion speaks to an issue that I raised during the general debate on the bill, and that issue is the pay cap for the city administrator that would be lifted if we proceeded to adopt this amendment in disagreement.

My problem is that this House has decided on several occasions in recent months to maintain a pay cap on Federal employees. We have made that decision despite the fact that we know there are consequences to be incurred when we cap pay in that manner, and that in some cases we do end up losing talented people who go elsewhere to find higher pay.

However, in this particular case it seems to me that even though that argument can be made about someone who evidently is a talented gentleman in the District of Columbia government, we have to look at the precedents that we have been setting in this House, the precedents are that we are willing to take the consequences of our action to maintain pay caps in order to send a signal to the American people that we are not going to increase salary levels over the next several months as we ask the rest of the American society to make sacrifices.

So, therefore, what we would be doing, if we would allow this amendment to go into place, is that we would be reversing the kinds of things we have previously been saying on other appropriation bills. I think that would be the wrong signal to send. I do not think the merits of the case are as important as what we will be viewed as doing in this House if we vote to lift the pay cap in this one individual instance.

Mr. Speaker, I would hope that the House would agree with me that we should maintain the pay cap and thereby assure that the House position as expressed over the last several months would be maintained.

Mr. COUGHLIN. Mr. Speaker, I yield 5 minutes to the gentleman from Connecticut (Mr. MCKINNEY).

Mr. MCKINNEY. Mr. Speaker, I guess we now move into what is known as the MCKINNEY once-more-into-the-breach speech about the District of Columbia.

I agree with my good friend, the gentleman from Pennsylvania (Mr. WALKER), that this House, either with knowledge and political courage or with no knowledge and a lack of political courage, decided to make the decision to lose most of the upper mid-level Federal employees in this Government, the cost of which, with retraining and with the foulups as we go on to losing these senior executives, is going to be monstrous. That is a decision we made because we run the country, wisely or not.

Most of the Members in this room that in the past 11 years have come to me about the District of Columbia, particularly since home rule, have asked, "Stewart, what is wrong with it?" I have tried to suggest to them that we gave a local government with no experience, a local government whose politicians had come up from the streets, a governmental system that had been so botched by the Congress of the United States over 114 years that it is going to take time to straighten out, just as it took time for Ed Koch to straighten out the problems of New York.

Mr. Speaker, for the first time—and it never happened when we ran the city—the city claims to have a surplus in its operating budget. It is not our city any longer, and the Mayor cannot run the city without qualified help.

I am not even going to talk about the individual involved; what I am going to talk about is the issue. Do we or do we not want to let the Mayor keep in the city the kind of persons that can overcome the impact of hundreds of years of budget deficits which

we in Congress covered over by simply appropriating more money when we ran this city?

Do we want to take the team and break it up? The gentleman involved has interviewed for two other jobs. Do we want to make the District of Columbia start all over again with inexperienced personnel working with one of the most complicated governmental systems in the country, one which we designed? Is that what we really want to do?

Do we have to, in ignorance and in every other way, continually wander into the District of Columbia's governmental affairs and say, "We are going to get you here; we are going to get you there; we are going to get you again and again and again"?

Would it not be nice if somebody in this body turned around and congratulated the District of Columbia for the progress achieved toward balancing its budget? I have been looking at some other budgets, those in Detroit, Atlanta, and others. Would it not be a good idea if we just let the city try to get itself straightened out? Would it not be a better idea if we got out of the city's hair?

I should add that 155 Members of this body were asked by the City Council to go to the Marine barracks last night to meet the people who run the District of Columbia. There was no charge. It was a beautiful Federal building. Those 155 people live within the 6th and 8th wards of the District of Columbia. To my knowledge, very few Members of this body went; yet the entire District government took the time to do that for us. And now today we are going to walk in and say, "Sorry, fellows, we are going to tell you how to run your government." Yet we do not have the courtesy nor the time to even meet with them. The gentleman under discussion, the city administrator, was right there in the receiving line.

Mr. Speaker, I yield back the balance of my time.

Mr. COUGHLIN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, it is with some reluctance that I rise in opposition to the motion offered by my friend and colleague, the gentleman from Pennsylvania (Mr. WALKER).

I think there are at least three things that are very important here. The first is that this is not a Federal employee we are talking about; he is an employee of the District of Columbia government and not of the U.S. Government.

The second is that in many cities in the country the city managers, who are called upon to do the very difficult job of administering a large city, are paid salaries considerably in excess of the salary paid to the manager for the District of Columbia.

Finally, as the distinguished ranking minority member of the authorizing committee has just pointed out, it is absolutely vital, if we are going to have a city that is run properly in our Nation's Capital, that we have the ability to hire and retain the kind of people who can make a success of operating this city. As has also been pointed out, the current manager has two other job offers. The chances are very good that if this motion is approved, we will lose the services of someone whom the city needs at this time.

Mr. Speaker, I yield back the balance of my time.

Mr. DIXON. Mr. Speaker, I urge an aye vote of the motion to recede, and I yield back the balance of my time.

Mr. Speaker, I move the previous question on the motion to recede.

The SPEAKER pro tempore. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER pro tempore. The question is, will the House recede from its disagreement to Senate amendment No. 42?

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. DIXON. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 186, nays 210, answered "present" 1, not voting 36, as follows:

□ 1215

The Clerk announced the following pairs:

On this vote:

Mrs. Chisholm for, with Mr. Breaux against.

Mr. Leland for, with Mr. McDonald against.

Until further notice:

Mr. Mazzoli with Mr. Rhodes.

Mr. Seiberling with Mr. Madigan.

Mr. Ford of Michigan with Mr. Wampler.

Mr. Dingell with Mr. McCloskey.

Mr. Findley with Mr. Dougherty.

Mr. Danielson with Mr. Evans of Delaware.

Mr. Traxler with Mr. Hagedorn.

Mr. Williams of Montana with Mr. Deckard.

Mr. Waxman with Mr. Duncan.

Mr. Santini with Mr. Goldwater.

Mr. Whitten with Mr. Forsythe.

Mr. Roe with Mr. Pritchard.

Mr. Jones of North Carolina with Mr. Martin of New York.

Mr. Mattox with Mr. Dornan of California.

Mr. Bedell with Mr. Johnston.

Mr. DICKINSON and Mr. LENT changed their votes from "nay" to "yea."

So the motion to recede was rejected.

The result of the vote was announced as above recorded.

MOTION OFFERED BY MR. WALKER

Mr. WALKER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. WALKER moves that the House insist on its disagreement to the amendment of the Senate numbered 24.

The motion was agreed to.

The SPEAKER pro tempore. Without objection, a motion to reconsider the votes by which action was taken on the several motions was laid on the table.

There was no objection.

□ 1230

WAIVING CERTAIN POINTS OF ORDER AGAINST H.R. 4995, DEPARTMENT OF DEFENSE APPROPRIATION ACT, 1982

Mr. DERRICK. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 275 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 275

Resolved, That during the consideration of the bill (H.R. 4995) making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes, all points of order against the following provisions in said bill for failure to comply with the provisions of clauses 2 and 6 of rule XXI are hereby waived: beginning on page 7, line 3 through page 16, line 21; beginning on page 18, line 12 through page 21, line 14; beginning on page 22, line 6 through page 25, line 10; beginning on page 26, line 3 through page 28, line 20; beginning on page 40, line 23 through page 43, line 9; beginning on page 46, line 21 through page 47, line 12; beginning on page 67, lines 9 through 24; beginning on page 68, lines 1 through 8; and beginning on page 68, line 16 through page 69, line 4.

The SPEAKER pro tempore (Mr. HOWARD). The gentleman from South Carolina (Mr. DERRICK) is recognized for 1 hour.

Mr. DERRICK. Mr. Speaker, for purposes of debate only, I yield 30 minutes to the gentleman from Mississippi (Mr. LOTT), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 275 is a rule waiving certain points of order against the bill, H.R. 4995, making appropriations for the Department of Defense for fiscal year 1982, and for other purposes.

The first waiver of points of order in this rule, Mr. Speaker, is a waiver of clause 2 of rule 21. Clause 2 of rule 21 prohibits both unauthorized appropriations and legislation in appropriations. The waiver applies only to sections of the bill that are specified in the rule and are necessary due to the fact that the defense authorization bill, S. 815, has not yet been enacted into law even though the House adopted the conference report yesterday. In addition, there are a few provisions of the bill, principally found in the general provisions of title 7, that technically constitute legislation and thus require a waiver, such as the provision in section 787 which permits the Department of Defense to lease no more than six aircraft as suitable replacements for C-140 aircraft.

The second waiver of points of order is a waiver of clause 6 of rule 21 which prohibits reappropriations of unexpended balances of appropriations. There are provisions in the bill, for example in title 4 procurement, where unobligated balances are, by transfer, to be reappropriated for Navy shipbuilding and conversion and for Air Force procurement.

The waivers of points of order contained in the rule will simply allow the House to proceed in an orderly fashion to consider this important appropriations bill for fiscal year 1982 into which we are already in the second month.

Mr. Speaker, H.R. 4995 appropriates $196.7 billion in new obligational authority and provides $73.9 million through transfer for the Department of Defense and for other purposes, for fiscal year 1982. This figure represents the largest sum ever included in one bill for military purposes in the history of our country. The committee's recommendation is $4 billion below the administration's revised defense budget of October 2 but represents a $37 billion increase over the fiscal year 1981 defense appropriation bill.

Mr. Speaker, the defense spending recommendations in this bill reflect our Nation's commitment to a greater national security. I urge my colleagues to adopt the rule in order that we may directly proceed to the consideration of H.R. 4995, the defense appropriations bill for fiscal year 1982.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of this rule which will permit the consideration of the defense appropriation bill for fiscal year 1982. This is, or course, a tremendously important piece of legislation, funding our Nation's defenses at a level of over $196 billion. I only wish this House had been able to complete consideration of the bill at a much earlier date.

Although appropriation bills do not ordinarily require special rules, this bill was brought before the Committee on Rules because of the necessity for waivers of points of order against numerous portions of the bill. Specifically, the rule before us would waive clause 2 of rule 21, dealing with the absence of authorizing legislation and with legislation in appropriation bills. It also would waive clause 6 of rule 21, which prohibits the reappropriation of unspent balances from previous appropriations. I particularly regret that we are put in a position of having to waive points of order based upon the lack of an authorization bill. However, at this time, that is the situation in which we find ourselves, and the point of order must be waived if the bill is to be considered.

Except for the fact that points of order will be waived, the bill will otherwise be considered in the Committee of the Whole under normal procedures for general appropriation bills. The rule before you does nothing to preclude amendments which would ordinarily be in order.

Mr. Speaker, I am aware of no controversy surrounding this rule, and I urge its adoption without lengthy debate.

Mr. LEVITAS. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield to the gentleman from Georgia.

Mr. LEVITAS. Mr. Speaker, would the gentleman explain about the

waiver about legislating in an appropriations bill?

Would that also apply to amendments which might be offered to the bill that may contain legislative language?

Mr. LOTT. A waiver would not be applicable to an amendment that needed the waiver, even though a waiver is applicable to the bill itself.

So the answer is "No" to the gentleman's question.

Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. DERRICK. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. COLEMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 398, nays 4, not voting 31, as follows:

Mr. Heftel with Mr. Hagedorn.
Mr. Savage with Mr. Goodling.

Mr. EVANS of Georgia changed his vote from "yea" to "nay."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 3413, DEPARTMENT OF ENERGY NATIONAL SECURITY AND MILITARY APPLICATIONS OF NUCLEAR ENERGY AUTHORIZATION ACT OF 1982

Mr. STRATTON. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight, tonight, November 18, 1981, to file a conference report on H.R. 3413, the Department of Energy National Security and Military Applications of Nuclear Energy Authorization Act of 1982, and that the conference report be printed in today's RECORD under the rule.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

CONFERENCE REPORT (H. REPT. No. 97-342)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3413) to authorize appropriations for the Department of Energy for national security programs for fiscal year 1982, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as

follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That this Act may be cited as the "Department of Energy National Security and Military Applications of Nuclear Energy Authorization Act of 1982".

TITLE I—NATIONAL SECURITY PROGRAMS

Operating expenses

Sec. 101. Funds are hereby authorized to be appropriated to the Department of Energy for fiscal year 1982 for operating expenses incurred in carrying out national security programs (including scientific research and development in support of the armed services, strategic and critical materials necessary for the common defense, and military applications of nuclear energy and related management and support activities) as follows:

(1) For the naval reactors development program, $279,500,000, including $9,500,000 for program management.

(2) For weapons activities, $2,494,600,000, to be allocated as follows:

(A) For research and development, $732,400,000, to be allocated as follows:

(i) For the defense inertial confinement fusion program, $142,300,000, of which—

(I) $75,500,000 shall be used for glass laser experiments;

(II) $40,000,000 shall be used for gas laser experiments;

(III) $18,000,000 shall be used for pulsed power experiments;

(IV) $7,500,000 shall be used for supporting research and experiments, except that none of such funds may be used for the research, development, or demonstration of the use of heavy ion devices as drivers for defense inertial confinement fusion experiments and defense inertial confinement fusion systems; and

(V) $1,300,000 shall be used for inertial confinement fusion program management.

(ii) For all other research and development, $590,100,000.

(B) For weapons testing, $369,000,000.

(C) For production and surveillance, $1,351,800,000.

(D) For weapons program management other than inertial confinement fusion, $41,400,000.

(3) For verification and control technology, $50,400,000, including $1,800,000 for program management.

(4) For defense nuclear materials production, $632,400,000, to be allocated as follows:

(A) For production reactor operations, $280,630,000.

(B) For processing of defense nuclear materials, $148,650,000.

(C) For special isotope separation research, $30,000,000.

(D) For supporting services, $171,320,000.

(E) For program management, $1,800,000.

(5) For defense nuclear materials byproducts management, $262,128,000, to be allocated as follows:

(A) For interim waste management, $181,084,000.

(B) For long-term waste management technology, $59,400,000.

(C) For byproducts beneficial uses, $5,000,000.

(D) For terminal waste storage, $5,000,000.

(E) For decontamination and decomissioning, $4,000,000.

(F) For transportation research and development, $6,067,000.

(G) For program management, $1,577,000.

(6) For nuclear materials security and safeguards technology development program (defense programs), $41,800,000, including $3,985,000 for program management.

(7) For security investigations, $23,600,000.

Plant and capital equipment

Sec. 102. Funds are hereby authorized to be appropriated to the Department of Energy for fiscal year 1982 for plant and capital equipment (including planning, construction, acquisition, and modification of facilities, land acquisition related thereto, and acquisition and fabrication of capital equipment not related to construction) necessary for national security programs, as follows:

(1) For naval reactors development:

Project 82-N-100, general plant projects, various locations, $4,000,000.

Project 82-N-111, naval fuels processing facility, Savannah River Plant, South Carolina, $15,000,000.

(2) For weapons activities:

Project 82-D-100, general plant projects, various locations (research and development), $15,800,000.

Project 82-D-103, general plant projects, various locations (production and surveillance), $16,300,000.

Project 82-D-104, new weapons production installations, various locations, $5,000,000.

Project 82-D-106, weapon assembly facilities, Pantex Plant, Texas, $23,500,000.

Project 82-D-107, utilities and equipment restoration, replacement and upgrade, Phase III, various locations, $87,500,000.

Project 82-D-108, nuclear weapons stockpile improvements, various locations, $15,000,000.

Project 82-D-109, 155-millimeter artillery-fired atomic projectile, various locations, $35,000,000.

Project 82-D-110, exhaust plenum modifications, Rocky Flats Plant, Colorado, $12,000,000.

Project 82-D-111, interactive graphics system, various locations, $9,000,000.

Project 82-D-142, North Las Vegas ATLAS Facility, Nevada, $3,600,000.

Project 82-D-144, simulation technology laboratory, Sandia National Laboratories, New Mexico, $1,200,000.

Project 82-D-146, weapons production and support facilities, various locations, $8,000,000.

Project 82-D-147, pressure test facility, Savannah River Plant, South Carolina, $3,500,000.

Project 82-D-150, weapons material research and development facility, Lawrence Livermore National Laboratory, California, $2,500,000.

Project 82-D-151, high explosives applications facility, Lawrence Livermore National Laboratory, California, $10,000,000.

Project 82-D-152, new detonator facility, Los Alamos National Laboratory, New Mexico, $8,000,000.

Project 82-D-153, tritium facility, Los Alamos National Laboratory, New Mexico, $5,000,000.

Project 82-D-154, weapons laboratory building, Sandia National Laboratories, New Mexico, $7,000,000.

Project 81-D-106, weaponization facilities, Lawrence Livermore National Laboratory, California, $1,000,000, for a total project authorization of $7,600,000.

Project 81-D-108, reactor support facilities, Sandia National Laboratories, New Mexico, $1,000,000, for a total project authorization of $10,000,000.

Project 81-D-115, MX warhead production facilities, various locations, $30,000,000, for a total project authorization of $40,000,000.

Project 81-D-116, utilities and equipment restoration, replacement, and upgrade, Phase II, various locations, $10,000,000, for a total project authorization of $85,000,000.

Project 81-D-120, control of effluents and pollutants, Y-12 Plant, Tennessee, $3,400,000, for a total project authorization of $6,400,000.

Project 81-D-133, earthquake damage restoration, Lawrence Livermore National Laboratory, California, $1,000,000, for a total project authorization of $4,000,000.

Project 79-7-o, universal pilot plant, Pantex Plant, Texas, $5,200,000, for a total project authorization of $12,600,000.

Project 78-16-a, cruise missile production facilities, various locations, $80,700,000, for a total project authorization of $98,800,000.

Project 78-17-e, high explosives machining facility, Pantex Plant, Texas, $5,600,000, for a total project authorization of $10,600,000.

Project 77-11-c, 8-inch artillery-fired atomic projectile production facilities, various locations, $3,600,000, for a total project authorization of $30,800,000.

(3) For defense nuclear materials production:

Project 82-D-116, general plant projects, various locations, $23,000,000.

Project 82-D-117, plant engineering and design, various locations, $3,000,000.

Project 82-D-118, N-reactor plant security and surveillance, Richland, Washington, $4,000,000.

Project 82-D-124, restoration of production capabilities, Phase III, various locations, $126,000,000.

Project 82-D-126, reactor safety and reliability, various locations, $42,900,000.

Project 82-D-127, safeguards improvements, Savannah River Plant, South Carolina, $34,600,000.

Project 82-D-128, plant perimeter security systems upgrade, Idaho Fuels Processing Facility, Idaho National Engineering Laboratory, Idaho, $4,400,000.

Project 82-D-136, fuel processing facilities upgrade, Idaho Fuel Processing Facility, Idaho National Engineering Laboratory, Idaho, $40,000,000.

Project 82-D-200, new production reactor, location unspecified, (A-E only) $10,000,000.

Project 82-D-201, special plutonium recovery facility, JB line, Savannah River Plant, South Carolina, (A-E only) $2,000,000.

Project 82-D-202, advanced isotope separation laboratory, Lawrence Livermore National Laboratory, California, $21,200,000.

Project 81-D-126, pollution abatement facilities—chemical processing plants, Richland, Washington, $4,300,000, for a total project authorization of $5,300,000.

Project 81-D-128, restoration of production capabilities, Phase I, various locations, $14,400,000, for a total project authorization of $49,400,000.

Project 81-D-142, steam transfer header, Savannah River Plant, South Carolina, $1,000,000, for a total project authorization of $8,000,000.

Project 81-D-143, L-reactor upgrade, Savannah River Plant, South Carolina, $66,000,000, for a total project authorization of $115,000,000.

Project 80-AE-3, steam generation facilities, Idaho Fuels Processing Facility, Idaho, $5,000,000, for a total project authorization of $28,500,000.

Project 77-13-a, fluorinel dissolution process and fuel receiving improvements, Idaho Fuels Processing Facility, Idaho National Engineering Laboratory, Idaho, $50,000,000, for a total project authorization of $199,400,000.

(4) For defense nuclear materials byproducts management:

Project 82-N-101, general plant projects, various locations, $11,400,000.

Project 82-N-103, waste handling and isolation facilities, Richland, Washington, $34,450,000.

Project 82-N-104, waste transfer facilities, Richland, Washington, $6,750,000.

Project 82-N-107, rail replacement, Hanford Railroad, Richland, Washington, $12,000,000.

Project 82-BU-1, byproducts beneficial uses demonstration plants, various locations, $5,000,000.

Project 81-T-105, defense waste processing facility (DWPF), Savannah River Plant, South Carolina, $20,000,000.

Project 77-13-f, waste isolation pilot plant, New Mexico, $38,600,000, for a total project authorization of $157,600,000.

(5) For capital equipment not related to construction:

(A) For naval reactors development, $28,000,000.

(B) For defense inertial confinement fusion, $11,000,000.

(C) For weapons activities, $185,500,000.

(D) For verification and control technology, $1,100,000.

(E) For defense nuclear materials production, $73,600,000.

(F) For defense nuclear materials byproducts management, $24,472,000.

(G) For nuclear materials safeguards and security, $3,700,000.

TITLE II—GENERAL PROVISIONS

Reprograming

Sec. 201. (a) Except as otherwise provided in this Act—

(1) no amount appropriated pursuant to this Act may be used for any program in excess of 105 percent of the amount authorized for that program by this Act or $10,000,000 more than the amount authorized for that program by this Act, whichever is the lesser, and

(2) no amount appropriated pursuant to this Act may be used for any program which has not been presented to, or requested of, the Congress,

unless a period of thirty calendar days (not including any day on which either House of Congress is not in session because of adjournment of more than three calendar days to a day certain) has passed after receipt by the appropriate committees of Congress of notice from the Secretary of Energy (hereinafter in this title referred to as the "Secretary") containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or unless each such committee before the expiration of such period has transmitted to the Secretary written notice to the effect that such committee has no objection to the proposed action.

(b) In no event may the total amount of funds obligated pursuant to this Act exceed the total amount authorized to be appropriated by this Act.

Limits on general plant projects

Sec. 202. (a) The Secretary may carry out any construction project under the general plant projects provisions authorized by this Act if the total estimated cost of the construction project does not exceed $1,000,000.

(b) If at any time during the construction of any general plant project authorized by this Act, the estimated cost of the project is revised because of unforeseen cost variations and the revised cost of the project exceeds $1,000,000, the Secretary shall immediately furnish a complete report to the appropriate committees of Congress explaining the reasons for the cost variation.

(c) In no event may the total amount of funds obligated to carry out all general plant projects authorized by this Act exceed the total amount authorized to be appropriated for such projects by this Act.

Limits on construction projects

Sec. 203. (a) Whenever the current estimated cost of a construction project which is authorized by section 102 of this Act, or which is in support of national security programs of the Department of Energy and was authorized by any previous Act, exceeds by more than 25 percent the higher of (1) the amount authorized for the project, or (2) the amount of the total estimated cost for the project as shown in the most recent budget justification data submitted to the Congress, construction may not be started or additional obligations incurred in connection with the project above the total estimated cost, as the case may be, unless a period of thirty calendar days (not including any day on which either House of Congress is not in session because of adjournment of more than three days to a day certain) has passed after receipt by the appropriate committees of the Congress of written notice from the Secretary containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of the action, or unless each committee before the expiration of such period has notified the Secretary it has no objection to the proposed action.

(b) Subsection (a) shall not apply to any construction project which has a current estimated cost of less than $5,000,000.

Fund transfer authority

Sec. 204. To the extent specified in appropriation Acts, funds appropriated pursuant to this Act may be transferred to other agencies of the Government for the performance of the work for which the funds were appropriated, and funds so transferred may be merged with the appropriations of the agency to which the funds are transferred.

Authority for construction design

Sec. 205. (a)(1) Within the amounts authorized by this Act for plant engineering and design, the Secretary may carry out advance planning and construction designs (including architectural and engineering services) in connection with any proposed construction project if the total estimated cost for such planning and design does not exceed $2,000,000.

(2) In any case in which the total estimated cost for such planning and design exceeds $300,000, the Secretary shall notify the appropriate committees of Congress in writing of the details of such project at least thirty days before any funds are obligated for design services for such project.

(b) In any case in which the total estimated cost for advance planning and construction design in connection with any construction project exceeds $2,000,000, funds for such design must be specifically authorized by law.

Authority for emergency construction design

Sec. 206. In addition to the advance planning and construction design authorized by section 102, the Secretary may perform planning and design utilizing available funds for any Department of Energy defense activity construction project whenever the Secretary determines that the design must proceed expeditiously in order to meet the needs of national defense or to protect property or human life.

Funds available for all national security programs of the Department of Energy.

Sec. 207. Subject to the provisions of appropriation Acts, amounts appropriated pursuant to this Act for management and support activities and for general plant projects are available for use, when necessary, in connection with all national security programs of the Department of Energy.

Adjustments for pay increases

Sec. 208. Appropriations authorized by this Act for salary, pay, retirement, or other benefits for Federal employees may be increased by such amounts as may be necessary for increases in such benefits authorized by law.

Availability of funds

Sec. 209. When so specified in an appropriation Act, amounts appropriated for "Operating Expenses" or for "Plant and Capital Equipment" may remain available until expended.

Safeguarding certain unclassified information

Sec. 210. (a)(1) The Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.) is amended by inserting after section 147 the following new section:

"Sec. 148. Prohibition Against the Dissemination of Certain Unclassified Information—

"a. (1) In addition to any other authority or requirement regarding protection from dissemination of information, and subject to section 552(b)(3) of title 5, United States Code, the Secretary of Energy (hereinafter in this section referred to as the 'Secretary') shall prescribe such regulations, after notice and opportunity for public comment thereon, or issue such orders as may be necessary to prohibit the unauthorized dissemination of unclassified information pertaining to—

"(A) the design of production facilities or utilization facilities;

"(B) security measures (including security plans, procedures, and equipment) for the physical protection of (i) production or utilization facilities, (ii) nuclear material contained in such facilities, or (iii) nuclear material in transit; or

"(C) the design, manufacture, or utilization of any atomic weapon or component if the design, manufacture, or utilization of such weapon or component was contained in any information declassified or removed from the Restricted Data category by the Secretary (or the head of the predecessor agency of the Department of Energy) pursuant to section 142.

"(2) The Secretary may prescribe regulations or issue orders under paragraph (1) to prohibit the dissemination of any information described in such paragraph only if and to the extent that the Secretary determines that the unauthorized dissemination of such information could reasonably be expected to have a significant adverse effect on the health and safety of the public or the common defense and security by significantly increasing the likelihood of (A) illegal production of nuclear weapons, or (B) theft, diversion, or sabotage of nuclear materials, equipment, or facilities.

"(3) In making a determination under paragraph (2), the Secretary may consider what the likelihood of an illegal production, theft, diversion, or sabotage referred to in such paragraph would be if the information proposed to be prohibited from dissemina-

tion under this section were at no time available for dissemination.

"(4) The Secretary shall exercise his authority under this subsection to prohibit the dissemination of any information described in subsection a. (1)—

"(A) so as to apply the minimum restrictions needed to protect the health and safety of the public or the common defense and security; and

"(B) upon a determination that the unauthorized dissemination of such information could reasonably be expected to result in a significant adverse effect on the health and safety of the public or the common defense and security by significantly increasing the likelihood of (i) illegal production of nuclear weapons, or (ii) theft, diversion, or sabotage of nuclear materials, equipment, or facilities.

"(5) Nothing in this section shall be construed to authorize the Secretary to authorize the withholding of information from the appropriate committees of the Congress.

"b. (1) Any person who violates any regulation or order of the Secretary issued under this section with respect to the unauthorized dissenmination of information shall be subject to a civil penalty, to be imposed by the Secretary, of not to exceed $100,000 for each such violation. The Secretary may compromise, mitigate, or remit any penalty imposed under this subsection.

"(2) The provisions of subsections b. and c. of section 234 of this Act shall be applicable with respect to the imposition of civil penalties by the Secretary under this section in the same manner that such provisions are applicable to the imposition of civil penalties by the Commission under subsection a. of such section.

"c. For the purposes of section 223 of this Act, any regulation prescribed or order issued by the Secretary under this section shall also be deemed to be prescribed or issued under section 161 b. of this Act.".

(2) The table of contents at the beginning of such Act is amended by inserting after the item relating to section 147 the following new item:

"Sec. 148. Prohibition Against the Disclosure of Certain Unclassified Information.".

(b) Section 181 of such Act (42 U.S.C. 2231) is amended—

(1) by striking out "or" before "safeguards information protected";

(2) by inserting "or information protected from dissemination under the authority of section 148" after "section 147"; and

(3) by striking out ", defense information, or such safeguards information," each place it appears and inserting in lieu thereof ", defense information, such safeguards information, or information protected from dissemination under the authority of section 148".

Arrest authority for persons authorized to carry firearms under the Atomic Energy Act of 1954

Sec. 211. Section 161 k. of the Atomic Energy Act of 1954 (42 U.S.C. 2201(k)) is amended by striking out the semicolon and inserting in lieu thereof a period and the following: "A person authorized to carry firearms under this subsection may, while in the performance of, and in connection with, official duties, make arrests without warrant for any offense against the United States committed in that person's presence or for any felony cognizable under the laws of the United States if that person has reasonable grounds to believe that the individual to be arrested has committed or is committing such felony. A person granted authority to make arrests by this subsection may exercise that authority only in the enforcement of (1) laws regarding the property of the United States in the custody of the Department of Energy, the Nuclear Regulatory Commission, or a contractor of the Department of Energy or Nuclear Regulatory Commission, or (2) any provision of this Act that may subject an offender to a fine, imprisonment, or both. The arrest authority conferred by this subsection is in addition to any arrest authority under other laws;".

Environmental studies and the nuclear weapons complex

Sec. 212. (a) None of the funds appropriated pursuant to an authorization of appropriations contained in this Act may be obligated or expended for the purpose of preparing any environmental impact statement not already in the process of preparation with respect to the operation of any defense facility of the Department of Energy unless the preparation of such statement is required by statute.

(b)(1) The Secretary may not proceed with the preparation of an environmental impact statement relating to the construction or operation of a defense facility of the Department of Energy if the estimated cost of preparing such statement exceeds $250,000 unless—

(A) the Secretary has notified the Committees on Armed Services of the Senate and the House of Representatives of his intent to prepare such statement and a period of thirty days has expired after the date on which such notice was received by such committees; or

(B) the Secretary has received from each such committee, before the expiration of such thirty-day period, a written notice that the committee agrees with the decision of the Secretary regarding the preparation of such statement.

(2) The provisions of paragraph (1) shall not apply in the case of any environmental impact statement on which the Secretary began preparation before the date of the enactment of this Act.

Plan for the permanent disposal of waste from atomic energy defense activities

Sec. 213. (a) The President shall submit to the Committees on Armed Services of the Senate and of the House of Representatives not later than June 30, 1983, a report which sets forth his plans for the permanent disposal of high-level and transuranic wastes resulting from atomic energy defense activities.

(b) Such report shall include, but not be limited to, for each State in which such wastes are stored in interim storage facilities on the date of enactment of this Act—

(1) specific estimates of amounts planned for expenditure in each of the next five fiscal years to achieve the permanent disposal of such wastes and general estimates of amounts planned for expenditure in fiscal years thereafter to achieve such purpose; and

(2) a thorough and detailed program management plan for the disposal of such wastes, including but not limited to—

(A) an explicit schedule for decisions regarding the further processing and permanent disposal of such wastes;

(B) a general description of new facilities likely to be required to achieve such permanent disposal; and

(C) identification of all major program objectives, milestones, key events, and critical path items.

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3413) to authorize appropriations for the Department of Energy for national security programs for fiscal year 1982, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report.

The Senate amendment struck out all of the House bill after the enacting clause and inserted a substitute text.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

SUMMARY STATEMENT OF CONFERENCE ACTION

The House passed its version of the Department of Energy National Security and Military Applications of Nuclear Energy Authorization Act for fiscal year 1982 on June 11, 1981. The Senate passed an amendment to such bill on November 3, 1981.

The conferees emphasize their conviction that the authorization amounts agreed to in conference represent the minimum amounts required to sustain national commitments to an improved national defense posture, modernization of strategic and theater nuclear forces, sustaining a nuclear powered Navy and restoring deteriorated facilities.

The conferees have agreed to authorizations that, in the aggregate, total $5,120,200,000, which is $123,800,000 above the Administration's request, $44,900,000 below the authorization recommended in the Senate amendment, and $55,650,000 above the authorization recommended in the House bill.

DEPARTMENT OF ENERGY, NATIONAL SECURITY PROGRAMS RECONCILIATION OF REQUEST TO CONFERENCE ACTION

OPERATING EXPENSES

[Amounts in millions of dollars]

Item	President's fiscal year 1982 request	Conference action
Naval reactors development:		
Development	270.000	270.000
Program management	9.500	9.500
Total, naval reactors development	279.500	279.500
Weapons activities:		
Research and Development—Defense inertial confinement fusion:		
Glass laser experiments	58.000	75.500
Gas laser experiments	33.300	40.000
Pulsed power experiments	13.400	18.000
Supporting research	0	7.500
ICF program management	1.300	1.300
Total, inertial confinement fusion	106.000	142.300
Other research and development	586.100	590.100
Total, research and development	692.100	732.400
Weapons testing	369.000	369.000
Production and surveillance	1,351.800	1,351.800
Program management. (less ICF)	41.400	41.400
Total, weapons activities	2,454.300	2,494.600
Verification and control technology:		
Operations	47.100	48.600
Program management	1.800	1.800
Total, verification and control technology	48.900	50.400
Defense nuclear materials production:		
Production reactor operations	280.630	280.630
Processing of nuclear materials	148.650	148.650
Special isotope separation research	21.800	30.000
Supporting services	163.320	171.320
Program management	1.800	1.800
Total, defense nuclear materials production	616.200	632.400
Defense nuclear materials byproducts management:		
Interim waste management	181.084	181.084
Long term waste management technology	59.400	59.400
Byproducts beneficial uses	0	5.000
Terminal waste storage	3.700	5.000
Decontamination and decommissioning	10.200	4.000
Transportation	6.067	6.067
Program management	1.577	1.577
Total, nuclear materials byproducts management	262.028	262.128
Nuclear materials safeguards and security:		
Operations	40.315	37.815
Program management	3.985	3.985
Total, safeguards and security	44.300	41.800
Security investigations	23.600	23.600
Total operating expenses	3,728.828	3,784.428

PLANT AND CAPITAL EQUIPMENT

[Amount in millions of dollars]

Project	President's fiscal year 1982 request	Conference action
Naval reactors development:		
Project 82-N-100, general plant projects, various locations	4.000	4.000
Project 82-N-111, naval fuel processing facility, Savannah River Plant, S.C	15.000	15.000

TITLE I (SEC. 101)

OPERATING EXPENSES

Weapons activities

The budget request contained $2,454.3 million for operating expenses for the category "Weapons Activities" which supports defense inertial confinement fusion (ICF) research, other weapons research and development, weapons testing, production and surveillance and program management.

The House bill authorized $2,352.3 million for weapons activities operating expenses and specifically allocated this amount to functional areas. The House bill authorized operating expenses for ICF as a separate program.

The Senate amendment authorized $2,490.6 million for weapons activities operating expenses, including the ICF program, and did not allocate that amount to specific functions.

The conferees recommend an authorization in the amount of $2,494.6 million for operating expenses for weapons activities to be specifically allocated to functional areas, as follows:

(A) for research and development, $732,400,000;

(B) for weapons testing, $369,000,000;

(C) for production and surveillance, $1,351,800,000;

(D) for weapons program management other than ICF, $41,400,000.

The following paragraphs explain specific changes recommended by the conferees.

Defense Inertial Confinement Fusion Program.—The budget request contained $106.0 million within the "Weapons Activities" amount for operating expenses for the Inertial Confinement Fusion (ICF) research and development program. The House bill specifically authorized $156.6 million for this purpose and directed the allocation of the amount authorized, as follows:

	Millions
Glass laser experiments	$82.1
Gas laser experiments	42.8
Pulsed power experiments	18.4

Supporting research and experiments	12.0
Program direction	1.3

The House bill also provided that none of the $12.0 million authorized for supporting research and experiments could be used for the research, development, or demonstration of the use of heavy ion devices as drivers for defense inertial confinement fusion experiments and defense inertial confinement fusion systems.

The Senate amendment included $142.3 million within the total amount authorized for "Weapons Activities" for ICF operating expenses.

The conferees recommend an authorization of $142.3 million for ICF operating expenses which amount is included within the $732.4 million recommended authorization for weapons research and development. The conferees also recommend that the $142.3 million be specifically allocated, as follows:

	Millions
Glass laser experiments	$75.5
Gas laser experiments	40.0
Pulsed power experiments	18.0
Supporting research and experiments	7.5
Program direction	1.3

The The conferees have elected to fund the ICF program at essentially the same level as last year. This will force the Department to absorb the impact of inflation but the conferees feel that this will permit all essential research to continue. In particular, the programs at KMS Fusion and the University of Rochester should continue at essentially current funding levels.

The conferees also recommend adoption of the provision of the House bill restricting the use of funds authorized to be appropriated for supporting research and experiments.

The House recedes with an amendment.

Other Research and Development.—The budget request contained $586.1 million for operating expenses for weapons research and development other than the defense inertial confinement fusion (ICF) program. The House bill authorized $590.1 million for this purpose—$4.0 million above the requested amount. The additional $4.0 million authorized by the House bill included $1.0 million to conduct a study of the feasibility of locating a dual purpose (electric power generation and material production) reactor at the Los Alamos National Laboratory in New Mexico. The additional $3.0 million increase was included to provide several weeks of additional operating capability in fiscal year 1982 for the Los Alamos Neutron Weapons Research facility. The Senate amendment provided for an authorization of $586.100 million for other research and development.

The conferees recommend an authorization in the amount of $590.1 million for weapons research and development other than the ICF program, as provided in the House bill.

The Senate recedes.

Verification and control technology

The budget request contained $48.9 million for operating expenses for the verification and control technology program which supports verification efforts related to certain arms control agreements. The House bill authorized the amount requested. The Senate amendment authorized of $50.4 million for this program. The conferees recommend the authorization of $50.4 million for operating expenses for the verification and control technology program, including $1.8 million for program management.

The House recedes.

Defense nuclear materials production

The budget request contained $616.2 million for operating expense for the Defense Nuclear Materials Production program, including $21.8 million for the special isotope separation program and $163.32 million for supporting services.

The House bill authorized $624.4 million for this purpose, including $30.0 million for the special isotope separation program and $163.32 million for supporting services. The House bill also allocated the total amount authorized to specific functional areas. The Senate amendment authorized $632.4 million for operating expenses for the Defense Nuclear Materials Production program, including $30.0 million for the special isotope separation program and $171.32 million for supporting services, adding $8.0 million above the House allowance to provide for increased requirements associated with the upgrade of the "L" production reactor at the Savannah River Plant in South Carolina.

The conferees recommend the authorization of $632.4 million for Defense Nuclear Materials Production operating expenses and the specific allocation of that amount to functional areas, as follows:

(A) for production reactor operations, $280,630,000;

(B) for processing of defense nuclear materials, $148,650,000;

(C) for special isotope separation research, $30,000,000;

(D) for supporting services, $171,320,000;

(E) for program management, $1,800,000.

The House recedes with an amendment.

Defense Nuclear Materials Byproducts Management.—The budget request contained $262.028 million for the defense waste management program, including $3.7 million for the terminal waste storage subprogram and $10.2 million for decontamination and decommissioning operations. No authorization was requested for a program to promote the beneficial use of certain compounds found within the radioactive "wastes" resulting from the production of defense nuclear materials.

The House bill authorized $262.128 million for the Defense Nuclear Materials Byproducts Management Program established by the fiscal year 1981 Authorization Act for Department of Energy Defense Programs. The House bill included $5.0 million for a subprogram to promote the beneficial uses of compounds found in defense "wastes", $5.0 million for the terminal waste storage subprogram, and $4.0 million for decontamination and decommissioning efforts. The House bill also allocated the total amount authorized to specific functional areas.

The Senate amendment authorized $263.328 million for defense waste management, including $5.0 million for terminal waste storage and $10.2 million for decontamination and decommissioning efforts. No authorization was provided for a beneficial uses of defense "waste" subprogram. The Senate amendment did not allocate the total amount authorized to specific functional areas.

The conferees recommend an authorization in the amount of $262.128 million for the defense nuclear materials byproducts management program, to be allocated as follows:

(A) for interim waste management, $181,084,000;

(B) for long-term waste management technology, $59,400,000;

(C) for byproducts beneficial uses, $5,000,000;

(D) for terminal waste storage, $5,000,000;

(E) for decontamination and decommissioning, $4,000,000;

(F) for transportation research and development, $6,067,000;

(G) for program management, $1,577,000.

The Senate recedes.

Nuclear materials safeguards and security.—The budget request contained $44.3 million for operating expenses for the nuclear materials safeguards and security program, including $3.985 million for program management. The House bill authorized $37.3 million for this program, including $1.985 million for program management. The Senate amendment authorized the amounts requested.

The conferees recommend an authorization of $41.8 million for operating expenses for the nuclear materials safeguards and security program, including $3.985 million for program management.

The House recedes with an amendment.

PLANT AND CAPITAL EQUIPMENT

NAVAL REACTORS DEVELOPMENT

Project No. 82-N-111, naval fuel processing facility, Savannah River Plant, South Carolina.—The budget request contained $15.0 million to initiate construction of a naval fuel processing facility at the Savannah River Plant in South Carolina. This facility was requested to provide a second source of nuclear fuel for naval vessels. The House bill authorized $3.0 million for this purpose. The Senate amendment authorized the $15.0 million requested. Additional information provided to the Congress subsequent to the passage of the House bill in June 1981 supports the requirement for this project. Accordingly, the conferees recommend the authorization of $15.0 million to initiate construction of the new naval fuel processing facility.

The House recedes.

WEAPONS ACTIVITIES

Project No. 82-D-100, general plant projects, various locations.—The budget request contained $15.8 million for general plant projects in support of weapons activities at various locations. The House bill authorized $25.8 million for this project. The Senate amendment authorized $15.8 million. The conferees believe that funds recommended to be appropriated elsewhere in the conference report for upgrading and replacing various facilities are sufficient for fiscal year 1982. The conferees recommend the authorization of $15.8 million for general plant projects for weapons activities.

The House recedes.

Project No. 82-D-107, utilities and equipment restoration, replacement and upgrade, various locations, Phase III.—The budget request contained $87.5 million for utilities and equipment restoration, replacement and upgrade in various locations which support weapons activities. The House bill authorized $87.5 million for this purpose. The Senate amendment authorized $100.0 million. The conferees recommend the authorization of $87.5 million for this project.

The Senate recedes.

Project No. 82-D-108, nuclear weapons stockpile improvements, various locations.—The budget request contained $32.2 million for nuclear weapons stockpile improvements at various locations. The House bill authorized $15.0 million. The Senate amendment authorized $32.2 million. The conferees believe an authorization of $15.0 million,

which is the amount of the appropriation request, would allow the program to get underway and that additional funds will be authorized in succeeding years. The conferees recommend an authorization of $15.0 million.

The Senate recedes.

Project No. 82-D-150, weapons material research and development facility, Lawrence Livermore National Laboratory, California.—No authorization was requested for project 82-D-150, construction of a weapons material research and development facility at the Lawrence Livermore National Laboratory in California. The House bill authorized $5.0 million for this project. The Senate amendment contained no authorization for this project. The conferees believe that the construction of a new weapons material research and development facility at the Lawrence Livermore National Laboratory would be more economic and cost effective than the expenditure of large sums to rehabilitate the existing obsolete structure. The conferees recommend an authorization of the $2.5 million to initiate the construction of this project.

The Senate recedes with an amendment.

Project No. 82-D-153, tritium facility, Los Alamos National Laboratory, New Mexico.—No authorization was requested for project 82-D-153, a tritium facility at the Los Alamos National Laboratory in New Mexico. The House bill authorized $5.0 million for this purpose. The Senate amendment contained no authorization for this project. The conferees believe that a new tritium handling facility is needed at the Los Alamos National Laboratory to handle projected requirements under more stringent health and safety standards. The conferees recommend an authorization of $5.0 million for this project.

The Senate recedes.

Project No. 81-D-133, earthquake damage restoration, Lawrence Livermore National Laboratory, California.—The budget request contained $6.3 million for project 81-D-133 for earthquake damage restoration at the Lawrence Livermore National Laboratory in California. The House bill authorized the amount requested. The Senate amendment authorized $1.0 million for this purpose on the basis that the majority of the amount requested would be used for upgrading buildings in addition to earthquake damage restoration. The conferees recommend an authorization of $1.0 million for damage restoration and agree that the Department of Energy should budget building upgrading projects as separate projects.

The House recedes.

Project No. 81-D-134, earthquake damage restoration, Sandia National Laboratories, California.—The budget request contained $1.7 million for earthquake damage restoration at the Sandia National Laboratories in California. The House bill authorized $1.7 million for the project. The Senate amendment contained no authorization. The conferees recommend no authorization for this project since it appears that existing authorization is sufficient to complete the originally defined scope of earthquake damage restoration.

The House recedes.

Project No. 78-16-a, cruise missile production facilities, various locations.—The budget request contained $80.7 million for cruise missile production facilities at various locations. The House bill authorized $44.0 million for this project. The Senate amendment authorized the amount requested. Developments relating to the nuclear weapons stockpile since the House bill was passed in June 1981 indicated the need for the full amount requested. The conferees recommend an authorization of $80.7 million for this project.

The House recedes.

Project No. 78-17-d, steam plant improvements, Y-12 plant, Tennessee.—The budget request contained $1.5 million for improvements to a steam plant at the Y-12 plant in Oak Ridge, Tennessee. The House bill authorized the amount requested. The Senate amendment contained no authorization science and adequate authorization had been provided for this project in prior years.

The House recedes.

Weapons activities capital equipment.—The budget request contained $185.5 million for capital equipment not related to construction for the weapons activities program. The House bill authorized $199.25 million for this purpose, adding $13.75 million for capital equipment for weapons testing. The Senate amendment authorized the amount requested. The conferees believe that the additional $13.75 million increase for weapons testing capital equipment is not required in fiscal year 1982 and recommend the authorization of $185.5 million for weapons activities capital equipment.

The House recedes.

DEFENSE NUCLEAR MATERIALS PRODUCTION

Project 82-D-117, plant engineering and design, various locations.—The budget request contained $30 million for plant engineering and design for the defense nuclear material production program. The House bill authorized the amount requested. The Senate amendment authorized $1.0 million for this project based on the belief that $2.0 million of the amount requested was included for another project (82-D-201). The conferees believe that the $3.0 million requested is required to accomplish other plant engineering and design project that are necessary to enhance defence nuclear materials production and recommend the authorization of that amount.

The Senate recedes.

Project No. 82-D-200, new production reactor, location not specified.—No authorization was requested for project 82-D-200 to initiate the design of a new reactor for the production of special nuclear materials. The House bill did not authorize such a project. The Senate amendment contained an authorization of $40.0 million for this project to begin concept studies, design and site selection activities for a new production reactor.

After lengthy discussion, recognizing that both houses has approved $5.0 million in operating funds for concept studies and preliminary cost analyses, the conferees agreed to authorize $10.0 million for further studies related to the new production reactor. However, before any of this $10.0 million may be expended, the Department of Energy must furnish to the Committees on Armed Services of the Senate and House of Representatives a complete report as to how these funds will be utilized. No expenditures may be made until both committees have had the report for 30 days.

The house recedes with an amendment.

Project No. 82-D-201, special plutonium recovery system, JB line, Savannah River Plant, South Carolina (AE only).—No authorization was requested for project 82-D-201, a special plutonium recovery system for the JB line at the Savannah River Plant in South Carolina. The House bill contained no authorization for this project. The Senate amendment authorized $2.0 million for the project for the purpose of "design only." The conferees found that this project was proposed to be initiated with funds requested for plant engineering and design and that the total estimated cost for advance planning and construction design would exceed $2.0 million. In view of existing policy that plant engineering and design funds for such projects which exceed $2.0 million must be specifically authorized by law, this project has been included as a separate line item. The conferees recommend an authorization of $2.0 million for this project.

The House recedes.

DEFENSE NUCLEAR MATERIALS BYPRODUCTS MANAGEMENT

Project No. 82-BU-1, byproducts beneficial uses demonstration plants, various locations.—No authorization was requested for project 82-BU-1, byproducts beneficial uses demonstration plants. The House bill authorized $5.0 million for this project. The Senate amendment contained no authorization for this project. The conferees believe that a modest sum should be allocated for a cooperative program to demonstrate the use of radioactive byproducts that can be extracted from defense nuclear waste. The conferees recommend the authorization of $5.0 million for this project.

The Senate recedes.

Project No. 77-13-f, waste isolation pilot plant, New Mexico.—The budget request contained $8.6 million to continue project 77-13-f, the Waste Isolation Pilot Plant in New Mexico. The House bill authorized the amount requested. The Senate amendment authorized $38.6 million for this purpose. The conferees recommend the authorization of $38.6 million for this project to assure that construction will proceed at a more satisfactory rate.

The House recedes.

ITEMS FOR SPECIAL COMMENT

DEVELOPING THE DEPARTMENT OF ENERGY DEFENSE PROGRAMS BUDGET

The Conferees believe that the present method used to develop the Department of Energy (DOE) defense programs budget is unsatisfactory. Under current practices, defense programs must compete for funding directly with all other activities of the Department of Energy. At the Office of Management and Budget (OMB) the same competition prevails, since budget oversight for DOE defense programs is controlled by the Associate Director of OMB for Energy. There appears to be little, if any, effort to match DOE defense requirements with other defense requirements. As a result, DOE defense programs are annually underfunded.

Although these concerns were noted last year (in Senate Report No. 96-920), no action has been taken or an explanation given why the OMB Associate Director for National Security Programs does not also have oversight of the DOE defense programs budget, or why the control remains misplaced with the Associate Director for Energy.

The Director of the Office of Management and Budget is requested to provide the Committees on Armed Services of the Senate and House of Representatives within 90 days after the date of enactment of the Department of Energy National Security and Military Applications of Nuclear Energy Authorization Act, 1982 his findings relative to this important issue, together

with plans for any changes to the current programming and budget review processes.

INERTIAL CONFINEMENT FUSION

The conferees do not believe that the $104.7 million requested for operating expenses for the inertial confinement fusion (ICF) program will permit orderly progression of this important research and development effort. The Congress has authorized and appropriated well over a billion dollars and made large investments in facilities and equipment for this program. Three large facilities are nearing completion. The proposed 25% decrease from the fiscal year 1981 funding level would force severe reductions in the scientific and engineering teams involved in the design and operation of these important facilities.

No reasons have been offered to the Congress for this precipitious decision to curtail the development of ICF as a laboratory method for simulating the effects of nuclear weapons. It should be noted that a severe curtailment of the weapons-related ICF program, as proposed, will eliminate any chance that ICF could be developed as a future energy source.

The conferees believe that a minimum of $142.3 million for ICF operating expenses is necessary for fiscal year 1982. Furthermore, the conferees believe that $50 million should be appropriated to permit completion on schedule of the NOVA facility at the Lawrence Livermore National Laboratory. The NOVA facility will be the most powerful ICF system in operation for many years and should provide the data which substantiates the efficacy of ICF as a laboratory simulation system and as a potential energy system.

SPECIAL NUCLEAR MATERIALS PRODUCTION AND SPECIAL ISOTOPE SEPARATION

A shortage of special nuclear materials may occur between 1985 and 1990 unless additional measures are taken to remedy the problem of declining productivity of the aging reactors at the Richland, Washington and Savannah River, South Carolina plants. At these production facilities, serious efforts are underway to replace and upgrade obsolete equipment and facilities, to convert the N-reactor at Richland to the production of weapons grade material, to upgrade and restart the Purex processing plant at Richland and the L-reactor at Savannah River, and to train the required operating personnel.

Even if these efforts are completely successful, additional sources of plutonium may be required. One candidate source is the construction of one or more replacement production reactors. A second possible source is a special isotope separation process to "enrich" materials for weapons use.

The conferees believe that because of potential economies, the special isotope separation program should be accelerated. The recommended funding for operating expenses for special isotope separation was increased from $21.8 million to $30.0 million to accelerate the programs at both the Los Alamos and Lawrence Livermore National Laboratories toward the demonstration phase. Under the conferees' recommendation, the atomic vapor isotope separation program at the Livermore Laboratory would receive $17.0 million and the molecular isotope separation program at the Los Alamos Laboratory would receive $13.0 million. The Los Alamos Laboratory would be expected to proceed with the design and installation of a pilot plant which could utilize existing facilities at the Savannah River Plant.

The conferees agreed to authorize additional funds for an advanced isotope separation laboratory to be built at the Livermore Laboratory. This laboratory was initially authorized, and funds appropriated, in fiscal year 1981. No funding was requested for fiscal year 1982. This facility, which could be in operation by 1983, is absolutely essential if the atomic vapor process is to reach the demonstration stage.

DECONTAMINATION AND DECOMMISSIONING

The Department of Energy (DOE) has identified approximately 500 sites that were formerly involved in defense activities which are contaminated by radioactivity to some degree. In addition, there are several uranium mill tailings piles which contain "commingled" tailings from both defense and civilian activities of the federal government. The DOE, in concert with the Environmental Protection Agency (EPA) and the Nuclear Regulatory Commission (NRC), is establishing plans for the cleanup of many of these sites. These plans, in many instances, are based upon the concept that residual radioactivity must be reduced to natural background levels or, in some cases, to below natural background levels. Congressional hearings have shown that the health risks, cost and benefits of decontaminating numerous sites by removing and transporting buried low-level radioactive materials commonly found at certain sites have not been thoroughly analyzed by the DOE, the EPA or the NRC. As a result, it is not clear whether the many hundreds of million of dollars planned to be expended for cleanup of those sites provide any actual health benefits to the public and whether the expense involved in cleanup is justified. The conferees believe that the DOE approach places its major emphasis on the technological limits of radiological detection equipment and does not fully consider factors such as actual health risks and costs. The impact of continuing to overlook costs/benefits will result in an ineffectual use of program funds with no probable public benefit.

The conferees found no indications that a health risk assessment and attendant cost/benefit analyses were developed before proceeding with plans for remedial action.

The conferees noted that the decontamination and decommissioning programs proposed by DOE could cost billions of dollars. Until DOE, EPA and NRC have conducted epidemiological and health studies which definitely establish risks and costs, as well as scientifically supported standards, the conferees cannot recommend increases in the decontamination and decommissioning program authorization.

SECURITY INVESTIGATIONS

Security investigations required for granting security clearances to Department of Energy and Government contractor personnel are now taking six months or longer. This delay in putting salaried, qualified persons to work in those classified areas for which they have been hired is resulting in the waste of authorized funds and the loss of efficiency. The conferees note that a similar and more expensive problem exists in the Department of Defense. The causes of the delay are manifold, but the fact that this problem has grown worse over the past several years indicates a lack of coordination among the requesting and investigating agencies.

Accordingly, the Secretary of Energy is requested to provide a report to the Committees on Armed Services of the Senate and House of Representatives, by June 30, 1982, on the actions that have been taken to significantly shorten the clearance delay.

BENEFICIAL USES OF DEFENSE NUCLEAR MATERIALS BYPRODUCTS

Many of the byproducts resulting from the processing of special nuclear materials have high potential economic value. These byproducts can be readily extracted from the waste stream. With some additional effort these same elements can be extracted from materials now stored in tanks at Richland, Washington and Savannah River, South Carolina facilities. The major elements involved are cesium, strontium, the platinum family metals, and krypton. Cesium is now being used in a DOE developed irradiator for the disinfestation of foodstuffs and sterilization of sewage sludge. Cesium can also be used to eradicate an algae which affects the pumping of oil on the North Slopes in Alaska.

Strontium is used as a heat source for electrical generation, for heating thick underground oil in situ, and for melting frozen water sources in frigid regions.

The platinum family metals—rhodium, palladium, and ruthenium—can be used separately or alloyed with platinum in electronic systems and catalytic processes.

If 85 to 95 percent of the strontium and cesium is removed from the defense waste stream, the resulting residues are equivalent to wastes which have been aged approximately 1,000 years. Such artificially aged wastes can then be much more readily and cheaply prepared for ultimate disposal.

Krypton, a gas, can be readily contained and used in self-illuminating signs or airfield lights, for examining jet engine turbine blades for cracks, or for checking complicated electronic integrated circuit chips.

The conferees believe that the economic value of the byproducts and the significantly reduced handling concerns with the residues should make the beneficial uses program one of special interest to the DOE.

TITLE II—GENERAL PROVISIONS

REPROGRAMING

Section 201 of the House bill and Section 201 of the Senate amendment contained similar provisions pertaining to the reprograming of funds authorized to be appropriated by the bill. Amounts authorized for a particular program could be increased by five percent or $10,000,000 whichever is less. No new program which has not been presented to Congress could be started unless that new program is specifically presented to the appropriate committees of Congress in writing and a period of 30 days expires, or unless prior to the expiration of the 30 day period each such committee states in writing that it has no objection. The Senate provision, which the conferees accepted, also places a ceiling on obligations pursuant to the act which is equal to the sum of all authorizations; that is to say, any increase in the amounts obligated, as provided by Section 201 of the conference report, must be offset by a corresponding decrease in one or more of the other amounts authorized.

The House recedes.

LIMITS ON GENERAL PLANT PROJECTS

The House bill and Senate amendment contained similar provisions (Sec. 202) which would authorize the Secretary of Energy to carry out any construction project, under the general plant projects provisions authorized by the Act, if the total estimated cost of such construction does not exceed $1.0 million. If at any time during

construction of any general plant project the estimated cost of such project is revised to exceed $1.0 million due to unforeseen cost variations, the Secretary shall immediately furnish a complete report to the appropriate committees of Congress explaining the reasons for the cost variations.

The Senate amendment also provided that the total amount of funds obligated to carry out all general plant projects authorized by the Act may in no event exceed the total amount authorized to be appropriated for such projects for fiscal year 1982.

The House recedes.

LIMITS ON CONSTRUCTION PROJECTS

The House bill and the Senate amendment (Sec. 203) contained similar provisions placing limitations on construction projects. There were minor drafting differences.

The House recedes.

AUTHORITY FOR CONSTRUCTION DESIGN

The House bill and the Senate amendment contained provisions (Section 205) placing limitations on the use of funds authorized to be appropriated for plant engineering and design. The provision in the House bill was identical to the provision requested by the administration. The Senate amendment contained more restrictive reporting requirements and required that where the total estimated cost for advance planning and construction design in connection with any construction project exceeds $2.0 million, funds for such design must be specifically authorized by law.

The House recedes.

ADJUSTMENTS FOR PAY INCREASES

The House bill and the Senate amendment contained similar provisions concerning the authorization for federal increases in pay and benefits. There were minor drafting differences.

The Senate recedes.

SAFEGUARDING CERTAIN UNCLASSIFIED INFORMATION

The Senate amendment contained a provision (Section 210) which would amend the Atomic Energy Act of 1954 by inserting a new Section 148 and by amending Section 181 of such Act. The new Section 148 would prohibit the dissemination of certain unclassified information if such information could reasonably be expected to result in significant adverse affects on public health and safety or the common defense by increasing the likelihood of theft, diversion, or sabotage of nuclear material or Department of Energy defense facilities. The amendment to Section 181 which the Senate provision contained would conform Section 181 with the new Section 148 of the Atomic Energy Act. The House bill contained no similar provision.

The House recedes with an amendment.

ENVIRONMENTAL STUDIES AND THE NUCLEAR WEAPONS COMPLEX

The House bill and the Senate amendment contained similar provisions (Section 211) restricting the use of funds authorized to be appropriated by the Act for the purpose of preparing environmental impact statements not already in the process of preparation with respect to the operation of any defense facility of the Department of Energy unless the preparation of such statements is required by statute. The Senate amendment contained an additional provision that requires the Secretary of Energy to notify the Committees on Armed Services of the Senate and the House of Representatives of his intention to proceed with an environmental impact statement relating to the operation of any defense facility of the Department of Energy where the cost of preparing such statement would exceed $500,000. Under the Senate provision, the Secretary could proceed with the environmental impact statement after the expiration of 30 days unless before the expiration of that time a written notification is received from the Committees on Armed Services concurring in the decision to proceed with such statement.

The House recedes with an amendment which would require that all environmental impact statements estimated to cost in excess of $250,000 would be the subject of prior notification to Committee on Armed Services of the Senate and House of Representatives.

PLAN FOR THE PERMANENT DISPOSAL OF WASTE FROM ATOMIC ENERGY DEFENSE ACTIVITIES

The Senate amendment contained a provision (Section 212) that would require the President to submit to the Committees of Armed Services of the Senate and the House of Representatives not later than January 31, 1983 a report which sets forth his plans for the permanent disposal of high-level and transuranic wastes resulting from atomic energy defense activities. The House bill contained no similar provision. The House conferees felt that the date of January 31, 1983, would not permit an adequate period to accomplish the study that would be necessary to produce the report. After some discussion the conferees agreed to revise the date for the submission of the report to June 30, 1983.

The House recedes with an amendment.

ARREST AUTHORITY FOR PERSONS AUTHORIZED TO CARRY FIREARMS UNDER THE ATOMIC ENERGY ACT OF 1954

The House bill contained a provision (Section 210) that would amend Section 161k of the Atomic Energy Act of 1954 to provide authority for persons authorized to carry firearms under the Atomic Energy Act of 1954 to make arrests without warrant for any offense against the United States committed in that person's presence or for any felony cognizable under the laws of the United States if that person has reasonable grounds to believe that the individual to be arrested has committed or is committing such felony. The arrest authority would apply only to persons during the performance of, and in connection with, official duties. The Senate amendment contained no similar provision.

The House bill also contained a provision (Section 210(b)) that would prohibit the use of funds authorized to be appropriated by the Act for the purpose of contracting for, or fulfilling obligations under any previously existing contract for, the performance of security and protective functions at the Los Alamos National Laboratory. The Senate amendment contained no similar provision.

The conferees agreed to adopt the provision of the House bill that would confer arrest authority on persons authorized to carry firearms under Section 161k of the Atomic Energy Act of 1954. The conferees did not adopt Section 210(b) as provided in the House bill relating to contracting for the performance of security and protective functions at the Los Alamos National Laboratory.

The Senate recedes with an amendment.

AMENDMENT OF THE TITLE OF THE BILL

The Senate amendment amended the title of the Act.

The Senate recedes.

MAKING IN ORDER ON OR AFTER THURSDAY, NOVEMBER 19, 1981, CONSIDERATION OF CONFERENCE REPORT ON H.R. 3413

Mr. STRATTON. Mr. Speaker, I ask unanimous consent that it may be in order to consider the conference report on H.R. 3413, the Department of Energy National Security and Military Applications of Nuclear Energy Authorization Act of 1982, on November 19, 1981, or any day thereafter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

GENERAL LEAVE

Mr. ADDABBO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill, H.R. 4995, making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes, and that I may be permitted to include tables and extraneous material in connection with the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

DEPARTMENT OF DEFENSE APPROPRIATIONS ACT, 1982

Mr. ADDABBO. Mr. Speaker, pursuant to a unanimous-consent request granted on November 12, 1981, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4995) making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes, and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to not to exceed 2 hours, the time to be divided equally and controlled by the gentle-

man from Alabama (Mr. EDWARDS) and myself.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. ADDABBO).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 4995, with Mr. ROSTENKOWSKI in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. Pursuant to the rule, the first reading of the bill is dispensed with.

Under the unanimous-consent agreement, the gentleman from New York (Mr. ADDABBO) will be recognized for 1 hour, and the gentleman from Alabama (Mr. EDWARDS) will be recognized for 1 hour.

The Chair recognizes the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Chairman, I yield myself 12 minutes.

Mr. Chairman, it is with a deep sense of mixed emotions that I bring to the committee today the largest defense appropriations bill ever presented to any legislative body.

Though the bill has my name on it, it is not actually my bill. It is the Defense Subcommittee's bill, a bill that comes after 8 months of hearings, filling nine volumes of hearing record. It is a bill that comes before the committee after 2 weeks of deliberations and markup. I had made recommendations at the markup recommending close to $11.2 billion in reductions.

Just to place everything in context, Mr. Chairman, when we speak of reductions, we are speaking of reductions in a massive increase. What we have before us is a total increase of almost $50 billion over 1981—an increase of over $30 billion by this administration over the presentation by the last administration in January of this year.

So we have a total increase of $50 billion which is more than almost every other appropriation for every other agency.

It would take care of schools, it would take care of veterans, it would take care of the handicapped, et cetera. But this is a $50 billion package we are speaking of. So within that $50 billion and within that $30 billion increase, I, working with the committee and looking through the various hearings we had and studies we had, saw justification for making this tremendous increase about $11.2 billion smaller.

Mr. Chairman, no one loves this country more than I do and no one is better aware that the job of keeping the Nation strong is not an easy one. I differ with some of my colleagues in that I do not feel that everything every general and admiral and defense contractor thinks is needed is really needed. And I think that in the long run a strong economy is of greater value in the competition with the Soviet Union in which we find ourselves than is every military toy that is requested of us.

Any Member who sat for a length of time on the Defense Subcommittee could see the great wisdom in the words of our late and great President, Dwight Eisenhower, when in his farewell address he warned us to beware of the influence of the military industrial complex in this country.

□ 1300

Now, in that increase I saw a waste of money for the B-1, and we will go into that question later.

I saw a waste of $2 billion for the MX.

I saw a waste of almost half a billion dollars for a Pershing GLCM missile for production, where we have not even finished any part of the R. & D.

We saw a $490 million overcharge for the military for fuel. Where we are paying now about $46 a barrel, they wanted $56, so we settled at about $52, which gave us a reduction of about $490 million.

You received much mail on this matter of the retired pay. I have been deluged, and I know you have, with phone calls and mail about what the committee is doing to our poor retirees, how we are hurting our poor retirees.

Well, let me give you a short explanation of what we did. The Congress passed and I supported a 14.3-percent increase for our military, but it was a two-part increase. It was 9.1-percent straight out and a 5.2-percent catch-up. We said the military needed that increase because we had problems with retention and we gave them that increase.

Now, what that increase did to our military in just a little more than 1 year has given them over a 26-percent increase, actual dollar increase.

Now, we were looking at retention, so we targeted that increase to those middle ranks which we need, which we are losing; but we said that if we really are going to have retention then let us take this last 5 percent and spread that over a period of 3 years.

The military does not contribute to that pension fund. Every other Federal employee does. Every other Federal employee receives his pension based on the high three. The military receives it on their last day of service pay. So if they receive that 5 percent immediately and retire immediately, they would get the windfall.

We are looking for retention and that was the reason for that increase; so what the committee said was we take that 5 percent and spread that over a period of 3 years, so if a man or woman does stay in the service for the full period of 3 years, he or she will not in any way lose any part of that retirement; but if he should retire now, then he gets the windfall benefit of the 9-percent increase and he does not get the 5 percent, because that should be geared to what we are interested in and that is retention. That was one of the major cuts we made and that is what the mail is about that you have been receiving.

It is for those officers who are seeking to immediately put in their papers and get the windfall benefits of this 5 percent which would take away from our national security dollars, dollars that we so much need for weapons and other purposes. That was part of the reduction this committee sought.

Now, in the final workings of the subcommittee in its markup, we finally came to a figure of about $6.4 billion, which included the deletion of funds for the MX. In the committee it was a vote of about 7 to 5. Those funds were subsequently restored by the full committee by a vote of 25 to 23. It will be my intention when we reach the point of amendments to offer an amendment to take out the funds for the MX. Again I will not debate that issue now because we must go into greater detail when the amendment is offered. That was $2.8 billion.

When we looked at these reductions, we were not looking to destroy our national defense or do away with it. What we were looking for was reductions in waste, overbudgeting, overcharging by the military. We made these reductions, as I said before, in this massive increase; not $1, not $1 affected our real defense.

We looked at it very carefully and what we did was make reductions of $10 million here, $50 million here, $100 million here and soon you had $600 million, because military spending of dollars add up very fast. That is why $6 billion looks like such a tremendous amount but it is not, because again we had thousands and thousands of items. We have the three services. We have the National Guard and the Guards and Reserves were very well taken care of by us in our markup. We put in additional funds to make sure that our Guard and Reserve are brought right up equal to our regular standing forces, because if there should ever be a war they will be there right alongside the regular services and they must be brought up to snuff as far as equipment is concerned; so we increased it. This bill includes over $450 million of increases above the budget for the Reserve components programs, as follows: $250 million for Army Guard and Reserve equipment; $18.4 million for Army Re-

serve personnel strength; $3 million for key personnel upgrade program; $2 million for Air Guard skill retraining; $3.6 million for Air Guard personnel strength; $14 million for Navy Reserve aviation spares; $22 million for Navy Reserve personnel strength; $20 million for Navy Reserve electronic warfare equipment; $9.2 million for Navy Reserve ship operations and support; $6 million for Navy Reserve engine repair; $10 million for Air Guard aviation spares; $7.6 million for Air Guard J-70 engine modifications; $30.4 million for Air Guard communications equipment; and $56 million for Marine Corps Reserve, four KC-130's.

We also increased the Navy. We put two additional ships in the Navy.

We increased flying time, where the administration, where the military had reduced flying time and steaming time. We know the importance of training and we increased that to increase our readiness.

So when I come before you today with this small minor cut of 4 percent, $4 billion, we still give the military an actual increase of about 16 percent over the cost of inflation.

So, my colleagues, I would ask you to please as we go through the debate, as the amendments are offered, to listen to the issues.

We have sat through these hearings, as I said before, for 8 months, fully substantiated in our hearing records.

Let me say this to you. The defense budget that we are looking at is no real fine-tuned item. It is not any great work of art. It is a mish-mash. It is a mess, because we have received no less than four and five amendments by the Pentagon.

Why did we have just yesterday the conference report on the authorization? Because they could not act until they knew what the administration, what the Pentagon wanted. We could not act until we got an authorization. That is why we are so late.

The President has charged the Congress with not passing appropriation bills. How could we pass a defense appropriation bill when all during the year, starting with the amendment in March, we received no less than four different amendments. They could not even number them any more. They gave us colored books, a blue, a green, a yellow or a salmon book.

Then finally when we were already into the fiscal year, we get the final administration request or amendment October 9. The fiscal year started October 1. On October 9 we finally got the final version of the budget. What does this mean? It means that no one really carefully scrutinized this defense budget—but our committee did. We held the hearings and carefully scrutinized every line when we went through the markup and we come before you with this bill. I ask your support for it.

Under permission granted, I will insert certain summary tables from the committee report in the RECORD at this point.

COMPARATIVE STATEMENT OF NEW BUDGET (OBLIGATIONAL) AUTHORITY FOR FISCAL YEAR 1981 AND BUDGET ESTIMATES AND AMOUNTS RECOMMENDED IN THE BILL FOR FISCAL YEAR 1982

[1] Includes amounts in Supplemental Appropriations and Rescission Act, 1981.
[2] Includes changes proposed in H. Docs. 97-29, 97-61, 97-94, 97-101, and S. Doc. 97-8.

Mr. MONTGOMERY. Mr. Chairman, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Mississippi.

Mr. MONTGOMERY. Mr. Chairman, I rise in strong support of the bill and commend the gentleman in the well and also the gentleman from Alabama (Mr. EDWARDS) and the subcommittee and the full Appropriations Committee plus the fine staff and especially for putting in funds for equipment for the National Guard and the Reserve.

There is one item that needs clearing up pertaining to the technician conversion program that is in the report. I will not read the whole report, but it includes this statement:

As a policy, similar skills within a Reserve component will be standardized as either military technician or full-time military.

This statement seems to indicate that all individuals with similar skills within a particular reserve component would be converted at exactly the same time. If this is the intent of this statement, we would have deep concern, because it should be left up to the reserve component to develop a plan for conversion that would cause the least administrative burden and

result in the least disruption in the training and readiness of the units.

Would the gentleman agree with the concept that I have outlined?

Mr. ADDABBO. I fully agree, and that should be the legislative history, that it is our idea that any conversion of a skill area should be done with the least disruption possible and consistent with the personnel and funding limitations imposed.

Mr. MONTGOMERY. I thank the gentleman very much.

Mr. ADDABBO. Mr. Chairman, again I ask the House for support and I take this opportunity to commend my colleague, the gentleman from Alabama, the ranking minority member, and all the minority members of the committee and members of my committee on the majority for the time they spend listening to all the witnesses and bringing forth this bill. I especially commend my committee staff, headed by Ralph Preston.

Mr. Chairman, my staff, our staff, the House staff on defense appropriations I consider is one of the best. If you ever sit in on a defense appropriation hearing you get 1 witness or 2 witnesses at the table and then he has 30 generals and majors and assistants sitting behind him. One of our guys has to equal their 30. They need 60 to match ours.

Mr. EDWARDS of Alabama. Mr Chairman, I yield myself such time as I may consume.

Mr. Chairman, I would like to start by echoing what the Chairman has said about the committee members and about the staff. If there is any one letter that it seems we have to write back to our constituents more than any other it is a response to the charge that somehow we are ripping off the taxpayers by having staff people to work on our committees and in our offices.

I think we probably have about 13 staff people on the defense subcommittee. When you figure that they are dealing with a quarter of the whole Federal budget, I would suggest that we are probably greatly undermanned when we deal with the computers and the array of talent that they have over in the Pentagon, and everything considered I think those members of the committee and the staff people on the committee do a magnificent job. If it were not for all of them, we would not be standing here today. So I want to add my thanks to them and to my colleagues on the committee who do yeoman service all year.

The chairman has expressed very fairly, I think, the fact that we have put in many hours, many days, many weeks, and months on this bill. It is about a quarter of the whole Federal budget and it does warrant, I think, our mature judgment and consideration. It is not something that we should take lightly and it is not something that we do take lightly. Every member of our subcommittee works hard at it.

I must say that when we go to the full committee that we receive rather close scrutiny there, so we come to you with a bill, I think, that on balance makes good sense. On balance, it is a bill that I can support. It is like any other piece of legislation that has ever been before this House. Sure, we can all find something in it that we do not like, something we would rather have written in a different way, some number that we would rather have increased or decreased; but when taken on balance, I think we bring to you a good bill.

Well, this has been an interesting year. I can understand the chairman's frustration, the committee's frustration, with the fact that we have been through about four different colored justification books and budget books and changes from Carter-82 to Reagan-March, to something in between, to Reagan-September, and finally coming to our markup with a number which is pegged at $200.8 billion, which is the latest Reagan budget for defense that we are responsible for in this bill.

I should make it clear that from that $200.8 billion we have cut about $4.2 billion and so we come to you in round numbers with a bill for about $196.6 billion, with hard to come by cuts. Everybody wants to do the most they can for defense. The biggest problem we have on our committee is trying to do the most for defense without falling all over ourselves to do everything for defense.

We wish to make reasoned judgments on where we put our money. Just because somebody says it is for defense does not mean in my view that we should automatically cave in and vote for it because it is called defense.

There is waste there. There is abuse there, just like there is in any other department of Government.

We have, in fact, in three different instances in this bill taken substantial amounts of cuts for fraud, waste, and abuse in various parts of the Defense Establishment.

I know that we will probably get an amendment later in the day or tomorrow that will address the question of fraud, waste, and abuse. I would suggest to you that we have done a good day's work in that regard. I would hope that Members would not get too carried away with that, but that they will listen to the debate on the subject.

□ 1315

Well, the chairman mentioned the fact that we are $50 billion over last year. I guess what he is talking about is that President Carter's fiscal year 1981 budget was $154 billion. And we started working on a budget number finally which was $200 billion. So in that context we are some $50 billion over Carter's original budget.

But I should remind the Members that the Congress last year increased the Carter budget to $159.7 billion, and then later in the year the Reagan supplemental came along, and we increased those 1981 numbers by $11.6 billion. So in that context, then, the bill we bring to the Members today is some $25 billion more than was passed for 1981.

Members should also know that later in the year there will be another supplemental, or there will be a 1982 supplemental that will have to do with financing the pay increases, and no doubt other things that will be proposed by the administration. So it is very difficult, year in and year out, to compare apples and apples, oranges and oranges, when you are talking about the Defense budget this year vis-a-vis last year or any other year, because we do not bring our whole bill to the floor at one time.

Historically that has been the case. I am not sure I understand why, but nevertheless, we do come later in the year with a supplemental.

So we have been through this process, a process generated, I think, by the election of last November that was a clear mandate to the Congress and to the President to start doing something about defense, to start beefing up the Defense Establishment of this country. Granted the President moved in with immediate dispatch, started moving in the Pentagon, looking at programs that could be developed early, looking at programs that could be beefed up, places where legitimate defense money could be spent. I would be the first to stand here and tell you that in that rush to try to get on with the mandate of the people, surely some things were put in that budget that never belonged in there. Surely some things had been put in there that had been kicking around in the Pentagon for years and finally somebody found their chance and put them into the Defense budget. Some of those things were taken care of later by the President's decreases in his increases.

I would argue that by the time we came to the September Reagan budget, trying to build this defense in the proper way, that much of the problem that existed in the early stages had been remedied by the administration's own work, so it was on that budget of some $200 billion that we then proceeded to go to work.

So it is complicated. It was doubly complicated by the fact that while we were going through all these tortures of trying to figure out which briefing book and which budget book to work from, the Armed Services Committee was going through the exact same

problem. They were in conference when the September budget came along, and thay had to go back to conference and had to work out their own problems. So we have had to wait, in part, while they were working. We have had to wait, in part, while the administration completed its work. That is why, unfortunately, we stand here in November with a bill that should have taken effect this past October 1.

Mr. Chairman, today the President made what I thought was a magnificent speech to this country and to our NATO allies and to the Soviet Union and to all of those who are concerned about peace in this world. He spoke about the need to go to Geneva on November 30 to start the debates with the Soviet Union on the theater nuclear forces agreements, trying to find some way to not have to deploy our Pershing II's and our GLCM's in exchange for the Soviets pulling out and dismantling their SS-20's and their SS-5's and their SS-4's. I thought he made a remarkable effort to try to take the lead to bring peace in this world.

We know that also—and he spoke to some extent about this—also in 1982 it is expected that some effort will be started at what he now calls the START talks, instead of SALT talks, trying to find ways to do away with the need for intercontinental ballistic missiles and all the rest.

The key point in all of it is that he must go to the bargaining table with chips in his pocket to deal with. We simply cannot at this time consider cutting back or terminating or doing away with or slowing down the MX. We cannot at this time talk about terminating or doing away with or slowing down the B-1, and we cannot talk about not going forward with the Pershing II's and the ground launched cruise missile. They will be the centerpiece of his effort to get some negotiation.

I would remind my colleagues that it was not too many years ago when we were in SALT talks trying to find some room to bargain with the Soviet Union that President Carter terminated the B-1 bomber. All of a sudden we had one less chip on the table to deal with, with the other side.

So I would hope that when this bill is finished on the floor this week that we will have done the job necessary to give the President those tools to go to the bargaining table with, to try to find some compromise to bring peace to this world. That is what it is all about.

I want to tell my colleagues the truth. It pains me more than can be imagined to sit there day after day after day on this committee and talk about spending billions of dollars that could go to every other thing in this world for the good of mankind, besides weapons, and yet I am convinced that until we can find that magic called peace that we simply have got to do it. So we find ourselves biting the bullet in way that I believe is for the good of this country.

Mr. Chairman, our subcommittee, or part of our subcommittee, took a trip this year to the northern flank of NATO. Some of the Members will recall that I have spent a few hours in the well of this House talking about the problems of the lack of spare parts, the problems of aircraft in hangars so long they become known as hangar queens. I must tell you, Mr. Chairman, we went to our F-15 base in New Amsterdam, and we met with the people who run that base, the pilots, and in particular we met with the major who is in charge of all of the maintenance of the F-15's in New Amsterdam in Holland. I asked him the question, "How is your spare parts situation today? How many planes have you got sidelined?"

He said, "Well, we are in much better shape today."

I said, "If you had to talk about a scale of 1 to 10, where would you put your spare parts and maintenance situation?"

He said, "About a seven." He said, "It can be improved, but it is improving greatly."

I said, "What would you say it was last year?"

He said, "About a five. And the year before a three. And the year before that a one."

So, Mr. Chairman, I think we have made some progress. We have a bill here today that has some $5.6 billion in here for spare parts across the length and breadth of the services of this country. I sat there in that little meeting room in New Amsterdam, and I have got to say, Mr. Chairman, I thought about one Charlie Murphy who used to be on my staff and who went out and found out all about the problems of the spare parts and came back and made me kind of a local hero, for 1 day anyway, in the Washington Post. Charlie is over there in the Pentagon now somewhere, buried, I am afraid—I have not heard from him lately—but I hope they are making good use of him, because this is a credit to Charlie Murphy. He brought it forcefully to us. We brought it forcefully to the House. And as a result of all that, that major in New Amsterdam could say to us that his readiness rate on those F-15's is at a very high level today. I could not stand here and make these remarks if I did not pay tribute to my buddy, Charlie Murphy.

Mr. Chairman, I will wind down now. There is a lot more we could say about this bill, but we will have amendments. I think that they will all be considered important. We will all treat them that way. I have the feeling that we have done a pretty fair job with this bill because we expect to have amendments from those who want to add money and those who want to take out money. Somehow maybe we have come down in that area where we should be.

I urge Members to support this bill. I urge Members on each and every amendment to listen carefully to what is proposed and try not to make just a pro- or anti-defense vote. Look at the amendment itself; see whether, in fact, it makes sense. See whether, in fact, it is something that this country needs to spend money on. Because I guarantee you, every dollar we spend unnecessarily for defense is a dollar that we are not going to have to spend on things we seriously need in defense. So we must make these rational judgments. Pay attention to the amendments that are offered and vote your best judgment. I believe that our committee has done a good day's work, and I am going to support the bill.

I yield back the balance of my time.

The CHAIRMAN. The gentleman from Alabama has consumed 15 minutes.

Mr. ADDABBO. Mr. Chairman, I yield 10 minutes to the gentleman from Florida (Mr. CHAPPELL).

Mr. CHAPPELL. Mr. Chairman, I want to add to what my colleagues have already said in support of this bill.

To the extent we are comfortable with a minimally acceptable package this is a good bill. The threat in the world, is such that we dare not do less than—than the effort made in this bill. I hope our colleagues in the House will sustain the bill.

You are going to have a couple of amendments, very critical amendments, that will seriously impact upon the ability of this Nation to meet the threat which it faces.

I would like to touch upon a few facts which I think are pertinent as we consider this defense bill.

First of all, I call your attention to the comment of Leonid Brezhnev when he was addressing the Warsaw Pact heads of government back in 1973. The heads of those Warsaw Pact nations who were meeting with him were concerned about his feelings about détente, and so they were putting him on the spot, so to speak, about his support of détente.

His answer to them was this: "Trust us, comrades, for by 1985, as a consequence of what we are now achieving with détente, we will have achieved most of our objectives in Western Europe, and the shift in the correlation of forces will be such that come 1985, we will be able to exert our will wherever we need to."

That was back in 1973.

I would like to call your attention now to some statistics that back up exactly what Mr. Brezhnev was saying.

The Soviets have set their goals. They have achieved their schedules to their stated end thus far. Let us look at some of the statistics pertinent to the point.

Turning first to the ICBM and SLBM's, strategic launchers. In 1965 the Soviets had 331 strategic launchers against our 1,100. Today they have 2,426 and we have 1,710 strategic launchers.

Let us look at the Soviet ballistic missiles, and on the same pattern, in 1965 they had 107 while the United States had 496. Today we have 656 and they have 1,028.

Let us look at the statistics with reference to the intercontinental ballistic missiles. In 1965 the Soviets had 224 while the United States had 654. Today we have 1,028 while the Soviets have 1,398.

What I am saying to you is that we have not put a new ballistic missile on line since 1965. We have not put a new launcher on line since 1965, while the Soviets have continued to increase their strength.

Look at the Soviet Armed Forces manpower with reference to ours.

□ 1330

Today we have roughly 2.1 million men in our military. The Soviets have a military manpower of 3.6-plus million.

What about total strategic warheads? In 1965 the Soviets had 530 while we had 2,716. But, look how the imbalance has changed. Now, we have a total of 6,282, while the Soviets have 9,139. Look at the trends. See what has been happening over this period of time.

Let us turn to Soviet tanks. In 1970 the Soviets had 20,450 tanks. Today, they have 26,768. We would be hard put to put 7,000 total in the field anywhere, everywhere in the world.

What about the expenditures on defense as compared to social services? We hear a lot of conversation about the fact that we are spending so much more on defense in comparison to our expenditures on social services. Let me review the statistics. In 1960, we were spending roughly 30 percent on defense and roughly 31 percent on social services. I am talking about all levels of government, State and Federal. We are now spending 14.8 percent on defense and 49.1 on social services. I just wanted to bring some of those statistics to bear because it shows that we are not spending for defense at the cost of social services.

Now, if we are not to invite disaster, we dare do nothing less than what has been provided in this bill. I hope the Members of this House will sustain the bill at least to the maximum it provides. I hope this spending level will prove in years to come to be a reasonable effort.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 5 minutes to the gentleman from Virginia (Mr. ROBINSON), one of the great members of this committee.

Mr. ROBINSON. Mr. Chairman, initially I want to express my high regard for the completely courteous and always totally cooperative attitude that has been shown me by our chairman and by our ranking member, and by the treatment which I invariably receive at the hands of our staff in terms of being able to call on any one of them at any time for any information, any assistance, and being sure that I will get their full attention.

Mr. Chairman, I am not going to take a great deal of time today going into details of what or what is not in this bill that is now before us. I am just not inclined to take valuable time to impose on this House my personal views as to which of the thousands of items are important and which are not. But as we begin debate on this year's Defense appropriation bill, I do want to take a few minutes to try and place in context some of the comments that we have already heard or will hear about this legislation.

It has been said, and it is true, that this is the largest defense bill ever considered by a legislative body in the history of the world, the largest bill of any kind. The same was said last year and the year before that. It will probably be said next year. One hundred and ninety-six billion dollars is a simply staggering sum, but I suggest to the Members that size alone should not make the bill suspect. The increase over last year is upward of $20 billion, and that is larger in increase, as has been said, than the total of many other appropriation bills. It is a simply shocking reflection that the cost of our defense of our Nation is a massive and expensive requirement in today's world.

This bill had its beginnings 5 years ago, as do all defense bills. During the close of the Ford administration and in the early days of the Carter years, change after change was made as we came down the road to the present time. Just about a year ago President Carter ordered it printed and sent to the Congress, and thus the budget that we received last January represented one administration's view—the Carter administration's—view of the world and how to keep America safe in that world.

That administration, however, was replaced by a new one with differing views and differing perceptions as to how to address our defense needs, and so the changes continued into the spring and the summer and into this fall. These changes, the last of which came to us as we were marking up the bill in subcommittee, made our job a lot more difficult. The figures did not add. The programs changed. The priorities changed, and times changed. This budget was not perfect when we received it in January, and it is not perfect now. It will not be perfect when the President signs it into law. The programs and policies we considered in committee represented the best judgment of two Presidents, and before us today is the best judgment of our committee and staff, and the bill which becomes law will be the best collective judgment of the whole Congress. After that, it is up to the management expertise of the various departments and the agencies of the Department of Defense to do their job with what they have been given.

President changed this budget; the Congress is going to change it. We should not, I suggest, be too critical of those who made changes before us, for I doubt if any of us are certain that our changes and ours alone have produced perfection in terms of this appropriation bill. I submit that we each can only do our best, and that, I assure the Members, we have attempted to do.

This Member can support this bill, although in my view changes were made at every stage which gave me concern in that we became involved as legislators in what is described by some as micromanagement.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 2 additional minutes to the gentleman from Virginia.

Mr. ROBINSON. I feel, for example, we in committee may have cut specific items in personnel and operations and maintenance which will impact in ways that we did not anticipate.

In the main, this bill gives the President those programs that he requested. Amendments will be offered to take away his strategic program and I shall oppose them. Other amendments will be offered to tinker with various of the minutiae in this bill. I shall judge each on its merit, as will all the Members.

But, this bill is only a start toward where we should be as we play catchup with the Soviets, as the gentleman from Florida (Mr. CHAPPELL) has suggested. Directions will continue to change, but I hope they will be fewer in the future than they have been in the past, because I say to the Members, the process cries for a dedicated sense of direction. No longer can we afford to have an on-again off-again defense program. We have had enough changes. It is time we get on with it, and the bill before us is our current opportunity to do just that. I commend it to the Members.

Mr. ADDABBO. Mr. Chairman, I yield 7 minutes to the gentleman from Washington (Mr. DICKS), a member of the subcommittee.

Mr. DICKS. Mr. Chairman, the bill brought to the House today by the Defense Subcommittee is a product of an

intense review of details of over $200 billion in budget request submitted by the Department of Defense. I would like to join with my colleagues who have already mentioned the fine work and leadership of our chairman, the distinguished gentleman from New York (Mr. ADDABBO). Who has spent an incredible amount of his own time working on the development of this bill; to the ranking Republican Member, the gentleman from Alabama (Mr. EDWARDS), who also has spent an incredible amount of time; and particularly to the very professional and competent staff. I do not always agree with what the staff recommends, but I have a great respect for their ability and their talent and their competence. I think it is a tribute to this House that we have people of that ability and skill serving us.

I am here today to tell the Members that I think we have a good bill. I think that this bill has received incredible scrutiny. I can tell the Members, as one Member, that this committee of the House has not gone along with every request that has been made by the Department of Defense. We have challenged them on a range of issues, and most importantly, in my judgment, we made some real steps in fighting waste, fraud, and abuse at the Pentagon.

I think there was a message in the 1980 election. The American people want scrutiny on how we are spending their tax dollars not only on social spending, but on defense spending as well. We have made a number of cuts, particularly in the area of consultants, that will in my judgment result in less money really being wasted or spent on frivolous items, money that we can take and use for ammunition, for spare parts, for war reserves, and the things that are vitally essential. A lot of these reductions, of course, are based on work done by a very professional survey and investigation staff, on reports from the General Accounting Office, on reports that we received by the audit services of the various departments, and they deserve some commendation for the work that they have done.

This committee has made an effort to address those issues, and I think it deserves some recognition. Last year, we made a major commitment on the issue of military pay, and I can tell the Members today that the All-Volunteer Force is stronger today. We are getting better people. We are getting better retention rates because of the commitment we made last year and this year to a better level of compensation for the people who serve us. I am one who believes that no matter how much equipment we buy, no matter how many tanks and ships and airplanes we have, if we do not have good people in the military we are bound to fail when we come to that critical moment when those people have to be utilized.

So, I think this House and this committee deserves some credit for the leadership we provided last year in dealing, along with our fellows in the Armed Services Committee, in putting forward a bill that produces additional compensation for the military.

I am concerned about a great issue that I think this Congress and this administration has not come to grips with; that is, what I call the affordability crisis that faces the Pentagon. All of us want to help the Pentagon get the weapon systems that they really need, but unfortunately there are too many weapon systems on the menu and, frankly, we cannot afford them all. The Armed Services Committee, and frankly, our committee have not faced up to that hard task, and neither has this administration. I predict that weapon systems, major weapon systems, will have to be canceled in the next 2 years because inflation and cost growth and gold plating simply will make it impossible for us to buy all the things the Pentagon is trying to sell to this Congress.

□ 1345

Mr. Chairman, I urge this administration and I urge this Pentagon leadership to take a better look at those issues. And yet I see some breath of reform in the air. I see the Army now willing to talk about maneuver doctrine, to talk about mobility, and to talk about lightening up its artillery and increasing its mobility.

I think there is a group in this Congress which deserves some credit beyond our committee, and that is the group known as the Military Reform Caucus, which has basically challenged the strategy, tactics, and procurement policies of any administration, any Pentagon, particularly this one. It seems to me that kind of reform is necessary. It is important that our leadership in the Pentagon look at its strategy and look at its tactics in light of the realities of the 1980's and the 1990's and then make decisions on procurement.

I for one have been one of the Members who have asked specific questions. My colleague, the gentleman from Alabama, and Senator HART, and I have asked for a study to be done on U.S. strategy by the Library of Congress. I think it is absolutely essential that we go back and review strategy, tactics, and procurement policies. I hope that we can, through this process, develop a military that is capable and competent of dealing with the realities of the 1980's and the 1990's.

I think this committee has done a good job. I think we have made some important revisions in this budget. A lot of work must be done yet in conference and in the other body.

Particularly, I would like to pay a compliment to our subcommittee chairman. Sometimes he has been a voice by himself challenging some of the pronouncements coming out of the Pentagon, and I for one, after serving now on the committee for 3 years, have a growing skepticism of some of the information we get from the Pentagon. I think these people try to do a good job, but sometimes I think they get too caught up in trying to sell something up on the Hill, and I think that sometimes on very major issues they do not give us totally accurate information when they know better. Sometimes, in my view, even as recently as yesterday, I am embarrassed to say, we have found a great distortion in the testimony we get from high officials in the Air Force, and then we find out from other people who are equally informed that what we were told by the Air Force a few minutes ago was totally inaccurate.

We have to end that, and I think, with the kind of leadership we have had on this subcommittee, that we have taken the right approach. That kind of adversarial approach will bring truth, and I think that is what we have got to search for.

We need a strong military, but we do not need to throw money at the problem. We need to do it in a thoughtful, constructive way, and I think this committee is providing that kind of leadership.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield such time as he may consume to the very able gentleman from Pennsylvania (Mr. MCDADE).

Mr. MCDADE. Mr. Chairman, I rise in support of H.R. 4995 making appropriations for the Department of Defense and I urge its approval by the House.

Mr. Chairman, while I have served on the Appropriations Committee for the past 17 years, this year was my first opportunity to serve on the Defense Subcommittee. It has been a tremedous experience, one which has greatly enhanced my already substantial respect for the two gentleman whose leadership points the way for all of us, the gentleman from New York (Mr. ADDABBO) and the gentleman from Alabama (Mr. EDWARDS). They bring not only great expertise but great patience to our deliberations. They set the agenda and bring some sense to what is surely the most complicated and complex bill the Members will see this or any other year. I might add that we could not possibly bring this bill to you were it not for the incredibly gifted professional staff of which there is no finer.

This bill comes before the House today after 10 months of hearings during which it seems that the budget numbers we received were under constant revision. Yet I believe that we

have brought a bill that meets a number of goals that we set out to achieve this year.

It adopts intact the administration's strategic weapons package. It meets the national mandate that our Nation revitalize and improve our Nation's defense. It targets specific areas where waste, fraud, and abuse have hampered our national defense effort. It continues the bipartisan attempt to improve the living, working, and pay conditions that were begun last year for our service men and women. And perhaps most significantly, we bring you a bill that does these things yet insures that the Defense Department makes some of the financial sacrifices that all other agencies of Government are being asked to make in the interests of fighting inflationary deficits.

This bill is $4.2 billion below the President's revised September budget request. Despite the committee reductions, it is still the largest defense appropriations bill ever considered by Congress. It is some $25 billion more in new total budget authority than was available to the Pentagon in fiscal year 1981.

Mr. Chairman, later during amendments all of the Members will have the opportunity to debate and vote on the contents and the merits of the administration's strategic weapons package, including both the B-1B manned bomber and the future of the MX missile. The committee has spent countless hours in public and executive sessions debating these issues. In subcommittee and in full committee, the votes to include both programs were nearly even, reflecting the committee's concern about cost, penetrability, deployment, and whether or not we are closing the famous "window of vulnerability" we face from the threat of the Soviet Union.

I supported both actions in committee and in subcommittee. The B-1B proved to be a most difficult decision in that we are being asked to go forward with a weapon that has been delayed for too long to replace a 25-year-old bomber that is clearly inadequate for our needs. Many of us would be quite happy to leapfrog the B-1B technology in the hope that the new Stealth bomber could be brought onstream by the close of the decade. But Stealth is still a paper concept and the B-1B can be brought into our fleet as early as 1984 and give us a penetration capability over Soviet defenses well into the 1990's. I don't believe we should delay this decision any longer.

I would also say to my colleagues that as they consider the debate on whether or not to go forward with the MX missile, there was considerable and justifiable concern on the part of our subcommittee on whether we would be improving our vulnerability to Soviet attack by going forward with the MX research while a final decision is still pending on a basing mode. But remember, the $1.9 billion contained in the bill for the MX is research and development money only. We need to go forward with the design and development of the MX to phase down our existing vulnerable Titan and Minuteman missiles. I would hope we could retain this provision in the final version of the bill.

The committee took a number of steps to reverse what has become an alarming trend of giving a low priority to our ammunition needs. For too long, ammunition has been the savings account of the services—reprogramings have drawn down funds earmarked for ammunition whenever there is a perceived need elsewhere. I commend my chairman for two actions he has taken this year. First, in telling the Pentagon that our committee would not look favorably on reprogramings out of the ammunition account, and second, in restoring funds for ammunition procurement deleted by the administration in their September budget request. The committee restored $112 million in ammunition procurement and $68 million in production support to increase the Nation's readiness by increasing the availability of ammunition. But procurement of new stocks is only part of the problem.

Since 1975 the committee has been trying to get the Defense Department to tighten up on its management and coordination of the ammunition program. To do this, the Army was designated as the so-called single manager for conventional ammunition for the three services. This single-manager program was to be a two-phased approach aimed at obtaining efficiencies and economies in the ammunition program. Years later, despite testimony from the Army that all SMCA problems have been worked out, we still have no phase 2 directive to finalize the system.

Problems at transfer depots, disputes between OSD and the services have led to the development of two phase 2 plans. The committee would like to see one strong plan, as proposed by the committee and the General Accounting Office, both of whom have found tremendous shortcomings in our ammunition program.

To prod the Pentagon one last time, the committee has included language that allows the single-manager program to continue only under a completed phase 2 directive after January 30, 1982.

Mr. Chairman, according to testimony before our committee along with studies by the GAO, we are wasting millions of dollars yearly in this critical program. This budget contains major increases for ammunition increases that bring the ammo budget to $3.7 billion. Yet presently, we have 25 percent of our inventory that is unserviceable. Long delays in disposal are wasting millions of cubic feet of storage space. Storage facilities are in terrible shape. The inventory of ammunition is seriously miscoded so we are unsure of the true condition of our stock.

These programs could be improved with more stringent managements and the committee believes that we need to get going with the completed single-manager program now. I am advised that the Secretary of Defense has given final approval to the phase 2 directive last evening.

Mr. Chairman, H.R. 4995 also contained an amendment in an attempt to assist our domestic automotive industry in competing for procurement work on certain administrative vehicles that will be purchased by the Department of Defense to replenish the existing NATO fleet of administrative vehicles. Included in that fleet are various jeeps, cars, trucks, and vans numbering some 20,000 at a total cost of $240 million over the next several years.

Our bill says that all procurements in excess of $50,000 must be bid competitively without regard to any price differentials favoring foreign sellers.

This amendment is designed to give the domestic auto industry the chance to bid competitively—nothing more, nothing less. If it is cheaper and more efficient to buy foreign, so be it. All this amendment does is to open bidding to domestic vehicle makers. It does not violate the GATT. It does not stack the deck for or against anyone. It does not even discourage efficiency. It simply opens the Pentagon's "buy foreign" policy to American industry.

Mr. Chairman, this is a comprehensive bill that will, in my judgment, meet our Nation's defense needs. I urge its approval.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 5 minutes to the very able gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Chairman, I want to briefly join in the tributes that have been paid to the chairman of our subcommittee and to the ranking Republican member of our subcommittee for the manner in which they have conducted the affairs of the subcommittee in hearings and markup sessions. Sometimes those sessions have become rather heated and quite controversial, and I understand why they might have pulled their hair a little from time to time because of the way some of the business was conducted.

Also as to the staff, I echo the comments of our chairman, the gentleman from New York (Mr. ADDABBO), and of the gentleman from Alabama (Mr. EDWARDS), as to the professional standards of the staff that we enjoy working with on this subcommittee.

I rise as a member of the subcommittee in strong support of the bill before us, and I want to be a little more specific in what I believe will add more credibility to this bill than has already been offered. One of the important parts of our defense doctrine is the ability to respond rapidly to any kind of a situation that requires military intervention.

At this time last year we had a concept, a concept of a rapid deployment joint task force that would be able to respond rapidly to any part of the world, more specifically Southwest Asia, to protect and preserve the interests of the United States.

Today, thanks to a lot of the inclusions in this appropriation bill before us, that concept begins to become a very viable part of our national defense doctrine, for in this bill we provide additional funding, additional equipment, and additional preparation for the rapid deployment force. We provide for additional communications equipment, which obviously is necessary if we are going to deploy troops anywhere. We provide for such things as water purification so when they get where they are going, they are going to have water to drink and so they are going to have utilities to take care of the facilities they do have there.

We are providing more training money. We are providing training for a new high technology Army division. We are providing more money for exercises like the Bright Star exercise that is taking place in Egypt today, and that is an exercise that appears to be a very successful one from all reports.

One of the real problems with the rapid deployment force concept or doctrine is, if in fact a decision is made to deploy the RDF, how do we get it there? Even if our force is fully trained, fully equipped, and has everything it needs to perform its mission, we still have to get it there if it is to accomplish its mission.

This bill provides for some of the needed sea lift. We provide money for roll-on, roll-off types of cargo ships, the SL-7's, the fast cargo ships. We are providing for the pre-positioning of 13 to contain ammunition, medical supplies, and other equipment that the rapid deployment force would need.

In addition, we are providing funding to re-engine the KC-135's so those air refueling aircraft will have greater payloads and greater range capability and so they can refuel those aircraft that are part of or are in support of the rapid deployment force. This bill provides for KC-135 re-engining and for four KC-10's, which have a much greater capability to carry fuel and to refuel in flight those bombers or transport planes or fighters or whatever other types of airplanes might be deployed.

We provide full funding for the readiness command. Readiness is obviously an important part of any military force. For rapid deployment or otherwise, readiness is obviously essential.

I want to refer to words that President Reagan used in his historic speech this morning before the Press Club. He said:

> Deterring war depends on the perceived ability of our forces to perform effectively. The more effective our forces, the less likely it is that we will have to use them.

I agree with that, and I think the people of America basically agree with that. The moneys we are providing in this bill for our national defense establishment and, more specifically, for this rapid deployment force I have been talking about for these few minutes, I believe, helps to establish that "perceived ability of our forces to perform effectively."

Let me make one comment here that might seem to be a little negative. There is something that we have not done in this bill that I think does have to be addressed and should be addressed as soon as we possibly can. Despite what we are doing and the ability that we are creating to rapidly deploy, we have this problem: If we rapidly deploy our forces today, we do not have sufficient medical care facilities to take care of those people who are going to be injured in that deployment and in the performance of their mission. We have to do a little better than that.

Let me say that I do not think anyone is completely innocent or completely guilty in this regard. I believe that the Defense Department has been remiss in not getting a better organized plan to provide for this medical care. I think perhaps the Congress could have been a little more pushy or a little more aggressive in putting the pressure on the Defense Department to come up with a program where we could in fact have some relocatable hospitals, some MASH units, if you will, or whatever they call them today.

The CHAIRMAN pro tempore. (Mr. DOWNEY). The time of the gentleman from Florida (Mr. YOUNG) has expired.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 2 additional minutes to the gentleman from Florida (Mr. YOUNG).

Mr. Chairman, will the gentleman yield to me?

Mr. YOUNG of Florida. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, the gentleman from Florida (Mr. YOUNG) is discussing a very important subject, that is to say the field hospital problem. This committee has been pushy, but perhaps not pushy enough to get the Department of Defense to centrally manage these efforts. We have, I think, in the work of the committee convinced the Army that they should get on with doing a better job with their field hospitals and in fact it appears that they have.

I certainly would hope that the Navy will do the same thing. The gentleman spoke eloquently about this problem in the full committee, as he is doing now, and I am sure our whole subcommittee joins with him in trying to find a way to resolve this problem so we can have a good central effort for field hospitals, whether on shipboard or on land. I certainly join the gentleman in his concern, as I am sure the other Members do.

Mr. YOUNG of Florida. Mr. Chairman, I thank the gentleman from Alabama (Mr. EDWARDS) very much for his remarks.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Florida. I yield to the distinguished subcommittee chairman.

Mr. ADDABBO. Mr. Chairman, I thank the gentleman for yielding.

First, I want to commend the gentleman from Florida (Mr. YOUNG) for his activity on the subcommittee and for his great diligence and interest in the rapid deployment force and its capabilities. The committee and I appreciate his expertise in this area.

The fleet hospitals and the other military hospitals have been a very deep concern of the subcommittee, especially as the problem relates to the unmanagement or nonmanagement by the military of all of the hospitals.

I appreciate the gentleman's bringing this issue to our attention. I know that he has looked into the question very seriously, and much of the information we have received shows that spending money as proposed by the Navy may not help to resolve the hospital problem, as we have pointed out in the committee on previous occasions. They just again went far afield by themselves and budgeted for all types of equipment which the Navy already has.

Mr. Chairman, I agree with the gentleman from Alabama (Mr. EDWARDS) that with our urging and with the dedication of the gentleman in the well, and we hope the Defense Department will put its act together so that there will be a concerted joint project by all the services for a good program which we can fund and which will be properly funded.

Mr. YOUNG of Florida. Mr. Chairman, I thank the subcommittee chairman for his comments, and I appreciate his understanding of the concern he and I share in this regard.

Let me say, Mr. Chairman, that I believe this is a good bill and we ought to pass it today.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to

the gentleman from Virginia (Mr. DAN DANIEL).

Mr. DAN DANIEL. Mr. Chairman, I thank the able gentleman for yielding time to me, and I rise in strong support of this bill, especially those portions dealing with operation and maintenance.

Mr. Chairman, our brief history as a nation, and our shorter span as a major power, have been characterized by large shifts in citizen perception of the need for a strong national defense. We are in the midst of the need for a stronger national defense. We are in the midst of such a shift now. As we leave behind the bitterness and divisiveness which marred the Vietnam era, and act on our collective judgment that the Soviets are beginning to outstrip us militarily, it would be well for us to keep one factor in mind.

Modernization of our Armed Services is critically necessary, and will proceed as quickly as the Congress and the President can effect. Although modernization is easily the most gratifying, and easily explained, effort in support of our defense, it is by no means all that is necessary. Nor is it the most rapid contributor to our military capability.

As we face the critical decisions of how to reequip our strategic and conventional forces, and how to insure a steady flow of high-quality young people to man them, we must also concentrate on another equally vital activity. And that is "to make ready that which we have."

We have yet to be prepared for any war in which we have fought. With the multiple demands on our national economy, there is little likelihood that we could ever be totally prepared. But we can, at a very good return on our investment, maximize that which we have, and in so doing, maximize our realistic deterrent capability.

In materiel terms, this means to address our industrial preparedness, our declining defense industrial base, such that our capability to be the "Arsenal of Democracy" is no longer a quaint, half-forgotten phrase. It means that the readiness of weapons and facilities now on hand, must be improved, so that a "come-as-you-are" war situation won't find us effectively denuded. Just as important, sustainability of our current force structure must be enhanced. We must be able to go to war, if necessary, and stay until we win. We must have, in stock, the beans, bullets, fuel, and spare parts for, and the means to effectively get them to, deployed forces.

Materiel preparedness and sustainability are only part of the answer, however. A much harder aspect to measure is the readiness of our forces to fight. Simply stated, our combined arms team must be superbly trained and led. Training is extremely dependent on resources allotted, as is leadership development. In order to retain the good, young noncommissioned officers and junior officers, and in order to steadily build priceless experience, we must address those factors which rob us of our single most vital resource: trained, experienced, able leaders capable of taking a mobilized force into combat.

Our relative military imbalance with the Soviets was not created, nor will it be fixed, overnight. Modernization will be a long time coming, and will be painfully expensive. As a result, the unsung and unglamorous, daily operations and maintenance of our Armed Services becomes even more critical than ever.

As we look to our allies' readiness in NATO, and jointly plan for our defense; as we look outward to the Pacific Basin, and Southwest Asia to troubled, but indispensable, friendly nations; as we look toward having to deter actual Soviet expansionism occurring today, rather than merely plan for tomorrow—let us look to our own readiness.

Let us make ready that which we have.

Mr. ADDABBO. Mr. Chairman, I yield 10 minutes to the chairman of the full committee, the gentleman from Mississippi (Mr. WHITTEN), who is a great, dedicated man on defense spending and not military waste.

Mr. WHITTEN. Mr. Chairman, I am going to vote for this bill, as I have voted for other defense bills throughout the years. I always support defense.

But through the years I have also made an effort, since I went on this subcommittee in 1943, to control spending, and here I have joined with the committee in asking for an investigation of defense spending and actual practices in an effort to get real defense for the money we spend.

BUILD THE B–1 NOW

I want to say that I have always supported the B–1 bomber and the nuclear submarine because I believe that what we ought to be doing is preventing war. I believe that a bomber that we can send and bring back is a whole lot better than a missile that has to explode and the war is on. We should get on with building the B–1.

I have had reasons to investigate, as I said, in the past, and I believe in 1956 the findings of wasting of funds in the military disclosed for our investigation were so terrible that when I got to the then Secretary of Defense, Mr. Wilson, to read the report, he came back to the committee and said that it made him mad to think that he was operating in such a Department.

COMMITTEE INVESTIGATION

In February of this year we conducted an investigation of military practices, and may I say that it is an eye opener. The findings raise doubts not only as to whether we are ready but raise the question of whether we will ever get ready. We do not hear anybody talking about strengthening defense. The Office of Management and Budget, the President, and everybody else have been talking about increasing military spending. Let me say to my friends that there is a difference. I shall put in the RECORD, under permission to revise and extend my remarks, excerpts from what I have found and wish to share with the Members.

First, I want to say that the Defense Department today has approximately $40 billion that is unobligated and it has approximately $125 billion unspent. Now, I mention that because I have reasons for wanting it in there—because I think that until we get some action taken to prevent the waste that is evident in this report we might tell them to use the money that they have got to carry these things on until they get their affairs straightened out.

I list here some of the funding of our investigation:

SUMMARY OF MAJOR FAILINGS

An important missile in our inventory is unsafe for use aboard a ship due to radiation hazards. Because of sensitivity to radar, the missile cannot be removed from the ship's magazine and loaded aboard an aircraft lest the missile be inadvertently detonated. This situation has existed for several years, and although the missile's firing circuit could be changed for $2.00 per missile, no corrective action has been taken.

A very similar situation exists which precludes the loading of a gun on one of our aircraft. The ammunition for the gun was found to be unsafe for use aboard Navy ships since the ships' radar—and even static electricity—could accidently detonate the rounds. Several thousands of costly handmade rounds were purchased, but they too were found to be unsafe. During a recent important deployment, this particular aircraft operated with empty magazines.

Although the MX missile's MARK–12A reentry vehicle already has four different fuse systems available, which provide for a total of 24 fusing options, the Air Force was directed by the Secretary of Defense to develop another, known as the path length fuse. The development and incorporation of this capability into the MARK–12A is estimated to cost the MX program more than $400 million. However, the Strategic Air Command believes the current MARK–12A fusing options are more than adequate for the MX.

The study shows that the U.S. Navy is regularly using tactical S–3A antisubmarine warfare (Viking) aircraft to perform cargo-carrying missions for deployed naval battle groups.

To date, the study shows that the Army has lost at least $8.3 million because of the procurement of defective Medical Unit Self-Contained Transportable (MUST) equipment. 207 defective shelters had to be disposed of by the Army, over 300 corridor connectors and passageways were unuseable because of faulty materials but were accepted by the U.S. Government and over 400 inflatable shelters will have to be refitted with proper connectors.

The General Services Administration (GSA) is charged to manage public utility services, including prescription of policy and

methods of procurement. The GSA provides local and long distance telephone service to all Government users. The DOD provides long distance service on its Autovon telephone system. In addition, DOD is in the process of instituting consolidated local service in metropolitan areas. In effect, the Government is operating two long distance systems, and two agencies, DOD and GSA are providing local telephone service in metropolitan areas. Consolidation of these systems would make reductions in telephone costs in the order of tens of millions of dollars by use of centralized attendant switchboards, thus eliminating operators, and common use of long haul circuits. The elimination of duplicating staffs engaged in analyzing requirements, procuring circuits, billing for service, etc., would result in savings of at least 200 people.

In fiscal year 1979, it is estimated that the Department of Defense spent about $1.6 billion on all types of professional service contracts. A preliminary survey of DOD use of Contractor Engineering and Technical Services (CETS) contracts disclosed operational reliance of CETS personnel (contractors) has reached the point that Navy air wings, and to some extent the Tactical Air Command (TAC) do not have the capability to operate at full combat mission readiness without civilian contractual support. The number of CETS personnel currently aboard and at sea with the four aircraft carriers operating with the Atlantic Fleet in the Indian Ocean—the JOHN F. KENNEDY, the AMERICA, the FORRESTAL, and the INDEPENDENCE—total 131, at a cost of approximately $80,000 per man-year or $10.5 million annually. The Commander of a Navy F-14 Fighter Wing advised that his unit would experience at least a 50 percent reduction in operational capability without the present level of CETS support. The study noted that the E-3A (AWACS) aircraft, including those in Saudi Arabia, could not function as a viable airborne warning system without the use of CETS support aboard the airplane to maintain and operate the essential radar function. The Navy's dependency has increased to such a degree that CETS personnel are employed as Logistic Support Representatives (LSR) to locate, and facilitate the delivery of spare parts within and through the Navy's own supply system. It was found that a large number of CETS personnel aboard deployed aircraft carriers are former Navy technicians who found that pay and career opportunities were greater in the private sector.

Improvement of inventory, supply systems and spare parts management could save millions of dollars, according to the study.

□ 1400

SECRETARY HAS NOT RESPONDED

We called attention personally by letter to the Secretary of Defense on October 19 and asked for a report. He was in my office 2 weeks ago and he had not looked at it yet, and he has not looked at it today, and not a word has been said about it.

I am not going to move that we delay this appropriation bill. I am going to vote for it. But I am going to say that they do not need it now. I am going to say we ought to hold it up until we get this matter cleared up so that we will get some defense for the money we spend.

Increased wasteful defense spending is certainly no answer, and that is largely what we are doing. In the Congress, at the White House and in the press we do not hear or read of better defense; what we hear of is "increased military spending" on weapons systems, never quite completed because we are always waiting to add the new gadget, including some still on the drawing board.

Largely for this reason, it took 5 years to build Polaris 1, 6 years for the Polaris A3, 9 years for the Poseidon C-3, and 11 years for the Trident C-4.

We promote low bids, with the knowledge that the real money will be paid for changes; as many as 35,000 changes on ships, with 6,000 change orders and large numbers on others.

We build submarines with large quantities of defective welding, some caused by mismanagement for which they take out an insurance policy and bill the Government for the premium. Military spending has become far too much of which service gets it, and where will it be spent.

Of course, we needed to cut out wasteful spending. We did that last year, $14.1 billion worth, with hardly a ripple. Now they want to cut muscle and bone.

This would be detrimental to our economic recovery for investment and productive expenditures are just as essential as to eliminate waste—and our country, built around credit, must, above all, get back to reasonable interest rates and get back to putting a premium on productive work.

Most of the weapons systems and other purchases will be ready by 1985. This sounds as if they believe we can get an agreement with Russia before we have any conflict. If we do not, 1985 may be too late.

I hope my colleagues will read the RECORD tomorrow because I do not have time to go into them. But may I say again, that when you get our intelligence people to say what Russia has, it appears that they are prone to accept the claims of Russia verbatim because it supports their efforts to get more money, even though they have $40 billion unobligated, and $125 million not spent. It serves their purpose. When you ask for information about Russia helpful to us the statements get fuzzy and uncertain.

So I say to you, while I am for defense, and I am going to vote for defense, I honestly think I can do more good for defense to point out these defects. We have all of these exotic weapons. We did not use them in Vietnam. We did not use them in Korea, probably wisely, because I think for anybody to turn them loose this day and time, whether it be a test or not, is inviting war. I think it would take a crazy person to set off a nuclear weapon under present conditions.

So I say again, I am for this bill and I am for defense. But, for goodness sake, help us to get defense for the dollars spent and not merely get a whole lot more money spent, because it is, after all, inflationary.

I say again: Will my colleagues please read the RECORD and see the detail that is in these hearings. I hope my chairman—and he and I have been close friends now through the years, and this is an area where he has worked through the years—I hope he will agree with me to get the Secretary of Defense before our committee and go after him and try to get action to correct these conditions which the investigation discloses.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from New York.

Mr. ADDABBO. I thank the gentleman for yielding. I fully commend him and agree with everything he has said. That report definitely confirms all of the items the gentleman has learned over the many years he has been on this subcommittee and dealt with defense. I fully support and will do everything possible to see that the Defense Department and the Secretary comply and correct many of these wastes.

Mr. WHITTEN. My I congratulate the chairman for the way that he has handled this committee. I appreciate his dedication and friendship.

I want to say to the Congress that we have no more able men in the Congress than the members of this subcommittee. But they, like I and like you, should be awfully sure that what we get is defense and not merely military spending increases.

Mr. MOFFETT. Mr. Chairman, will the gentleman yield to me briefly?

Mr. WHITTEN. I yield to the gentleman from Connecticut.

Mr. MOFFETT. I want to congratulate the distinguished chairman on his statement. I think some of us have not always agreed with the chairman on what our defense should be. But I think the chairman is making great sense and has given us an inspirational statement here today about the need to scrutinize the budget.

Mr. WHITTEN. I appreciate the gentleman's statement. Let me say that other statements made about Russia back my own judgment. Did you know that in 1856 in Harpers magazine they were worried about the Russian bear. Disraeli in 1875 was worried about Russia. We have worried about Russia. You can go back 15 years ago and the same debates were being made here. But I assure the gentlemen that 25 years ago when I went to Russia, the major reason they did not let you go into much of Russia is that they did not have any roads, and

they did not have any indoor toilet facilities. They were embarrassed.

I do not mean to say that they are not a threat today. They can throw their weight in the contest and they can put their best forces in and go here and there, and they are a threat. But I do think our folks are prone to believe their claims because it justifies what many of our people would like to have any way that increased military spending.

Mr. Chairman, the answer is not how many dollars you spend in the name of defense, but how much defense you get for the dollars we spend.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield such time as he may consume to the Republican leader, the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, in his eloquent and historic speech this morning, President Reagan quoted a letter he had written to Soviet leader Leonid Brezhnev.

In that letter, the President reminded President Brezhnev that at the heart of the relationship between our two nations must be the concerns of ordinary human beings.

"Government exists for their convenience, not the other way around," said the President.

He could not have chosen a day more fitting to make such remarks. Today we are debating what is perhaps Government's most important function—to protect the freedom and security of American families.

Some say the defense appropriations bill should be cut because it takes money for programs for human needs.

The need to be alive and free and the need to be protected against tyranny are the biggest human needs we have. And this bill is the only way we have of meeting those needs.

You can talk all you want about programs for human needs. But the biggest human need we have is to keep the Soviet Union from destroying us, quickly or slowly.

Mr. Chairman, during my years as a member of the Appropriation Committee no votes were as important to me as those I made on defense issues.

On all other issues you have a margin for error. But if you give our country inadequate spending for defense, you have made the one error that can be fatal.

As I look back over 25 years, it is evident that there were times when we should have been a little more prudent here or a little more expansive there.

But in the final analysis, you always try to do what you think is best for the country.

I think the committee has done that in this bill.

This bill contains adequate provisions for the research and development on the MX system, the B-1 bomber, for the land-based theater missile, and for cruise missiles.

They are the big four. They are not merely weapons systems. They are instruments of peace.

They are instruments of negotiation. I do not know of anyone who really believes that we can negotiate with the Soviet Union from a position of vulnerability and weakness.

That is what this bill is all about: Keeping the peace.

Our strength is absolutely vital, not for the sake of provocation, but for the sake of prevention.

There is no greater contribution we can make to the peace and safety and freedom of the American people and the hope of lasting peace throughout the world than a national defense that commands the attention and respect of our adversaries.

If you dispute the need for one weapons system or another, then be sure when you do, that you weigh all of the implications involved. We have a grave responsiblity to insure the success of our efforts toward arms reduction. No error in judgment will be slight.

In debates on nondefense issues, we hear cries for compassion and concern.

I say the best way to demonstrate compassion and concern for all Americans is to give them the defense they need.

The CHAIRMAN. The gentleman has consumed 4 minutes.

Mr. ADDABBO. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Illinois (Mr. PRICE), the great chairman of the Armed Services Committee.

Mr. PRICE. I thank the gentleman very much for yielding this time.

Mr. Chairman, yesterday the House approved the conference report on S. 815, the fiscal year 1982 defense authorization bill. However, since this bill has not yet been signed into law, it was necessary for the Appropriations Committee to get a rule waiving points of order against the bill because of a lack of authorization.

I appreciate the technical need for a waiver and I recognize that the late reporting of the authorization conference report has created an unusual problem for the Committee on Appropriations in dealing with appropriations accounts subject to prior authorization. I would also note that the Appropriations Committee has been diligent in the past in respecting the authorization process by deleting items for which there is no authorization.

The present chairman of the Defense Appropriations Subcommittee, in particular, made it clear repeatedly that he did not wish to report an appropriations bill until there was an authorization. This year, however, because of the late decisions of the President on strategic programs and the revised budget submission of the administration in October, the authorization bill was delayed to the latest point in my memory. Because of the actions of the administration, the conferees on the authorization bill could not prevent this delay. I know the distinguished gentleman from New York appreciates the unique situation we are in this year.

Mr. ADDABBO. Will the gentleman yield?

Mr. PRICE. I yield to the gentleman from New York.

Mr. ADDABBO. I recognize the situation that the able chairman of the Armed Services Committee has outlined and appreciate his concerns. As I have said before, I do not like reporting the appropriations bill in the absence of authorization, and it was because of the urgency of the situation that we were forced to ask for a waiver. It was not my intention that unauthorized programs be funded.

Mr. PRICE. I appreciate the gentleman's comments. I raise the point because a preliminary review indicates there are some items in the appropriations bill before us that do not have prior authorization. Under normal procedures I would have opposed a waiver or would move to strike unauthorized items. Because the authorization has not been enacted and because I do not wish to delay action further, I will not make such motions here today. I would trust the distinguished chairman of the subcommittee would endeavor to work the matter out in conference and remove nonauthorized provisions to the extent conference procedure permits.

Mr. ADDABBO. I appreciate the indulgence of the gentleman from Illinois in avoiding further delay on the bill. While I must state that we in the Appropriations Committee have firm positions on some matters in the bill, I certainly will make every effort to arrive at an agreement which meets the gentleman's concerns.

Mr. PRICE. I thank the gentleman very much, and I want to assure him that I appreciate his cooperation, not only in this instance, but in many other instances.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. GREEN).

Mr. GREEN. Mr. Chairman, for sometime I have been concerned that we have not been spending enough on the basic readiness element of our defense—the ability to project conventional force in strategic spots around the world. We have underspent on training, spare parts, ammunition, operations, and maintenance. I am pleased that this bill deals effectively with those issues and support those aspects of the bill.

However, many of the programs funded in this bill are testimony to the pork-barrel politics of the defense budget. Too many procurement pro-

grams—the F-18, the MX, B-1, and others—are more reflections of their powerful and entrenched constituencies than they are well thought-out responses to our defense needs. The pork-barrel approach to the defense budget—"if you vote for my contract or to keep my base open I'll vote for yours"—works only to the detriment of our genuine defense needs, and has led to the underfunding of readiness that I have already described.

These practices have led not only to overspending, but to putting money in the wrong places. The unglamorous side of defense—readiness—gives way to the glamorous state of the art procurement project, while readiness—training, spare parts, ammunition, supplies, operations, and maintenance take a back seat. Everyone loves to take the well of the House to display a model of a new plane or missile, when what we really need are more bullets and more hours of training.

We must also understand that defense spending cannot be infinite, and that cost issues simply must be addressed. Our GNP is only so great, and if we are going to make the investments necessary to expand it—whether they be in physical plants, education, scientific research, job training, energy development, or the assurance to our citizenry at large that their participation in this effort will not result in destitution and want—then we cannot in the short run expand our defense effort to the point where these other needs, which are also necessary to our ultimate national security, are neglected. Ultimately, a healthy economy is more critical to our national security than the level of defense spending.

I had planned to offer an amendment today that reduced the totals appropriated in this bill for procurement—except spare parts, repair parts, and ammunition—and R. & D. by 3 percent. I understand the gentleman from Georgia (Mr. GINGRICH) will be offering a similar amendment at the 2 percent level, and I have decided to support his effort. I proposed my amendment because I feel the emphasis by the administration on procurement will beggar the U.S. Treasury, bankroll costly, unnecessary procurement programs, and ultimately starve the most crucial areas of defense spending: those relating to military readiness. Without making choices in determining our mix of strategic gadgetry, the Pentagon will ultimately be forced into the time-honored means of cutting defense costs: chipping away at O. & M. Already we have seen the beginnings of this: The centerpieces of the Reagan defense package are the very costly B-1 and MX, and the slight cutbacks in defense spending have come in O. & M.

I would like to focus on one area of defense—strategic nuclear forces—where we as a nation must make some choices. Until recently, our defense system has been based on the simple theory that a triad of nuclear retaliatory forces—sea-based, air-based, and land-based—would stretch the Soviets' weapon systems thin.

But the U.S. strategic forces is now working on a pentad, not a triad. We have five nuclear responses going: Land-based ICBM's, submarine-launched ballistic missiles (SLBM's), manned penetrating bombers, air-launched cruise missiles, and sea-launched cruise missiles.

I particularly question the MX missile. First, a fixed-site missile makes no sense as a second strike weapon: As former Secretary of Defense Harold Brown said recently, all fixed-site targets will be vulnerable by the end of this decade. Second, hardening existing silos to 5,000 psi will not make the MX invulnerable, because slight increases in Soviet missile accuracy or payload greatly offset increased hardness, as does an increase in the number of warheads deployed against a site. As was the case with the race-track basing mode proposed by President Carter, absent the ratification of SALT II, the hardened silo basing mode is simply not survivable. Consequently, we still lack a credible MX basing mode, and it is hard to see how one can design the missile itself without knowing its basing mode. Do we really want to spend $1.9 billion on a missile—whose predecessor was justified only under the terms of SALT II—but whose current incarnation is supposedly justified only by the abandonment of SALT II.

Though I think there is a much better case for the B-1 than for the MX, on balance—and with some hesitation—I have decided that I cannot support the B-1. The basic case for a manned penetrating bomber is that after the Soviets have fired a first round at our missile sites and we have responded, the Soviets will have mobile targets against which only manned penetrating bombers will be effective.

Plainly, the B-1 would be better for this mission than the B-52, to some degree because of its smaller radar profile, to a larger extent because it requires shorter runways than does the B-52 and so theoretically could be dispersed over many more airports than could the B-52's, thus presenting more targets than Soviet first strike capability could handle. Yet as a practical matter it is hard to conceive a nuclear war scenario under which the B-1 with nuclear weapons would actually get to all those small town airports to fly again in any organized response against the Soviets. I am also troubled by the Secretary of Defense's own admission that the first B-1 squadron will not be ready to fly until 1987, but will not be able to penetrate Soviet air defenses past 1989 or 1990.

I strongly believe we should be focusing on cruise missiles and improving the accuracy and command control of SLBM's. While the Soviets can probably ultimately defend hardened small sites against cruise missiles, the expense ratio is probably in our favor and they seem the best way of closing whatever short run window of vulnerability may exist. In the long run, it appears that the Soviets have more of window of vulnerability than we because of the vulnerability of any fixed-based missiles, on which the Soviets have relied heavily, and our lead in SLBM's and submarine hiding and detection. In fact, U.S. superiority in this area should make us invulnerable for many years to come.

To close, Mr. Chairman, let me repeat that we must make choices in our procurement of strategic weaponry. Failure to do so will harm our actual defense posture by starving O. & M., not to mention as well as the U.S. Treasury. I believe the best choices for elimination are the MX missile and the B-1 bomber. I urge my colleagues to join me in supporting improved defense readiness while making some effort to eliminate the pork barrel approach to weapons procurement.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from Connecticut (Mr. MOFFETT).

Mr. MOFFETT. Mr. Chairman, I would like to thank the distinguished chairman for yielding me this time. I have listened to the debate quite carefully, and I want to say to both the gentleman from New York, the distinguished chairman of the subcommittee, and to the gentleman from Alabama (Mr. EDWARDS) that I have a great deal of admiration and respect and fondness for them, and I think they know that. I think their statements, their opening statements on this legislation, the largest defense bill ever considered by a legislative body, show what kind of people they are and what kinds of conscientious legislators they are.

As I indicated a few minutes ago, I thought that the statement by the distinguished chairman of the Appropriations Committee, the gentleman from Mississippi (Mr. WHITTEN), was an inspirational statement.

The fact of the matter is, however, that we are still considering this bill at a time when the statements would indicate there is a growing need to do more scrutiny of the defense budget; and, second, I think there is a recognition, a growing recognition in this body, of the burgeoning movement that is sweeping not only Europe, but is beginning to sweep the United States, crying out for some leadership in arms negotiations. On that score, I

salute the President for his statement today, and I think we all should. I think that there should be a consensus that we have to move in this direction. But what this bill reflects is that for the moment we must be boxed in, or something, because it does not seem to square with a march toward arms control or even a crawl toward arms control.

Now, I know that the gentleman from Alabama has said that we ought to have all of our chips on the table, and there is an implication that now is not the time, when we might be going to the negotiating table, to be cutting back on defense. But we are always told that. Ever since I have been here we have been told now is not the time, now is never the time to cut back on defense.

But I submit to you that now is indeed the time. In the churches across the country, not only in the Northeast part of the United States, but in all of the districts represented here, there is a growing concern about the arms race. In the schools you hear more and more talk about it. And the question is: How can we get to the point where we as Members of Congress can play a more substantive role in the push toward arms negotiations? This bill, I do not believe, despite the various rationalizations that can be given for it, is not helpful in getting us closer to the arms race.

I listened very closely to Mr. CHAPPELL's statistics, and what they say to me is: Where are we going to be 20 years from now, in terms of all of those warheads and all of those missiles? We will be in much worse shape if we do not have arms negotiations in a very, very serious manner.

So I think that sooner or later this body is going to have to confront that, rather than just feeling boxed in and voting out the largest defense increases and the largest defense bills in history.

Mr. Chairman, the fact is, we are not doing the job the American people expect of us. We are merely reacting to the momentum of the arms race. This body is just climbing on the bandwagon, throwing huge sums of money at something called defense. But in reality we are making a major contribution to world instability. Let's get to the negotiating table. This bloated bill is not the way to do it.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 4 minutes to the gentleman from Georgia (Mr. GINGRICH).

Mr. GINGRICH. I thank the gentleman for yielding.

Mr. Chairman, I have to start by commenting on the remarks of my distinguished colleague, the gentleman from Connecticut, who just spoke. It is true that there is growing concern in the churches of America. There is marching in the streets of West Germany. But there is not nearly such obvious concern in the churches of Russia, and there is no marching in Moscow. You cannot simply negotiate an arms race with yourself. We are, in fact, dealing with the Russian Empire from precisely the same position that the British dealt with Nazi Germany. If they insist on arming, if they go into Afghanistan, if their puppets are in Africa, it does little good for our preachers to tell us not to be warmongers.

As George Washington said, "If you want to preserve peace, you must prepare for war."

Douglas MacArthur, in the 1930's, faced with the rise of Nazi Germany, faced with increasing aggression by Italy and Japan, said that all too many passivists are in the position of people who, because they hate fires, want to abolish fire departments. Abolishing the fire department, in fact, increases the likelihood of fires being dangerous.

President Reagan today gave us a historic speech. He gave the Nation and the world an opportunity to measure two systems. He pointed out correctly that when we dominated the planet, when we had built weapons that could literally wipe out cities with no response, for 4 long years we had the only atomic bombs on the planet, our response to that opportunity was to dismantle our army, to demobilize our forces, to come home, to seek freedom in America. We did not seek empire then; we do not seek empire now. He has given the Russian Empire a chance to prove that it cares about peace beyond propaganda, to dismantle some 900 warheads, to free Europe from the danger of a theater-level nuclear war. We will see in the next few weeks whether the Soviet propaganda machine is willing, in fact, to act as well as talk.

But in order for the President to negotiate, he must negotiate from strength, and that strength has to be based on weapon systems such as the B-1 bomber, the MX missile, the Trident submarine; and at the theater level, his offer has to be predicated on the Pershing II missile and on the ground launch cruise missiles. Only by voting for a strong poker hand at the negotiating table do we genuinely move for real negotiations. And any American who really wants to see a peaceful Europe, any American who wants to see bilateral disarmament, with the Russian Empire disarming as well as the Americans, the only way to vote is for those strategic systems. However, there is a danger growing in the midst of talk about disarmament. We have to recognize that we have for 36 years been able to rely on strategic strengths to offset our conventional and theater weaknesses. We knew we could build up our conventional forces for a small war in enough time to fight a secondary power, and we felt confident that our major opponent, the Russian Empire, would not risk a major conflict which might lead to escalation. That world is changing. It is vital that we fundamentally reform the military structure and the Pentagon to provide a conventional force capable of winning on short notice, capable of fighting at whatever level is necessary, and capable of delivering a dollar's worth of defense for a dollar's worth of taxes. That system does not currently exist, and the great challenge to the Appropriations Committee and the Armed Services Committee and the great challenge to the Secretary of Defense is in the next year to offer us the reforms that will allow us to develop a conventional force structure with some belief that it will in fact work in wartime.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. Mr. Chairman, I take this time to call to the attention of the House a provision in this bill that is designed to correct serious problems in the management and maintenance of our supplies of conventional, or nonnuclear, ammunition.

This is a subject that the Government Operations Committee, as well as the Appropriations Committee, has long been interested in. Because of poor management of these supplies the three military services are wasting millions of dollars and, even worse, letting vast stores of ammunition become useless through poor maintenance.

Just this morning our Legislation and National Security Subcommittee had a hearing on the problem. We learned that almost one-third of the Navy's $6.7 billion inventory of conventional ammunition was in an unserviceable condition in June of last year. We also learned that the Army has a backlog of 111,000 tons of ammunition needing renovation to make it usable, and it is the Army's contention that a backlog of 33,000 tons is unmanageable.

Congress thought it had solved these problems back in 1975, when, at its direction, the Defense Department established a single manager for conventional ammunition under the Secretary of the Army. The actual transition from multiservice management to single management was supposed to take place in two steps. Phase I was completed in 1977 with a few facilities being transferred to the army, but little progress has been made toward implementing phase II.

Section 789 of this bill is designed to prod the Defense Department into completing phase II. It says that the funds for the single manager for conventional ammunition can only be used for implementing phase II.

I want to commend the Appropriations Committee for including this provision in the bill. Since establishing the single manager concept and making a few token transfers in 1977, the Defense Department has done little to bring about this much-needed consolidation of the procurement, maintenance, and delivery of conventional ammunition. It has let interservice bickering and rivalry block the actions that need to be taken.

At our hearing this morning the Defense Department witness acknowledged that there has been little progress toward implementing phase II. He said agreement had been reached to transfer principal staff responsibility for the single manager to a new office and he promised to take action to strengthen the single manager.

I hope this provision in the appropriation bill will help him see the wisdom of carrying through on that promise.

Mr. ADDABBO. Mr. Chairman, I yield 1 minute to the gentleman from California (Mr. PANETTA).

Mr. PANETTA. Mr. Chairman, I would like to express my great appreciation to the chairman of the committee as well as the subcommittee chairman, the gentleman from New York, for their fine work on this legislation.

Mr. Chairman, included in the report language accompanying this bill is a statement of congressional intent which I feel to be of immense importance. That statement concerns a proposal by the Department of Defense to implement a change in status of the 7th Infantry Division at Fort Ord, Calif., for a temporary period. As described by Secretary Weinberger, the Department's proposal would involve reducing the strength of the 7th by some two-thirds and placing the division on an "active cadre" status for a 3-year period between 1983 and 1985. I am pleased that the committee has directed the Defense Department to abandon this ill-conceived scheme, and would urge my colleagues to support the committee's action.

Secretary Weinberger presented this plan as a means of accomplishing savings in defense expenditures. However, it is apparent to all who would give this proposal even the most cursory examination that it will fail to achieve this goal. Moreover, not only would this temporary reduction in the 7th Division fail to accomplish any real savings, it would also have the effect of severely impairing the readiness and morale of one of our finest fighting units.

Since reactivation of the 7th Division several years ago, a great deal of energy and resources have been invested in this unit by Congress and the Pentagon. New construction at the Fort Ord base, extensive training exercises in the United States and abroad, and close interaction with Reserve units have served to render the 7th Division one of our most highly trained and disciplined units. Recent participation by a division battalion in the Reforger maneuvers in Germany elicited glowing reports of the division's conduct and performance. One Army officer serving as liaison to a local German infantry school said that the 7th had "set new standards in appearance, conduct, esprit de corps and training by which future U.S. units will be judged * * *."

The effect of the proposed change in status of the 7th Division would be to reduce an already undermanned division by an entire brigade. I think it is important to note that the division in question is one of only two light infantry divisions in the continental United States—divisions which will undoubtedly play a significant role in the event that rapid deployment of U.S. military personnel overseas becomes necessary.

I am sure that I do not need to emphasize the effect this proposal could have on our defense readiness—those impacts are only too obvious. However, I would like to bring to the Members' attention the implications of the plan for Federal expenditures. Although the Defense Department touts this as a cost-saving measure, I think that in truth this is not likely to be the case at all. The following are just a few examples of the likely costs involved:

It could take up to 2 to 3 years to relocate the recommended number of Fort Ord personnel; many would have to be reassigned ahead of normal schedule;

The dislocation and turbulence involved in the reassignment of some 10,000 soldiers would be enormous and exceedingly costly;

Since Fort Ord would have to be kept in functional condition, many of the same fixed costs now being incurred would continue to exist throughout the period of "active cadre" status; and

It would take several years' leadtime to bring the division back up to speed—thus, if the 7th Division were to be reactivated by 1986, reactivation would have to take place shortly after deactivation was completed.

These costs, together with the incalculable damage that would be done to the moral and readiness of the troops of the 7th Division, undermine any possible budgetary sense this proposal might make.

I would again express my appreciation to the members and staff of the Defense Subcommittee for their excellent work on this matter, and ask my colleagues again to join me in rejecting the proposed reductions in the 7th Division.

● Mrs. SCHROEDER. Mr. Chairman, I rise in praise of Committee Chairman Joseph P. Addabbo. His additional views on the Defense appropriations bill is must reading for anyone who cares about our Nation's defense. The influence of his sound, responsible thinking on the defense budget is evident throughout the committee report accompanying the bill under consideration. It is too bad he did not have more support on his own committee.

For the benefit of those who have not had an opportunity to read Chairman ADDABBO'S views, I would like to read a few excerpts:

The action of the Defense Subcommittee in reducing the Defense budget by $6.3 billion is certainly a step in the right direction but it represents only a portion of wasteful spending found within the budget request that should have been eliminated. After extensive debate the Subcommittee declined to make further cuts in marginal programs at this time. My belief is that we could have prudently cut $11.2 billion without harming necessary military programs or hindering national security in any way.

There is absolutely no doubt of the adverse impact of defense spending on the economy. Money which goes for national defense and which does not produce any marketable goods or services is by definition inflationary. Every year the American people pay a terrible toll because of economic inflation. It appears that they will be required to continue to do so at least for as long as the present administration is in office.

One of the saddest aspects of the much touted increase in defense spending is that many Americans have been led to believe that an increase in defense spending automatically provides for greater national security; but it does not. When the additional funds are spent for consultants, cost overruns, obsolete weapons, and wasteful procurement policies, and procedures, it is very easy to spend more money but very difficult to obtain any additional real defense capability. As I have tried to point out all year, the huge increase in defense spending we are asked to agree to does not provide for any major increases in military forces. The increase, and it is a large one, is primarily for the purpose of maintaining the status quo. We are agreeing to pay more for the people we have and to pay more for the equipment we purchase and the supplies we purchase, but we do not get significant additional combat units for the additional money we are spending.

The waste committed against the American taxpayer in the name of national defense are many. Only constant vigilance on the part of the Department of Defense, the military services and the Congress can hope to cope with this situation. Unfortunately, when an atmosphere is created in which there are constant outcries for more and more defense spending, the atmosphere is created under which the military services are given no incentive to become more efficient.

When more money is requested by the Department of Defense than the Department can adequately cope with, we can expect nothing but bad management and waste.

Looking at the huge influence Defense spending has on our nation's economy and the huge influence Defense spending has on our law-making bodies, brings to mind the admonition of former President Eisenhower in his farewell address to beware of the undue influence of the military-industrial complex. This action is much closer to a

failure of civilian control of the military than most citizens are aware. The present Administration has almost given up trying to manager the military services and has turned over that management almost exclusively to the military themselves.●

Let me add one comment of my own. The uncontrolled spending binge ongoing at the Pentagon ridicules White House calls for eliminating waste throughout the Government. How can we ask social security recipients to tighten their belts when we are allowing defense contractors to soak the taxpayer for record amounts? It is time to attack waste at the Pentagon. For those of you who think that my comments are just the complaints of someone who thinks our budget priorities are all wrong, I urge you to read David Stockman's comments on the same subject in this month's Atlantic magazine. As Stockman said:

The whole question is blatant inefficiency, poor deployment or manpower, contracting idiocy . . . Hell, I think there's a kind of swamp of $10 or $20 to $30 billion worth of waste that can be ferreted out if you really push hard.

I opposed the Michel recommittal motion on the continuing resolution because it did not include a 5-percent cut in the Defense budget, a cut which could come entirely from waste, fraud, abuse, and mismanagement. I intend to offer a Michel-type amendment to this bill to see who really wants to cut the budget.●

● Mr. WHITE. Mr. Chairman, I had originally intended to offer an amendment which would delete the $1.9 million contained in the defense appropriations bill for funding the testing of 9 millimeter handguns. It is the announced intention of the Department of Defense to replace the current military handguns—some half million weapons—with new 9 millimeter pistols at a cost variously estimated between $118 million and $236 million.

Earlier this year the Investigations Subcommittee of the Armed Services Committee held a hearing on the DOD handgun proposal. The hearing convinced members that converting to 9 millimeter handguns at this time, and according to the DOD procurement plan, would not be prudent. Our report recommended that "the Secretary of Defense either cancel the proposed procurement or at least defer it indefinitely."

The subcommittee arrived at the recommendation for a number of reasons. First, it found that the need for new handguns uniformly, and properly, receives a very low priority from Army, Navy, Air Force, and Office of the Secretary of Defense officials as compared with the urgent requirements for other weapons such as tanks, ships, and aircraft. Second, the subcommittee questioned the assumption that the handgun proposal will achieve the purposes of standardization. It is unlikely that combat capability will be increased significantly, if at all. And we are certain the present cost of providing military sidearms will increase rather than decrease. Finally, the procurement plan is flawed. The period allowed for industry proposals was so brief that only four manufacturers were able to submit handguns for testing. A number of others were interested. Also, the Office of the Secretary of Defense shortened the testing period to far less the minimum time deemed adequate by the Army.

These objections suggest Congress should foreclose any further action by the Department of Defense in acquiring 9 millimeter handguns. In face, however, the initial tests of the four weapons submitted by manufacturers are nearing completion. Little can be done to avoid the expense. Also, the Investigations Subcommittee agrees with the Defense Appropriations Subcommittee that something needs to be done to reduce the proliferation of handguns in DOD.

Consequently, I will not challenge the funds for testing the 9 millimeter handgun in the bill. Instead, the distinguished chairman of the Defense Appropriations Subcommittee and I have agreed to request jointly that the Department of Defense to prepare a full report to Congress on the test results and the issues surrounding the proposed handgun acquistion, including an analysis of alternatives, before taking further action. This agreement will afford the opportunity for full deliberation by the committees before proceeding on the handgun question.●

● Mr. FRENZEL. Mr. Chairman, congressional service is full of frustrations. One of the worst is trying to make sense of, and ultimately a responsible decision on, the defense appropriation.

It is obvious that we have to spend more to improve our defense. The rapid Soviet buildup makes that policy necessary. It is less clear how much we have to spend, or whether we will spend it wisely.

It is reasonable to assume there is about as much waste, fraud, abuse, duplication, overlap, et cetera, in military spending as there is in other functions, but we have found nonessential spending is awfully hard to find in any function.

Since the effects of the recession on our deficits over the next few years have become better known, the Congress wisely has begun to scrutinize the defense budget more closely. If the coalition to strengthen our defense is to be held together, the people will have to be assured that its budget receives the same scrutiny we give to every other function.

By the tape measure this bill is huge. It is up $25 billion over last year, or about 15 percent. The committee alledges it is $4.2 billion under the budget, but since every agency and most Members are their own scorekeepers at least this Member is not at all certain how this appropriation budget authority compares with the outlay total of the first budget resolution.

I think it is between $11 billion and $12 billion under the first budget resolution in budget authority. What that means in actual outlays for fiscal 1982 will not be known until next September, but it does mean that the committee cut the budget authority by about $4 billion more than the President proposed. That will probably translate into an outlay cut of $1½ billion more than the President requested.

In general, I believe the committee has done a good job in trying to make spending reductions without canceling systems or wrecking havoc. Actually, I favor still deeper cuts and will support additional modest, 2 to 3 percent, across-the-board cuts. And I shall vote against efforts to increase spending.

Nevertheless, I will not support amendments to kill either the B–1 bomber or the MX. In the case of MX, these appropriations cover only developmental expenses, not actual deployment. I am not wholly convinced on deployment, but I do think we must go forward with development.

I am even less certain on the B–1, but the B–52's have aged about 5 years since I last voted to suspend that program. By the time we can make a reasonable number of B–1B's operational, the B–52's will have reached an age of about 35 years and will then require modification expense nearly equal to the cost of the new B–1B's.

Finally, I regard the President's proposal today for mutual elimination of theater nuclear weapons in Europe and reduction of strategic weapons and forces as a very important part of our defense policy. Limitations and reductions should be, in my judgment, one of the keystones of our overall foreign policy. I was very pleased to hear the President reemphasize that aspect of his policy in his speech today. That statement, that challenge to the Soviets, gives me more confidence in my vote in favor of this bill.

I wish we could buy a strong defense more cheaply. Until we can be assured of adequate defenseve strength, we will have to support expensive bills like this one.●

● Mr. HOLLENBECK. Mr. Chairman, I rise to commend my colleagues on the Appropriations Committee for their efforts to make specific reductions designed to eliminate waste and abuse in the Defense Department.

Mr. Chairman, in the past, I have shared with this body some of the many opportunities that are available to reduce unnecessary defense costs. I know that many of my colleagues have

also pointed out other ways to combat waste in Pentagon spending. Unfortunately, the crusade against squandered funds and mismanagement has met with little success nor official sanction, the excuse often being that Pentagon waste is easier to identify than eliminate.

In light of this fact, I am particularly heartened by the actions taken by this committee to foster more efficient defense policies and to eliminate wasteful defense expenditures. Among the recommendations made by the committee which address the problems of massive waste, fraud, and mismanagement in the Defense Department are an increased emphasis on competition for defense contracts, a streamlining of supply systems and the elimination of cost overruns in weapon programs.

Complementing these efforts are provisions in H.R. 4995, which require more efficient personnel policies that will save an estimated $60 million a year in fiscal year 1982. The bill also addresses problems resulting from a lack of consolidation among military base support activities and a general absence of control over Government-furnish materials. Upon reviewing the committee's report, it was also pleasing to note that the Appropriations Committee is now studying the procurement policies and practices of the Department of Defense and that Chairman ADDABBO has contacted the Secretary of Defense to report committee findings regarding the excessive time required for developing weapon systems, the lack of an effective procedure for the requisition of nonstandard and nonstocked items and the fact that defense contractors continue to pass unallowable overhead costs on to the Department of Defense. Added to these efforts to trim wasteful defense dollars is the President's intention to appoint for the first time an inspector general for the Department of Defense and to develop improved auditing procedures.

All of these actions are important steps in the right direction and are ones which I endorse wholeheartedly. Unfortunately, however, even these gains represent only a small portion of the potential savings that are possible. For instance, the Northeast-Midwest Coalition recently reported that important savings could be realized by eliminating payments to reservists and guardsmen for drills they did not attend. Millions of dollars could be saved by lowering the subsidy given the three services to operate the Pentagon dining rooms. And, by prohibiting telegrams for routine defense related messages, $20 million could be achieved in fiscal year 1982 alone.

Most recently, the General Accounting Office has reported that there are less costly ways to budget and provision spare parts for new weapon systems and that faster processing of Department of Defense personnel security clearances could save millions. In addition, the Government Accounting Office has consistently demonstrated that minor improvements in the way final separation payments for service members are processed could result in significant savings.

Supplementing these reports, Mr. Chairman, are dozens of other documented instances of wasteful or excessive military spending. In view of the fact that wastes committed against the American taxpayer in the name of national defense are many, and because only constant vigilance on the part of the Congress can hope to deal with this situation, I again call on the Members of this body to continue in their surveillance, to examine closely the suggestions being made to rectify these abuses and to continue to demonstrate our commitment to across-the-board scrutiny and fiscal prudence.

In closing, permit me to once again emphasize that I am not advocating that the Nation's defense is an area in which to take chances. Our Armed Forces must be able to meet our security needs and I, for one, am not willing to begrudge the funds required to maintain our defenses at a demonstratively safe level. However, as I have stressed many times, it is not enough to simply throw money at the Defense Department and expect our military capabilities to improve. It is not how much money is appropriated but how effectively it is spent. Therefore, bearing in mind that the time has not yet arrived when the Defense Department can demonstrate that it can manage its funds efficiently, and that we are being asked to approve major reductions in all other areas of Government, I feel further reductions in the Department of Defense appropriations bill are appropriate.●

Mr. EDWARDS of Alabama. Mr. Chairman, I have no further requests for time.

Mr. ADDABBO. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

TITLE I

MILITARY PERSONNEL

MILITARY PERSONNEL, ARMY

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements), and expenses of temporary duty travel between permanent duty stations, for members of the Army on active duty (except members of reserve components provided for elsewhere), cadets, and aviation cadets; $12,278,300,000.

□ 1430

AMENDMENT OFFERED BY MR. NICHOLS

Mr. NICHOLS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. NICHOLS: On page 2, line 12, in Military Personnel, Army, strike "$12,278,300,000", and insert in lieu thereof "$12,288,300,000".

Mr. NICHOLS. Mr. Chairman, my amendment would restore $10 million for the Army at this point for recruiting and another amendment will be offered by the gentleman from Virginia (Mr. DAN DANIEL) to restore an additional $50 million in Army operations and maintenance for a total of $60 million to provide the Army with the amount of recruiting resources it requested.

Mr. Chairman, I know that the Appropriations Committee has worked long and hard on this legislation and it contains some excellent steps to assist our national defense program. However, I am concerned about the impact on Army recruiting, which has been a very difficult area. My amendment would restore all the funds for Army recruiting pay.

Mr. Chairman, I am very worried about the reduction of the whole $110 million in Department of Defense recruiting funds. As I am sure the Members realize, the Department of Defense conference report which was passed yesterday continues strict quality standards on enlistment in the military. These standards require the Army to enlist at least 65-percent high school graduates and no more than 25-percent category IV personnel—those scoring in the lowest mental category eligible for enlistment. Further, Mr. Chairman, the Congress has imposed an additional standard this year that bars the services from taking any personnel who are non-high school graduates and also score in category IV on the enlistment test.

These are strict standards but they are also minimally acceptable standards. The services need more bright enlistees to man the increasingly sophisticated equipment in the military today.

It is true that for the fiscal year just completed only a month and a half ago—fiscal year 1981—the Army did well in recruiting. They obtained 75-percent male high school graduates, although still enlisting 30 percent of their personnel from those scoring in category IV. However, this was the first year in the past three the Army has done well.

In fiscal year 1979, all of the services experienced shortfalls in recruiting. The shortfalls were 24,000 overall, with 16,000 attributed to the Army alone. By cutting this substantial amount of recruiting funds, we are essentially slapping the Army after they have finally done well.

I must say that I share the Appropriations Committee members' concern that recuiting is expensive. The administration has requested to spend almost $1.3 billion in fiscal year 1982 in recruiting and advertising. I don't like to spend that amount but, Mr. Chairman, it is the only game in town unless the Members are prepared to reinstitute the draft.

As the Members will recall, the Appropriations Committee proposed a reduction of $100 million in Department of Defense recruting funds last year. My predecessor as subcommittee chairman of the Military Personnel and Compensation Subcommittee, Mr. White from Texas, proposed an amendment to restore these funds. The vote in favor of his amendment was 390 to 13. The facts indicate that the Congress was correct in deciding to provide the funds last year. Recruiting was good in fiscal year 1981.

The Appropriations Committee is basing its action on essentially the same rational as last year. They argue it is all right to cut money this year because unemployment is high. I would say to them that while the condition of the economy is relevant, it really only affects the number of non-high school graduates with limited opportunities who are available. Quality individuals will have other options.

If the Appropriations Committee reduction is allowed to stand, the services—the Army in particular—will be forced to either have to recruit more low quality personnel or experience recruiting shortfalls. The Army indicates the proposed reduction will result in an estimated loss of 5,000 to 7,000 high-quality enlistees and an overall recruiting shortfall exceeding 12,000. The Navy indicates it will have difficulties also. I have received letters from the Assistant Secretary of Defense for Manpower, the Assistant Secretary of the Army for Manpower, and each of the chiefs of the uniformed services strongly opposing these proposed cuts.

I recognize these services' estimates of losses at this time are only guesses. However, the Congress would be playing a high-risk game if it approves the proposed reduction. The stakes are the continued viability of the All-Volunteer Force. Recruiting in the 1980's, everyone agrees, will only get more difficult as the population declines.

I urge the Members of the Committee to support this amendment restoring $60 million of the amount from Department of Defense recruiting activities.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. NICHOLS. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, the committee had looked at an increase of over $300 million in recruiting and advertising and had made a slight reduction of $100 million, but in carefully reviewing the gentleman's amendment, we do acknowledge the Army may have a special problem and accordingly we agree to the amendment.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. NICHOLS. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we accept the amendment on this side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama (Mr. NICHOLS).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

OPERATION AND MAINTENANCE, ARMY

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Army, as authorized by law; and not to exceed $5,400,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of the Army, and payments may be made on his certificate of necessity for confidential military purposes; $14,788,712,000, of which not less than $898,600,000 shall be available only for the maintenance of real property facilities.

AMENDMENT OFFERED BY MR. DAN DANIEL

Mr. DAN DANIEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DAN DANIEL: On page 7, line 12, strike "14,788,712,000" and insert in lieu thereof "$15,019,062,000".

Mr. DAN DANIEL. Mr. Chairman, this amendment would add $230,350,000 to the Army operation and maintenance appropriation through program increases of $238 million with offsetting reductions $7.7 million for items not authorized.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, when the committee had the matter before it we did not have the authorization bill. We have fully studied it and we fully agree with the amendment at this point. It is my understanding that the amendment will provide the following:

	Thousands
Real property maintenance	+108,000
Training support (SQT+)	+22,000
National Guard Army Reserve equipment offset	+23,000
Foreign national indirect hire	+30,000
Commissaries	+5,000
Recruiting	+50,000
Intelligence and communications	−2,300
Veterinary positions conversion	−350
Korean Won	−5,000

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, the chairman speaks the position for our side as well. We will accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia (Mr. DAN DANIEL).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

ARMY STOCK FUND

For the Army stock fund, $163,300,000.

OPERATION AND MAINTENANCE, NAVY

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Navy and the Marine Corps, as authorized by law; and not to exceed $1,899,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of the Navy, and payments may be made on his certificate of necessity for confidential military purposes; $19,258,970,000, of which not less than $646,500,000 shall be available only for the maintenance of real property facilities: *Provided*, That of the total amount of this appropriation made available for the alteration, overhaul, and repair of naval vessels, not more than $2,800,000,000 shall be available for the performance of such work in Navy shipyards: *Provided further*, That not less than $3,699,700,000 of this appropriation shall be available only for regularly scheduled ship overhauls, restricted availabilities and expenses associated with the installation of equipment, improvements, and modifications scheduled to be accomplished concurrently during an overhaul or restricted availability of which not less than $24,000,000 shall be available for such work at the Ship Repair Facilities, Guam: *Provided further*, That such amounts of the funds available for work only at the Ship Repair Facilities, Guam, may be used for work in other Navy shipyards in amounts equal to the amount of work placed at the Ship Repair Facilities, Guam, funded from other sources: *Provided further*, That not less than $59,000,000 shall be available only for payments in support of the LEASAT program in accordance with the terms of the *Aide Memoire*, dated January 5, 1981.

AMENDMENT OFFERED BY MR. DAN DANIEL

Mr. DAN DANIEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DAN DANIEL: On page 7, line 25, strike "19,258,970,000" and insert in lieu thereof "$19,345,000,000".

Mr. DAN DANIEL. Mr. Chairman, this amendment is similar to the other one except it applies to the Navy and it would add $86 million to the Navy operations and maintenance appropriation through program increases of $90 million and offsetting reductions of $4 million in items not authorized.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from New York.

Mr. ADDABBO. I thank the gentleman for yielding.

I would mention again that the committee did not have the authorization before us when we marked up our bill. We have since looked at it and we have looked at the authorizing

amounts and fully agree with the amendment. It is my understanding that the amendment will provide the following changes:

	Thousands
Real property maintenance	+$40,800
Berthing barges	+7,700
Strategic weapon system support	+9,000
Army/Reserve/National Guard offset	+27,500
CITA administration	−4,000
Commissary	+5,000
Total	$86,000

Mr. DAN DANIEL. I thank the gentleman.

I further understand that this action will not preclude the Navy from converting its commissary systems employees to a nonappropriated fund status.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we agree on this side the amendment should be adopted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia (Mr. DAN DANIEL).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

OPERATION AND MAINTENANCE, MARINE CORPS

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Marine Corps, as authorized by law; $1,169,240,000, of which not less than $176,800,000 shall be available only for the maintenance of real property facilities.

AMENDMENT OFFERED BY MR. DAN DANIEL

Mr. DAN DANIEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DAN DANIEL: On page 9, line 4, strike "1,169,240,000" and insert in lieu thereof "$1,184,540,000".

Mr. DAN DANIEL. Mr. Chairman, this amendment would add $15.3 million to Marine Corps operation and maintenance appropriation.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from New York.

Mr. ADDABBO. Again, Mr. Chairman, the committee did not have the authorizing legislation before it. We have studied the question and agree with the amendment. It is my understanding that the amendment would add funds for: Real property maintenance, $13.7 million; Army Reserve and National Guard offset, $1.6 million.

Mr. DAN DANIEL. I thank the gentleman.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we agree on this side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia (Mr. DAN DANIEL).

The amendment was agreed to.

Mr. DAN DANIEL (during the reading). Mr. Chairman, I ask unanimous consent to return to the Air Force section. I did not hear the Clerk read and I have an amendment on page 10, line 2.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The CHAIRMAN. The Clerk will reread the section.

The Clerk reread the section.

OPERATION AND MAINTENANCE, DEFENSE AGENCIES

For expenses, not otherwise provided for, necessary for the operation and maintenance of activities and agencies of the Department of Defense (other than the military departments), as authorized by law; $4,941,470,000: *Provided*, That not to exceed $5,812,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of Defense, and payments may be made on his certificate of necessity for confidential military purposes: *Provided further*, That not less than $72,400,000 of the total amount of this appropriation shall be available only for the maintenance of real property facilities.

AMENDMENT OFFERED BY MR. DAN DANIEL

Mr. DAN DANIEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DAN DANIEL: On page 10, line 2, strike "4,941,470,000" and insert in lieu thereof "4,949,470,000".

Mr. DAN DANIEL. Mr. Chairman, this amendment would add $8 million to the Defense agencies operations and maintenance appropriation.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, again the committee did not have the authorizing level before us. We agree with the amendment which will restore the $8 million reduction to offset Army Reserve and Guard equipment add-ons.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. We accept the amendment on this side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia (Mr. DAN DANIEL).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

OPERATION AND MAINTENANCE, AIR FORCE

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Air Force, as authorized by law; and not to exceed $4,091,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of the Air Force, and payments may be made on his certificate of necessity for confidential military purposes; $15,895,276,000, of which not less than $46,800,000 shall be available only for the installation of modification kits into KC-135 aircraft, and not less than $1,000,300,000 shall be available only for the maintenance of real property facilities.

AMENDMENT OFFERED BY MR. DAN DANIEL

Mr. DAN DANIEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DAN DANIEL: On page 9, line 16, strike "15,895,276,000" and insert in lieu thereof "15,978,376,000".

Mr. DAN DANIEL. Mr. Chairman, this amendment would add $83.1 million to the Air Force operations and maintenance appropriation through program increases of $92.8 million and offsetting reductions of $9.7 million for items not authorized.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, again we did not have the authorizing figures before us and we agree with the amendment with the understanding that the funds will be provided for following items:

[In thousands of dollars]

Chemical warfare equipment	+4,500
Real property maintenance	+47,000
Army/National Guard equipment offset	+23,400
Commissaries	+5,000
Korean Won	+12,900
HARM depot maintenance	−600
Combat rescue	−5,000
SAC projection force	−3,900
Veterinary position conversions	−200
Total	$83,000

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we accept the amendment on this side.

Mr. PURSELL. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Michigan.

Mr. PURSELL. Mr. Chairman, since we are on this amendment, I would like to ask a question of any member of the committee or a sponsor.

Up to this point these amendments are moving so fast without debate. How many millions of dollars have we added to this appropriation bill up to this point if this amendment is also adopted?

Mr. ADDABBO. Mr. Chairman, if the gentleman will yield, with these total amendments, agreeing with the gentleman from Virginia, they would amount to around $390 million.

Mr. PURSELL. $400 million without any debate at all?

I think we ought to slow down and I think attempt to discuss these amend-

ments a little more accurately so people on the floor understand these amendments.

We were asked to participate and I do not want to be negative or counterproductive. There are some bigger amendments yet to come that will probably have protracted debate, but I think we are just moving too fast and we ought to be more cautious.

Mr. ADDABBO. If the gentleman will yield further, I fully agree. There normally would be general debate on them, but the matters under the titles have been discussed and these are adjustments which will cause the bill to more closely conform with the authorizing bill. When we had this bill before us, we did not have the authorization details figures before us and so many of those matters have now been corrected to meet those.

Mr. DAN DANIEL. Mr. Chairman, I want to apologize for the manner in which these amendments have been presented, but they were just handed to me 30 seconds before I came to the well. We have been trying to reconcile the figures since early this morning. We have just gotten them perfected. Mr. ADDABBO expressed the problems earlier. This is the third bill we have worked with this year. It has been terribly frustrating. Again, I apologize to the House for the manner in which they have been presented.

Mr. Chairman, I ask unanimous consent to correct the RECORD.

On page 7, line 25, strike "19,258,970,000" and insert in lieu thereof, "19,345,000,000".

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

Mr. EDWARDS of Alabama. Mr. Chairman, reserving the right to object, I will object until I understand what the gentleman is doing.

Mr. DAN DANIEL. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from Virginia.

Mr. DAN DANIEL. Mr. Chairman, We have an error in the figures.

Mr. EDWARDS of Alabama. Mr. Chairman, I am reserving the right to object because I do not understand it.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, what has happened was the amendment that was sent up to the desk I would have loved because it provided $19 million instead of $19 plus billion.

It is adding three zeros which the gentleman left off the original amendment. That is how the Defense Department works.

Mr. DAN DANIEL. Just another case of inefficiency.

Mr. EDWARDS of Alabama. I would ask the Chair, do we have these numbers recorded right?

Mr. DAN DANIEL. I think we do now, if not I will reread.

The CHAIRMAN. The gentleman from Virginia (Mr. DAN DANIEL) will restate his request.

Mr. DAN DANIEL. Mr. Chairman, I ask unanimous consent to correct the RECORD.

Mr. Chairman, on page 7, line 25, strike "19,258,970,000" and insert in lieu thereof "19,345,000,000".

Mr. EDWARDS of Alabama. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia (Mr. DAN DANIEL).

There was no objection.

□ 1445

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

MISSILE PROCUREMENT, ARMY

For construction, procurement, production, modification, and modernization of missiles, equipment, including ordnance, ground handling equipment, spare parts, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including the land necessary therefor, without regard to section 4774, title 10, United States Code, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title as required by section 355, Revised Statutes, as amended; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes; $2,131,200,000, to remain available for obligation until September 30, 1984.

AMENDMENT OFFERED BY MR. ADDABBO

Mr. ADDABBO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ADDABBO: Page 16, line 1, strike out "$2,131,200,000" and insert in lieu thereof "$1,912,300,000".

Mr. ADDABBO. Mr. Chairman, I am always astonished that whenever an appropriation bill comes up something dramatic happens. Today we heard a very dramatic and a very forceful speech by President Reagan which I fully agree with and support. He discussed the Pershing II missile and my amendment deletes procurement funds for the Pershing II missile. So, it would appear that I am trying to undercut the President's effort, but actually we are not. What I am trying to do is bring some semblance or reason to procurements by the military.

We are being asked to procure a missile for which development is far from complete. I must point out that the Army intends to make a production decision based on only two test flights. And both of those flights will be over water. I must also point out that the production decision will be made 15 months before development is completed. What happens when procurement is made before completion of development? We, the Defense Department, the military, our national security, have to pay, because if there are any changes, if there are any questions, they become amendments to the contract which cost extra. That is where you get overruns and delays.

So what I am urging my colleagues to do today is to cut out this procurement money. It is premature. We have money in the bill for the research and development. We continue that. We give the administration, DOD, every bargaining chip it needs, because if the Russians agree to take out their missiles and we do not put the Pershing II into Europe, the R. & D. can be stopped. The R. & D. is important, but the procurement of a missile which has not been tested is just a waste of funds.

We heard our good chairman, the gentleman from Mississippi (Mr. WHITTEN) say that this is the step in the process we have been investigating. This is the waste. This is the money that goes into unobligated balances and is available for the Defense Department to use as it sees fit.

Mr. Chairman, this in no way undercuts the President's program for discussions on arms limitation. This just imposes a semblance of proper management, proper procurement practices, into the military. They should not be buying a missile until they are certain it will work.

Mrs. HOLT. Mr. Chairman, will the gentleman yield?

Mr. ADDABBO. I yield to the gentlewoman.

Mrs. HOLT. I do not understand what the gentleman is trying to do. The gentleman said that he felt that he might be perceived as undercutting the President's efforts. I certainly perceive it that way.

I think that this is a real slap in the face if we are to have bargaining chips, if we indicate to the Soviet Union that if we do not get some negotiations, of we do not have some progress in trying to reduce this, that we will continue to procure this kind of thing.

Mr. ADDABBO. Well, I would be happy to answer the gentlewoman.

What I am saying is this: We do not fool the Russians. They know our capabilities and when we are procuring a weapon we are not sure it works, they know that; but what they are concerned with is if we are going forward with R. & D., putting all the needed funds into R. & D. to insure that when this missile does finally reach procurement stage, it will be ready for production.

Therefore, I do not propose to stop the Pershing II program. That can be stopped in the strategic armaments talks. What we are stopping are the

waste and the overruns by procuring before development is completed. That is all my amendment does. It cuts out the procurement money. The research and development money remains in the bill.

Mrs. HOLT. Mr. Chairman, will the gentleman yield further?

Mr. ADDABBO. I yield to the gentlewoman.

Mrs. HOLT. Well, why was the money put in there initially in the committee markup?

Mr. ADDABBO. I offered an amendment in the subcommittee to strike it. I was outvoted by the committee and that is why it is in the bill.

Mrs. HOLT. So the majority of the committee at the hearings felt that it was important.

Mr. ADDABBO. On the basis of its being a bargaining chip. I do not believe it is a bargaining chip.

Mr. EDWARDS of Alabama. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, of course, much of what the chairman says is true. We deal with concurrency problems constantly on our committee; that is, spending money for procurement at the same time we spend money for R. & D. Obviously, that is a continuing ongoing problem. That is not to say, however, that in procurement we never have concurrency. We have a lot of it.

We talked earlier during general debate about the fact that the Carter budget had come in at one level and President Reagan had changed that in March and again later in the year and finally in September we had another budget that we had to deal with for the defense of this country.

One thing that has been certain and tried and true throughout this whole process is that on the Pershing II, the Carter budget for the Pershing II for R.D.T. & E. and for missile procurement and spares has been kept intact by President Reagan all though his proposals; so we came to our markup with a unified Carter-Reagan approach to the need for the Pershing II.

Now, I would argue as I did earlier during general debate that if there ever was a time to move forward, to be perceived as moving forward, to do the thing that is necessary to put the chips on the table, this is that time with the President's approach on nuclear weapons, going to conference with the Soviet Union on November 30.

We simply cannot let him go to that first session, or his representative go to that first session appearing in any way to be weakened in his position.

I would have to argue to support this amendment would, in fact, weaken that position.

This missile is on schedule. It is on budget. The IOC for it, that is to say the time we will first have some of the missiles available for use is December 1983. There is nothing to suggest that it will not meet the dates and schedules and dollar figures called for.

I would certainly hope that the Members will not support this amendment.

Mr. STRATTON. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from New York.

Mr. STRATTON. I want to support the gentleman's position, because the House conference on the authorization bill, which was approved here yesterday, overwhelmingly supported the production of the Pershing II missile.

I think the gentleman is absolutely right that if we were to knock it out now, the Soviet Union would say that we were not really sincere in our efforts at going into disarmament discussions in Geneva to withdraw the Pershing II in the event the Russians were to withdraw their SS-20's.

Mr. EDWARDS of Alabama. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. ADDABBO).

The amendment was rejected.

Mr. BADHAM. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I had contemplated introducing an amendment to the procurement title of this bill but I felt that it was not a propitious time. However, I think it is necessary to take some time discussing procurement for air lift requirements for the U.S. Air Force.

The report language that accompanies the bill under consideration at the present time on page 229 states in part that the committee included no funds in the R.D.T. & E. account for the CX aircraft, which the Air Force had planned on being a future strategic wide-bodied air lift aircraft.

In this section, the procurement title, $50 million is included for procurement of wide-bodied aircraft. It is timely that I speak on this subject at this point, because the chairman has just suggested that it is foolhardy to procure something that does exist and has not made it through Research and Development.

The report language from the gentleman's committee would have us believe that examples of existing wide-bodied aircraft for air lift are C-5's, KC-10's, and the 747. Now, I have no argument with the KC-10's and 747's. In fact, they are existing, flying, commercial aircraft, but they do share one drawback and that is that they cannot carry the size cargo needed to be carried for military airlift and they are, therefore out of the competition before they even get in.

That brings us to the C-5. I would submit to the house and I would hope that the Senate takes it more seriously. The simple fact is that no resuscitation of the C-5 aircraft can make it an existing aircraft for airlift. That is totally without commonsense and truth and fact.

The fact is that the C-5 aircraft has to have its wings taken off and rebuilt now.

The fact is that no C-5's have been built for 9 years and that there is no line open.

The fact is that the C-5 aircraft requires twice the man-hours for maintenance.

The fact is that this language in the report should be removed by the Senate and I indeed hope it is. It should be brought to the attention of the House that life cycle costs under warranty and guarantee by the CX competition winners are about half the cost in man-hours and half the time for maintenance; and for cost over the life of the program the cost of CX would be substantially less.

Again, I state—the CX (C17) technology has been flying in test and development in the form of YC14 and YC15 and is, therefore ready to go forward.

Mr. RUDD. Mr. Chairman, will the gentleman yield?

Mr. BADHAM. I would be happy to yield to the gentleman.

Mr. RUDD. I thank the gentleman for yielding.

I want to concur in what the gentleman from California has said and to commend the gentleman in providing this House with these compelling facts in favor of the CX (C17).

I wonder if there is not some way to do what the gentleman wants done. If the gentleman proposes an amendment, I for one would certainly support it, because it is the only commonsense approach.

Mr. BADHAM. I thank the gentleman for his contribution.

I think and I hope that it will be taken care of on the Senate side, but I think this is preliminary to the argument that will take place at the conference and post-conference debate.

I certainly thank the gentleman, because it is important, it is vital that we do have air lift and that to try to revive a dead bird "just ain't good sense."

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PROCUREMENT OF WEAPONS AND TRACKED COMBAT VEHICLES, ARMY

For construction, procurement, production, and modification of weapons and tracked combat vehicles, equipment, including ordnance, spare parts, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including the land necessary therefor, without regard to section 4774, title 10, United States Code, for the foregoing purposes, and such lands and interests therein may be acquired, and construction prosecut-

ed thereon prior to approval of title as required by section 355, Revised Statutes, as amended; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes; $3,806,200,000, of which $1,900,000 shall be available only for the continued testing and evaluation of 9 mm handguns without delay, to remain available for obligation until September 30, 1984.

AMENDMENT OFFERED BY MR. STRATTON

Mr. STRATTON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STRATTON: On page 16, line 18, strike "$3,806,200,000" and insert in lieu thereof "$3,818,200,000".

Mr. STRATTON. Mr. Chairman, this is another one of these amendments that is being offered to bring the appropriation bill into line with the authorization legislation which was approved on yesterday. It would simply add $12 million to the Army weapon and track combat vehicle appropriation to complete the expansion of production facilities for infrared detectors.

At the present time there is a critical shortfall in the production capacity for these detectors which are used in virtually all thermal imaging sensors.

In other words, it is important to supply a night vision capability to these tracked combat vehicles.

I urge adoption of the amendment.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, we have no objection to the amendment.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we have no objection to the amendment.

□ 1500

Mr. WEISS. Mr. Chairman, I move to strike the last word.

POINT OF ORDER

Mr. STRATTON. Point of order, Mr. Chairman.

Did I understand that the amendment had been accepted?

The CHAIRMAN. The Chair did not put the question.

Mr. STRATTON. Is a motion to strike the last word in order at this time?

The CHAIRMAN. Even while an amendment is pending, the gentleman may be recognized for 5 minutes.

Mr. WEISS. I thank the Chairman.

Mr. Chairman, as we discuss these various appropriation matters relating to procurement of weapons and weapons systems, I think it is worthwhile pausing for a moment to examine the logic of what we are doing. There is a tendency in this body to behave as if there were something different when we are expending billions upon billions of dollars for military purposes than when we are expending or cutting back the expenditure of billions upon billions of dollars for domestic purposes.

It is as if we were subjected to an extreme case of schizophrenia, that budget deficits, for example, counted only when the moneys were spent for domestic purposes, for the well being of children and older people and generally to improve life for people, but that budget deficits did not matter, when we are making military expenditures.

Now, a case in point, Mr. Chairman, is the debate that we just had when the chairman of the subcommittee attempted to delete procurement funds for the ground launched cruise missile and the Pershing II missile.

It may have escaped the attention of some of the Members of this body that what the gentleman from New York (Mr. ADDABBO) was saying was that we are appropriating billions of dollars to procure weapons systems, theater nuclear missiles, on which the research had not yet been completed. At the same time that we are telling elderly and indigent people who needed medical attention in this country that we cannot afford to pay for their medical costs, we are willing to expand over $4 billion to purchase ground-launched cruise missiles and Pershing II missiles, even though the research on them has not yet been completed.

We are talking in the context of a situation where the President of the United States, to his great credit, took to the air waves today to let the world know that we, the United States of America, were offering to negotiate with the Soviet Union on the basis of their removing theater nuclear weapons which currently are aimed by the Soviet Union on European capitals and land masses and people, in return for our not deploying our own theater nuclear weapons in Europe. At the same time that he goes on the air to do that, what are we doing in this body? We are undercutting the very premise on which he makes that proposal, because as far as the Russians are concerned, as far as the Europeans are concerned, indeed as far as a great many of the American people themselves are concerned, you cannot on the one hand talk about negotiating down to the zero option of not having any theater nuclear weapons at all in Europe, or aimed at or from Europe, at the same time that we eagerly move forward to expend billions of dollars for those very theater nuclear weapons upon which the research has not yet been completed.

It seems to me that we should want to be credible to the American people, to the Soviet Union, to the Europeans who are marching through their capitals and their countrysides, concerned that on the basis of what the President and some others high in the administration have been saying, we seem to be ready and willing perhaps to fight a nuclear war down to the last European. Our prime concern must be to bring this mad nuclear arms race to a halt.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. WEISS was allowed to proceed for 1 additional minute.)

Mr. WEISS. Mr. Chairman, we would be giving up precious little if we were to decide not to expend the moneys for weapons systems such as the Pershing and the ground-launched cruise missiles on which the research has not even been completed. In essence we would be giving away nothing.

It is, in my opinion the way that we can genuinely demonstrate good faith, not be pretending that by throwing all our chips on the table, by having one grand, massive poker game, that we will constructively decide the fate of civilization. I am afraid if that is what we are planning we are sooner, rather than later, going to be playing for the pot, and the pot is humanity. My colleagues, there will be no winners in that poker game.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. STRATTON).

The amendment was agreed to.

Mr. YOUNG of Florida. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I appreciate the comments that our colleague from New York (Mr. WEISS) has just made, and his comments about President Reagan's speech today. But I would like to read a paragraph from President Reagan's speech today that he might find very interesting. As Members know, the Soviets need a little bit of incentive to go to the bargaining table to undo something that they have already done. The gentleman should not overlook the fact, as President Reagan spelled out very dramatically today.

During the past 6 years, while the United States deployed no new intermediate range missiles and withdrew 1,000 nuclear warheads from Europe, the Soviet Union deployed 750 warheads on mobile, accurate ballistic missiles.

The point that the President has made very well is, that without some incentives, the Soviets are not going to stop their buildup. We have to give them some incentive. Now here, in that period of the past 6 years, we did what the gentleman is suggesting. Unilaterally we withdrew, we stood down certain forces, but the Soviets did not respond in kind. To the contrary, the Soviets responded with a dramatic buildup. I think the gentleman ought

to pay close attention to the facts of history.

Mr. Chairman, I yield back the balance of my time.

Mr. BOLAND. Mr. Chairman, since 1974 the Department of Defense has been concerned with the great profusion of handgun types in the inventory of U.S. Military Forces and the Coast Guard. Currently, there are 25 different handguns being used and maintained by the Department of Defense. Because of the several types of ammunition which are required for various purposes, the Appropriations Committee was asked in 1978 to provide funds for 125 different kinds of sidearm ammunition. The problems with providing spare parts for an aging and fragmented inventory of handguns are considerable as well. In addition, the current .45 caliber semiautomatic pistol is unsuitable for use by left-handed personnel, and because of its weight and recoil characteristics, by female personnel of the Armed Forces.

In addition to the need to standardize weapons among the U.S. military branches and the Coast Guard, the Department of Defense is concerned about the lack of standardization among the NATO nations in terms of ammunition.

For all of these reasons, the Defense Department has for years been planning to procure a new 9 millimeter handgun. In fact, in June 1981 the Army, acting as the lead agency for the military departments and the Coast Guard, solicited proposals for a weapon which would achieve standardization within U.S. forces and compatibility with our NATO allies. A number of manufacturers have submitted test weapons, and the period for submission has been extended three times at the urging of various interested manufacturers.

At present, the Army is engaged in testing and evaluating the weapons which have been submitted. It is hoped that a selection of the most suitable weapon will be made in January 1982. To insure that the testing and evaluation are sufficient to provide the Government with the most cost-effective solution, to the current handgun problem, the committee has provided $1.9 million for the continued testing and evaluation of the 9 millimeter handgun. The bill provides no funds for procurement.

The question of handgun standardization and NATO compatibility has been studied extensively by the Department of Defense over a long period of time. Among the solutions considered by the Department was the retrofitting of existing .45 caliber arms with 9 millimeter barrels, new slides, magazines, extractors, ejectors, and slide stops. Each of these high tolerance parts would be fitted to an old, worn handgun frame. The newest of our .45 caliber handguns is 36 years old. The problems of hand assembling new parts mixed with old frames are considerable. Retrofitting would not provide military personnel with a modern, safe, reliable weapon capable of ambidextrous operation. The modification of existing handguns to meet the need for a 9 millimeter standard handgun has been considered carefully and wisely rejected.

The Appropriations Committee has been concerned about the problems associated with our handgun inventory for years. For these reasons, the committee recommends that the Defense Department be allowed to continue the testing and evaluation of the XM-9, 9 millimeter handgun. We should bear in mind that this bill contains no funds for procurement of the weapon, and that the decision to acquire a 9 millimeter handgun will be subject to specific authorization and appropriations in future years.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SHIPBUILDING AND CONVERSION, NAVY

(INCLUDING TRANSFER OF FUNDS)

For expenses necessary for the construction, acquisition, or conversion of vessels as authorized by law, including armor and armament thereof, plant equipment, appliances, and machine tools and installation thereof in public and private plants; reserve plant and Government and contractor-owned equipment layaway; procurement of critical, long leadtime components and designs for vessels to be constructed or converted in the future; and expansion of public and private plants, including land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title as required by section 355, Revised Statutes, as amended, as follows: for the Trident submarine program, $230,700,000; for the CVN aircraft carrier program, $475,000,000; for the SSN-688 nuclear attack submarine program, $1,167,000,000; for the reactivation of the U.S.S. New Jersey, $237,000,000; for the reactivation of the U.S.S. Iowa, $88,000,000; for the aircraft carrier service life extension program, $81,000,000; for the CG-47 AEGIS cruiser program, $2,929,300,000; for the LSD-41 landing ship dock program, $301,000,000; for the FFG guided missile frigate program, $926,100,000; for the MCM mine countermeasures ship program, $99,700,000; for the T-AO fleet oiler ship program, $200,000,000; for the T-AGOS SURTASS ship program, $156,500,000; for the ARS salvage ship program, $135,500,000; for the T-AKRX fast logistics ship program, $184,000,000; for the T-AFS Lyness conversion program, $37,000,000; for craft, outfitting, post delivery, cost growth, and escalation on prior year programs, $538,700,000; and in addition, $73,100,000 of which $15,100,000 shall be derived by transfer from the "Trident submarine program" of "Shipbuilding and Conversion, Navy 1979/1983", and $58,000,000 shall be derived by transfer from the "maritime prepositioning ship programs" of "Shipbuilding and Conversion, Navy, 1981/1985"; and reductions in the amounts, as follows: $12,000,000 for inflation offsets; $13,700,000 for consultant, studies and analyses; and $11,900,000 for Army Guard and Reserve equipment transfer; in all: $7,748,900,000, and in addition, $73,100,000 to be derived by transfer, to remain available for obligation until September 30, 1986: *Provided*, That none of the funds herein provided for the construction or conversion of any naval vessel to be constructed in shipyards in the United States shall be expended in foreign shipyards for the construction of major components of the hull or superstructure of such vessel: *Provided further*, That none of the funds herein provided shall be used for the construction of any naval vessel in foreign shipyards.

AMENDMENT OFFERED BY MR. BENNETT

Mr. BENNETT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BENNETT: On page 20, line 7, strike "$1,167,000,000" and insert in lieu thereof "$1,351,000,000".

On page 20, line 21, strike "$538,700,000" and insert in lieu thereof "$754,700,000".

On page 21, line 5, strike "$7,748,900,000" and insert in lieu thereof "$8,148,900,000".

Mr. BENNETT. Mr. Chairman, my amendment would increase the appropriation for shipbuilding by $400 million, to a new total of $8,148.9 million. Even with the adoption of this amendment, the appropriation for ships would be below the President's revised budget figures and below the authorized level.

The Appropriations Committee has made reductions in 16 different line items in the shipbuilding account. The amendment I am offering would add funds for only two items and would leave unchanged most of the adjustments made by the Appropriations Committee.

The amendment would provide the funds to produce three SSN-688 nuclear-powered attack submarines per year in 1983 and 1984 and would restore an unspecified reduction that could otherwise preclude the construction of one or more ships included in the bill.

A minimum of three SSN-688 submarines should be built each year to maintain current submarine force levels. Additional submarines will have to be built if we are to increase current forces. The funds in the bill before us would only support the production of two submarines in 1983 and one in 1984. The amendment would add $184 million for the procurement of long leadtime nuclear components for three SSN-688 submarines in 1983 and 1984.

The amendment would also restore $216 million identified as a general reduction in the report accompanying the appropriations bill. The effect of this reduction, if allowed to remain, will be to prevent the construction of one or more ships for which funds are appropriated in this bill. While the Appropriations Committee suggests that project managers growth reserves can be reduced, recent experience with shipbuilding has shown that the problem is not estimates that are too high, but rather estimates that are too low.

I want to again emphasize that the amendment leaves untouched more than three-fourths of the recommended changes of the appropriations Committee, and would result in a shipbuilding program that is below both the President's budget and the authorization level—which the House passed on Tuesday of this week.

I urge your support for the amendment.

I yield to the chairman of the subcommittee for a response. I understand he is agreeable to this.

Mr. ADDABBO. I thank the gentleman for yielding.

Again, as I have previously stated, the committee did not have the benefit of the authorizing legislation. We have reviewed the amendment and would agree with the gentlemen's amendment at this point.

Mr. BENNETT. I thank the gentleman very much.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we accept the amendment on this side.

Mr. BENNETT. I thank the gentleman very much.

Mr. SCHNEIDER. Mr. Chairman, I rise in strong support of the amendment offered by the gentleman from Florida and urge its adoption.

Two weeks ago, during debate on my bill to require that naval vessels be built in this country, I noted that 21 of our Nation's shipyards have closed in the past 5 years, leaving only 26 in the active base. This serious decline in a vital national security industrial base must be reversed. Even with the President's accelerated shipbuilding program, it is expected that some 30,000 shipyard workers will lose their jobs in the years ahead, due to the lack of other new orders.

The gentleman's amendment is a step in the right direction, by placing emphasis on shipbuilding at a time when it is sorely needed.

This is a reasonable amendment, which, if approved, will still be below the President's October request.

Mr. Chairman, I would like to note at this point that as originally offered, this amendment would have also included $100 million in long-lead procurement funds for the 10th Trident submarine.

I regret that these funds were deleted from the bill, and I shall urge conferees on the part of the House to recede to the other body should these funds remain in their version of this bill, as is expected. Mr. Chairman, the Trident program represents the only technologically superior leg of our strategic triad which is in production and, as of last week, on station. The need for a further installment of long-lead funds results from the failure to fully authorize the 10th Trident as a part of the fiscal year 1982 Defense Authorization Act. To fail to supply these funds will result in possible delivery delays of 7 months each for the 10th and 11th Trident. It could result in loss of jobs and further—if temporary—erosion in our defense industrial base. Furthermore, delays will only cost the taxpayers more in the long run.

The heart of the President's strategic program is the assurance that its components be both endurable and survivable, and the Trident is the superlative in each of these areas. I shall urge the conferees to recognize these facts and support inclusion of these funds in the conference report.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. BENNETT).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

OTHER PROCUREMENT, NAVY

For procurement, production, and modernization of support equipment and materials not otherwise provided for, Navy ordnance and ammunition (except ordnance for new aircraft, new ships, and ships authorized for conversion); the purchase of not to exceed three hundred and four passenger motor vehicles for replacement only; expansion of public and private plants, including the land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title as required by section 355, Revised Statutes, as amended; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; $3,692,177,000, to remain available for obligation until September 30, 1984.

AMENDMENT OFFERED BY MR. DICKS

Mr. DICKS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DICKS: On page 22, in line 4, strike out "$3,692,177,000" and insert in lieu thereof "$3,695,577,000."

Mr. DICKS. Mr. Chairman, this amendment for $3.4 million includes $2.1 million for the AN/SRN-19 shipboard navigation receiver and $1.3 million for the AN/WSS-1 Link-4A data terminal.

The gentleman from New York (Mr. ADDABBO) is aware of this ammendment and its importance to the U.S. Navy. Last minute knowledge of these requirements precluded these items from being requested in the fiscal year 1982 DOD request.

The AN/SRN-19 is a satellite navigation receiver for shipboard use and these funds are required for system support and final buy out.

The AN/WSS-1 is a data terminal link for shipboard radar landing systems and will replace the current outmoded system.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. DICKS. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, again, the committee, I think, was in full accord with the systems. They are needed by the Navy. We are awaiting the authorization levels.

Mr. Chairman, we agree with the amendment.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. DICKS. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Chairman, we accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. DICKS).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

AIRCRAFT PROCUREMENT, AIR FORCE

For construction, procurement, and modification of aircraft and equipment, including armor and armament, specialized ground handling equipment, and training devices, spare parts, and accessories therefor; specialized equipment; expansion of public and private plants, Government-owned equipment and installation thereof in such plants, erection of structures, and acquisition of land without regard to section 9774 of title 10, United States Code, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to the approval of title as required by section 355, Revised Statutes, as amended; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes including rents and transportation of things; $13,957,598,000, of which $1,817,600,000 shall be available only for purchase of F-16 aircraft under a multiyear contract, $103,500,000 shall be available only for the procurement of B-707 aircraft to provide for engines and parts to re-engine KC-135 aircraft, $121,700,000 shall be available only for the procurement of A-7K aircraft only if such procurement is authorized in the Department of Defense Authorization Act, 1982, and $334,300,000 shall be available for contribution of the United States share of the cost of the acquisition by the North Atlantic Treaty Organization of an Airborne Early Warning and Control System (AWACS) and, in addition, the Department of Defense may make a commitment to the North Atlantic Treaty Organization to assume the United States share of contingent liability in connection with the NATO E-3A Cooperative Programme, to remain available for obligation until September 30, 1984.

AMENDMENT OFFERED BY MR. ADDABBO

Mr. ADDABBO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ADDABBO: Page 23, line 7, strike out "$13,957,598,000" and insert in lieu thereof "$12,156,598,000".

Mr. ADDABBO. Mr. Chairman, I ask unanimous consent that all debate on this amendment be limited to 1 hour, to be equally divided between myself and the gentleman from Alabama.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. The gentleman from New York (Mr. ADDABBO) will be recognized for 30 minutes, and the gentleman from Alabama (Mr. EDWARDS) will be recognized for 30 minutes.

The Chair recognizes the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Chairman, I yield myself 3 minutes.

Mr. Chairman, I rise to offer the amendment to delete $1.9 billion for procurement of the B-1 bomber. This is a weapons system so far behind its time, so much more costly than its supporters admit, and so unworkable as a penetrating bomber threat that by buying it we actually set back our national security position in that we slow down development of the Stealth bomber.

The B-1 bomber is a weapons system that was developed in the 1960's for production in the 1970's and deployment as a penetrating bomber in the 1970's and 1980's. The Congress refused to fund the program in the early 1970's because of cost overruns and the slowness in proving out research and development. As a result, by 1977 the program was so costly and time for use of the bomber as a penetrating threat was running so short that the Congress decided to end the program.

Four years after the line was shut down, after the contractor sold the plant and facilities, the Reagan administration has decided to renew this battle. That is certainly nice for the California contractor but it is not very nice at all for the American taxpayer who will have to foot the bill for this decision, and it hardly enhances national security to spend nearly $40 billion for 100 1960's-era bombers.

We can argue about the B-1 and what it will cost and why the administration is so insistent upon funding this contract, even with all the intelligence information that has been presented to the President and his staff that confirms our objections to it.

But what is the most important question we will face here today is whether or not this Nation can afford to squander its money to buy a bomber that cannot do the job after it comes on line. To be brutally candid, the White House and the Defense Department have been all over the lot in the claims on behalf of the B-1. If you do nothing more than take the published statements of the administration witnesses, you have in the last few months a price range of some $200 million per plane. The claims of last summer have now been forgotten and even the White House concedes the planes will cost $390 million each, as of now. Do not hold your breath that that price quotation will last long, either.

Additionally, the claims for performance of the B-1 have been as inaccurate as have the cost figures. You may wonder why these things can be. You might think that cost and performance records should be fairly determinate figures. Our Defense Appropriations Subcommittee would have thought so too, until we begin to see the same witnesses say different things.

Certainly, in defense matters that is easier to do because the figures are generally classified. The press, the general public, and most Members of Congress do not have much access to that information.

Nevertheless, when you see the Secretary of Defense sign a letter saying the B-1 can penetrate Soviet air defenses "well into the 1990's" and then testify yesterday that the B-1 at best will be able to penetrate until 1990, anyone can tell there is a difference there. Worse, this country's best intelligence information says the Secretary is wrong in both statements, that the B-1 cannot penetrate after 1987 or 1988, depending on how rapidly Soviet missiles can be deployed. The B-1 may never drop a bomb on Russia but it certainly has bombed Pentagon credibility.

The Air Force role in the B-1 matter has been far more as an advocate for the B-1 than as an objective source of technical information. The Air Force has not been above doing a little bookkeeping juggling to make their pet program look a little better.

The simple fact of life is this country cannot afford to develop both the B-1 and the Stealth bomber. By delaying Stealth in favor of the B-1, we seriously set back our national defense capabilities in the 1990's, perhaps terribly so. We need to have a means of keeping the Russians honest and there is a smaller chance of that without a penetrating bomber. Stealth is a technology that will continue on into the 21st century. No matter how much they bluster, no one can truthfully say that about buying the B-1 today.

Yet, a high ranking Air Force officer testified to the Defense Appropriations Subcommittee just this week that, and I quote, "Given the priority of dollars the Air Force would fund the B-1 and cancel the Stealth."

That is an incredible statement coming from a man who knows the difference in the two technologies. It also means, as far as I am concerned, that the statements of support on behalf of the B-1, no matter whether they come from the Air Force, the Secretary of Defense, or from the White House themselves, are to be considered in the light of the political demands that the administration is placing on those making the statements.

□ 1515

A B-1 or B-1B bomber, whatever you want to call it, is a bummer of a bomber. It is something that has outlived its usefulness.

The CHAIRMAN. The Chair would like to clarify the request of the gentelman from New York on the division of time. Is the gentleman's request on this amendment and all amemdments thereto?

Mr. ADDABBO. Yes, Mr. Chairman.

The CHAIRMAN. Without objection, it is so ordered.

Mr. ADDABBO. Mr. Chairman, the B-1 bomber funds that I move to delete are strictly procurement funds. The information the Air Force puts out and the letters that we received are to the effect, "We need it in our inventory," as if the B-1 were available today. We cannot get it today. The earliest we can get it will be in 1986, and that will be only 12 airplanes. We all know the history of aircraft. We have never received anything on time, so it is very possible in this case that we will not see a B-1B bomber until 1987 or 1988.

We have the direct testimony of the Secretary of Defense and of Under Secretary DeLauer that a Stealth bomber, which can and will be able to be used as a penetrating bomber well into the 21st century, could come on line by 1988 or 1989 if properly funded. We have received information that the Stealth bomber, the ATB, was not properly funded just so that the B-1 bomber could be put forward even though it is not the best weapon. As a result, real defense, the weapons really needed for our defense, will be stretched into the 1990's, giving the Russians sufficient time to build up a defense against that most needed weapon.

So, I would ask my colleagues to support this reduction of $1.9 billion for procurement funding for a bomber which still needs, by Defense Department direct testimony, $2.4 billion for research and development. The currently admitted cost of the B-1 bomber is about $222 million, $222 million a copy. And the Pentagon fully agrees that by the outyears the price will be up to almost $300 million a copy or more.

Mr. EDWARDS OF Alabama. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I rise in opposition to the amendment. I have agonized probably as much as anybody in this House over the subject of the B-1 over the years that we have had to deal with it. I supported it during the years of the Carter administration. I opposed President Carter's effort to terminate it. I felt like it was the thing to do then, and I must say that since that time in 1977 the question of the Stealth or ATB has come on the scene, and it has created an additional reason

to pause and think about where we are going with manned bombers.

Let me say, just reiterate what I said earlier today, a penetrating bomber is one of those chips in the President's arsenal of chips that he should have when he negotiates START as it is now going to be called. The question is whether we can get from here by stretching the B-52's life a little longer into the advanced technology bomber without creating a gap that is too big during that interim period.

We are told that if everything goes as well as it can go, and we know how these things work, that we could probably have advanced technology bombers coming off the line sometime around 1990. We are told that if everything goes the way it should go we can have B-1 bombers coming off the line in 1986. There is a gap in there that I cannot guarantee we can fill without building the B-1. I would like more than anybody in this Chamber to stand here and tell the Members that we do not have to spend that money on the B-1, but I am convinced that we do. I am convinced that we have no choice. But, let me go a step further. If we build 100 B-1's, which is the proposal, we would then come back sometime in the future and propose to build perhaps 130-odd ATB's, and so sometime in the 1990's we would have a fleet of penetrating bombers of 230-odd, perhaps. If we do not build the B-1 and we are willing to accept whatever gap there is, then we will come to you one day and say that what we need to build is some 230-odd ATB's. In any case, we are talking about a number of penetrating bombers approaching 230-odd planes.

Now, it seems to me that we should go with the B-1. We should use it as a penetrator as long as it is available for that purpose. It has excellent potential for a cruise missile carrier. It has excellent potential as a conventional bomber when that is called for, and we would put it all together. On balance, I think we really have no choice. I reiterate again, I would love to be able to stand here and tell the Members that we do have a choice, but having agonized over it, I think we must go with 100 B-1's. We must follow on with the ATB. We must insist that it not slip because of the B-1 expense, and if we will do this in an orderly fashion, as I believe the subcommittee will insist that it be done, we will have this country defended with a penetrating bomber as well as we could hope to be, everything considered.

Mr. DICKS. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield.

Mr. DICKS. Mr. Chairman, I have a great deal of respect for the gentleman's judgment on these matters, and I frankly am still in the position of determining how I am going to vote on this particular amendment. I think it is a very complicated and difficult issue. One of the things that concerns me is the fact that I do not think the Air Force has been totally candid with us about their approach to funding the advanced technology bomber.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield myself 2 additional minutes.

Mr. DICKS. Therefore, I think there are some of us who are concerned that the Air Force is in fact stretching out that program, and one has to speculate whether that is being done in order to justify going forward with the B-1 bomber. That is something that concerns this gentleman, because I am concerned that we have the best available bomber that can do both the conventional and the strategic missions with the best chance of penetrating improved Soviet air defenses, for a sufficient time period.

I would like to know how the gentleman feels about that particular issue.

Mr. EDWARDS of Alabama. I am concerned about that issue. I think the Air Force has obviously tried to put the best picture it could, the best face it could, on the B-1. That is one of the reasons that we are determined, I think on our committee that we are not going to let the ATB slip because of that. The contractor says, of course, he can have it done so quickly it will make your head swim. The Air Force says he cannot do it that quickly. Probably the truth is somewhere in between the two.

Mr. DICKS. I thank the gentleman, and I would agree that for sure they cannot do it if they are cutting back on the money they need at the beginning of the program to move the program ahead as rapidly as possible.

Mr. EDWARDS of Alabama. I certainly agree with that. I think the point to consider is that, if you can believe who we have to believe, that whether you have a combination of B-52's and B-1's and ATB's or a combination of B-52's and ATB's, or a combination of B-1's and ATB's or whatever, putting risk aside, that you are going to spend within $1 billion or $2 billion about the same thing. So, it occurs to me—and I guess this is where I finally have come out after all my agony—that you get a penetrator quicker with a B-1. You have a very useful alternate for it later down the road while you bring on the state of the art, the latest state of the art at the earliest possible time. I would oppose this amendment.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from Pennsylvania (Mr. MURTHA).

AMENDMENT OFFERED BY MR. MURTHA AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. ADDABBO

Mr. MURTHA. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. MURTHA as a substitute for the amendment offered by Mr. ADDABBO: Page 23, line 7, strike out "$13,957,598,000" and insert "$12,158,598,000."

Mr. MURTHA. Mr. Chairman, I offer this amendment so that Members will have an opportunity to vote on a strategic bomber that would cost half as much. We would have more flexibility because we would be able to move more bombers in more airfields throughout the world. Some people say this bomber is not as good, and yet this FB-111 dominated the SAC Joint Bombing and Navigation Contest in the last 6 of 7 years.

The key thing is that with refueling this FB-111 Stretch could reach anywhere in the Soviet Union. It uses the same number of tankers, so every argument that is used has to come down in favor of the FB-111.

I feel that the B-1 will probably never be built. I can see the change in attitude back home at this very time about defense. I can remember during the Vietnam war when people walked out of seminars that I had because they felt I was too strong for defense. What concerns me is that the same attitude may change next year, and we will be back here having to cut one of these systems.

I think the ATB is such a good system that if we take a much smaller, much less expensive system such as the FB-111 as an alternative and go on with the ATB, we have a system. General Ellis, former commander of the Strategic Air Command, strongly supports the FB-111 as an interim system. The people that would build this airplane have vast experience and feel comfortable with it.

One other thing we have to consider is the fact we have a facility still in place where they could go forward very quickly in building FB-111. We would have more bombers in the air faster at half the price, so I would urge the Members of this Congress to settle for a less expensive stopgap measure while we go forward very quickly with the ATB.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield myself 1 minute for the purpose of inquiring of the gentleman from Pennsylvania whether the FB-111 is authorized, and therefore whether it is a proper alternative to be presented in this bill or as an amendment to this bill.

Mr. MURTHA. As the gentleman knows, the FB-111 is not authorized, and what I intend to do is, with one amendment reducing the procurement money if this amendment passes; than

with the amount of research and development available, and as the gentleman knows, an increased appropriation in research and development, and in subsequent debate imply to the Air Force that this is what Congress intends for it to do.

Mr. EDWARDS of Alabama. It is a novel approach, I would say to the gentleman. We are in a position where we cannot make a point of order on his amendment because he is just simply moving bucks around.

□ 1530

But I would urge the Members not to move in this direction. It serves no real purpose. I have looked at the FB-111 at length with all the others, and its primary shortcoming, among others, is that it has no residual value as a cruise missile carrier or anything else other than strictly some kind of an interim deploying force.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Mr. Chairman, in the brief time I have I would like to assert that the decision to build and deploy 100 B-1 bombers is expensive, unnecessary, wasteful, and it is a political decision rather than a military decision.

First of all, it would take until the years 1986-88 to deploy 100 B-1 bombers. Most experts indicate that this bomber would only be able to penetrate Soviet defenses until the year 1990, which means at a maximum that we would be spending approximately $40 billion for a bomber that could penetrate the Soviet defenses for a maximum of 4 years.

Then the argument is that after 1990 the B-1 bomber could act as a cruise missile carrier. I would suggest that this is an extraordinarily expensive, sophisticated, overpriced, overly designed carrier for a cruise missile at a price of $400 million per plane.

The Soviets have been engaged in air defense technology, anti-B-1-type defense, for at least a decade to 12 years. We are now talking about Stealth bomber technology. Both of these arguments, in my estimation, are arguments in opposition to the B-1 bomber.

At a time when many of my colleagues are speaking out of both sides of their mouth about fiscal conservatism and tightening the belt, here we are about to engage in a $40 billion program, building a monument to military madness that in my estimation makes no sense.

Finally, I would assert that this decision is a political decision. The President took the Air Force's latest nuclear toy away from them, namely, the mobile mode MX missile system, so he had to give them something back. So he throws them 100 B-1 bombers.

We should not go along with that decision. It is $40 billion of American human beings' money that ought to be translated into enhancing the quality of our lives.

To summarize, Mr. Chairman, this decision to build 100 B-1 bombers is expensive, it is unnecessary, it is wasteful, and it is a political decision. Forty billion dollars is one hell of a lot of money to waste on a program that makes no sense. For a maximum of 4 years, we are talking about the capacity to penetrate the Soviet Union.

Mr. Chairman, there are all kinds of other cheaper ways to carry cruise missiles in the air. We do not need a $400 million plane to do that.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 3 minutes to the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Chairman, on the question about the penetrating ability of this B-1 bomber until 1990, that estimate has been all over the board, and there have been additional estimates. These are other estimates based on new information, but I do not know of anybody who can really tell us how long a B-1 or a Stealth or a B-52 is going to be able to penetrate the Soviet Union, but 1990 is not necessarily an accurate figure which we should accept without debate.

On the question of the cost of the B-1 being $400 million per airplane, I do not know that anybody really believes that. There again we are talking about a figure that is twice as much as what the Defense Department is telling us this program is going to cost.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Florida. I do not have enough time to yield at this point. If the gentleman could get me extra time, I would yield?

Mr. Chairman, I want to concentrate on the subject of the B-1 versus the Stealth bomber. I want to say that I am a strong supporter of the Stealth technology. We ought to move in that direction as rapidly as we can. The people and the companies involved in that effort are very credible. They know what they are doing when it comes to airplanes. They have proven that over many, many years.

But I say, Mr. Chairman, as strongly as I favor that concept, today I think we would all have to admit that this paper airplane in my hand is really the only Stealth bomber we have now or will have any time in the near future. We do not know whether it is going to be ready in 1990 or 1995 or ever.

In the meantime, we need a bomber that is more capable than the B-52. In today's warfare—and let us all prey every day that we never have to engage in any warfare, let alone nuclear warfare but in today's nuclear warfare, we are talking about minutes from missile launch to missle impact. Survivability of the B-52 in that case is very doubtful. With the B-52, the world could be blown up by the time the B-52 could be cranked up, put onto the runway, and get into the air. The B-1 on the other hand can be airborne before an incoming missile has ever landed, escaping from the initial attack and being there as a realistic retaliatory force.

The Soviets know about the B-1. The Soviets know that the B-1 is a very powerful weapon and we ought to proceed with the B-1. We ought to reject both of these amendments and move right along.

Mr. ADDABBO. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. DOWNEY).

Mr. DOWNEY. Mr. Chairman, I would submit to my friend, the gentleman from Florida (Mr. YOUNG), that by the time the B-1 gets to the Soviet Union, it, too, will be blown up. The fact remains that we have to ask ourselves whether or not $20 billion to $40 billion for this airplane is going to buy us improved security.

The answer to that, in my opinion, is no. If we are interested in a cruise-missile-carrying platform, which is what I think the requirement calls for, we can buy L-1011's and DC-10's and stuff them full of cruise missiles and do target saturation, or we can do what the gentleman from Pennsylvania suggested: We can buy FB-111's.

The requirements keep changing for the B-1. As the cost keeps rising, so will its missions. Now we are hearing that it is going to find moving targets inside the Soviet Union. During a nuclear war, are the pilots going to be looking out of the cockpit and looking for moving targets? I think not. I think that requirement is a lot of nonsense, that there are going to be targets, moving targets inside the Soviet Union for the B-1 to attack.

We are told it is going to be used as a conventional bomber. My God, it is not going to bomb anything more valuable than the cost of the airplane. We are not going to risk the asset of $200 or $300 million per airplane in some tactical bombing mission. There are many more viable options.

Mr. Chairman, I submit that there are alternatives. This is one piece of equipment in the area of national security that costs too much and is just not necessary.

Mr. ADDABBO. Mr. Chairman, I yield 1 minute to the gentleman from Connecticut (Mr. MOFFETT).

Mr. MOFFETT. Mr. Chairman, the gentleman from Pennsylvania (Mr. MURTHA) has at least given us an alternative here which I think we should seriously consider. In the meantime I would hope that we can go back to what my friend, the gentleman from New York (Mr. DOWNEY), just said,

about this being a bad bargain. If we would only give the same level of scrutiny to the B-1 bomber that we gave to the WIC program, the women, infants, and children's program, it would fail the test. It would absolutely flunk the test. On the issue of cost, if we put the B-1 in here on the table, with the same kind of enthusiasm for budget cutting and cutting out waste as we had during the school lunch debate, it could not possibly survive.

Mr. Chairman, if we were to use the same kind of motivation, the same kind of desire, and the same kind of yardstick that this House so enthusiastically put forward and utilized during the debate on those social programs, the B-1 would fail the test. I think that is the real test. We need to put it to the test and look at other alternatives. The gentleman from Pennsylvania (Mr. MURTHA) is offering one, and there are many others.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 4 minutes to the gentleman from Florida (Mr. CHAPPELL).

Mr. ADDABBO. Mr. Chairman, I yield 1 minute to the gentleman from Florida (Mr. CHAPPELL).

The CHAIRMAN. The gentleman from Florida (Mr. CHAPPELL) is recognized for 5 minutes.

Mr. CHAPPELL. Mr. Chairman, I rise in support of the B-1 concept and for the development of the ATB technology. In my view, we need both.

That is the most efficient way, in my view, to produce a manned bomber that makes it certain we can penetrate Soviet airspace into the outyears and cost the Soviets overwhelming sums of money to defend against those various technologies.

I hate to rise in opposition to the gentleman from New York and the gentleman from Pennsylvania, but in the first place, if I thought for one moment the FB-111 could be stretched effectively and efficiently to give us the payload and the range we need, I would certainly support it. The facts and the statistics simply are not there.

We have been through this before. While the F-111 is an excellent and fine airplane—as a TAC aircraft, and I wish we would buy more of them for that purpose—the B-1 bomber represents the only technology we have that can close the gap during the time we need to close it.

We are talking about the timeframe of 1985, to which I have alluded earlier in my comments to this House today. This is the number one priority of the Air Force. It is the only thing we have to work with to close the gap that has to be closed.

If we believe what the Soviets tell us, if we believe what the Soviets are doing in preparing for offensive warfare and preparing to carry their will uncontested throughout the world by the year 1985, then this is the prime vehicle by which we can prevent and deter that kind of action.

The B-1 bomber is an up to date plane, with the very latest tested technology applied. It has the capacity to be hidden equally as well as does the proposed technology of the Stealth. It has the capacity to penetrate into 1990's, and most of the experts agree that with ongoing and improving technology, it will go well beyond the year 2000.

The B1-B carries a payload at least twice that of the paper ATB.

I said that I am for the ATB because I want us to develop that technology. The ATB exists only on paper at this time though certain of its technology is in test. It is for the future; it is not for now. We want to develop on that technology, but we must have a penetrating bomber now.

The B1-B is supersonic, not subsonic. The ATB we are working on is subsonic. The only reason I mention the comparison is that we must go with the B1-B now. I think we would be very remiss if we did not. We will put our country at serious risk by not going forward with the B-1 now.

We continually talk about what we are going to do in the future. We have gotten to the point where we do not build airplanes, we do not build hardware, we do not give the soldiers in the field the weapons they need. We do not give the pilots the aircraft needed, we do not give the Navy the undisputed capacity to control the seas. We are inviting trouble, if we postpone the production of the B-1, if we cut these moneys from the bill. It has the effect of killing the B-1B program. That would be disastrous for this Nation. I hope we will defeat these amendments, the substitute amendment by Mr. MURTHA and the amendment by Mr. ADDABBO and that we will vote to move forward with the B1-B program and a stronger national defense.

Mr. DICKS. Mr. Chairman, will the gentleman yield?

Mr. CHAPPELL. I yield to the gentleman from Washington.

Mr. DICKS. Mr. Chairman, as the gentleman knows, I have great respect for his expertise and his judgment on this particular issue.

Is it not true that currently the B-1 or the B-52 or the ATB is going to be used as a mopup weapon? In other words, after there is a nuclear exchange, then this weapon would go in a mopup role; is that not correct?

Mr. CHAPPELL. No indeed, the B-1 is both a conventional aircraft and a strategic weapon. It is a very vital conventional weapon to give assistance to the Navy in control of the seas. It is a vital weapon to give credence to the conventional forces in Europe and wherever else in the world it is necessary. It is a tremendous conventional weapon.

Mr. DICKS. But is its capacity not primarily to go in in a mopup role?

Mr. CHAPPELL. No, I would disagree with the gentleman. No, it is not a mopup weapon; it is a weapon that would be used in any mode and in any conventional mission. It has great versatility.

Mr. ADDABBO. Mr. Chairman, I yield 2 minutes to the gentleman from Mississippi (Mr. WHITTEN).

Mr. WHITTEN. Mr. Chairman, this represents many things that frighten me. I kind of agree with the Atlantic Monthly article that increased military spending will merely take up the slack in the economy of what we have last by cutting out domestic programs.

Let us get on with the program and get ourselves a plane that will fly.

As to both of these planes, as I understand it, the F-111 and the Stealth bomber, whether they are ever any good depends upon—what are the words?—revolutionary breakthrough. Let us get something that does not require a revolutionary breakthrough. Let us get something we can use now, and let us go ahead and build the B-1 now.

If we leave it with the researchers they will keep it and they will go on and on and on with it. As I told you, the Trident submarine took 11 years, because we kept adding every new thing that came along. We can build the B-1 if we go ahead and build it now.

AGAIN LET US PREVENT WAR

We need defensive weapons; we need to prevent war. We need a bomber that can work. It is important that we prepare to prevent war, and it is here that history shows that a show of force is frequently the means of preventing the use of force.

I have seen Russia park an old battleship across the Baltic Sea next to Sweden—and it served its purpose. We have seen an aircraft carrier with fighter planes do the same thing in the Mediterranean, and there are hundreds of similar cases.

While in Russia some years ago, I saw a cannon on display at the Kremlin which, while very large and very frightening to look at, had no firing mechanism. I was told that on one occasion it caused the enemy to retreat in terror from the battlefield where it was displayed, even though it could not fire a shot.

□ 1545

We need a bomber that we can use now because what we need is to have a bomber, which, of course, we can bring back. Let us not put all our eggs in one basket and keep on building up defense spending to keep the domestic economy going. Let us get the B-1 and be ready to meet the problems of the day. When we get the breakthrough,

then there is time enough to build another new airplane.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Chairman, I rise in opposition to the amendments offered by the distinguished gentlemen from New York and Pennsylvania. I believe the new version of the B-1 bomber must be built and deployed quickly if we are to maintain a strong national defense capable of protecting our security and our vital interests. I did not intend to speak on this matter, but the B-1 has become controversial in my district and I felt it necessary to make my position clear for the record—the CONGRESSIONAL RECORD. And these arguments have all been made by others here on the floor but I want to give my reasons for voting for the B-1.

Our triad system of defense requires a modern bomber force—a controllable, recallable element able to attack mobile as well as fixed targets, able to perform both nuclear and conventional missions, and able to project an American presence in troubled regions around the world. The B-1 bomber is needed to fulfill this vital defense requirement in this decade and beyond.

In my view the two most important considerations in favor of the B-1 are the age of our current bomber force and the uncertainty of development of the so-called advanced technology bomber.

The B-52 bomber has been the mainstay of our air defenses for more than 20 years. It is an old airplane, designed in the early 1950's, that has performed nobly and well for many years. But it is rapidly nearing the end of its usefulness. We know that as Soviet defenses continue to improve, the B-52 will become increasingly incapable of reliably executing its missions.

I believe former President Carter made a bad mistake when he elected not to proceed with the construction and deployment of the B-1 bomber in 1977 and instead chose to modernize and modify the B-52 bomber. Despite these highly expensive modifications, it has become clear that the B-52 bomber is becoming an archaic anachronism, a lumbering, plodding dinosaur in this era of high technology weaponry. If we are to maintain an effective bomber force, we must replace the B-52 and soon.

The obvious replacement for the B-52 is the updated version of the B-1 bomber, which is superior to the B-52 in virtually every area of comparison. The B-1 was designed to meet the challenge of this nuclear age and employs state-of-the-art technology. Both the offensive and defensive capabilities of the B-1 have been thoroughly tested and proven effective. The initial operating capacity for the B-1 can be reached quickly, by mid-1986, and the full complement of 100 B-1's will be ready for deployment by 1988.

Air Force tests have shown that the B-1 is about 100 times less detectable by radar than the B-52. It can penetrate Soviet defenses at greater speeds and fly at much lower altitudes, following the "nap of the Earth" to evade detection. Gen. Lew Allen, the Air Force chief of staff, has testified before the Senate Armed Services Committee that the B-1 will be able to effectively penetrate and strike targets within the Soviet Union well into the 1990's.

The updated B-1 is smaller than the B-52, but is has a much greater payload capacity. It can operate on smaller, shorter runways and gets airborne faster than the B-52. The B-1's engines are more efficient than the B-52 engines, enabling it to use 25 percent less fuel and giving it greater range. It has the flexibility to fly both nuclear and conventional missions.

These characteristics are important when our current foreign policy concerns are considered. The B-52 bomber does not have the range to reach the critical Persian Gulf region, for example, with an adequate payload. Moreover, there are no airstrips in the Middle East that are long enough for a B-52 to take off. With the B-1, America can project its presence anywhere in the world within 24 hours.

I believe the capabilities of the new B-1 bomber make a compelling case for its construction and deployment. However, some Members of this body believe that we should save money by forgetting about the B-1 and instead rely upon the aging B-52's until the advanced technology bomber, the Stealth aircraft, is developed. I am as conscious as any Member of Government spending, but I believe such reasoning is wrong. Indeed, I believe that to take such a course would be gambling with our national security.

We all know of the great promise of the Stealth bomber. But there is no guarantee that the Stealth bomber will be successfully developed according to a set timetable. The process of developing and refining new technology is a time-consuming one that is prone to delays and unforeseen problems. The difficult experiences of the space shuttle are testimony to that fact.

If we rely on the rapid development of Stealth we are risking our national defense upon a very unpredictable process. In addition, such a move could cause the development of Stealth technology to be unnecessarily rushed. The full and successful development of Stealth might never by achieved.

A far better course is to approve President Reagan's request for 100 B-1 bombers. This will provide for a quick and much-needed modernization of our bomber forces. It will allow for ample time for the proper development of the Stealth bomber. And when Stealth bombers are eventually perfected and deployed, we will be armed with a versatile modern bomber, capable of variety of missions and uses, that will complement the Stealth force well past the 1990s.

By approving construction and deployment of the new B-1 we are insuring that this country will have an effective bomber force into the 21st century. There will be no gaps in our national defense system.

I think the amendments which would reduce funding for the B-1 should be rejected.

Mr. ADDABBO. Mr. Chairman, I yield 1 minute to the gentlewoman from New York (Ms. FERRARO).

Ms. FERRARO. Mr. Chairman, I rise in support of the amendment and I ask unanimous consent to revise and extend my remarks.

Mr. Chairman, the supporters of the B-1 bomber have told us that the debate on the B-1 is really a debate on the national security of the United States. They are right.

They have also argued that production and deployment of the B-1 is essential to our national security. On this point, though, they are wrong.

I support a strong defense program. I support continued employment of the strategic triad of land-based missiles, submarine based missiles, and manned bombers. I support efforts to close the gap, the so-called window of vulnerability, between the time when the B-52's can no longer be relied on and the time the advanced technology bomber, or Stealth, is brought on line.

But I do not support wasting tax dollars on flashy new weapons that have limited use for our national defense.

The B-1 is a giant waste of money.

Let us understand what we are talking about here. The administration wants to build 100 B-1's, at a Congressional Budget Office estimated cost of $40 billion. That's $400 million per plane, which means that for the price of one B-1 we could buy 14 F-15's or 28 F-16's.

And what do we get for our $40 billion?

Well, we get nothing until at least late 1986 and possibly 1987. That is when the Air Force says the first B-1 comes off the production line. After that, there is some confusion regarding the useful life of the B-1's.

Air Force witnesses have maintained that the B-1 would be able to penetrate Soviet defenses well into the 1990's. But Secretary of Defense Caspar Weinberger told the Senate Armed Services Committee that to send the B-1 on a mission to penetrate Soviet air defenses after 1990 would be, in his words, a "suicide mission."

Taking Secretary Weinberger at his word, we are faced with a decision to

buy 100 $400 million per copy planes that will serve their primary purpose for about 3 years.

Is that what the American people mean for us to do to strengthen our national defense? I don't think so.

If we vote to approve this amendment and block funds for the B-1, that doesn't mean we have turned our backs on the question of how to address the gap between the B-52 and the Stealth. In fact, there are several options we could pursue.

The former commander of the Strategic Air Command, USAF Gen. Richard Ellis, has stated his support for the F-111B as a substitute for the B-1. By stretching the F-111B to allow greater range and payload, we could provide an alternative to the B-1 at less than one-fourth the cost.

A second alternative would be to modernize the B-52 to prolong their effectiveness until the advanced technology bomber is available.

Maybe the best choice for our manned bomber program, though, would be to forgo the B-1 and accelerate development of the Stealth.

Just a month ago, Secretary Weinberger said a Stealth fleet could be operational by 1989, only 2 years longer than it will take for the B-1. Clearly, resources expended on the B-1 would reduce our efforts to develop the Stealth as quickly as possible.

We have spent a lot of time this year talking about the need to reduce expenditures on domestic programs because Federal spending is out of line, and the need to increase defense spending because our national security is threatened by the Soviets. I agree with both halves of that argument, though I do not agree with many of the specific actions that have been taken.

Last week I participated in a Joint Economic Committee hearing on the impact of the Reagan budget and tax cuts on New York City. One of the things I learned was that my city currently has $40 billion worth of repairs to do on its highways, and bridges, and subways, and sewers. I cannot, in good conscience, vote for a program that costs as much as the B-1 which offers so little in terms of improving our national defense.

One final point I would like to make. Yesterday I had a phone call from a businessman in my district who makes hydraulic equipment. He explained that if the B-1 production was approved, his business stood to gain because Rockwell, the prime contractor for the B-1, would subcontract with him for part of the order.

I told him that I appreciated his concern, but that I did not feel I could support the B-1 program because of its costs and limited effectiveness. I expected him to give me a hard time about my decision, but he did not.

This businessman, whose personal financial interest clearly favored building the B-1, told me he understood my concerns about the plane, and that as a taxpayer, the costs of the program were troubling to him as well. The American people know what they want. They want a strong defense, but not a boondoggle. The B-1 is the weapon of the past.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 2 minutes to the gentleman from California (Mr. HUNTER).

Mr. HUNTER. Mr. Chairman, there is no doubt but that the air-breathing leg of the strategic triad, incorporated in our bomber force, is now the cornerstone of our strategic deterrent. The recently acquired vulnerability of our Minuteman silos, generated by rapid development in Soviet accurization of their SS-18's missiles is now generally accepted as fact.

As we turn our attention to the bomber area we should scrutinize the three basic requirements for a viable long-range bomber capability. These requirements are: First, ability to fly out or escape from our home bases in the event of a Soviet nuclear attack; second, the ability to carry, successfully, a substantial nuclear payload to the edge of Soviet defenses; and third, the capability to penetrate the Soviet air defense system and deliver our payloads.

In regard to the first area, the requirement of escaping from American bases before destruction by submarine-launched ICBM's, the B-1 bomber has a much faster fly out time than the B-52. Additionally, the B-1 is much better able to withstand blast overpressure and other nuclear effects such as electromagnetic pulse. This basic improvement in the ability to survive, which is manifested in the B-1 program is extremely important because it reduces Soviet incentives for a surprise attack on our bomber bases.

In the second area, the B-1 has the ability to carry, with greater reliability, about 50 percent more payload than the B-52, a significant factor.

In the third area, the B-1, will have the ability to pentrate Soviet defenses well into the 1990's. Our electrocountermeasures, coupled with outstanding advances in signature reduction would presently overwhelm the Soviet air defense system. But perhaps more important, is the economic outlays that the B-1 will force the Soviets to make in order to deploy air defense systems in the 1990's and beyond the year 2000 which will have a chance against defending B-1 attacks. We will force the Soviets to reduce outlays on offensive systems such as ICBM and submarine-launched ballistic systems, in order to defend against B-1. Further, they will be faced with a two-pronged adversary, the B-1 and the cruise missile. The cruise missile launched from B-1 or B-52 will complement our short-range nuclear tipped attack missiles, carried by B-1.

I would like my colleagues to hark back to 1977 when we decided not to build B-1, apparently for cost reasons. At that time if my figures are correct, we could have had B-1 for about $70 million a copy, and I would guess if we took a rollcall vote right now which could undo our mistake of 1977 and have B-1's in our inventory for that price, the vote would be overwhelming to do so.

Today we have the same opportunity. And we have the same people saying, no its too expensive, let us wait for Stealth. And I ask these Members, "How do we know Stealth is not going to cost an arm and a leg? How do we know Stealths many technological uncertainties will be solved? How do we know that we will not be sitting here in 1990 with a Neanderthal B-52 force and the same critics saying, no, Stealth is too expensive and too old?" Let us wait until the year 2000 for the real superduper bomber. If I could analogize our strategic problem to a sports event I would compare it to a prize fight in which we are behind on points, and instead of working to pile up points with jabs and hooks and uppercuts we are waiting to throw our big Sunday punch, our perfect weapons system, while our adversary wins round after round by making swift procurement decisions, keeping their industrial base at high operating capacity and refusing to rely on any single program as the cornerstone of their strategic force. And I would suggest to my colleagues that the match up between our bomber force and the Soviet air defense system is not a matter of developing one system and throwing it at an air defense curtain, which like a wall either stops or does not stop it. Our bomber capability is driven by a combination of design, weapons development, and electronic advancement. And as these factors improve our capability improves. Similarly, the posture of the Soviet air defenses is a dynamic one, that improves with the dedication of money and technology. There is no doubt that the B-1 today, especially with its radar signature reduction, is superior to the 1977 B-1 and there is no doubt that future electronic advancements will be incorporated in succeeding generations of B-1, just as the B-52 was improved in the D, G, and H models. So I would urge my colleagues to support the B-1, which is the only program which will maintain America's bomber capability through the eighties while allowing fair time for the development of the advance technology bomber, or Stealth.

Mr. ADDABBO. Mr. Chairman, I yield 5 minutes to the gentleman from Georgia (Mr. FOWLER).

Mr. FOWLER. Mr. Chairman, I rise in support of an enhanced strategic deterrent but in opposition to cost-ineffective and strategically unsound weapons systems.

I rise in support of the Reagan administration's plans for improving strategic command, control, and communications systems and for upgrading our strategic submarine force, but in opposition to its recommendations for the manned bomber and land-based ICBM programs. Furthermore, I object to administration plans calling for a reduction in the procurement of KC-10 tankers and for a cutback in the planned upgrading of the B-52 force. These latter two policies will leave our country with diminished strategic capabilities during the much-touted "window of vulnerability", given the long leadtimes required to place the projected B-1 and MX systems in operation.

I rise in suppport of 98 percent of the appropriations contained in the fiscal year 1982 Department of Defense appropriations bill but in opposition to the roughly $4 billion it provides for the B-1 bomber and the MX missile.

I stand before you as a moderate in the extreme, one who deplores the calls for unilateral disarmament but who also seeks to demand the utmost care in the expenditure of taxpayer dollars.

No fair-minded individual can deny that the Soviet Union has embarked on a massive, and threatening, conventional and strategic arms buildup over the past decade. I have no sympathy whatsoever with those who criticize American military efforts but turn a blind eye to Soviet activities. The debate that we are now engaged in could not, unfortunately, take place in that totalitarian society, much to the detriment of all mankind and most especially the Soviet people themselves. However, rigorous, open discussion is a hallmark of our system and is one of our greatest strengths.

Despite some perceptions to the contrary, our country has not stood still in the face of the Soviet strategic buildup. The retrofitting of the Mark 12-A warhead on Minuteman missiles has vastly increased the effectiveness of the weapons. The avionics and other upgrades of B-52 squadrons have increased the useful life of these aircraft through the mid to late 1980's as a penetrator and through the end of the century as a standoff cruise missile carrier. The recent addition of the SSBN *Ohio* to the ballistic missile fleet is a reminder of the Trident submarine and submarine-launched ballistic missile modernization programs which significantly improve the sea-based leg of our strategic triad.

Admittedly, in the absence of Soviet restraint we cannot stand pat and that is why I firmly support: The air-launched cruise missile (ALCM), which will tremendously boost the capabilities of the air-breathing leg of the triad when it joins the force in 1983; the Trident II missile, which offers survivable countermilitary capabilities; and accelerated research and development on the advanced technology bomber which by all accounts will be required by sometime in the 1990's to insure the continued ability of our bombers to penetrate Soviet air defenses.

In fact, as I stated earlier, one of my concerns about the net impact of the Reagan strategic program is that it would leave our strategic forces less capable in the short-term by reducing the buys and the KC-10 tanker, delaying or denying planned upgradings of B-52 aircraft (including the hardening against electromagnetic pulse (EMP) effects), and requiring an earlier retirement of the B-52 force.

Hopefully, this will put to rest the notion that critics of the B-1 and MX, for whatever motivation, demand the development of the unattainable perfect weapon. What this critic demands is cost-effective weapons that are consistent with our defense strategy and fulfill mission requirements. Strategy and mission must drive procurement and not the other way around.

THE B-1

My reason for opposing the B-1 program is simple: I do not believe that the marginal improvements it offers as a penetrator or cruise missile carrier are sufficient to justify the $28 billion to $39.8 billion price tag.

A few dates will illustrate the point. The B-52 will be capable of serving as a penetrating bomber through the mid to late 1980's. The B-1 will be deployed between 1986 and 1988 and is expected to be able to penetrate Soviet air defenses until the early to mid-1990's. Parenthetically, perhaps one of the most valuable contributions that the debate over the B-1 has already made has been to rapidly improve the performance of the aircraft. Within a few weeks' time the official estimates of the end of the useful life of the B-1 as a penetrator have gone from the end of this decade to "well into the 1990's."

A similar story emerges when one looks at the cruise missile carrier mission. The B-52 will be effective in this role until the end of the century while the B-1 will be able to perform this function for an indeterminable amount of time beyond that date.

In my judgment, the few years that we would gain in the penetrator mission are more than offset by the cost of the B-1. With such an expenditure we run a grave risk of stretching out or curtailing both the ALCM program which will be the major contributor to improved survivability of our air-breathing strategic forces whether the carrier is the B-1, the B-52 or some other aircraft, and the advanced technology (or Stealth) bomber program, which the Reagan administration acknowledges to be an essential element of U.S. strategic forces in the 1990's.

Events seem to already be bearing out these concerns. The Reagan administration has not increased the Carter request for the number of cruise missiles even though the number of launchers is to be increased by the addition of the 100 B-1's. The payload of each aircraft will have to be reduced accordingly. Secondly, the planned initial operating capability of the advanced technology bomber has slipped from 1989 until sometime in the 1990s.

With regard to potential conventional missions, it is my strong belief that the B-1 is overpriced and ill-designed compared to other aircraft which are already operational. I also feel that the B-1 is not optimally priced or designed to fulfill the cruise missile carrier mission.

Now some might say that, when it comes to defense, talk of cost-effectiveness is inappropriate and money must not be a primary consideration. But, Mr. Chairman, I would suggest to you that the September reductions in the defense budget by an avowedly pro-defense administration demonstrate that money must and always will be a consideration. What we expend on the B-1 we will not have to spend for other strategic or conventional military programs, or for nondefense needs, or for tax cuts.

THE MX

My opposition to the proposed MX system is not based primarily on cost—though in the out years the Reagan program could be almost prohibitively expensive depending on the final basing mode—but rather on its strategic implications.

Unless I am badly mistaken, the primary purpose of our strategic nuclear forces is to deter aggression against ourselves, our interests, and our allies. With this in mind, the problems that do or will exist in the triad stem not from insufficient numbers or warheads or too little firepower but from the perceived survivability of our missiles and bomber—that is, their ability to ride out potential attack and to inflict unacceptable damage to any aggressor.

The major reason that defense planners have pushed for an MX program has been to improve the survivability of U.S. land-based missiles against potential Soviet attack. The Ford and Carter administrations had responded to the theoretical vulnerability of our land-based missiles by proposing that we develop a mobile MX missile that could be shuttled between a number of possible launch points.

Frankly, I had several major reservations about the Ford and Carter plans,

including my belief that, in the absence of a ratified SALT II or successor treaty which limits the size of United States and Soviet nuclear arsenals, the Soviets would be able to field enough warheads to theoretically threaten our land-based missiles no matter how many launch points we provided for our missiles. For this reason, I question the wisdom of pouring vast sums of money into land-based strategic missile forces and favor instead the enhancement of our invulnerable (for the foreseeable future) strategic submarine forces.

The President's MX decision makes even less sense to me than the earlier proposals. Essentially, it postpones a final decision on the proper basing of the new missile by calling for the deployment of the first 36 MX missiles off the production line into fixed silos that now house our aging Titan missile forces.

With regard to the plan to harden these fixed silos, if the Soviet ICBM's can attain the current and future accuracies attributed to them no amount of hardening will be sufficient because any silo would be vaporized by the fireball created when the incoming warhead detonates.

This short-term solution is most unsatisfactory because the MX missiles in the fixed silos will be as vulnerable as our current land-based forces. In fact, they must probably be judged to be more vulnerable because, with their improved accuracy and larger number of warheads, they represent a greater threat to Soviet forces and are thus a more urgent target for attack.

The administration's proposed long-rang solutions to the MX basing problem offer little, in my opinion. The deep underground and air mobile systems suffer from severe cost and operational constraints. The antiballistic missile system not only poses a potential threat to the Nixon administration's ABM Treaty, the most successful of all strategic arms agreements in limiting Soviet-United States military competition, but also is nowhere near technological realization as an effective system, as Secretary Weinberger himself has admitted.

I grant that research and development breakthroughs could make any or all of these alternatives more viable in the future. But, as those who are on the other side of the debate from me on the B-1 issue correctly caution, we cannot afford to place too many eggs in the futuristic technological fix basket.

What we can be sure of is that the current MX plan does not promote strategic stability, a characteristic that is vitally important given the fact that any nuclear exchange is more likely to be the result of accident or miscalculation rather than of rational, premeditated design.

In my opinion, the major negative consequence of the Reagan MX policy would be to place both American and Soviet policymakers on more of a hair-trigger when it comes to launching nuclear attacks: The Soviets because the MX will pose a significant threat to their land-based missile forces (which are a much bigger part of their total strategic forces than U.S. land-based missiles are of ours) and the Americans because to be able to use this new weapon we will have to be prepared to launch it before Soviet missiles can destroy it.

I can think of few more destablizing armaments than a vulnerable, countersilo nuclear weapons system.

CONCLUSION

In my opinion the procurement decisions on the B-1 and the MX offer another example of a strategic-force mismatch.

It is proposed that we increase our strategic bomber force, yet at the same time cut back our strategic tankers and missiles necessary to augment that bomber force.

It is proposed that we make dash capability to take off upon tactical warning a major criteria for the bomber leg of the strategic triad. In view of the fact that any suprise submarine-based attack on our bombers, which would afford the least reaction time, also would provide an unmistakable alert to our more capable ICBM force prior to its coming under attack by Soviet ICBM's, how much importance should be give to dash capability relative to other considerations?

It is proposed that we consider opening up the possibility of ABM deployment, yet this could pose a serious potential threat to the effectiveness of our submarine-launched ballistic missile force, the one element of the triad that now offers survivability and stability for the foreseeable future.

Finally it is proposed that we deploy a vulnerable counterforce system. How can this square with our strategic doctrine which emphasizes deterrence and escalation limitation?

By the B-1 and MX spending decisions we also run the risk of neglecting the less glamorous but vitally important area of conventional force readiness. We need to set priorities, within the Pentagon as well as in the rest of Government. Our constituents, the taxpayers of America, have a right to expect that we not suspend our judgment when billions of their dollars are at stake just because the spending agency is the Defense Department.

In the now notorious Atlantic Monthly article, David Stockman said that the administration would rise or fall depending upon its ability to reject weak claims by powerful clients. In my opinion, the Congress has a similar responsibility. The military has strong claims for increases in readiness items, tanker and airlift capacity, and a number of other programs; but they have weak claims in the case of the B-1 and MX programs before us today.

When listening to the rhetoric, both pro and con, on these weapons systems, with discussions of electronic countermeasures, and counterforce doctrine, and equivalent megatonnage, it is easy to lose sight of the central question at issue here: Namely, how can we avoid a nuclear holocaust while preserving our national security.

With the passage of time since the beginning of nuclear competition between the United States and the U.S.S.R., it is easy to forget the human consequences of nuclear war. In order to put this issue into some perspective the Congressional Office of Technology Assessment issued a report on "The Effects of Nuclear War." I would like to read you some of the report's conclusions:

A large-scale nuclear exchange between the United States and the Soviet Union could kill more than 250 million people in those two countries alone. The numbers killed in the first few days would depend on the exact number of nuclear weapons used and the places of detonation, the time of year, extent of warning, and the weather. U.S. deaths would probably range between 70 million and 160 million, while Soviet deaths would be between 50 million and 100 million. Many "survivors" would die later from starvation, exposure or disease, particularly in areas where the immediate deaths were relatively low.

A "limited" nuclear exchange would have enormous impact as well, even if there were no escalation. An exchange limited to 10 MIRVed missiles aimed at oil refineries, for example, could kill 5 million Americans and destroy 64 percent of the U.S. refining capacity and 73 percent of the Soviet capacity. An attack directed solely at missile silos could kill as many as 20 million Americans.

In the period following a nuclear attack . . . patterns of behavior could be changed by worsening shortages and the enormous psychological shock a nuclear war would produce. A failure to achieve economic viability (production equaling consumption) before stocks ran out would cause many additional deaths, and further economic, social, and political deterioration.

We owe it to our constituents to keep these thoughts always in mind in pressing for cost-effective, mission-oriented defense systems and for effective arms control and reduction agreements.

To the extent that we overemphasize marginal defense capabilities at the expense of our economic strength, we are playing into the only area where the Soviet Union can compete.

To the extent that we overlook the possibilities for arms control, we sentence ourselves and our posterity to a more uncertain and more dangerous future.

In today's debate neither side has a monopoly on virtue or wisdom, or patriotism. We are all concerned about finding the best, most certain way to

prevent nuclear war while protecting our national interests.

After lengthy and calm deliberation, I have come to the conclusion that approval of the B-1 and MX proposals before us today would not be in our national interest and I urge you to support the efforts to delete funding for these programs.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. FOWLER. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate my colleague yielding. I am fascinated by his comments that it is possible to upgrade the B-52 as a possible alternative to the B-1 bomber.

My understanding is that to put new wings on it, refit the engines and other benefits is actually very expensive. Let us say we are refitting 50 B-52's. Does that really give us the kind of capability we are hoping to achieve with the production of the B-1 bomber?

Mr. FOWLER. Those questions have already been answered earlier in the debate.

Mr. ROUSSELOT. Not too well.

Mr. FOWLER. When the gentleman from California was not here.

Mr. ROUSSELOT. Regret to inform you that I was here. I did not think the issue was handled too well. Does the gentleman want to answer it since he brought it up?

Mr. FOWLER. I think the whole question, as we have heard in the now-famous Atlantic Magazine article by Mr. Stockman——

Mr. ROUSSELOT. I do not think Mr. Stockman opposed the production of the B-1 bomber.

Mr. FOWLER (continuing). Is whether or not we have the courage to cut unnecessary military spending as well as domestic spending. The courage to resist those people that have weak claims, I believe Mr. Stockman put it.

Mr. ROUSSELOT. Does that give the House an answer to what the cost would be if we upgraded the B-52 fleet? I think not. My understanding is that it would cost about $40 to $50 million per each B-52.

The CHAIRMAN. The gentleman should let the gentleman from Georgia (Mr. FOWLER) answer the question, since the gentleman from Georgia has the floor.

Mr. FOWLER. The gentleman from California has asked a question and I want to answer.

I say to the gentleman that the administration, through its spokesman, Mr. Stockman, has emphasized over and over that we should reject weak claims from strong clients. The gentleman in that article, Mr. Stockman, said over and over again that he said we should examine the defense industry with the same magnifying glass that we used in the domestic sector.

Mr. ROUSSELOT. I agree with that. Now what is the cost, of upgrading our current B-52 fleet?

Mr. FOWLER. One of the points Mr. Stockman raised was to point out that we should continue to go after these major weapons that do not improve the operable systems that the gentleman from California has praised, the B-52, which with increased avionics the administration says will take us to 1990.

Mr. ROUSSELOT. An incredible answer. I suppose we should go ahead with production on the B-1 bomber.

Mr. FOWLER. I thank the gentleman for his contribution and yield back the balance of my time.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield such time as he may consume to the gentleman from Oklahoma (Mr. SYNAR).

Mr. SYNAR. Mr. Chairman. I do not pretend to be an expert on defense. Like many Members, I tend to rely on the expertise of the chairman and of the ranking majority member. In the case of the B-1, however, we find that they have diametrically opposed positions. Thus I have spent considerable time studying the B-1 question. I must conclude that I would support the position of the gentleman from Florida.

Yes; the B-1 is expensive. Yes; we must exercise fiscal responsibility in defense as in other fields. However, there is no alternative to the B-1. We must always try to use the most efficient means of defense, but that must be an effective means. An effective strategic force requires a penetrating bomber able to locate and attack those Soviet targets whose positions we cannot determine in advance.

Quite bluntly, I worry about the viability of many parts of our strategic systems. By the time the MX is in service, we can expect Soviet missile accuracy to have increased to the point that our extra concrete will be useless.

Our cruise missiles depend on synthetic radar imagery—a technique we have tried to perfect since 1944 with little success. The translation from optical image to radar image is imprecise and is subject to cheap and easy deception by the specialized and well-developed radar deception forces of the Soviet Union. Also, by its nature the cruise missile is an easy target for 23 millimeter antiaircraft guns—the most plentiful antiaircraft weapon in the Soviet inventory.

The Stealth bomber is as yet a paper airplane. It is, moreover, capable of being detected by the old VHF "Pine strut" radars which still comprise one-third of the Soviet antiaircraft strategic defense network. We are using high technology to defeat high technology, but this does little against multimeter wavelength, old-technology low-resolution radars. Moreover, the Stealth design chosen—the flying wing—is of low maneuverability and is thus one which is restricted to high altitudes. It is a gamble that our technology will not be easily matched by massive efforts by the Soviet Union. This leaves us with merely the Trident and the B-1. Because of communications difficulty, the Trident system is inherently rigid in its targeting, which leaves the B-1 as our best bet for a flexible and viable strategic response.

There is an advantage to the manned penetrator which is seldom discussed. That is, its targets include many systems which have as a prime mission the destruction of Europe. Certainly, the approximately 330 surviving Soviet ICBM silos are a target in defense of the United States. However, Soviet long range combat aircraft and SS-20 sites are primarily threats to our reinforcement of Europe and to Europe itself. The procurement of the B-1 will be a message to Europe that the United States will include the protection of Europe among its objectives in a central war. This message may well aid in overcoming European misgivings about our theater nuclear modernization. The procurement of the B-1 thus allows the Congress to go a long way in correcting the impressions given by statements by uninformed senior members of the current administration.

We must remember that the current B-1 is a vastly different plane than that found ineffective by the Carter administration. A key point in any penetrating aircraft's survivability is its radar cross section. The plane which we are proposing to buy has a radar cross section of only 1 percent of that of the B-52, only 7 percent of the original B-1. Moreover, it is the only plane near to flying that can reach all points in the Soviet Union. The B-1 is required for two reasons: First, to be able to penetrate where the B-52 is too large and second, to maintain the penetration mission when our B-52's are converted to cruise missile carriers. Proposals to delay our new penetrator acquisition ignore this last fact. In the late 1980's, our B-52's will no longer be available for the manned penetrator role.

Admittedly, I have certain problems with the specifics of the B-1 decision. I question the actual costs of the plane. The manufacturer claims 22,000 airframe related jobs. However, the Air Force claims $8.8 billion for the airframe. At $40 an hour, 6½-year program, the Air Force figure works out to between 14,000 and 15,000 jobs. Thus, I would not be surprised to see apparent cost overruns in this program. The question is whether this will have been a true cost overrun or, rather, a manifestation of inadequate oversight of the original packaging of the program. I also question whether the decision to buy 100 planes is an op-

timum decision. Half of our expected losses can be accounted for in the servicing of the 60 category one Soviet regiments which are targeted. Admittedly, the prospects of eastern Russia being open to the Chinese may well have a considerable deterrent effect. However, I still would question whether these are proper strategic targets. Possibly by overestimating our targeting needs we are overestimating out total needs regarding fleet size.

On the other hand, there are questions as to whether the Soviet air defenses will be such that the cruise missile threat will be easily countered. At this point, we need to put more emphasis on our manned penetrators which suggests a larger fleet of B-1's. There is a question in my mind as to whether we should not go up to the original fleet of 250 B-1's as planned in the seventies. This may be excessive in terms of current targeting policy, but existence of a planned procurement would be a safeguard against technological surprise. If ALCM does not work or is subject to an easy counter, we will need more B-1's. If Stealth—the advanced technology bomber—does not work, we will need more B-1's. Our fail-safe position is to plan on more than 100 B-1's, even if our procurement is less.

Even if one ignores the probability of nasty surprises with our new technologies, the 100 B-1 fleet assumes the carriage of external weapons. These not only will increase the radar cross section but also ignore the point defense nature of the Soviet strategic defense posture. If we have 13-percent attrition for every target serviced, the last weapon from a fully loaded B-1 would only have a 5-percent chance of being used. It seems to me that we would do better as a country and do better by our aircrews if we were willing to give our crews a chance of survival and to give us a chance of servicing all targets by limiting the planned weapons load to internal weapons and increasing our buy of bombers. This would make our total B-1 buy very expensive—the program would be almost as expensive as the F/A 18. However, cost analysts unconnected with the program tell me that an increase of the program to 300 units would reduce the unit cost by one-third—from $200 million to $130 million in 1981 dollars. We would be paying a huge amount in total but at least we would have some guarantee of security instead of the marginal hope given even by 100 B-1's and pie-in-the-sky systems.

Additionally, I would point out that the B-1 has many capabilities beyond those of a manned penetrator. For example, an adequate weapons load for the B-1 could include at least 16 Harpoon antiship missiles. Two B-1's have the same anti-Soviet fleet strike capability as does an aircraft carrier battle group. The difference is in cost. If we have three B-1's even at $300 million, we are still under $1 billion in cost. If we go to an aircraft carrier, we have the carrier at $3 billion, its escorts at another $3 billion, its aircraft at another $3 billion over 15 years. Then we have the supply ships, the port facilities, the need for two additional battle groups to maintain one on station. We are talking $40 billion to have one carrier battle group on station—not to mention 40,000 men.

I would submit that in these terms, the B-1 is a fiscally prudent means of gaining control of the surface of the North Atlantic Ocean and Norwegian Sea. This, unfortunately, is a cross-service solution not likely to even be considered by the parochial interests in the Pentagon. However, it is one which Congress should examine.

Again, we can look at the first possible intervention by the United States against an aggression in say the Middle East. B-1's based in the United States could reach targets in the Middle East long before an aircraft carrier in the Arabian Sea was in range to launch its planes.

Mr. Chairman, the B-1 is expensive. It is a program which Congress would monitor closely. No less, I believe it is one which must be supported as almost our only means of insuring our deterrence rather than merely hoping for deterrence. And it is, further, a cost-effective, flexible and efficient means of performing vital missions in less than the strategic context.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield such time as he may consume to the gentleman from Ohio (Mr. LUKEN).

Mr. LUKEN. Mr. Chairman, I strongly oppose the amendment before us to delete funding for the B-1 bomber authorized for fiscal year 1982 in this bill. I am convinced that this modernized version of the 1977 B-1 bomber offers the most effective addition to our national defense system.

Production of the B-1B is the most expedient way to redress the possible growing imbalance between the Soviet military forces and the U.S. military forces. It would be dangerous to stop production at this point, especially when President Brezhnev hinted, according to the Washington Post yesterday, that $42 billion, initially earmarked for capital investment for construction and public works, will be used for defense.

Most of us agree that the improved technology of the Soviet Union poses a serious threat to our existing bomber force. The antiquated B-52's must be replaced as the Soviet work to improve their air defense systems. The B-52 is almost 30 years old and was designed almost 40 years ago. It is a relic of World War II. According to administration officials and current U.S. intelligence estimates, the B-52's cannot be relied upon for strategic penetration missions after the mid to late 1980's.

When their penetration effectiveness has been degraded, the Air Force plans to use the B-52's as standoff launch platforms for cruise missiles from outside the range of Soviet air defenses. In addition, if the B-1B is not built, the Air Force will have to spend several additional billions of dollars in order to maintain and prolong the effectiveness of the B-52's pending the development of the advanced technology bomber.

Some have suggested concentrating solely on the development of the advanced technology bomber, commonly known as Stealth. This would be an extremely risky course of action, since this bomber is still in its paper stage and significant acceleration of the program is highly unlikey. There are a great deal of uncertainties tied to this quantum leap in technologies.

In the meantime, we must have a proven B-1 that will provide substantial capability to penetrate the most advance Soviet defenses well into the 1990's. The range and payload of the modernized B-1 have been increased and the radar cross section has been reduced tenfold by redesigning engine inlets and applying radar absorbing materials. The smaller radar cross section also makes it possible to use deceptive electronic countermeasures more effectively than the B-52.

Another valuable feature of the bomber is that while it is slower to its target—and thus clearly not a provocative "first strike" weapon—it can be launched and recalled in a demonstration of alert and resolve or sent forward to attack many targets with pinpoint accuracy.

When the B-1B's no longer have high penetration capability in the 1990's they will replace the B-52's as cruise-missile carriers. ALMC's (air-launched cruise missiles) can be programed to fly a deceptive, threat-avoiding path to even hardened military targets.

The B-1B designed for a 30-year service life with its capability to perform the changing roles of the penetrating bomber, cruise missile carrier aircraft, conventional bomber, and other missions, it should still be in active service in the year 2015.

The B-1B's capabilities far surpass those of the aged B-52's and 1977 B-1.

Action is needed now to upgrade the effectiveness of our defense triad of intercontinental ballistic missiles, nuclear submarines, and strategic bombers. Together, this combination of American military forces confronts a potential enemy with enormously complicated requirement for defense and with virtually insurmountable obstacles against launching a disarming first strike. For both defense and offense, each leg of the triad helps to re-

inforce the survivability and effectiveness of the others. And the B-1B would improve and modernize this manned bomber element, allowing the triad to weather any strategic defeat.

I sincerely hope that the House today will act positively in support of the B-1B as the best alternative for defense.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio (Mr. WILLIAMS).

Mr. WILLIAMS of Ohio. Mr. Chairman, I rise in opposition to the amendments. I would like to use some phrases that have been quoted from the other side of the aisle very loud and clearly in the past few months, and that is to call attention of the Members of this House to another significant reason for moving ahead with the construction of the B-1 bomber. That reason is the strong economic benefit that the B-1 construction will have to the Nation in general, to the Midwest and Ohio region specifically.

There is extensive evidence to show that a significant portion of B-1 construction will be of direct benefit in those areas of the country which are currently experiencing the most severe economic downturn, such as the State of Ohio.

□ 1600

The prime contractor for the B-1 has indicated that the project will provide over 16,000 jobs for Ohio workers and others throughout the Nation, and this could result in creating a new opportunity for a large number of our currently unemployed nationwide, and that is something that has come loud and clear from the other side of the aisle.

Mr. Chairman, we are aware that this country must stand up to the continuing threat of aggression by the Soviet Union. We have the technical capability to meet that challenge. We may disagree on how to do it. And our unemployed workers in Ohio and in the Nation are eager to increase their contribution to provide the industrial base necessary to build an effective and efficient military system.

Everyone has expressed in the past few months and as recently as yesterday the concern of the rising unemployment in this Nation. I am concerned about the armies of unemployed in Ohio and throughout the Nation who stand ready to be enlisted in new jobs to rebuild our Nation's military capability.

I urge the rejection of these amendments.

Mr. ADDABBO. Mr. Chairman, I yield 5 minutes to the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Chairman, I rise to support the Murtha substitute, but to say that if it is not adopted, I would have to oppose the Addabbo amendment that would delete the B-1.

It is very important that we have a modern penetrating manned bomber. Too long have we postponed the development of a supersonic long-range bomber.

The aging fleet of B-52's no longer can perform the mission for which it originally was purposed and built. Most of those planes are actually older than the young men who are flying them. It is a subsonic aircraft. It is incapable of the low-level mission which flies in under the enemy's radar and avoids detection.

For those reasons, I think if we are to maintain the credibility of our defense posture we must have a modern penetrating manned bomber to replace the aging fleet of B-52's.

I think, however, that three reasons argue very strongly for the FB-111 option. Those reasons are its availability, its proven survivability, and its affordability.

It is a sensible option. First off, it is available now. We can have a fleet of operational FB-111's much more quickly than the first operational B-1's would roll off the assembly lines. And since the purpose really is to provide some interim solution to the immediate window of vulnerability, it seems to me that it is very important to get these modern manned bombers as quickly as we can. We can have an equivalent number of FB-111's at least 2 years earlier than we could have the B-1.

The second question avoids affordability. We quite probably can build 150 FB-111's for half the cost of 100 B-1's. The B-1 has been estimated variously at $29 billion, $39 billion now according to the GAO, for the 100 planes. In any event, we have to acknowledge that the unit cost for the B-1 is in the neighborhood of $300 million for each aircraft.

Let us look to 1984, toward the end of that fiscal year, at which time President Reagan had hoped to have a balanced budget. The difference is this: By the end of 1984, we can have a full squadron of FB-111's operational, including spares; but at the end of 1984, we would have only one B-1. By the most optimistic forecast, we would have only one of those aircraft.

The difference in cost for these next 3 crucial fiscal years in which we are trying to strain to hold the budget down, would come to probably $8 billion between the two. Over the long pull, the difference is probably somewhere between $15 and $20 billion, as between whether we go with the known, proven, survivable, available weapons system, which we know we can produce, the FB-111 rather than the still undeveloped B-1.

The FB-111 will not have quite as long a range; it will not carry quite as many bombs. But 150 of them will provide more firepower than 100 of the B-1's. With one aerial refueling it could reach any target in the Soviet Union, and it would require one aerial refueling for the B-1 to reach all such targets.

The FB-111 could not carry the same cruise missile capability, I am told, that the B-1 could carry, but the cruise missile is something that can be lobbed in outside the enemy's radius of defense. It is intended to be carried by the kind of a plane that does not necessarily need to be survivable over enemy targets.

All of those reasons, then—availability, affordability, survivability—seem to argue in favor of this sensible alternative. If we can save $15 billion or $20 billion, surely that is money that can go into other weapons systems, the MX, the cruise missiles that we are going to need, and for a more rapid development of the Stealth bomber. It can speed up the development of the ultimate weapon system, which all of us seem to agree needs to be expedited as rapidly as possible.

Does it make sense to go simultaneously into the development of three or four entirely new weapon systems competing for these hard-to-get dollars? If it is going to be $30 billion, or $39 billion that we commit today to the B-1, is it not reasonable to assume that this might turn out to be money that is going to be taken from the expeditious development of the MX, or the Stealth?

So for those reasons, while I am certain that we do need a modern manned bomber, and I shall oppose the Addabbo amendment unless the Murtha provision is substituted, I urge the adoption of the substitute offered by the gentleman from Pennsylvania.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. MITCHELL).

Mr. MITCHELL of New York. Mr. Chairman, I rise in opposition to the amendments from both of my friends from New York and Pennsylvania.

The last time I heard the FB-111 stretch version discussed seriously was quite a while ago. This is another paper airplane that we do not know very much about. The last time I heard it talked about seriously, the word was that it would carry about half the load of the B-1, it would provide about half the range of the B-1, it will cost about half as much as the B-1, but you would need a lot more crew support, a lot more air base support, a lot more tanker support, to make it viable.

I urge support of the program to provide 100 B-1's, Mr. Chairman. It is an excellent airplane. It is far superior to the B-52. It carries nearly twice the payload and flies at nearly twice the speed.

Mr. Chairman, how one comes down on these issues, how one makes the

final decison, depends a lot on who he listens to and who he believes. I have great respect for Secretary Weinberger. I think he is one of the finest Cabinet officers we have seen in any administration in recent years. He assures us that the B-1 will be able to penetrate for about 10 years. He assures us also that the radar cross-section will be about one one-hundreth of the B-52. It is a highly survivable aircraft. We can send it out and get it back without asking our pilots to fly suicide missions or kamikaze runs.

There have been a lot of different estimates about costs. The Secretary assures us that he is going to bring it in at about $200 million a copy, maybe $250 million a copy. He assures us he is not going to gold plate it, he is not going to load it with gadgets, and he has finalized the design, which means we are not going to delay it, hold it up for every latest modification or development in technology.

There has been a lot of talk, too, about the cost of the different mixes. Mr. Chairman, if we mix 100 B-1's with 150 Stealth airplanes, it costs almost identically to what it would cost for the mix of B-52's, which we will have to patch and paste for 15 years, and 250 Stealth aircraft.

As for the future, the B-1 can serve us as a penetrator for 10 years in a very difficult radar environment and serve us as a penetrator for many more years in a less sophisticated radar environment, which means most of the rest of the world. It can also serve us as a standoff vehicle for cruise missiles. It would be useful for us for many, many years.

My argument against Stealth is that we may never see Stealth. I have heard a lot of other bombers debated here which we have never seen, which have been paper tigers. No one knows how long it is going to take to develop it, if ever. We cannot be certain at all, but certainly not within 12 years. In the interim, we will have the B-1. It will be effective. It will penetrate. It will help provide for the defense of this Nation.

I urge my colleagues to vote against the amendments and for the B-1.

□ 1610

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. STRATTON).

Mr. STRATTON. Mr. Chairman, it may be difficult to add anything to the debate at this period, but I think there are two points that need to be made, even though they may have been touched on briefly earlier in the debate.

The standard excuse for opposing the B-1 was outlined recently by the gentleman from Georgia (Mr. FOWLER); namely, that we can keep the B-52 going until the very late 1980's. By the very early 1990's, Stealth will be available and, therefore, why should we spend all of this money, $20 billion, for a plane just to stick into the middle there for only 2 or 3 years.

But the two points that have been largely overlooked. The first point the gentleman from New York (Mr. MITCHELL) mentioned just a moment ago, but some people may not have caught it.

That point is that it will cost as much money to keep the B-52 going into the early 1990's as it will be to build the 100 B-1 bombers, about $20 billion.

As we all know, there is a point beyond which we cannot drive our cars because it costs more to keep on driving them and replace all their machinery every other year than it is to buy a new one. So the real question becomes whether we want to spend all this money for a modernized B-1 or spend it to keep these old, rusty obsolescent B-52's going.

The other point is also one that the gentleman from New York (Mr. MITCHELL) made, and that is that the Stealth bomber is still a paper plane. We do not know what it is going to be able to do. We do not know how fast it can go. We do not know what kind of a payload it will carry. And judging from some of the other development plans that the Pentagon has handled in the past, it may not be available until the year 2000 or even the year 2010.

Take a look, for example, at what happened to the M-1 tank. They the Army still has not gotten all the bugs out of the M-1 tank even though our soldiers in NATO are crying for it.

So the sensible thing as far as the bomber leg of our Triad is concerned is to put our money into a plane that will be not only available but also effective in case the Stealth does not come in on the schedule we hope it will. Lets spend our money on a plane that will be a useful vehicle well into the future rather than on an old hulk which will be ready for the junkyard, even though we have spent $20 billion to keep it rolling for another 10 years.

Mr. DUNN. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Michigan.

Mr. DUNN. I thank the gentleman for yielding.

The gentleman said that the aircraft our pilots are flying are 30 years old. How old will that make them in the year 2000?

Mr. STRATTON. That would make them about 50 years old.

Mr. DUNN. A 50-year-old airplane we will be asking our pilots to fly.

Mr. STRATTON. As a matter of fact, probably closer to 55.

Mr. COEHLO. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from California.

Mr. COEHLO. Mr. Chairman, I rise in opposition to the amendment.

Mr. MYERS. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Indiana.

Mr. MYERS. I think the gentleman has made a very appropriate remark. Does anyone here drive to work in a model T Ford, that old a vehicle? Of course not yet asking our Air Force to continue using the B-52 for at least 10 more years is comparable to us driving a model T on our busy streets and highways.

Mr. STRATTON. The gentleman is absolutely right.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 1 minute to the gentleman from California (Mr. BADHAM.)

Mr. BADHAM. Mr. Chairman, I would say it is difficult for those of us on the Armed Services Committee to debate these obvious issues time after time. Very few of us, and I am one, have flown these three airplanes under discussion, F-111, B-52, and B-1.

To make the FB-111 we would have to take 150 of the F-111's out of service to alter them to make FB-111's. If we were to do that, we would admit there really was no mission for the TFX or F-111 and I do not think anybody on this floor would like to admit that.

So we do not have FB-111's available unless we replace them. With what, F-15? At $30 million per copy?

The B-1 is here. It is ready to go with Stealth technology as it exists to the state of the art and we do not have presently a Stealth aircraft because it is just not available yet.

We need the B-1. I think it is time the Congress got on with its work and rejected both of these amendments and moved our defense capability ahead with the only manned penetrating bomber that will work and is available today.

Mr. MYERS. Mr. Chairman, will the gentleman yield?

Mr. BADHAM. I yield to the gentleman from Indiana.

Mr. MYERS. I thank the gentleman for yielding.

Listening to the arguments about Stealth, by the time Stealth is ready for production there will be another new plane proposed on the drawing boards, but not ready to be built and we will never get one built.

Mr. BADHAM. I thank the gentleman for his contribution.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 1 minute to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, our defenses are based on a triad, because each log of the triad has a different response time. If we eliminate the

bombers, because the B-52 is outmoded, we will not have that part of triad.

Also remember the B-1 is a penetrating bomber that can be recalled if there had been a mistake in signals.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, I would like to say, as was pointed out earlier, the time has come now to do something about the aging fleet of B-52's. The only thing we have available is the B-1B. It is a different airplane than the one that was canceled by President Carter. It is a much advanced airplane and the Stealth is still a plane in the future.

I support the continued efforts for the Stealth. I think the only alternative we have is to proceed with the B-1.

Mr. WHITE. There has been a criticism of the defense system of the United States, and that is that we try to perfect a weapon system, before we actually produce it, whereas the Soviets have what they call concurrence. They develop a system, produce it and then improve it and develop it further. We should have the B-1 bomber and then continue the development.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, I take the floor to support the amendment by my distinguished colleague from New York (Mr. ADDABBO), the chairman of the Appropriations Subcommittee on Defense, to stike the $1.9 billion which this bill would provide for the B-1 bomber. This would be a colossal waste of money and I urge this House not to be panicked into opposing this amendment. There is no urgency about building a new strategic bomber right now. The B-52's flying now can carry on for many years yet, especially as they are modified to carry air launched cruise missiles. Furthermore, the B-1 is not ready to go as its supporters would like us to believe—the first B-1B would not be able to get airborne with nuclear weapons aboard until 1987, 6 years from now. By then even administration spokesmen admit that the B-1B will not be able to perform its mission for more than a few years, at best, until the Russians are able to shoot it down. So what the pilots at the Pentagon want us to do is spend $40 billion for a bomber fleet at $400 million apiece, but only expect them to be able to fly into the Soviet Union to perform their mission for 3 years. I do not see how the House of Representatives can be so numb to numbers that it cannot realize how wasteful this would be. One B-1 bomber will soak up as much tax dollars as do the 886 community health centers across the country which serve more than 5 million people.

The Carter administration, led by Secretary of Defense Harold Brown, had the good sense to stop the B-1 before it ever got airborne. I hope this House will continue to use good sense and support this amendment.

Mr. ADDABBO. Mr. Chairman, I yield 1 minute to the gentleman from Massachusetts (Mr. MAVROULES).

Mr. MAVROULES. Mr. Chairman, I rise to speak in support of the Addabbo amendment, and urge that funding for the B-1 bomber be stricken from this defense appropriations bill.

Many new initiatives are contained in this appropriation bill. The decisions made this year will form the foundation of our Nation's defenses in the coming 21st century.

Two decades ago, President John Kennedy outlined our responsibility in this nuclear age—that it is America's destiny rather than choice to be the watchman of world freedom. That responsibility, to preserve our freedom and keep the peace, remains the greatest challenge facing the United States today.

Yet, even with the national mandate to revitalize the American military, it is essential that the decisions made this year be prudent and provide "the most effective defense" from limited tax dollars.

Consequently, as we debate the B-1, it is important that this program not be viewed in isolation. We cannot restrict this debate to bomber force structures and hypothetical "windows of vulnerability."

Instead, we must measure the B-1 program, not just on the basis of its particular mission, but rather, we must judge it on the basis of how it fits into the total defense equation. If we examine our defense structure in its totality—strategic forces, tactical forces, operations and maintenance, manpower, and research and development—if we take a hard look at these critical areas and their future funding profiles, there is no escaping the conclusion that the B-1 program is so costly—its military effectiveness so marginal—that it will hurt rather than improve our overall defense posture.

In coming to this judgment, I carefully evaluated two critical issues: Cost and initial operational capability.

The official line out of the Pentagon a month ago was that 100 B-1 aircraft would cost the Nation $19.7 billion. The Congressional Budget Office, last week, estimated that B-1 program costs could exceed $39 billion. In response to the CBO estimates, Air Force officials insisted that the program would cost $20.5 billion in current dollars, or $28 billion when inflation is included. Ironically, in January, certain officials claimed that the 100-bomber force would cost $11.9 billion. Even with these conflicting cost estimates, one point is very clear. The B-1 will be one of the most expensive weapons programs in the history of this country.

Even traditional supporters of the B-1 concede that program costs are disturbingly high, with the per aircraft costs at a minimum of $200 million.

Perhaps in isolation—standing alone—a case for the B-1 could be made. However, it does not stand alone in our strategic arsenal. The bomber is but one part of a triad of forces which includes intercontinental ballistic missiles, and submarine-launched ballistic missiles.

Now within the bomber group of the triad, there is not just the B-1. Also in production or research and development are air-launched cruise missiles, modifications to the B-52 G and H aircraft, and the advanced technology bomber. In the present fiscal year 1982 budget, there is over $3.6 billion for these bombers, or bomber-related programs.

Spending $3.6 billion for the bomber leg of the triad translates into an undeniable reality—there is simply not enough budget authority for the Air Force to proceed with the B-1, MX, advanced technology bomber, and other strategic programs, if the Air Force is to preserve sufficient budget authority for the F-15's, F-16's, A-10's, transports and other tactical aircraft which are so essential to our conventional military capabilities.

If the Members are willing to support funding for the B-1, they run the risk of compromising the funding base available for our conventional forces. How will we be able to afford a sufficient number of cargo planes capable of moving equipment to the Middle East in an emergency with so much money tied up in bombers?

How will be be able to procure sufficient tactical aircraft for Europe, where we are outnumbered, when the air-breathing leg of the triad consumes much more than its fair share of the budget? These are fundamental questions each one of us must answer.

But in addition to the fiscal arguments, there is also the critical issue of the initial operational capability for the B-1, and the projected IOC of the advanced technology bomber.

Under present Air Force plans the first squadron of B-1's are to have an initial operational capability in 1986. The first aircraft to be operational will not carry cruise missiles but will instead hold short-range attack missiles. While there are conflicting assessments as to the IOC of the advanced technology bomber, the most optimistic date for its operation is 1989, with 1995 the most pessimistic. Secretary Weinberger has used the 1991 IOC for the advanced bomber.

While there are risks associated with the advanced technology bomber, the former Commander of the Strategic Air Command, Gen. Richard Ellis, advised me this summer that the advanced bomber program was structured so that there was a high probability that the aircraft would be operational in a timely way. Further, he stressed that the advanced bomber program must have priority over any other bomber procurement program.

The question I present to my colleagues is very simple. Can we afford almost $30 billion for a weapons program which will have a strategic life of slightly more than 5 years?

If you are concerned about the total size of this defense budget; if you are concerned that in future years we will not have the resources to properly fund conventional forces; then you must conclude as I do. We cannot afford a B-1 program which will not contribute significantly to our military capability, and which will drain resources away from other critical national priorities.

Last year, many of us asked the question, how is it possible to raise defense spending, cut income taxes, and balance the Federal budget, all at the same time? Now, thanks to the Director of the Office of Management and Budget we know the answer. It cannot be done.

If we are to maintain a national consensus for a revitalized military then it is necessary for this House to propose realistic and honest defense priorities. The country needs to improve existing forces and equipment before leaping at glamorous weapons which are not essential.

I urge support for the amendment.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. MILLER).

Mr. MILLER of California. Mr. Chairman, I rise in opposition to the B-1 bomber.

I find it very difficult to vote for the B-1 when this country is staggering under a $1 trillion debt. With this program we are being asked to support the purchase of an airplane that is far too expensive for the mission for which it is designed. By the time the B-1 is ready for deployment it will be nothing more than an overbuilt cruise missile carrier—a mission that can be met by another of other options that will do an equal job at less cost to the taxpayer.

Over the last couple of weeks I have attended a number of briefings and listened to spokesmen for both the Pentagon and opponents of the B-1. After listening to all arguments I remain convinced that it is still wrong to vote for the procurement of the B-1 at this time. Finally, Mr. Chairman, I am concerned that to purchase the B-1 at this time will cause delay in the development of the advanced technology bomber (ATB). These same concerns were expressed better by Mr. Dicks of Washington. We would be wise Mr. Chairman to accept the amendment to allow research and development to continue by not purchasing this very short-term and excessively expensive answer that will not solve our defense problems in the area of a workable penetrating bomber.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. FAZIO).

Mr. FAZIO. Mr. Chairman, I rise in strong support of the Murtha substitute.

The vote on this amendment is a critical one, for we are truly at the proverbial fork in the road. Do we spend upward of $20 billion on a manned penetrating bomber that will only begin to be deployed in late 1986, coupled with over $30 billion on its replacement, the advanced technology bomber that can be ready for operation by the early 1990's; or, do we invest our limited resources in another direction?

There is no question that the Strategic Air Command is forced to rely on a fleet of aging bombers. The B-52 has served us well, but it is questionable as to how much longer this bomber will be able to evade the ever-increasingly sophisticated Soviet air defenses. Furthermore, it is generally agreed that the ATB is the answer for the long-range future; however, what is our best interim solution? I contend that the F/B-111 is the best alternative in terms of capability and costs.

Allow me to quote General Ellis, recently retired SAC Commander in Chief. He had the responsibility for the U.S. strategic planning and for two-thirds of our strategic execution, and has put the problem in perspective this way:

> Two alternative programs, 155 FB-111 B/C's or 100 B-1's, ultimately achieve an equal capability. However, the FB-111 B/C becomes available sooner—and our country needs the earliest possible relief. A second criterion is cost, and, while there are many ways to measure this factor, a B-1 buy costs about 2.5 times that of an equivalent force of FB-111 B/C's. In view of other heavy concurrent defense needs, total cost must be an important consideration, although front-end investment cost is high in both programs.
>
> Another important consideration is the fact that when a new strategic penetrating system comes into the inventory in the nineties, the FB-111 B/C can become the night/all-weather aircraft for force projection, contingency and tactical nuclear forces. The added contribution that aircraft could offer would be as significant in the 1990's as it would be today. Conversely, opting for the B-1 at this time could preclude procuring a more advanced aircraft available by 1990. What makes this a legitimate concern is that B-1 technology is representative of the late 1960's, or maybe 1970, and that aircraft could become obsolete in the nineties as a strategic penetrator.

If we opt for the F/B-111 as the interim solution we will not only save the taxpayers billions of dollars, possibly as much as $30 billion if the Congressional Budget Office figures are correct, but we will have online by late 1984 a bomber which can effectively meet our strategic requirements. This is over 18 months ahead of the B-1B deployment date.

We will have a near-term vulnerability problem, and it is necessary to effectively address that situation; but, we do not have unlimited resources. Thus, we must look at this decision, not as an isolated issue, but rather in terms of all our defense requirements and in terms of the resources available. The F/B-111 is by far and away the best interim solution, and I therefore urge my colleagues to join with us and vote in favor of this amendment.

Mr. BROWN of Ohio. Mr. chairman, I wish to rise in support of the B-1 bomber. It is an essential tool in our overall strategic defense machinery.

The B-1 bomber will prove a necessary replacement to the aging B-52 force. Without it, we would be totally dependent on the B-52 force to carry the manned penetrating bomber loan through the 1980's.

The weapon that we are discussing today is not the same as the B-1 bomber that was canceled in 1977. Instead, it is far more efficient and capable. It has been improved to include Stealth technology and the capacity to carry cruise missiles. It also allows new defense avionics that are unsuitable for the B-52.

Controversy has continued concerning the cost of the B-1 bomber, but the Secretary of Defense, Caspar Weinberger, is committed to a strong cost control program. The estimated cost of $20.5 billion for its development includes all planned modifications to the original B-1 that are considered militarily essential.

Our development of this weapon will greatly strengthen our defense capabilities and will go a long way to correct the arms imbalance, tipping the scales in our favor. This is the only way we can insure peace, a peace through strength.

Mr. THOMAS. Mr. Chairman, I urge my colleagues to support H.R. 4995, the Defense Department Appropriations Act of 1982 which appropriates $1.8 billion for procurement of the B-1 bomber.

Our current manned bomber fleet, which carries 50 percent of the megatonnage in our arsenal is composed of 20-year-old aircraft—the B-52. This aging bomber is no longer capable of carrying out its primary mission of penetrating to targets within the Soviet Union.

It is absolutely essential to the maintenance of America's strategic deterrent to modernize the manned bomber component of the triad. The version of the B-1 which President Reagan wishes to produce, the B-1B, incorporates many improvements over the B-1 including adaptations of some of the latest technologies. For instance, the range of the B-1B has been increased so that it can penetrate to its targets in the Soviet Union and recover in a third country without aerial refueling. In addition, utilization of Stealth technologies in the B-1B will reduce its radar cross section to 10 percent of that of the original B-1. These changes and others will insure that the B-1B will be able to penetrate to its targets in the Soviet Union and perform other conventional missions well into the 1990's.

Some have argued that we should make do with the B-52 until a Stealth aircraft is ready. But I think that such a course would be unwise. What if the experimental technology fails or is too long in coming to fruition? Stealth may be just over the horizon, but like the horizon, it may ever recede as we advance toward it.

In contrast, the B-1B is ready—now. Its production models have been exhaustively tested and we know its capabilities. Production of the B-1B as our first-line bomber while we simultaneously explore Stealth technology is the prudent course to pursue. By taking such action we will begin, finally, the rejuvenation of the air arm of the triad upon which rests our deterrence and the peace of the world.

Mr. EDWARDS of Alabama. Mr. Chairman, I think the issue is clear and most Members know exactly how they are going to vote on this. I would like to comment briefly on the FB-111 issue that will be voted on first.

In my view, the right direction to go is the B-1 ATB and if the B-1 is voted down, then I think the right way to go is to go directly to the ATB.

I have tried every way I know to justify the FB-111 as an interim bomber to have some useful purpose in this whole equation, and I simply cannot reach that conclusion as being worthy of serious consideration.

I would urge Members to vote for the B-1, that is, to vote against the Addabbo amendment and let us do the best we can to bring a penetrating bomber on the scene just as soon as it is available, as soon as we can do it, to fill that gap that is clearly out there.

Mr. ADDABBO. Mr. Chairman, as I said earlier in my beginning remarks, we are discussing a B-1 bomber as though it already existed. As I explained earlier, my amendment cuts out the procurement funds only. R. & D. continues.

Both Secretary Weinberger and Secretary DeLauer have testified to the fact that the B-1 still requires $2.4 billion of research, so there is no B-1 bomber. It is a paper plane as much as the Stealth.

Why do I support the Stealth? Because if we develop the Stealth, at least we will have a weapon that can meet our needs and beat the Russian defenses well into the 21st century. The B-1 cannot do that. That is not my testimony, that is the testimony of the Secretary of Defense before our subcommittee.

Beginning about 1989, the B-1 becomes a cruise missile carrier—that is right, a plane costing $300 million becomes a cruise missile carrier. The B-52 can carry cruise missiles. So can a 747 carry cruise missiles. We do not need a plane to carry cruise missiles that will cost $300 million.

The first time that we may see a B-1B is perhaps 1986, not tomorrow, and not next year. In 1986, maybe 12 airplanes will be ready; 1987, maybe 62; 1988, maybe 100. And those will cost $300 million a copy.

We know what the Russian defenses will do to a B-1B at that time. We also know those defenses cannot defeat the Stealth. That they cannot do. We need the Stealth bomber as fast as possible and we can get it, Mr. Chairman. The Secretary of Defense, not me, not the gentleman from New York (Mr. ADDABBO), but the Secretary of Defense has said if we properly fund the Stealth program we can move it up. We could move it up and very likely have it by 1989, and not have it pushed into the 1990's, as the Air Force would do by getting the money for the B-1.

The Air Force generals have testified the B-1 is their priority and everything else, including Stealth, would go. Stealth goes in favor of the B-1 bomber, and that is the question before us: whether we want to buy an archaic plane at $300 million a copy, or whether we want to spend our tax dollars for a penetrating bomber, a bomber which will meet the Russian defenses in 1988 and into the 21st century.

● Mr. DORNAN of California. Mr. Chairman, I join with my colleagues here today in support of President Reagan's efforts to restore funding for the B-1 bomber project which President Carter had terminated. Now that we have a President more committed to maintaining the delicate strategic balance between the United States and the U.S.S.R. In pursuit of that balance, President Reagan has announced his intention to build the long-delayed B-1 bomber. This aircraft is acknowledged by the majority of aviation experts to be the best bomber ever developed by man. It is capable of penetrating Soviet air space undetected and may continue to have that ability until the 1990's or later. Only after the Soviets spend massive funds on improved radar systems will they be even able to detect the B-1.

The citizens of my 27th Congressional District can be particularly proud of the B-1 bomber project; much of the research/development and manufacture is the work of local citizens. The Reagan decision to recommend funding for the construction of the B-1 is based upon some logically accepted assumptions. The United States must depend heavily on bombers—and sea-based forces—while we take steps to strengthen our land-based missiles. We cannot afford the luxury to wait for the Stealth bomber, which presently exists only on paper. There are currently technical uncertainties about the Stealth bomber. It is expected that these uncertainties will be resolved during development and the advanced technology bomber will be a very effective aircraft when ultimately deployed. Without the B-1, there would be pressures to accelerate the Stealth bomber, which would increase program risks and possibly result in a less capable aircraft being deployed. Building two bombers will stimulate competition and give the Defense Department the flexibility to adjust bomber production in accordance with any changes in estimates of the cost and effectiveness of the two aircraft, as well as any changes in the Soviet military capabilities.

President Reagan has proposed building 100 of the variant bombers. The term variant is used because research and development has continued on the B-1 since the Carter cancellation. Innovations and efficiencies developed in the 5 years since its cancellation will be incorporated in the new variant model. The first B-1 squadron is expected to be operational in 1986.

Mr. John W. R. Taylor, editor of Janes All the World's Aircraft, is universally recognized as one of the foremost experts on every type of military and civilian aircraft. Mr. Taylor warns,

> It is therefore vital for all people to understand that the fragile co-existence maintained for generations by balanced East-West military power is being allowed to slip inch by inch from our grasp.

When Mr. Taylor was asked about his thoughts on the opposition that has been raised to the B-1, he replied:

> Most of that has been due to the high cost. But really, I do not think that the cost is the main consideration. It is a question of what it does for you. Does it keep you alive? If there is anything else that will do the job less expensively, by all means build it. But, in this case, there just isn't anything else.

The decision to build the B-1 is a clear move away from the previous administration's policy of unilateral arms restraint. The Reagan administration wants to be sure that any weapons system forgone by the U.S. Government is reciprocated by the Soviet Union. The new policy direction will increase the Soviet incentive to se-

riously discuss arms limitation agreements. In turn, assisting our Nation in achieving its most important foreign policy goals: Preservation of peace and valid arms limitation agreements with verifiable provisions in any treaty that is agreed upon.

The B-1 bomber will have advantages that no other leg of our triad of strategic nuclear forces possesses. Some of these are:

Bombers are the only element that can be launched prior to a decision to employ these weapons, and permits a trained crew to take actions and accept responsibilities that cannot be anticipated or preprogramed in missile systems.

Weapons-carrying bombers can be launched to insure their survivability, or to signal national resolve during times of crisis with the confidence that the crew can be redirected or recalled as the situation develops. Bombers can be put on increased ground alert, dispersed to remote airfields, flown on airborne alert, or dispatched to trouble spots throughout the world without a final commitment to use their weapons. In a time when the availability of foreign bases and ports is uncertain, the B-1 will provide the quickest, and in some cases probably the only, means to mount a rapid show of force.

Bombers provide the only capability to engage unanticipated or mobile targets by using the crew and aircraft sensors to determine target location at the times of delivery.

In assisting maritime roles, bombers have the inherent capability to provide an important supplement to U.S. Naval Forces. They can provide collateral maritime support in long range sea surveillance and interdiction, mine laying and, potentially, in antisubmarine warfare.

As a reusable strategic weapons system, bombers have the capability to accurately deliver large nuclear or conventional payloads throughout the course of the conflict, regardless of the level.

The B-1 is going to enter into the defense of our Nation's borders much later that it could have or should have. It will nevertheless play a vital role on our strategic defense until the year 2000, and perhaps beyond. First as a penetrating bomber, later as a bomber capable of standing off the coast of an adversary nation and launching cruise missiles. Its manufacture sends a strong signal to the Soviets that we are as serious about our defense as we are about pursuing arms agreements.

And one more item before I close. I will be circulating a letter to colleagues which will be sent to the President asking him to appoint the Nation's No. 1 "junkyard dog" and a bona fide "cheap hawk" as the project manager for the B-1 project. I of course refer to A. Ernest Fitzgerald who was removed some 10 years ago from his position of authority in the C-5A cargo plane project because he "committed a truth" with respect to the C-5A cost overruns in testimony before a congressional committee. I think that the appointment of Mr. Fitzgerald will further add credibility to the President's efforts to build up the defenses of the United States without at the same time breaking the national treasury.●

● Mr. BIAGGI. Mr. Chairman, I rise to join my friend and colleague, the distinguished chairman of the Defense Appropriations Subcommittee, Mr. ADDABBO, in support of his amendment to delete $1.8 billion in procurement funds for the B-1 bomber program.

At the outset, I must state my firm belief in and support of an American military defense posture which is second to none in the world. Clearly, American technology has provided us with an ever-increasing array of military hardware which has enhanced our offensive and defensive capabilities in all three areas of our defense program—on land, on sea, and in the air.

This amendment represents a bold, but essential attempt to curtail what I see to be a dangerous American desire to continually spend money on new and supposedly superior equipment at the expense of existing weapons systems. A perfect case in point is the B-1 bomber.

There are numerous reasons why we should oppose the building of the B-1. This issue of cost must be seen as critical, particularly in light of two factors—conflicting estimates and inflation. Official estimates have varied significantly and risen dramatically in recent months. In July, the Air Force said that it would cost $19.7 billion in 1981 dollars which climbed to $20.5 billion by October. A Defense Department estimate stated the cost to be $27 to $28 billion in 1981 dollars. Further, both GAO and the Congressional Budget Office have offered significantly higher estimates. GAO stated estimates were short by $5.5 billion and CBO, using its own assumptions came up with $26.2 billion.

With inflation assumptions, these costs climb even higher. CBO, using administration inflation assumptions calculated $34.5 billion in costs and using its own assumptions, came up with $39.8 billion.

Given the history of military spending on strategic defense equipment which sees an ever-increasing bill to produce the same piece of equipment over time, we cannot be sure that the same will not happen to the B-1. Given the current economic recession which does not foresee a declining inflation rate until late next year—at the earliest—why should we lock ourselves into a stopgap program whose cost-benefit over time is at best unpredictable? To spend $250 to $400 million for every B-1 bomber given our current economic situation would be foolhardy.

The capabilities of the B-1 must also be questioned. We have heard conflicting reports from the highest levels of the administration in recent days about the relative effectiveness of the B-1 as well as its projected operational date. Defense Secretary Weinberger recently stated that to send the B-1 against Soviet defenses in 1990 or after would be a "suicide mission" given the technological advances we would realize by then. This concern was also echoed by former Defense Secretary Brown and Gen. Richard Ellis, former Commander in Chief of the Strategic Air Command.

To fund a long-range weapons system such as the B-1, even under the most optimistic assumptions, would give us a fleet of 100 obsolete bombers by 1990 which would perform for less than one-third of their planned life. The B-1 cannot justify its enormous cost by assuring us that we will have a design mission capable of multiple defense roles. It cannot be considered a viable candidate to be a premier strategic weapon for our defense arsenal if it will be unable to penetrate Soviet defenses into the 1990's.

The issue of the U.S. commitment to arms control must also be considered when discussing the fate of the B-1. Today, President Reagan in his first major foreign policy address, clearly underscored the American commitment to arms control through mutual reductions with the Soviets. If we continue with the President's proposal to build the B-1 we will most certainly be sending mixed signals to the Soviets. How can we advocate arms control—and fault the Soviets for their unchecked weapons build-up when we would be doing the same?

George Kennan, the renowned Soviet historian and former Ambassador to Moscow, recently stated that our perceptions of the Soviet Union's defense capabilities were "an endless series of distortions and oversimplifications * * * and routine exaggeration." As the intellectual leader in the 1940's who spearheaded the U.S. policy vis-a-vis the Soviets of containment, we would be well-advised to heed his words. He clearly sees the rhetoric of the Defense Department on Soviet military might a contributing factor to the unchecked growth of our own defense programs. To build the B-1 would be to believe the false hysteria which has been created to justify its production. We do not need a new bomber—we can adequately equip our current defense systems with additional capabilities to carry us through the next decade until the

Stealth and cruise-missile programs become reality.

The work and the recommendations of the Appropriations Committee must also be considered. This bill appropriates $196.7 billion for the Department of Defense, a reduction of $4.2 billion from the budget and an increase of $25 billion from 1981. The distinguished chairman of the subcommittee has heard 8 months of testimony which has filled nine volumes totaling 8,000 pages. He clearly believes that to build the B-1 would be to build a military as well as a fiscal bomb. The distinguished chairman of the full Appropriations Committee, Mr. WHITTEN, agrees with him. I fully concur with them that the B-1 is a thing of the past and that we should concentrate our resources on building a more advanced system which will carry us into the 1990's and also provide us a short-term system which can fill the gap between now and when the Stealth becomes available.

It has been suggested that the FB-111 could fill this gap and would be comparable to 100 B-1's at a cost of $8 billion. The $32 billion difference between the two is enough to fund the entire Stealth program and at the same time, accelerate the cruise missile program. This is but one of many other options open to us if we forego the B-1.

Finally, I must make a case against the B-1 in light of the human costs involved. To date, we have cut $35 billion in programs through reconciliation which directly affect the lives of millions of Americans. Intemperate defense spending must be checked if we are to maintain even an adequate offset in the budget for vital human service programs. This is the largest defense budget in our Nation's history—at a time when we have mammouth cuts in non-defense-related programs and are looking at the possibility of an additional $4 billion in this area by the end of the year.

Clearly, the votes we have taken on the continuing appropriations bill this week to turn back any more cuts in nondefense programs are a strong indication that we will not tolerate further assaults on the neediest in our country. In this case, the B-1 would be costly investment in real terms and in human service terms that we cannot justify.

I urge my colleagues to join me in support of this amendment to delete funding for the B-1 bomber. To put it more simply—the B-1 is a bomb-out and we should not support it.●

□ 1620

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from Pennsylvania (Mr. MURTHA) as a substitute for the amendment offered by the gentleman from New York (Mr. ADDABBO).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. MURTHA. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 99, noes 307, not voting 27, as follows:

[Roll No. 315]

AYES—99

□ 1630

Messrs. DERRICK, MICA, BROWN of California, DYMALLY, LATTA, SAVAGE, HEFTEL, and OBERSTAR changed their votes from "aye" to "no."

Mr. LONG of Maryland, Mrs. COLLINS of Illinois, Messrs. MOFFETT, ERTEL, NOWAK, WAXMAN, RODINO, FOLEY, and PATTERSON changed their votes from "no" to "aye."

So the amendment offered as a substitute for the amendment was rejected.

The result of the vote was announced as above recorded.

□ 1640

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. ADDABBO).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. ADDABBO. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 142, noes 263, not voting 28, as follows:

[Roll No. 316]

□ 1650

The Clerk announced the following pairs;

On this vote:

Mr. Reuss for, with Mr. Pepper against.

Mr. Florio for, with Mr. Breaux against.

Mrs. Chisholm for, with Mr. Dixon against.

Mr. Mattox for, with Mr. McDonald against.

Mr. Donnelly for, with Mr. Davis against.

Mr. Moakley for, with Mr. Duncan against.

So the amendment was rejected.

The result of the vote was announced as above recorded.

□ 1700

AMENDMENT OFFERED BY MR. EDWARDS OF ALABAMA

Mr. EDWARDS of Alabama. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. EDWARDS of Alabama: On page 23, strike "$13,957,598,000" on line 7 and everything beginning with "$121,700,000" on line 11 through "1982," on line 14 and insert "$13,835,898,000" on line 7 in lieu of "$13,957,598,000".

Mr. EDWARDS of Alabama. Mr. Chairman, I will be very brief, but this needs to be done.

In our report language on page 227, we make the point that we have provided for the funding of certain A-7K aircraft "if authorized by law."

Also on page 23 of the bill, the parts that have just been referred to in the amendment, it says $121,700,000 shall be available only for the procurement of A-7K aircraft "only if such procurement is authorized in Department of Defense Authorization Act, 1982."

Mr. Chairman, the A-7K was not authorized. I would, therefore, suggest that this amendment is in order and should be adopted. Were it not adopted, then there would be an extra $121 million just left in the account in the Defense Department. I think that would be an unwise move and I urge the adoption of this amendment.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from New York.

Mr. ADDABBO. I fully agree with the gentleman. This would just go into the unobligated balances which are up now to about $38 billion.

Mr. WILSON. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from Texas.

Mr. WILSON. I would just like to express to the gentleman that I introduced this amendment in subcommittee. The gentleman is absolutely correct. It is not authorized and it should be dropped.

Mr. EDWARDS of Alabama. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama (Mr. EDWARDS).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments?

If not, the Clerk will read.

The Clerk read as follows:

MISSILE PROCUREMENT, AIR FORCE

For construction, procurement, and modification of missiles, spacecraft, rockets, and related equipment, including spare parts and accessories therefor, ground handling

equipment, and training devices; expansion of public and private plants, Government-owned equipment and installation thereof in such plants, erection of structures, and acquisition of land without regard to section 9774 of title 10, United States Code, for the foregoing purposes, and such lands and interests therein, may be acquired and construction prosecuted thereon prior to the approval of title as required by section 355, Revised Statutes, as amended; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes including rents and transportation of things; $4,546,550,000, to remain available for obligation until September 30, 1984.

Mr. ADDABBO. Mr. Chairman, I move to strike the last word.

Mr. Chairman, it would have been my intention at this time to offer an amendment to reduce the funds for the procurement of the ground-launched cruise missile. But in the interest of time, and realizing no one is listening to the facts, I will not offer the amendment.

AMENDMENT OFFERED BY MR. STRATTON

Mr. STRATTON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STRATTON: On page 24, line 12, strike "$4,546,550,000" and insert in lieu thereof "$4,555,550,000".

Mr. STRATTON. Mr. Chairman, this, I think, is almost the last proposed amendment that would bring the appropriations bill into conformity with the authorization bill which was approved in the conference report on yesterday.

This amendment would simply add $9 million to the Air Force missile appropriation to enable the Air Force to build a hybrid circuit facility at plants currently manufacturing the TV Maverick, TOW, Phoenix, and Roland missiles. The plant is expected to add IR Maverick, AMRAAM and WASP missiles in the near future and does not have sufficient hybrid circuit capacity to meet the needs of these new systems. The hybrid circuits required are not available on the commercial market.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from New York.

Mr. ADDABBO. The chairman of the subcommittee had not seen this before. When we were working on this bill, we had not seen the authorization. We agree with this amendment.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. We agree with the amendment on this side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. STRATTON).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NAVY

For expenses necessary for basic and applied scientific research, development, test, and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, as authorized by law; $5,517,671,000, to remain available for obligation until September 30, 1983.

AMENDMENT OFFERED BY MR. PRICE

Mr. PRICE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PRICE: On page 26, line 18, delete "$5,517,671,000" and insert in lieu thereof "$5,617,671,000".

Mr. PRICE. Mr. Chairman, the purpose of my amendment is to restore $100 million to the Navy's fiscal year 1982 research and development program.

In its hurried effort to revise and lower the fiscal year 1982 defense budget, the administration proposed that an undistributed reduction of some $211 million be levied against the Navy's research and development program. By an undistributed reduction, I mean that specific programs were not identified against which this overall reduction of $211 million was to be made. The authorization conference accomplished the same total reduction but made reductions to specific programs. Since the Appropriations Committee has accepted these specific programmatic reductions, to also take $211 million in an undistributed reduction as well makes a double cut.

Mr. Chairman, the Appropriations Committee may not have been aware that the specific program reductions made by the authorization conference were designed to effect the $211 million cut. I believe, therefore, that we should restore part of the money to the Navy account. Therefore, my amendment would restore $100 million and I hope the chairman can accept it.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. PRICE. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, we have carefully reviewed the figures and our action in the markup. There was almost a double dipping and we accept the amendment.

Mr. EDWARDS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. PRICE. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. We agree with the amendment.

Mr. LIVINGSTON. Mr. Chairman will the gentleman yield?

Mr. PRICE. I yield to the gentleman from Louisiana.

Mr. LIVINGSTON. If the gentleman will yield, could he explain to me a little bit more carefully exactly what these additional funds are for?

Mr. PRICE. The additional funds would reduce the amount of the undistributed reduction.

Mr. LIVINGSTON. This is not a special program being reinstated into the total?

Mr. PRICE. That is right. This is not for a special program; it would preclude excessive cuts in the overall Navy R. & D. program.

Mr. LIVINGSTON. Simply to make corrections in a program?

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. PRICE).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION, AIR FORCE

For expenses necessary for basic and applied scientific research, development, test, and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, as authorized by law; $8,501,210,000, to remain available for obligation until September 30, 1983.

AMENDMENT OFFERED BY MR. ADDABBO

Mr. ADDABBO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ADDABBO: On page 27, line 1, strike out "$8,501,210,000" and insert in lieu thereof "$6,588,010,000".

Mr. ADDABBO. Mr. Chairman, I ask unanimous consent that debate on this amendment and all amendments thereto be limited to 1 hour, the time to be equally divided and controlled by myself and the gentleman from Alabama (Mr. EDWARDS).

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. LEVITAS. Mr. Chairman, reserving the right to object, as I understand the request of the gentleman from New York it is that the debate on this amendment, which he now has offered, shall be limited to 1 hour and the time controlled between the ranking member and the chairman of the subcommittee. I wonder if the gentleman would explain what this amendment relates to so we might have some idea as to the necessity of debate upon it.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from New York.

Mr. ADDABBO. The amendment relates to the funding for the MX missile.

Mr. LEVITAS. Further reserving the right to object, Mr. Chairman, does the amendment of the gentleman from New York relate both to the research and development on the missile itself as well as to the deployment question, the basing mode?

□ 1710

Mr. ADDABBO. The R. & D. figure of 1.9 includes the missile and the basing mode.

Mr. LEVITAS. Further reserving the right to object, is there any intention, so far as the gentleman from New York is aware, to divide the question in some form so that a separate vote or a separate consideration can be made on the issue of basing, as opposed to the issue of missile development?

Mr. ADDABBO. I do not know of any pending motion or amendment. That amendment can be made if my amendment is voted down.

PARLIAMENTARY INQUIRY

Mr. LEVITAS. Mr. Chairman, I have a parliamentary inquiry at this time.

The CHAIRMAN. The gentleman will state it.

Mr. LEVITAS. If the amendment of the gentleman from New York is not agreed to, would it then be in order for a further amendment to the same figures to be offered relating solely to the basing mode?

The CHAIRMAN. If the amendment is not agreed to and the figures are not changed, further amendments to those figures and to this paragraph would be in order.

Mr. LEVITAS. I thank the Chair.

Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. MOFFETT. Mr. Chairman, reserving the right to object, if the gentleman from New York would please let us know—and I applaud him for his amendment—does the gentleman have any indication of how many Members would like to speak on this particular amendment?

Mr. Chairman, we go for days and days and weeks and weeks on end without serious business on the floor, and then we come to maybe the most serious matter we will consider this year, and we are talking about 30 minutes on this side.

Mr. ADDABBO. If the gentleman will yield, I have requests from about three or four Members right now who have asked for about a minute or more.

Mr. Chairman, I do not like to limit time, but I am trying to complete this bill tonight, and for a very special reason. The other body is moving very rapidly with their defense bill. There is every indication that they will try to put their defense bill, if there is no defense bill available. Normally, we pass a bill, and they act on that bill, amend it or accept it. If there is no bill, there is every indication that the Senate will pass a bill and will attach it to the continuing resolution.

So that the House may work its will and so that we do have a bill to go to conference with the Senate, I am trying to complete this bill tonight at a reasonable hour. I believe that most Members know what the problem is, what the question is with the MX. We could probably debate from now until tomorrow morning, and the gentleman from Connecticut knows that if this bill lays over until tomorrow, like rabbits the amendments will multiply at the desk. Then we could be on this bill for the next 2 days and we may lose the opportunity of the House to work its will.

Mr. MOFFETT. Further reserving the right to object—and I do not want to prolong this—I think all of us want the gentleman and his committee to be in that conference. There is no question about that. And I think all of us want the representatives from both sides of the aisle in whom we have a lot of confidence to be in that conference. But it just seems to me, Mr. Chairman, that this is a really serious matter. We have 1,000 people meeting in Riverside Church in New York City, wondering why we are not moving more vigorously toward arms control and why we do not talk about it more in this body, and we have universities all over the country discussing it. We applaud the President. I have already done that, and I know the Speaker has, and many other Members on this side of the aisle have said it was a good speech he gave today. But it just seems to me that there is a great deal of interest in this subject and we should not be limiting it to an hour.

Mr. Chairman, I would like to hear from other colleagues, however, before I lodge any objection.

Mr. SKELTON. Mr. Chairman, reserving the right to object, I wish to point out that, as I understand it, the gentleman's amendment strikes the entire MX system in its entirety.

Mr. ADDABBO. That is correct.

Mr. SKELTON. I have an amendment to the same section, for a $4 million over-the-horizon backscatter air defense system. Should the gentleman's amendment fail, I would be protected. But I think, in all probability, I am going to have to offer an amendment to the gentleman's amendment, to protect this air defense system, to increase it by $4 million. The gentleman understands that situation, then.

Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. DELLUMS. Mr. Chairman, reserving the right to object, I would like to say, with all due respect for my distinguished colleague, who tends to be on the same side on these particular issues, that I think limiting debate on this particular question is really very tragic.

No. 1, this is not a procedural question here. We are talking about a weapon system which eventually could cost this country over $100 billion. We are talking about a weapons system that may very well be a first-strike weapon. We need to be able to evaluate the mobile mode system. We need to be able to comment on the President's approach to the MX missile. These are terribly important questions which, in my estimation, cannot be resolved with 30 minutes on this side of the aisle and 30 minutes on the other side of the aisle.

Mr. Chairman, I would be constrained to object if we are not able to have at least a few hours of debate on this critical question.

Mr. ADDABBO. Mr. Chairman, I withdraw my unanimous consent request.

Mr. Chairman, I ask unanimous consent that debate on this amendment and all amendments thereto end in 90 minutes, the time to be equally divided and controlled by myself and the gentleman from Alabama.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. The gentleman from New York (Mr. ADDABBO) will be recognized for 45 minutes, and the gentleman from Alabama (Mr. EDWARDS) will be recognized for 45 minutes.

The Chair recognizes the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Chairman, I rise to offer this amendment which removes $1.9 billion from the bill. The $1.9 billion is for the research and development on the MX and the basing mode.

Mr. Chairman, we have expended and appropriated over $1 billion for the MX. The Department of Defense would not give us exact figures, but I believe there are several hundreds of millions of dollars still remaining in that account of R. & D. for the MX missile and its basing mode.

The subcommittee, when I offered this amendment in subcommittee markup, agreed with me. I believe it was a 7-to-5 vote to remove the funds. The funds were restored by the full committee by a vote of 25 to 23.

So it is not a clear case that everyone is for the MX. It is a very serious question whether or not this money should be spent at this time.

The reason the subcommittee deleted the funds was this question: Where are we going with the MX missile? Where will it be put? Is it better to base it in Arkansas or Arizona, Kansas, North Dakota, South Dakota, Nebraska, Wyoming, Colorado, rather than Utah or Nevada? Is there some special reason why Utah or Nevada should be deleted for a basing mode?

All of these questions remain open, Mr. Chairman and my colleagues. We do not know where it is going to be based. If you do not know where you are going to base a missile, then how do you know what type of missile you need? If you are going to make it air-

borne, you need one type of a missile. If it is going to be on a track, you need a second type. If it is going to be in a silo, which is vulnerable and will continue to be vulnerable, you need a third type.

So the subcommittee said rather than waste $1.9 billion until we know where we are going, increase the capability of the Minuteman III, which we did, do some upgrading on the silos, which we did, but withhold this $1.9 billion until we know what the basing will be, where the basing will be, and what type of missile we need and, most important, what this program will cost.

□ 1720

My colleagues, we have asked the Defense Department for their 5-year plan. About a month ago we got some semblance of a 5-year plan. The MX does not appear in that 5-year plan. So the Defense Department does not even know what type or what should we do.

Do we need a new missile? Yes. Are we funding a new missile? Yes. In this bill we are funding a new missile, a D-5. The D-5, or Trident II, is a missile whose basing mode we know. It will be based in submarines. Can it be land based? Of course it can be land based.

So why give the Defense Department $1.9 billion to look at air basing, land basing, hardening of silos, only to have that $1.9 billion wasted?

I think the taxpayers, and this Congress, should know, before we embark on that type of a program, some important things. This program could start at $40 billion and end up at $100 billion. We should know what type of a program it is going to be, where it will be based, and whether we really need a new separate missile for the Air Force or can we possibly use the new D-5 Navy missile?

So my colleagues, I would ask the Members to support my amendment, the subcommittee's original move in deleting the $1.9 billion.

Mr. McHUGH. Mr. Chairman, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from New York.

Mr. McHUGH. First, I would like to compliment the gentleman on his amendment and the fine job that he had done throughout the year on this legislation.

My question relates to something the gentleman referred to a moment ago, and also referred to during our committee deliberations when this bill was before our full committee.

At that time, the gentleman indicated that he had asked the Defense Department how much unobligated funds were available in this account and the Defense Department refused to answer. Am I correct in that?

Mr. ADDABBO. That is absolutely correct.

Mr. McHUGH. Did the Defense Department give any reason why it refused to respond to the chairman and the committeee on that question?

Mr. ADDABBO. The basic reason is that the program is in such disarray, and there are so many unanswered questions, that they are unable to give us the figures.

My answer to them is, "You say you are unable to give us the figures because that will give us the reason not to give you 1.9. You have sufficient money in R. & D. to find out where you are going and what you are going to do with this missile and then come back and ask for these funds."

Mr. McHUGH. It seems to me rather incredible that the Defense Department on an issue of this magnitude would not respond to the responsible subcommittee and ultimately to the House with a more precise figure, and for that reason alone it seems to me that this body should approve the gentleman's amendment and I hope we do.

Mr. ADDABBO. I thank the gentleman for his comments.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I do not like to be in this posture of opposing my good friend, the gentleman from New York (Mr. ADDABBO), on his amendments, but again I think that this is the wrong time and the wrong place to start talking about tampering with the MX.

I will not go through my routine again about the need to give the President a bargaining chip. Clearly, this is a factor. Clearly, it is one in my view that we cannot back up on. Clearly, it is something he needs as he talks to the other side about ways to find some kind of a responsible peace agreement.

The missile itself—let me remind my colleagues that this is strictly R. & D. Whether we talk about basing of the missile or the long-term basing decision, anything that is in this amendment has to do with R. & D. Anything in this bill has only to do with R. & D.

So we really find ourselves with a missile R. & D. program that has been put forward by the prior administration, carried forward by this administration, and the only issue that basically is different from what we have done in prior years is the method of basing.

Now, there is clearly a split decision, a split opinion, on whether we should have 4,600 holes and 200 missiles running around a little racetrack playing the shell game, and I must say that I never liked that approach; I never thought it was the way to go. I always felt as though if we did it, the Soviets would find enough missiles to knock each one of those holes out. We would then build 4,600 more and it would never end.

So I approve of the President's proposal to cancel out that approach to basing of the MX missile.

Then, what do we do if that has no basis in fact, and the President concluded that, and I do not suggest that here at this debate that is an item really for debate anymore.

What do we do if we do not have the racetrack? We do not build missiles and put them in a warehouse, I would hope.

If we are going to have the missiles, then we should have somewhere to put them that makes sense. And so part of this bill provides money for research and development for the method of basing the missile.

It is two parts going down the same track. We cannot build a missile in my view and not put it anywhere, and we cannot just sit back and wait until we find some better alternative that is going to be the be-all, end-all in basing because the threat is certainly there.

So what the President is proposing to do very simply is spend some money here on R. & D. on how he can do a better job with the fixed silos, how he can strengthen those silos, how he can then build the missile, do the research and development work there, all of it coming out hopefully in 1986 with missiles in place, agreeing, at the same time, with more research money to find a permanent way to do it.

Now, there will be those who will get up and say, "This is sheer madness." Mr. Chairman, I must say it is madness. I wish I had a better thing to say to the American people. I wish I could say to the American people that if we do not do this somehow everything is going to be all right.

But I guess I just do not believe that is true.

I think we need that deterrent. In any case, I think we need to continue down the right road toward research and development on this missile and the basing system so that when the President and his representatives go to the START talks in 1982, they have something to deal with, and I come back again to the point that in 1977, President Carter terminated the B-1, canceling out what I thought was a chip that he should have had available to him in the negotiations.

I would urge that this amendment be voted down and I would go further at this point and urge that if a subsequent amendment is offered just to deal with the missile and not the basing, that that amendment, as well, would be voted down.

Mr. LAGOMARSINO. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from California.

Mr. LAGOMARSINO. Mr. Chairman, I thank the gentleman for yielding.

I want to commend the gentleman for his statement. I think the gentleman has laid out the argument very well. We do need to go ahead with development of an MX missile, testing of the missile. I personally approve of the basing decision the President made. Others may not. But the one thing about it, it is not a final-for-all-time decision in any event. He even indicated that further and final decisions would be made down the road.

It would be counterproductive to cancel the program, especially today, just hours after the President made a historical and remarkable offer to the Soviet Union that they have to be really concerned about and worrying about, because it makes so much sense; it is so reasonable and logical. We have to back him up. We have to give him the tools to carry out that diplomacy and I would again commend the gentleman and hope the amendment will be defeated.

Another point. This Congress has appropriated moneys for the testing program for MX at Vandenberg Air Force Base. Much has already been spent. That money would be, at least to some extent, wasted if we do not go ahead.

Mr. Chairman, I support H.R. 4995, the Defense Department appropriation. This is a good bill, a tight bill, and most importantly, it will help reverse the alarming decline in our strategic position vis-a-vis the Soviet Union. As the President noted just a few hours ago, the United States does not have imperialist motives; we seek only the security of ourselves and our allies, as we have always done. And the best way to insure that security is to present a balanced, strong, and workable defense. This bill, and particularly the provisions concerning the MX missile system and B-1 bomber, is vital to the realization of that goal. We are embarking, have set forth, a series of arms control and reduction proposals. It is vital that we negotiate from a position of authority and credibility. By indicating our resolve today, in this body, we will strengthen the President's ability to negotiate meaningful terms and realistic agreements with the Soviets. Failure to act will simply weaken our position, and place the likelihood of meaningful agreement further away.

It includes important provisions to insure that we get our money's worth and to cut down on waste and mismanagement within the Department. There is no agency of Government that cannot do a better job in that regard, and we are not exempting the Pentagon from that directive. At the same time, the bill provides an appropriate and necessary level of funding for operations, maintenance, procurement, research, and development. A supplemental bill will provide the needed pay incentives to insure that we have the trained men and women to carry out the mission.

I urge all Members of the House to support the committee on this bill, to vote down weakening amendments, and to give the President the support he needs to guide our Nation in the next few years.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from New York.

Let me say that the gentleman from New York (Mr. KEMP) served for many years on this subcommittee and served well.

Mr. KEMP. I appreciate that.

Mr. EDWARDS of Alabama. He was one of our leaders as far as knowledge of defense budgets are concerned and I am happy to yield.

Mr. KEMP. I appreciate the gentleman yielding, and I, too, want to join along with my colleague from California and many others on the floor who have heard the gentleman from Alabama speak both on this subject as well as on the previous vote, the B-1 bomber. I commend the gentleman for his efforts not only in opposition to this unwise and imprudent amendment, but also his efforts on behalf of the B-1 bomber.

The gentleman has served our country and his constituents very well in bringing his thoughtful and logical presentation to this body and I particularly want to thank him for his leadership.

I particularly make note of the fact that he has alluded to the President's speech this morning with regard to START, the Strategic Arms Reduction Talks. It would be a big mistake for this body, to remove from the President the option of going ahead with an MX program in light of what the Soviets have done for years of their own buildup in strategic nuclear weapons.

I supported the B-1 bomber and I support the money for MX, both positions essential I believe to the preservation of peace and as a deterrence to war.

□ 1730

I am going to speak a little bit later on this subject, but I could not help but comment that the gentleman from Alabama has provided this House with great leadership and his statement is prudent, thoughtful, constructive, and well thought out. I am particularly grateful for the leadership of the gentleman and could not let this chance pass without saying so.

Mr. EDWARDS of Alabama. I thank the gentleman. If I had known he was going to talk about that, I would not have yielded, but I appreciate the gentleman's comments.

Mr. McCURDY. Mr. Chairman, will the gentleman yield for a quick question?

Mr. EDWARDS of Alabama. I yield to the gentleman from Oklahoma.

Mr. McCURDY. I have some problems with this position and I wanted to have the gentleman perhaps elaborate on a couple points and perhaps clarify some of the questions that I have.

First of all, I was distressed when the President made the decision to scrap the system and to place in effect new missiles in old holes. To me, the issue has been that of vulnerability all along.

Would the gentleman take a moment or two and explain for me the gentleman's position as far as the gentleman's proposal as to addressing the question of vulnerability?

Specifically, my point, too, is, are we so far along with the MX, which is a 200,000-pound-plus missile that we could not go into research and development with a smaller intercontinental missile which would perhaps be more mobile without a "racetrack" than could be deployed without the political ramifications and repercussions as was in the MX itself?

Mr. EDWARDS of Alabama. I guess you are never too far along to change your mind.

I would think, however, that this body is not literally equipped in the discussion of this bill to do that about-face as would be suggested here.

This missile has been going along for a good while. It is not going to be ready until 1986. I think that there is a long time, therefore, that is available to us to resolve this basing problem.

I agree that the problem of vulnerability is there.

I agree that if you are sitting in a hole that will not move and you cannot move the missile and you cannot completely protect it, that it is obviously more vulnerable than one where you might play the racetrack type of scenario; but I think we can harden the silos. Part of this money is for the purpose of seeing whether we can.

I think we can find better alternatives, and yet I stand here saying that I am not smart enough to know what that alternative is.

I think it has got to be the product of the sound judgment of reasonable people who understand this type of thing.

So the common missile that I suppose the gentleman is referring to has been considered and discarded by those who consider and discard these things.

I must say that certainly in our hearings we have not had testimony to any degree that would cause me to think that I know what a common missile can do, that this will not do or that that is the better way to go.

So I am persuaded that the MX is the way to go, until somebody can

show me otherwise, because I am just a humble servant of the people and not a technician and not an engineer. I do not understand all those things. Some of those things we have to accept that are presented to us by the scientists and the engineers and the researchers and the people who study these things.

This thing has been studied about as much as anything I know.

If I might comment one further point. It is my information—although I have not talked to these people personally—it is my information that former Secretary of Defense Brown, who preferred the racetrack approach, nevertheless thinks that that having been canceled, this is what we have got to do.

I do not know where else to turn for information. The present administration thinks that. The last administration having lost on the racetrack concedes that this is now the way to go. It seems to me we would be foolhardy to change that direction.

I would like to yield further to the gentleman but I have much time committed on my side and I must yield the floor at this time.

Mr. ADDABBO. Mr. Chairman, I yield 4 minutes to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Chairman, Senator Dirksen once said, "I am a man of principle and my first principle is flexibility."

It looks to me as if Senator Dirksen's principle has perhaps inflicted by or perhaps afflicted upon us the Department of Defense and perhaps the executive branch on this issue.

It is my understanding that the MX missile's main strategic purpose was to continue our land-based component of the Triad. For years the decision was made to place it in some sort of a mobile system. For a variety of reasons, Nevada and Utah were not chosen for that system. Some were environmental reasons, some were political reasons.

So when the decision was made to put the missile elsewhere, I thought, well, it seemed like a pretty good idea, because the mobile system involves a lot of environmental problems and I therefore would probably support less environmentally troublesome basing system; but inasmuch as my hometown is surrounded by 18 Titan silos and inasmuch as the decision was made perhaps to place them in those fixed-based silos, I decided to try to figure out why people like Senator LAXALT, Senator GARN, and Senator HATCH were so terribly opposed to putting this missile in their backyards, the States of Utah and Nevada. These men, some of the strongest supporters of the President of the United States, would like them not in their backyards and would put them perhaps in my backyard, the State of Kansas. While I do not have the close relationship with the President of the United States that those men do, I decided that my constituents were entitled to the same scrutiny and protection as Senator LAXALT's and Senator GARN's and Senator HATCH's constituencies.

Inasmuch as this decision reflects a 180-degree turn on the deployment of the MX missile from the decision announced a few years ago, I decided to take a look at it. I found two basic issues.

We are deploying a new land-based missile for two reasons. One is to have a survivable missile, one that can withstand Soviet attack, and to have a missile that does not have the vulnerability of current fixed-based-land, land-based systems.

As I looked at the situation, the more I began to realize the reason we were moving to a mobile system is because the Russians could target our fixed-based missile, our Titans that are around Wichita and the Minutemen that are around other parts of the country, very, very carefully.

So when a decision was made, I believe, more for political reasons than strategic reasons to put these missiles in fixed-based silos, because I judge that the political furor would be less, I think that the issues of vulnerability and survivability went down the tube, and that worries me.

So I have asked the Pentagon for a long time, 6 weeks now, to find out, where are you finally going to deploy these missiles? Is this deployment in current holes an interim step or a permanent step? What are the strategic pluses for this new deployment? No decisions to any of these questions have yet been made. Perhaps these missiles will never be deployed anywhere and are being used as a bargaining chip in arms negotiations. That is a possibility, but until I get better strategic reasoning from the Pentagon as to how they are going to deploy the missile, I am hard pressed to approve a plan that deploys them in fixed-based silos, where Russian avionics and Russian missiles clearly could target them with precision by 1985.

Now, the gentleman from Alabama (Mr. EDWARDS) has raised the issue of hardening. There is no question that hardening produces virtually no positive results with respect to the protectability and survivability of the missiles. Perhaps an ABM system might protect the missiles and make them somewhat less vulnerable. But that does not seem to be within the realm of practicability right now.

What I fear is that an interim decision on a multibillion-dollar defense system to deploy the missiles in current silos, a missile system of sophisticated capability like the MX will inherently become a permanent system because there is no politically attractive way to deploy a land-based missile system.

Given all that, I just think, I fear that this will become a permanent basing system which is insupportable unless I receive some more powerful strategic arguments from the Defense Department. I do not think I can support it.

I did listen to the gentleman from Alabama, one of the real scholars on defense here, and when asked by the gentleman from Oklahoma (Mr. MCCURDY) about survivability and vulnerability, in all candor his answers were not terribly informative.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. HEFNER. Mr. Chairman, I yield one-half minute to the gentleman.

Mr. GLICKMAN. I do not think that is anything negative about the gentleman's remarks. The truth of the matter is that nobody knows. The Defense Department is very confused about how to deploy the missiles.

Do you know that the Secretary of the Air Force did not know the decision to employ the missiles in fixed-based silos until it was made?

So while I think this basing system proposed by the Secretary of Defense is perhaps one option, I think it is a very bad option. I would like to see it go back to the drawing board.

While I do not oppose the concept of deploying a new missile in some basing mode, deploying it in a permanent system in fixed-based holes around my hometown, which was not good enough for Senator LAXALT, is not going to be good enough for me unless I can be shown that it is a survivable and a nonvulnerable missile.

After a great deal of thought, I have also concluded that the MX missile B-1 bomber provisions in the Defense appropriations bill will not enhance the Nation's defense program, and if deployed, may even weaken our ability to adequately meet the strategic requirements of the United States.

This decision was not an easy one. There is no doubt in my mind that an upgrading of our military programs is necessary. The question is what will be the best approach. My overriding concern is that the B-1 and MX proposals are considered to be interim measures until more advanced technologies come on line. At the cost of $1.9 billion for the MX missile and the $2.4 billion for the B-1 for fiscal year 1982 alone, I would say these are very costly interim programs the expense of which may threaten the adequacy of funding for advanced programs, such as the Stealth or additional Trident submarines.

Further, I am not convinced about the capability of either the B-1 or the MX as currently proposed. Will the B-1 meet our penetrating bomber requirement that much better than ex-

isting B-52's do? Is it worth $29 billion—or possibly $40 billion as the Congressional Budget Office estimates— to find out? At $300 million a piece, the B-1 should be a wonder plane, but it is not. It appears to me that a Stealth-type bomber with its radar evasion capability represents the kind of technology that we should aggressively pursue. The Pentagon estimates that a Stealth bomber could be on line as early as 1989. We should be making an all out effort to meet the goal and not spread ourselves too thinly with interim approachs of questionable effectiveness.

I do not reject the argument that our penetrating bomber force may need to be revamped and for that reason supported an amendment that deleted production funds for the B-1 while adding funds for an alternate bomber option, the FB-111. As an interim penetrator, the FB-111 would have similar capability and would be available a year sooner than the B-1. Further, 155 FB-111 would cost about one-third the amount of 100 B-1's, or a little over $13 billion. The amendment failed, as did the later amendment that simply struck production funds for the B-1 while retaining research and development funding. I supported the latter amendment as well.

My goal, and I am sure, the goal of my colleagues here in the House is to help put together the best program possible for protecting our vital security interests. Throwing taxpayers' dollars at interim programs with questionable strategic ramifications will not lead us to that goal. I believe that the Defense Department must provide us with more convincing evidence of why the B-1 bomber and the MX missile must be deployed.

□ 1740

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 5 minutes to the gentleman from Arkansas (Mr. BETHUNE).

Mr. BETHUNE. Mr. Chairman, ladies and gentlemen, the MX and the plan to deploy the MX in existing Titan silos has special meaning to me and to Arkansas, particularly those Arkansans who live in central Arkansas, because we have Titan silos there, and I am sure everyone in the Chamber remembers the Damascus, Ark., explosion which occurred in September of 1980.

Now, I learned several things after that explosion. I learned an awful lot about the missile itself, about the protective suits, about the leaking seals, about the evacuation plans that are essential in the event of a catastrophe. I learned an awful lot about it.

I also learned that those missiles are old and decrepit and that they need to be retired and replaced, which is part of the administration's proposal.

But I learned something that is much more important, and that I think is extremely relevant to what we are discussing here today. I learned that the people of Arkansas, in spite of all the trouble we have had with Titan missiles, want a strong national defense. They want to do their part. That has already been established. They do not have to prove anything further on that count. They have already proved it by having the Titan sites right there in their backyard for the last 20 years. In spite of the difficulties we have had with the Titan missiles, Arkansans want a strong national defense.

Of course they would rather not have the missiles. I can tell you that from all the discussions that I have had with them. But if this Congress and the administration and this country collectively agree that that is what we should do, then they would accept it and do their part as they have for the last 20 years, because that is the kind of people they are, and we are proud of the people in our State.

People there also want to reduce arms. They want to save the money, quite frankly. And they want to have peace. That is an overriding concern of our people. These are not inconsistent goals: the idea of having a strong national defense and the idea of having peace and reducing arms.

They want to reduce arms, but they do not want to do it unilaterally. We have tried that in the last few years. Under the last administration, we let the Trident submarine slip away. We let MX slip away. We let some other things languish instead of keeping ourselves strong, and the perception in the world changed. So we have tried all of that.

What they want to do is, they want to be strong, and they want to work for peace, and they want to work for arms reduction in the same way that the President on this very day has announced to the whole world that we are going to be strong in this country, but that we will engage in meaningful and real arms reduction talks if that is what the Soviets really want to do.

So it occurs to me that the question here today, on the very day when the President has said that we are going to offer arms reduction, and has made that offer to the entire world and to the Soviets, the question is: What will the Congress do today? Is the Congress going to vote for strength or is the Congress going to vote for weakness?

The President needs the MX option as he goes to the table on November 30 and as he pursues other strategic arms reduction agreements after the first of the year. He needs the option, and it is an option. There may be differing opinions about whether we should deploy these missiles on the interim basis that has been discussed, whether we should put them in the existing silos. I have heard some excellent arguments on both sides. But you have to agree with me that that approach, that concept, is plausible enough that it has merit, and that it will be perceived as a viable option when they do go to the table. And it is an option that the President needs for that reason.

So I encourage all my colleagues here not to, on this very day when the President is talking strength and arms reduction, send a signal that the people are weak.

Mr. HEFNER. Mr. Chairman, I yield 3 minutes to the gentleman from Illinois (Mr. SAVAGE).

Mr. SAVAGE. Mr. Chairman, today we are voting on the fiscal year 1982 Defense appropriations bill, H.R. 4995.

This bill, as you know, is the largest single DOD budget ever considered in U.S. history. It would provide $196.6 billion in funding for military personnel, operations and maintenance, procurement, and research and development.

Specifically, the bill contains $1.9 billion in funding for the MX missile.

I am opposed to the revised MX system which, though it is not as costly as the original MX proposal, it is still a $20 billion-plus program that will add to the severe strain on the Federal budget. This expenditure is even more questionable in light of the fact that according to its own testimony, the Reagan administration has yet to find a satisfactory basing system for the MX and that the proposed system will have limited usefulness. It is also my view that the only solution to any problems with land-based missiles is serious negotiations with the Soviet Union to limit the number of first-strike missiles each side targets on the other.

The bill also provides $2.4 billion for the B-1 bomber, which the Pentagon estimates will cost as much as $29 billion and which CBO estimates could cost as much as $40 billion. In my judgment it makes no economic sense to spend up to $40 billion for an aircraft that would be replaced in a relatively few years. Any expenditure for this bomber would be a gross waste of resources.

This bill further appropriates $63.7 billion for Defense Department procurement; $19.3 for Defense Department research, development, test and evaluation programs: $37.5 billion for fiscal year 1982 military pay, allowances, servicemen's group life insurance, and other military personnel costs; it also appropriates $12.6 million for the intelligence community staff and $84.6 million for the CIA retirement and disability system fund.

The so-called defense proposal before us today is further inflationary evidence of the Reagan administra-

tion's upside-down priorities. Therefore, I wish to be on record in total opposition to this travesty of justice; this lack of understanding that national security begins at home, in our cities and rural areas, that national security is best served by a country that best serves its citizens.

This insane escalation of the arms race is the path to world war, not to domestic well-being. The billions of dollars proposed for more deadly nuclear weapons and penetrating super bombers could better be spent on jobs for our unemployed, improved education for our young, social security for our elderly, and justice for the still oppressed minorities of our Nation.

Thank you, Mr. Chairman.

Mr. ROBINSON. Mr. Chairman, I yield 5 minutes to the gentleman from Missouri (Mr. SKELTON).

Mr. SKELTON. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from New York.

I think we ought to look at it in a different light than what we have been discussing this afternoon. The MX, in and of itself, is not the issue. The issue in this particular instance is strategic deterrence. The issue is whether we will have a proper strategic deterrence for our Nation.

The MX missile system as proposed is one of 5 parts to this all important strategic deterrence program. This program is made up of the following parts: manned bomber, which we have discussed earlier, the MX missile system, which we are discussing now, upgrading command, communication, and control, which is so important, the upgrading of the Trident submarine program by a better D-5 ballistic missile, and the fifth and just as important a part, the strengthing our strategic defenses, including civil defense, air defense, and ballistic missile defense.

This entire matter of strategic deterrence should be looked at, not piecemeal as we are attempting to do now, but it should be looked at in its entirety. Any one piece of the puzzle that fails, any one piece of the puzzle that is not in place, causes us to have an absence of strategic deterrence. All of them are important. That is why I speak in favor of an MX system.

Now, we can probably change in our own mind's eye some of these areas. The MX system may not be exactly as you would like to have it. The manned bomber may not be the exact one that you would like to have. But we must have all five of these, and I am willing to say, so it will fit together as a true strategic deterrence, let us accept it as proposed.

Those of us from western Missouri know what it is to have in our back yard part of our Nation's strategic deterrence. We have 150 ICBM Minutemen missiles and silos in western Missouri. These are part of the entire picture. These would play every bit as an important part as the MX ones that are deployed. All of this is very important for us to keep on line.

□ 1750

The people in western Missouri are willing to do their share. They know what it is to live on ground zero. They know what it is to need a strategic deterrence system, which we do not have. That is why I say, Mr. Chairman, let us go with all five of the elements. Let us not be misled by picking and choosing among them. Let us stick with the entire program as proposed. It means a strategic deterrent. It means peace in the years ahead once we get it on line. It means that the Soviets will be willing to talk, and we will have the bargaining chips with which to do it.

I urge the defeat of the amendment.

Mr. HEFNER. Mr. Chairman, I yield 3 minutes to the gentlewoman from New York (Ms. FERRARO).

Ms. FERRARO. Mr. Chairman, I rise in support of the amendment and I ask unanimous consent to revise and extend my remarks.

Mr. Chairman, I have been a consistent supporter of the MX missile since I came to Congress in 1979. Throughout the still-raging controversy over both the need for the missile itself and especially the various basing modes that have been proposed, I have voted against every amendment to delete funding for the development of the missile.

Tonight, however, I will be voting for the amendment to block MX funding.

The reason I have changed my longstanding position is the chaos and confusion surrounding the Reagan administration's deliberations on the basing issue. I think the distinguished chairman of the Defense Subcommittee hit the nail on the head when he said, after lengthy hearings on the issue:

> The Administration told us that it does not know what to do with MX missiles, if they are built.

Let us review the situation.

On October 2, President Reagan announced his long-awaited decision on MX basing. His plans were to scrap the mobile basing plan favored by President Carter, and instead to place the first group of missiles in hardened Titan and Minuteman silos.

The administration specifically proposed to deploy 100 MX missiles over the next decade, and another 100 after that. A first group of missiles—the administration has used numbers ranging from 18 to 50—would be placed somewhere—but nobody knows exactly where—in silos spread over eight States.

That is about as specific as they have been so far.

My problem is that the whole argument over how to base the MX has been aimed at finding the best means of improving the survivability of our land-based missiles against Soviet attack. Yet the administration wants now to put the MX in the same old hiding places, all of which the Soviets know.

Mr. Chairman, it is time we got a handle on exactly what we are going to do with the MX missile. We have been debating the need for the missile and the merits of the increasing number of basing alternatives for long enough, and it is time to make a decision.

As recently as July 16 I voted against an amendment to strike all funds for the MX. At that time, the President and his advisers were still considering the basing question and were assuring us they would soon have their decision and I figured we should give him a chance.

The announcement that was made on October 2, however, was no decision at all. It was a political decision, perhaps, but it was not a national defense decision.

I think we must now shut off the funding for the MX and force the administration to complete its plan for basing at least the first group of missiles. The situation we have now, with cost figures and deployment sites and dates constantly shifting, is certainly not conducive to a stronger strategic deterrent or to reassuring the American people that their interests are being protected.

In the meantime, we should go forward with the submarine based missile program, which has none of the survivability problems of the MX and other land-based options. In this regard, I am pleased that this bill contains the full amount requested for the Trident D-5 missile program.

Mr. ROBINSON. Mr. Chairman, I yield 5 minutes to the gentleman from New York (Mr. KEMP).

Mr. KEMP. Mr. Chairman, I rise in opposition to the amendment to delete the moneys for the MX. I sincerely believe that the production and deployment of the MX is an integral part of our Nation's and our President's efforts to modernize the strategic program and forces that he announced in October and which is so vital to the deterrent of war and the maintenance of peace. This is part of the essential modernization of each leg of our strategic triad of forces, that has been the mainstay, the linch pin, if you will, of our defense deterrent for more than a decade. It is a signal and a symbol of our resoluteness to maintain U.S. strategic strength and balance in the world, which as I said before, is the keystone of any genuine arms reduction negotiation with the Soviet Union, something that the President,

wisely, addressed in his great speech this morning.

The President this morning gave truly one of the most far-reaching, positive, and progressive speeches on foreign policy and arms negotiations that I have heard in this Nation in the 11 years that I have been in the Congress. He not only talked about arms negotiations, he talked about arms reduction, something that the American people, indeed the people of the free world, are vitally interested in and he addressed the issue of promoting and preserving the peace.

He had a key point in his speech, when he said that we are not going to reduce arms unilaterally. He suggested there is no empirical, historical, or objective analysis to suggest you can negotiate with an adversary such as the Soviet Union from a position of unilaterally reducing one's weapons strength, and that is what we would be doing if we vote for this amendment to cut the money for the MX.

The President talked about the problem we had with SALT II and he wisely, I think, characterized his new beginning toward arms reduction by labeling it with the acronym "START," strategic arms reduction talks.

Briefly, the problems with SALT II were accentuated by three main flaws as far as I am concerned as a congressional delegate to the SALT talks in the last Congress. No. 1, SALT II did not include the Soviet Backfire bomber. There is no way that I think this Nation could have negotiated a successful SALT II as long as the Soviets were not willing to consider the Backfire intercontinental strategic bomber as a part of those negotiations.

No. 2, the SALT II talks did not count missiles it just counted missile launchers. How can one sign an agreement with the Soviets and count launchers but not count missiles. The Soviets have developed a technology for cold launch capability in which they could take missiles off the shelf that they have manufactured and put them into launchers for refiring. That would allow them a capability via that technology that the United States did not have and made SALT II a mistake.

Third, we did not go forward with SALT II because the Soviet SS-18 and SS-19 were not capped. In effect, we were going to give the Soviets heavy missiles and a strategic first strike capability, the SS-18 and SS-19, that were not allowed the United States.

Those flaws in SALT II were the reasons the President wisely suspended those negotiations upon assuming office, and today announced that we are going to negotiate with the Soviet Union in the future over theater nuclear weapons, we are also going to negotiate with the Soviet Union on reducing strategic nuclear weapons, but it will be on a reciprocal basis, something I think each and every man and woman in this body, whether one is liberal or conservative, would agree with. You cannot negotiate from a position of weakness and to cut this program would be to cut the President's ability to negotiate.

I appreciate the President's leadership in putting the onus where it belongs, on the Soviet Union. If they really want peace, in the lexicon in which they use that word; if they really want to put a cap to the arms race and reduce the chances for nuclear war they will join President Reagan in attempting to bring not only an arms halt, but a reduction of nuclear weapons as well.

Mr. Chairman, the first line of defense for our Nation, indeed the free world, is the credibility of our President in his negotiations on behalf of this Nation.

Let us not reduce the President's ability to move our country and our free world to arms reduction negotiations.

I commend the President for his strong leadership on behalf of the cause of peace and freedom.

Mr. DICKS. Mr. Chairman, will the gentleman yield?

Mr. KEMP. I will be happy to yield.

Mr. DICKS. Mr. Chairman, I want to agree with the gentleman on this point. I think that it is vitally important that we not only have talks about the reduction of strategic and theater nuclear weapons, but that we have actual negotiating and actual bargaining. I think the gentleman has made a very important point in that what the Soviets have always stressed to the United States——

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from Washington (Mr. DICKS).

Mr. DICKS. Is it not true that the Soviets, in discussing theater nuclear weapons, have always called for parity, not reductions? I think the plan that has been put forward today is real parity. Now, it is going to be very interesting, at least in my judgment, to see whether the Soviets are interested in true parity. That would mean reducing and taking out the SS-20's, the SS-4's, and SS-5's in terms of theater nuclear weapons.

Mr. KEMP. The gentleman has made a very good point, and I appreciate his yielding to me now to agree with him. I think the President has, as I said before, shifted from a defensive pattern for our country to an offense pattern, in our negotiating stance which is important. It also signals to our NATO allies that we are willing to discuss not deploying the tactical nuclear weapons that has caused so much pain in so many circles politically in Europe. I frankly think, it seems to me to be a terrible mistake for this country not to go ahead with MX or even the research and development on MX when we are asking our NATO allies to take the political heat of putting the ground launched cruise missile, as well as the Pershing II missile, in their countries.

□ 1800

Mr. DICKS. Mr. Chairman, I would like to say one further thing that I think is important to us.

I think we ought to remain flexible with our NATO allies in trying to come up with methods to meet the TNF threat. I do not think we should necessarily try to force-feed Pershing II and GLCM if there are other ways to solve this problem that the alliance can go along with and that will actually deal with the real threat posed by the existing weapons. I think there is a time when we have to demonstrate some flexibility in our relations with our allies.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. DICKS. I yield to the gentleman from New York.

Mr. KEMP. Mr. Chairman, I think the gentleman has raised a good point. I think he would also agree that the President has come forward with an environment at least for those negotiations which: First, provides that flexibility; and second, allows some assurance to our European allies of whom we are asking a lot that we are willing to take dramatic steps to reduce the fears those people have with regard to the deployment of the Pershing and GLCM.

But let us not forget that right now there are 1,100 strategic nuclear weapons on the side of the Soviet Union, whether they are in front of the Urals or behind the Urals. The SS-20, the SS-5, and the SS-4 represent a real threat to every major city in Europe, and it seems to me the President has not only signaled dramatically that he is willing to help our NATO allies but he is also, as the gentleman points out, willing to put the Soviets on the defensive.

Mr. DICKS. Mr. Chairman, the last time I was at a NATO conference, one of the parliamentarians came up to me and said, "Congressman, how is it that you want us, in an area like between Boston and Washington, D.C., to deploy all these SS-20's and you won't go out and put your MPS system in Nevada and the western desert?"

The CHAIRMAN. The time of the gentleman from Washington (Mr. DICKS) has expired.

Mr. ROBINSON. Mr. Chairman, I yield 3 minutes to the gentleman from Maine (Mr. EMERY).

Mr. EMERY. Mr. Chairman, I rise in opposition to the amendment and in

strong support of the MX program as outlined by President Reagan.

There are two or three points that I think need to be made. First of all, I have heard some discussion here this afternoon that there is not any concrete plan as to where the MX missile is to be located. I want to point out that that is not so. The President made some specific proposals, among them replacing the old Titan II missiles, which I think we all agree are outmoded, outdated, and no longer serving a strategic purpose. It is also proposed to upgrade some of the Minuteman III silos with the new MX missile.

That certainly represents a substantial strategic upgrading. It means that we are swapping a less capable missile for a more capable missile. In one case it means swapping an unsafe missile for a safe and reliable missile. It means either swapping 1 warhead for 10 in the case of the Titan II, or 3 warheads for 10 in the case of the Minuteman III. It also means we will increase the accuracy of our strategic deterrent, and it means we will have a hard target kill capability, which is important since the Soviets are developing cold launch techniques. It also means we will have a significant bargaining chip for our future strategic arms negotiations such as the President announced today.

The other point that I think is necessary to make is that as we develop modern technology, as we look toward the future of ballistic missile defense systems or maybe other technologies that will allow our existing systems to become more survivable, not only will we be able to base the MX missile in different and more sophisticated basing modes in the future, but we will also be able to protect silos that we have today.

I think from an economic standpoint it makes good sense to take advantage of existing silos where they may be developed into a more survivable and more useful system.

Someone also mentioned that hardening did not make a significant difference. Let me tell the Members that that simply is not so. A hardened silo is a silo that can withstand a much more accurate attack. It would mean that existing silos will be useful for several years to come. It also indicates that we are not willing to make massive expenditures, as in the case of the MPS basing mode, but we will take advantage of systems that we have available today and technologies we have available today. That is going to mean a savings of at least $20 billion over the MPS system.

Frankly, I never had much confidence that the MPS basing mode or any of its derivatives would give us more survivability or a more credible deterrent than we would otherwise achieve from a hardened fixed base silo.

In summary, Mr. Chairman, I support the President's MX basing mode, and I hope that this amendment will be defeated.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, most of the public controversy about the MX has centered on the succession of basing plans for this mammoth new intercontinental ballistic missile. Western States have raised a great hue and cry about the hundreds of thousands of acres of ground that would have been taken up by digging thousands of shelters for this new missile and the Reagan administration has succumbed to the political impossibility of proceeding with this plan. But the administration wants to continue full-scale development of the missile, even though no decision has been made on what we are going to do with it. This does not make sense. You do not embark on a $40 billion to $50 billion system with such serious questions of how it is going to be deployed still unanswered.

Furthermore, the basing argument has obscured one of the original and most important reasons for opposing development of this superaccurate, highly destructive missile: The MX is a counterforce weapon which would increase, not decrease, the possibility of nuclear war. Its accuracy will threaten the Soviet Union with losing its land-based ICBM's in a United States attack because the MX will be able to explode its warheads right on top of Soviet missile silos. Our present missiles can come close to doing this, but the MX is designed to guarantee it. Thus the Russians will have every reason to begin worrying about the same window of vulnerability that now so bedevils our own strategic planners.

Thus, the MX will not increase our security. The billions it will divert from meeting real needs will only weaken us as a nation. We simply cannot afford to fund such grandiose symbols that are designed to show the Russians that we are tough and hope to scare them into negotiating limits on strategic arms. Getting serious about resuming SALT negotiations would do far more for assuring our security than hundreds of unnecessary and expensive new missiles. I urge support of the amendment to stop the MX.

Mr. ADDABBO. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Mr. Chairman, I thank the gentleman for yielding me this time.

Mr. Chairman, I rise in support of the amendment pending before the body.

As the Members know, Mr. Chairman, for a number of years we have marched into the well of this House in opposition to the MX missile system on the basis of the notion that the MX missile system as proposed was expensive, unnecessary, wasteful, dangerous, impractical, and environmentally disastrous. Therefore, obviously we would agree with the President in making the judgment to reject the various mobile modes of our MX missile system.

However, I think his new decision has enormous implications that I think we should consider for a moment, for I would assert that the President's new decision with respect to the MX missile is both incorrect and extraordinarily dangerous. No. 1, the President proposes to place 100 new MX missiles in present Titan and Minuteman silos. This totally ignores the original objective of survivability.

Let us remember that the argument with respect to the window of vulnerability was based upon the notion that our fixed base ICBM's were vulnerable by nature of the fact that they were fixed-base. Therefore, if we place them in some kind of mobile mode, this would render these land-based missiles survivable. But the President has rejected the mobile mode. Therefore, in my estimation, he has missed the objective of survivability which was used to justify the system.

I would then assert that this decision is not a security solution but a political judgment. If indeed the mobility of the missile itself reduces the vulnerability, then why place them in fixed silos? The argument back from the administration is that we have an answer as to how to make our silos more survivable. First, we can harden them or deepen them.

I would suggest that by hardening and deepening, that takes time and therefore creates an incredible time delay, so we keep the so-called window of vulnerability open for an extraordinary period of time.

Second, hardened and deepened silos would continue to fall in the crater of an SS-18 explosion, which in my estimation renders deepening and hardening null and void.

Third, the argument is that we would then surround our MX missiles in the present mode with an ABM system, an antiballistic missile system. It would take us, based upon expert testimony, approximately 15 years to build an ABM system. So we are talking about 15 additional years of keeping this so-called window of vulnerability open.

The second point with respect to ABM is that we would then abrogate an important treaty. It is a flight into

fantasy to assume that we could build an ABM system and the Soviet Union would not also build an ABM system, which raises a number of questions with respect to whether or not we could even retaliate and get beyond their ABM system. So it abrogates the entire thing, and it does not make any sense.

I would now like to turn to an important argument made by Mr. Scoville, former Assistant Director of the Central Intelligence Agency and also one of our arms controllers, who points this out:

Instead of reducing American vulnerability to Soviet attack, the MX—

The missile system as proposed by the President of the United States at this moment—

will increase the risk of the United States being devastated in a nuclear war.

He goes on to point out that—

The real reason for President Reagan's proposed go-ahead with the MX is exposed to open view.

We should evaluate this reason.

He goes on to say:

He admits that the only certain justification for this deployment is that he wants early prompt counter-ICBM capabilities.

□ 1810

Translated into everyday language, what the President is saying is that he wants to threaten the Soviets' deterrence, their ICBM deterrence, which is 75 percent of their nuclear capability. But this missile, the MX missile, can only do that job in a first-strike situation.

My colleague, the former Speaker, just pointed out this is a hard silo killer. It increases the accuracy. It gives this weapon a first-strike capability. So we now must render this judgment naked for what it is worth.

It is not a deterrent weapon in this mode. It becomes a first-strike weapon.

What does that do? That forces the Soviet Union to make a response. They put their weapons in a launch-on warning situation, hairtrigger alert, thus increasing the risk of nuclear accident or launching of a preemptive strike. Thus the MX missile, instead of improving America's security, will reduce it.

I would like to quote Mr. Scoville further:

It is unfortunate that President Reagan, when he finally reached the conclusion that there was no way to make land-based ICBMs truly survivable, did not go one step further and recognize that the deployment of the MX missile system—on land and in a vulnerable mode—was only an invitation to nuclear war.

The only way, Mr. Chairman, that we can insure survivability of our Nation and our world is not through arms race but through arms control. If we seek balance with the Soviet Union, and I think any rational mind in this body wants to seek balance with the Soviet Union, I would argue as diligently as possible that you do not get that by increasing the arms race. You get it by engaging in arms control, which means we go to the table to negotiate and we do not go to the table with a first-strike weapon, spending billions of American taxpayer dollars.

At the point in time when the President of the United States is asserting that he seeks peace and that he seeks negotiation, we certainly do not want to cram a first-strike weapon down the throats of our taxpayers and the Soviet Union for the implications are both obvious and enormous.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. DELLUMS. The gentleman is anxious for me to yield and I will yield to the gentleman from New York.

Mr. KEMP. I appreciate the gentleman yielding. I want to ask this as diligently as the gentleman has made his statement. If the gentleman suggests, as I think he has, that the ABM treaty was the right thing, on that basis, I would remind my friend that the reason there was an ABM treaty was the ability of this Nation to have an ABM system tested and deployed by the vote of the Congress.

Is it not necessary to a successful negotiating for a reduction in strategic weapons to at least have something with which to bargain. How can you expect to get the Soviets to reduce their heavy SS-18 intercontinental strategic first-strike weapons without giving bargaining power and credibility to our President?

Mr. DELLUMS. Let me say that this is the argument that I have heard for at least 11 years. The strategy is to continue to escalate the level of our capability, and we never quite get to the negotiating table. The same argument was made when we talked about the MIRV technology. That would bring the Soviets to the table, but then the Soviets responded. Now we are talking about the MX and they will then respond and then we will talk about something different. It keeps going forward endlessly.

Mr. ROBINSON. Mr. Chairman, I yield such time as he may consume to the gentleman from Idaho (Mr. CRAIG).

Mr. CRAIG. Mr. Chairman, I join in opposition to this amendment.

Mr. ROBINSON. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. HUNTER).

Mr. HUNTER. Mr. Chairman, I rise in opposition to the amendment that would delete funds for the MX system.

This administration has made the decision to proceed with the MX system. In part, this decision reaffirmed the one made by President Carter to proceed with this important weapon system. The Carter decision was a reaffirmation of President Ford's decision to develop an advanced intercontinental ballistic missile.

Unfortunately, Secretary Weinberger did not see fit to support the multiple protective structure basing mode for the MX missile. I believe time will show that this decision was not a good one and that, indeed, the silos that will contain the MX missile are threatened by incoming Soviet reentry vehicles. Regardless, the decision to proceed with the missile is a good one and will give us more retaliatory capability should the Soviets decide to launch a preemptive first strike. This in itself enhances our deterrent posture.

Mr. Chairman, if we proceed with the MX missile, and I hope this Congress sees fit to do so, we will be building a missile that is not as devastating as the existing Soviet SS-18 but a missile that is substantially more capable than our Minuteman III.

The Minuteman III is our most capable intercontinental ballistic missile in terms of destructive power. Since we deployed the last Minuteman III, the Soviets have fielded three new systems, the SS-17, SS-18, and SS-19. They have in various stages of test and development four new intercontinental ballistic missiles, all with increased destructive power by virtue of improvements in yield and accuracy.

Mr. Chairman, I urge the defeat of this amendment and hope that this Congress will support the decision to proceed with the development of the MX missile, a system that has received the support of the three administrations.

Mr. ROBINSON. Mr. Chairman, I yield 3 minutes to the gentleman from Delaware (Mr. EVANS).

Mr. EVANS of Delaware. Mr. Chairman, this particular issue is not an easy one. Very well-meaning people can have differences of opinion and, as in most issues that are important here on the floor of the House of Representatives, there is very little black or white, but one heck of a lot of gray. However, I think there are some compelling reasons to vote against this amendment and to vote for the MX missile system.

I believe it would be spectacularly ill timed before entering into arms control negotiations in Geneva, to take away a bargaining chip that our negotiators should have. That has been pointed out quite clearly by the distinguished gentleman from Alabama (Mr. EDWARDS).

The psychology of these talks is important. Do not take away that chip before we get to the table. We want to strengthen the cause of peace and stability in the world, and that is the whole effort behind talks and negotiations with allies and potential adversaries. But in order to bring about that

strengthening of peace and stability in the world, we need to negotiate from a position of strength.

The distinguished gentleman from Florida (Mr. YOUNG) pointed out what our President said in his address this morning, what had been happening over the last 6 years in terms of the Russian buildup while we had been doing very little, if anything. One just cannot look at the world through rose-colored glasses.

President Reagan made it clear today, and I think it genuinely reflected the hopes, the aspirations, and the feelings of the American people, that we want genuine peace in the world. But we also know that this takes resolve on our part.

Unilateral reduction is not the answer. My colleagues, just 1 week ago today we celebrated Veterans Day, which used to be called Armistice Day. The best way in the world we can honor those who sacrificed that we might live in freedom is to maintain the security of the United States of America, and then some day, as we move toward mutual reduction in arms, we will end man's injustice to man. But we are not going to do that by striking out the MX and placing our negotiators at a disadvantage in the upcoming arms control talks in Geneva.

I would like to end, if I may, on this point. If we are wrong on our side, in our support of the MX, if it turns out we really do not need this missile, then we will have spent some money unnecessarily. But if we are right, and if we do not take this particular step, then there may not be anyone left on the face of this Earth to record in history who was right or who was wrong.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Chairman, I rise in opposition to the amendment, at least that portion of it relating to deleting the development of the MX missile. It is significant that we engage in this debate on the very day that President Reagan made the dramatic and bold innovative proposal for strategic arms reduction talks and the mutual zero option for theater nuclear weapons in Europe.

This initiative for peace which the United States now has committed itself to recognize and deal effectively with the threat and the possibility of destruction through a nuclear holocaust, whether it is strategic in nature or begins in a theater or so-called limited war, is a major move toward peace which should justifiably allay the fears of millions and millions of people throughout the world.

This new proposal must give hope to all who seek peace. Especially important is the fact that this initiative comes from an administration which had originally spoken in terms of superiority in military power and avoided stategic arms limitation talks.

I think it will also expose the fraudulent attempts by the Soviet Union, who have falsely professed peace and arms control. Unfortunately, I predict that the Soviets will reject the President's bold initiative and thereby expose the lies they have put forth, but perhaps it will encourage and force the Soviets into real and meaningful arms control negotiations.

It would be unconscionable if on this very day of the peace initiative the Congress of the United States pulled the rug out from under the President and took away the very subject matter that has to be the basis for negotiations. There is no such thing as unilateral disarmament, and we have to be in a situation in which there can be something to negotiate about. The MX missile is clearly either an important part of our security system or it is a major element in the arms negotiations which will soon follow.

□ 1820

So, therefore, I cannot support the amendment offered by the gentleman from New York, because providing for our common defense, which comes first and which this MX missile will do, or providing it as a means of discussions for arms reduction, are vital to our national interests.

But there is another part of this amendment which I am inclined to support, because it seems to me the proposal which the administration has made to base the MX missile in the existing Titan silos is an absolutely ludicrous decision. It is foolish to place missles of this capacity in sites which have already been identified by the Soviet Union, which have already been targeted and, no matter how much silo strengthening is done, cannot be protected from the type of nuclear assault to which they would be subjected.

One of the main purposes of the MX proposal was to develop a system to protect these missiles from the type of first-strike attack which the Soviet Union would subject them by means of mobile or deceptive sitting to protect them from their sitting-duck vulnerability.

The CHAIRMAN. The time of the gentleman from Georgia (Mr. LEVITAS) has expired.

Mr. ADDABBO. Mr. Chairman, I yield 1 additional minute to the gentleman from Georgia.

Mr. LEVITAS. There must be some way, if we are to have this missile system, that it can be utilized as a less vulnerable basing mode. I do not see any provision for that, and I would like to ask the gentleman from Alabama whether it is his understanding that, as part of the R. & D. which is proposed for the basing mode, there will be specific and serious decision-making placed upon a mobile or deceptive mode. Because if there is not, there is no way I can support an MX system put in the old, outmoded, vulnerable, and targeted Titan launch sites.

Mr. EDWARDS of Alabama. If the gentleman will yield, as I understand it, some of the long-range proposals to be pursued would be the continuous patrol aircraft, so-called air mobile system that probably would not go anywhere, nevertheless it is a mobile system; the deep underground basing system that would obviously be looked at and has been discussed at some length; the ballistic missile defense system, which would be considered and is being considered as part of some kind of fixed base type of defense for the system. The authorization conference report provides for $25 million for deceptive basing, which is a system that moves the missile, and I am convinced, from talking to the people at the Defense Department, having discussed this with the gentleman earlier, that there will be some deceptive basing modes studied, along with everything else, and that that certainly has not been ruled out.

Mr. LEVITAS. I appreciate the comments of the gentleman from Alabama, and I would hope that he would use his efforts to assure that some deceptive basing mode, some means of protecting against the vulnerability of fixed basing will be an important part of whatever research and development on basing is done as a result of this program.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 5 minutes to the gentleman from Florida (Mr. CHAPPELL).

Mr. CHAPPELL. Mr. Chairman, I associate myself with the remarks of the gentleman from Alabama (Mr. EDWARDS) and with those spoken by others against this amendment.

In my view, the evidence is clear that the Soviets now believe they not only can survive a nuclear exchange, but they can indeed win a nuclear war. What is important about that is the fact that so long as they have that perception, I repeat, as long as they have that perception, then the status of effective deterrence simply cannot exist.

We have come a long way in building up our conventional forces. We must have a good balance between our strategic and conventional forces. We have been building those up. We are yet far behind the Soviets, obviously, in conventional capacity. In the strategic field, we have not come on board with one new intercontinental ballistic missile since 1965. Not one. We simply have been lying dead in the water, and the Soviets have been gaining the superior position for too many years.

If we are going to insure effective deterrence we must soon restore the strategic imbalance of this leg of the triad. I hope all of us understand the fact that we are only talking about R.D.T. & E. on the missile itself and on its basing mode. We are not providing funding for construction. We are only providing research and development moneys. I hope we will not make the mistake of placing the security of our country at further risk by approving this amendment.

I urge a no vote on the amendment.

Mr. MOFFETT. Mr. Chairman, will the gentleman yield?

Mr. CHAPPELL. I yield to the gentleman from Connecticut.

Mr. MOFFETT. The gentleman, for whom I have great respect, made the statement at the outset of his remarks that the evidence is conclusive—if I am misquoting, correct me—that the Soviets think they can win in a war with us.

That may be true, but I do not know that that is the case.

Mr. CHAPPELL. Let me explain to the gentleman why I think it is conclusive. Everything we see the Soviets doing insofar as their buildup in the strategic arena, everything they are doing there leads to a conviction on their part that they have to have the superior force in the strategic field. And I think indeed they have substantially gained that. Now, what they have been doing that we have not been doing is that they have long since undertaken a determination to protect their industries and their people from nuclear attack. To me, that is a very significant factor. If they have the perception that they can survive an exchange by reason of the fact that they are protecting some 80 percent of their people for example, while they are putting at risk 80 percent of ours, then it is pretty convincing, to me, that they have determined that they have or shortly will have arrived at the point where they can survive that nuclear exchange and, not only survive it, but win it, because of the superior forces which they are in the process of fielding and have already fielded.

That is what convinces me they have embarked upon that kind of a program and feel that that is where they are. Therefore, I think that not only do we have to pay attention, keen attention, to our conventional capacity and capability, but keen attention to the effectiveness of a nuclear deterrence.

Mr. DOWNEY. Mr. Chairman, will the gentleman yield?

Mr. CHAPPELL. I yield to the gentleman from New York.

Mr. DOWNEY. How does the gentleman respond to the Office of Technology Assessment, our own House arm, that said that in a thermal nuclear exchange between ourselves and the Soviets, the Soviet society would not be a contemporary operating society for the next 30 years, indeed, that they would be bombed into the stone age?

Is the gentleman suggesting that the civil defense system in the Soviet Union is going to protect 80 percent of their population from the effects of a full-scale thermal nuclear exchange?

□ 1830

Mr. CHAPPELL. I am simply saying to the gentleman if they have the perception they can do so. I think the perception is important here, and I think that is something we have to address.

Mr. ADDABBO. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. DOWNEY).

Mr. DOWNEY. Mr. Chairman, I think it is important for us to examine exactly how we got here. The temptation is almost overwhelming to indulge in a little self-serving praise for those of us who said the MX would never be built and the shelter system indeed is not being built. The only reason why we are here even discussing land-based vulnerability is because both parties, (the U.S.S.R. and the United States), in the late sixties and early seventies failed to seize upon the opportunity to control MIRV's and that is why Soviet ICBM's and our ICBM's are currently in jeopardy because of the failure of arms control.

It seems to me by going ahead and eschewing the notion that somehow we can provide security without arms control is a devastating mistake for us to make, and we continue to make it over and over again.

What is the MX missile? Make no mistake, the MX missile is a bargaining chip. That is all it is. It cannot be anything else. It is a tremendously expensive bargaining chip.

Just think about the basing mode for a minute if you will. Six thousand PSI shelters.

The gentleman on both sides of the aisle on this question know, No. 1, that even today, and certainly by 1986, those missiles will be vulnerable and indeed they will be the first missiles if the Soviets were to launch an attack that they would go after.

Let us not make any mistake about the MX being survivable. It is not. Putting it up in an airplane to fly around nonstop is also absolute dribble, that will never happen.

The third option, putting it in deep underground shelters or on the sides of mountains so that 3 and 4 weeks after they have dug themselves out they can be used is hardly an option that anyone considers seriously.

ABM. The countermeasure, countermeasure systems in ABM, there is no way that that is a survivable system. MX is a bad idea. It is an expensive, very expensive bargaining chip which I submit to the Members is the only reason it is being built. That is no reason to spend 2 billion dollars.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan (Mr. WOLPE).

Mr. WOLPE. Mr. Chairman, I rise in strong support of the amendment offered by my colleague from New York, Mr. ADDABBO, to delete funding for the MX missile system. He and others have spoken to the absurdity of the proposed multi-billion-dollar investment—not only from a military standpoint, but also from the perspective of a country struggling to reduce the rapid pace of the nuclear arms race. If we are truly serious about strengthening our defense capability, we will today put an end to this kind of wasteful, unjustified expenditure; the proposed MX missile program represents nothing more than a tremendous diversion of critical resources away from areas of genuine need, both within and outside of the defense budget.

Study after study has concluded that our most pressing military need is not the purchase of increasingly costly and sophisticated nuclear weaponry; rather, our needs are in the conventional forces area—in the improvement of the morale and competence of our personnel, in the provision and maintenance of our basic equipment, in the adequacy of basic logistical support. Yet, as the country gears up for a massive nuclear buildup, it is these elements of our military preparedness—elements essential to real national security—that are by and large ignored.

Perhaps the greatest absurdity of the MX is that it is proposed as a means of enhancing American deterrence when our nuclear forces already provide a tremendously powerful counterthreat to Soviet aggression. To put the issue of our nuclear deterrent in perspective, it should be noted that even if the Soviet Union launched a first strike against the United States—a strike that was so extraordinarily successful that it totally eliminated our land-based nuclear force, our airborne nuclear fleet, and all the nuclear submarines that are in port at any one time—there would remain at sea 20 nuclear submarines, each carrying 16 missiles, each missile carrying 8 to 10 warheads, each warhead having an explosive power seven times that of the bomb that fell on Hiroshima. These 20 subs alone would be sufficient to destroy every major economic, industrial, and population center in the Soviet Union three times over.

In terms of accuracy, size and survivability, the U.S. nuclear force is more than sufficient to deter Soviet aggression; and in the absence of any operable agreement on strategic arms limitation, the decision to develop even greater nuclear capability will only

fuel the already growing threat of a major and destabilizing arms race.

But these are military arguments that have been addressed and addressed effectively by those who have proceeded me. I think what really requires discussion at this point are the broader implications of the approach that we appear to be taking to national defense issues—an approach that is symbolized by the MX missile debate.

What is happening is that—out of a sense of fear unsupported by evidence or reason—we are indiscriminantly throwing dollars at the Pentagon and, in the process, we are ending up with less security rather than more. Moreover, the kind of unnecessary and uneconomic military investment which we consider today—the quintessential example of which is the MX missile—undermines the very economic foundations of our Nation and, thereby, our national security.

It is difficult to conceptualize the sheer magnitude of the defense program being promoted by the administration. Over the next 5 years, the United States will spend over $1.6 trillion on defense; $1.6 trillion. If we were to spend that sum at the rate of $1 million per day, 365 days a year, it would take over 4,000 years to exhaust the war chest. Put another way, over the course of the next 5 years, we will be spending on the average, $830 million a day on defense alone.

The economic implications of the defense buildup are staggering. Last fall, the Pentagon asked such luminaries as the Nobel laureate Lawrence Klein, Otto Eckstein, and Michael Evans, along with forecasting firms such as Chase Econometrics and Merrill Lynch Economics, to examine the impacts of rising military spending. Their conclusion: "Large increases in the military budget will lead to greater deficit spending." And with tax reductions exceeding cuts in social spending, the defense increases will push the Federal budget even further into the red—meaning continuing high interest rates and continuing high rates of inflation.

But that is only part of the economic cost of wasteful and excessive military spending. Economists are also warning us that our defense spending binge, by diverting scarce capital and technical expertise away from other sectors of our economy, threatens directly our efforts to revitalize our private industrial base. We are all keenly aware of the tremendous difficulties the United States has encountered in recent years in the competition with the Germans and Japanese. And the explanation for our difficulties is traceable directly to their relatively greater commitment of capital to the private sectors of their economies. Over the past decade, American fixed capital investment as a percentage of our Nation's gross national product ranged between 17 percent and 19 percent. During the same period, German fixed capital investment was between 20 percent and 26 percent of GNP and Japanese fixed capital investment was in the 31 percent to 36 percent range. Is it any wonder that modern and efficient Japanese and German firms have been able to overtake the aging American industrial system? For emphasis, it should be noted that in 1977, for every $100 of new fixed capital formation, the United States applied $46 to the military sector; in sharp contrast, in Japan only $3.70 of every $100 of new fixed capital formation was applied to the military. This concentration of Japan's capital on productive economic growth goes far to explain the current success of that country's industry, where productivity grew 6.2 percent in 1980. By contrast, aging plants and equipment in the United States led to a decrease in the average output per person in manufacturing industries of 0.5 percent.

The important point, in the context of the legislation before us, is that this economic disparity will only widen if we fail to bring defense spending under control and if we fail to recognize the overall economic impact of wasteful defense expenditures. As Economist Bruce Russett has noted:

> Every dollar in military spending results in a new loss of over 27 cents in fixed investment in civilian goods and a drop in personal consumption of 42 cents. Interest sensitive sectors like housing and durable goods, cars, appliances, and furniture are especially hard hit when excessive arms spending bids up the cost of borrowing. This loss of investment and consumption to the military decreases long-term growth opportunities, making job creation difficult and preventing any growth in real wages.

If in the process of arming America, we allow our country's economy to decay, I submit that we will have only weakened our Nation's security. Clearly the question before us today is not whether we can afford both guns and butter. We can and must afford both. But what we cannot afford is waste and extravagance—be that in domestic or in military programs. And we must recognize that our national security is as dependent upon our economic strength as it is upon the number of missiles in our nuclear arsenal. This is the real meaning of the amendment offered by the gentleman from New York: it offers us an opportunity to pare back the kind of wasteful military expenditures that have no real military utility and are so economically destructive. I commend Mr. ADDABBO for his effort and urge the adoption of his amendment.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the gentleman from Connecticut (Mr. MOFFETT).

Mr. MOFFETT. Mr. Chairman, we have heard perhaps the foremost defense authority in the Congress, the distinguished gentleman from New York, the chairman of the subcommittee, tell us that $1.9 billion that is asked for here is not needed. I think we ought to take that very seriously.

I think it is one thing if lay persons who have not been involved in defense allege it. That might have credibility. But I think it has even more credibility when the gentleman from New York (Mr. ADDABBO) says it.

Now, if I heard the gentleman correctly, what he said to us was that the Pentagon does not need this money. I think that is what he said. They absolutely do not need this money. They can move ahead on R. & D. without $1.9 billion.

Yet we appear to be moving toward a decision to simply brush aside the analysis of the distinguished subcommittee chairman and shovel this money out of the Treasury over to the Pentagon.

I earlier in the debate on this bill made reference to some social programs, and I know some of our colleagues think it is rather corny to talk about social programs when we are talking defense spending, but the fact of the matter is it was in this same room, in this Chamber, where not so long ago we took actions which have in fact cut poor kids off of meals, cut old ladies off of home health care. We are not imagining it. It has happened and I look around the Chamber and see a few people smiling. It is not corny to raise these kinds of issues. Some might say that the gentleman from Connecticut is raising them and maybe he is being overly simplistic and maybe it is somewhat simplistic. But we did it. We took the action to cut people off of needed nutrition, and we took the action to cut people off of school lunches and we did it with vigor and enthusiasm—maybe not happily, but we talked about fighting inflation when we took that action.

Everyone here knows that that is what the language was and when we closed day care centers, we said, "Well, we know there are some good day care centers that will be closed, but we have to make the tough decisions, do we not? We have to make these tough decisions."

I held hearings on the Youth Conservation Corps, ghetto kids for the first time being in touch with the world of work, self-reliance, frugality, tens of thousands of them, now off of the jobs, back out into the streets to a life of crime and drugs. We said, gee whiz, Secretary Watts says this program has got to go. We have to fight inflation.

So here we are about to shovel out $1.9 billion for a weapon that nobody seems to figure out where it goes, but as the gentleman from New York (Mr. DOWNEY) said, it is some sort of bargaining chip. It makes no sense. It makes absolutely no sense. This

weapon represents a provocative step. This very confident, self-assured President does not need MX when he goes to the negotiating table. He has a very powerful defense system now. It might need changes in certain areas, it might need improvements here or there, but the top priority ought to be to get to that table as fast as possible, not to load up with more and more new weapons before we get there.

Mr. ADDABBO. Mr. Chairman, I yield 3 minutes to the distinguished majority leader, the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Chairman, I must recommend that we reject this amendment.

During the 1970's, we did not deploy a single new intercontinental ballistic missile. During that period of time the Soviet Union deployed six new intercontinental ballistic missiles embodying new technology.

For the decade of the 1980's, the Soviet Union has four new, larger, more devastating intercontinental ballistic missiles on the drawing boards and scheduled for development. We have only one—the MX.

Theirs will be bigger than ours and will have more throw weight. They will have a greater capacity for independently targeted reentry vehicles. If we are to stay in this game and have a believable deterrent triad of land based, air carried, and sea based power, then it seems to me imperative that we at least move ahead with the development of the technology for the MX missile.

I think there is a further reason today why it is important that the House vote to authorize and appropriate moneys for the beginning of this technology.

Today, the President of the United States in a dramatic and historic gesture of peace has offered to zero out, if the Soviet Union will agree, all land based intermediate range nuclear warheaded missiles from the continent of Europe.

Let us not pull from under him the ground on which he must stand by turning down his request at this very moment for this long-range development. If we were to do so, we might reduce his credibility. Surely that is not the desire of any American citizen.

In this particular moment in the history of the negotiations throughout the world, let us give to the world by our actions today a convincing demonstration that when the President of the United States speaks for us in the councils of the world, he speaks for a nation united in purpose and not eaten apart by corrosive acids of internal political division.

For that reason, as well as the reason earlier stated, I urge a "no" vote on this amendment and a vote in support of the development of the MX missile.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield 4 minutes to the gentleman from New York (Mr. STRATTON).

Mr. STRATTON. Mr. Chairman, let me say that I second very strongly the eloquent remarks of the majority leader and I can perhaps add just two or three points to what he has said.

I am myself not very happy with the President's decision on the MX basing system. I think it would have been much better had he approved the deceptive basing system.

Senator TOWER and other outstanding experts on defense in the other body share this point of view. But I do not think we ought to be voting against the MX missile simply because we do not like the basing mode, and because the basing mode decision is up in the air.

After all, we have to remember why it is that the MX has been proposed. It has been proposed because we are seriously, gravely inferior to the Soviet Union in virtually every category of military activity. We have a hollow Army. We have a 1½-ocean Navy. We have in our land-based missile force a window of vulnerability that exists now and is likely to exist for 4 or 5 years; and if we do not do anything about the MX, it will last a lot longer than that.

□ 1840

So we have got to move now to close that gap with the Soviet Union. Why is it that the Soviets are so much ahead of us with respect to the missile factor? Because they have much bigger missiles and because their missiles have much greater yield. The SS-18 and the SS-19, for example. Those are the very missiles that President Carter tried to get the Russians to give up back in March 1977 and he did not succeed.

Once again we find, as the majority leader has just mentioned, that our major missile today, the Minuteman III is almost obsolete. It may not be quite as old as the B-52, but it certainly is as old as the TFX. The MX represents the first time we really have undertaken to build a large missile that can match what the Soviets have been deploying for years.

It is going to take at least 3 or 4 years to develop that missile. But let us get going now to develop it. And in the 4 years between now and when that new missile becomes available, we may well have been able to achieve in the meantime some kind of consensus about basing this particular missile.

The one thing I think has added a bright note here in the city of Washington in this administration was the clear indication on the part of the Reagan administration that we have finally recognized that if we are ever going to deter the Soviets, if we are ever going to get a satisfactory arms limitation or reduction agreement out of the Soviets, we have to catch up with them and match them in terms of military capability. Now if the Congress today, after having done such a remarkable job in demonstrating our determination to improve our forces just a moment ago by supporting the revival of the B-1 were to reverse itself and vote down the MX missile, it would not only undermine our President, as the gentleman from Texas (Mr. WRIGHT) has just said, but even more it would undermine the credibility of the Congress and of the U.S. Government to do what needs to be done to match the Soviet Union so that we can successfully deter them and so that we can sometime get a successful, satisfactory arms agreement.

Mr. EDWARDS of Alabama. Mr. Chairman, in closing the debate for this side, let me just remind the Members that this is an important item as far as the President is concerned, as we begin talking about START. I want to thank the majority leader, the gentleman from Texas (Mr. WRIGHT) for his statement in support of this system.

I think we have got to support our President now and that we should move forward with this. Any changing of course on this missile would be an extreme mistake at this particular time.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. MURPHY).

Mr. MURPHY. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, the security of our country is of preeminent concern, and no one in this House is more supportive of the security needs of our country than I am. We must do all that we can to protect the people of this country—to act in the best interests of this Nation.

It is tempting to support any program that is heralded as being necessary for national defense. In some quarters, that would be the popular course to take, but that is not the most judicious course. That is not what we were elected to do. Our task is to examine carefully and fully the proposals that are put before us, and to select and support those that are worthy on the basis of merit. This is what I have tried to do. And I regret that after having looked at a number of these items, I must reject two of the proposals which have been placed before us today.

Our earlier discussion today centered around the B-1 bomber. I voted in opposition to the B-1 bomber, because, in my opinion, it is a program whose time may have come—and gone. I have supported the B-1 in the past. But building it now, considering the time that will be taken to complete its

development and to begin production, may result in a plane with an extremely short effective life. It may be obsolete for the use for which it was intended shortly after it is built—a potentially life threatening vehicle for the airmen who will have to fly it. Furthermore, developing and producing the B-1 may actually impede the development of its logical successor, the Stealth bomber. I am aware of several of the problems concerning the continued use of the B-52. I agree that something must be done to solve these problems. But I am convinced that building the B-1 is not the answer.

The MX missile proposal really encompasses two very different and separable aspects that are often considered together. These are the missile itself, and the way in which the missile is to be based. The MX proposal, however, has always had only one objective: The increased security of the United States, to be accomplished specifically by making our land-based intercontinental missiles less vulnerable to Soviet attack.

The missile itself contributes very little to this objective. It is a new missile, it can carry 10 warheads to the 3 now carried by the Minuteman III, but at least initially, the accuracy and yield of MX warheads will be exactly the same as those used by the advanced Minuteman III. It is the basing scheme that will determine how vulnerable the missile will be to Soviet attack, and thus it is the basing scheme that ultimately will contribute most of the security to be gained by implementing this program. Given the ever-increasing accuracy of both U.S. and Soviet warheads, any missile placed in a fixed land-based location must be considered vulnerable when attacked by two or more warheads from the other side. Now that we have abandoned the "racetrack" designs for MX basing, and the administration has deferred its decision on the permanent basing of the MX until 1984, we have no real way to assess the gains to be made in the name of national security by accepting the MX missile proposal. We are being asked to buy, and we are not being told what we are buying. We should not vote blindly to accept a program of uncertain merit just because it is promoted in the name of national security.

A more general question that should be addressed is whether we need the MX missile program at all. An examination of the number of nuclear warheads estimated to be available to the United States and to the U.S.S.R. on land-based intercontinental and submarine-based missiles shows a remarkable parity at about 6,700 to 6,800 warheads apiece. While the numbers for both sides are projected to increase dramatically into the mid-1980's, with up to as many as 12,000 warheads available to each side, a tally shows that the balance between countries should continue to remain comparable. This does not mean, of course, that the United States and the U.S.S.R. are equal in every respect with regard to nuclear weapons. The U.S.S.R. has far more land-based intercontinental warheads, while we have far more submarine-launched warheads. And these numbers do not even include bomber strength, where the United States is superior. It may in fact be a strategic error for our country to even try to achieve parity with the Soviets in every category. As I have already noted, fixed land-based missiles are increasingly vulnerable targets. Just because the U.S.S.R. now finds itself with almost 80 percent of its available warheads in fixed land-based targets does not mean that we should elect to follow their lead. The distribution of our warheads among a number of different delivery systems was a prudent strategic decision. The resulting numerical difference in one area, especially in an area that is vulnerable to attack, should not be interpreted as weakness on our part.

The prospect of nuclear war is horrible indeed. In 1945 when Hiroshima and Nagasaki were bombed, over 100,000 people were killed and over 50 percent of the two cities were destroyed. Those bombs had a yield of 14 kilotons and 20 kilotons respectively, where 1 kiloton is the equivalent of 1,000 tons of TNT. United States and Soviet warheads now generally range from 170 kilotons to 1 megaton (1,000 kilotons). Furthermore, the Hiroshima and Nagasaki explosions were "air bursts," detonated 1,800 feet above the surface. Surface bursts on the other hand are detonated at ground level, and as a result throw a great amount of radioactive dirt and debris into the air. Large areas are affected by radioactive fallout and can remain that way for a long time; food sources are contaminated. This is exactly the kind of an explosion that is most effective against blast-hardened missile silos, and so, this is exactly the kind of an explosion that we could expect to see during a nuclear war at 1,000 sites in the United States and at over 1,500 sites in the Soviet Union.

The MX missile, as a major change in the balance of long-range nuclear weapons, may actually provide the impetus for the Soviets to embark on yet another round in the development of nuclear weapons. Where will it all end? Given that our technology can now give us 15 to 20 minutes of advanced warning, and that it is very unlikely that we can be completely surprised by a Soviet attack, when can we finally say that we have enough nuclear warheads to satisfy the needs of national security? Is a 3-to-1 ratio of warheads to probable targets sufficient—just about what we have now? How about 4 to 1? When can we reasonably refrain from making numerical increases in nuclear warheads every time the Soviets achieve parity?

I am strong in my support of a strong national defense. It is something that this country must have. But a strong national defense is based upon making wise choices in the allocation of resources and effort. There are several points in our national defense posture that need to be improved, and I will vote to improve them. I will also vote to support our general program of national defense. But I could not vote to support the development of the B-1 bomber, and I cannot vote to support the production of the MX missile. In my opinion, at this point in time, it is simply not in our Nation's best interest to do so.

Mr. ADDABBO. Mr. Chairman, I yield such time as he may consume to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Chairman, I rise in support of the amendment offered by the distinguished chairman of the subcommittee, Mr. ADDABBO, to delete funds for the MX missile. I recognize that our land-based ICBM's are facing a theoretical window of vulnerability. Of course, it is unlikely that any Soviet leader in his right mind would chance the complete destruction of his country by attacking our ICBM's. Nevertheless, it is not wise to allow one leg of our strategic deterrent Triad to become even theoretically vulnerable if the vulnerability can be eliminated without exorbitant cost and without actually adding to the risk of nuclear war.

However, not every proposal to close the window of vulnerability can meet these criteria. Certainly the previous administration's racetrack or shell game proposal for basing the MX did not. And neither does the current administration's proposal for storage of MX missiles in the old Titan silos, even if they are hardened as planned. As has already been pointed out, the MX in hardened silos would still be vulnerable and, therefore, it would become not a deterrent but a first-strike weapon. As such, it would be highly destabilizing and would add to, rather than lessen, the danger of nuclear war.

The MX in silos can be justified only as an interim step until an economically viable, less vulnerable basing mode is developed. If I were convinced that the administration were pursuing such a basing mode, I would strongly support continued funding for MX. Unfortunately, none of the basing modes which the administration is publicly on record as considering meet such criteria.

The one basing mode that would be least vulnerable and probably the least costly, the shallow underwater missile submarine (SUM) is not being consid-

ered by the administration. This busing mode would mount two or four MX missiles in their canisters attached to small 1,200 to 1,400 ton conventionally powered submarines cruising at 200-foot depths at distances of 100 to 500 miles off our Atlantic and Pacific coasts. SUM would be completely invulnerable and undetectable, involve no new technology and no scarce materials or scarce industrial capacity.

In the absence of a satisfactory basing plan, MX can, at best, be justified only as a bargaining chip, to be scrapped in exchange for scrapping of an equivalent number of Soviet missiles under some future arms reduction agreement.

I am gratified and encouraged, as I am sure we all are, by President Reagan's speech yesterday holding out the prospect of genuine arms reduction negotiations. If followed by actual negotiations, the speech may represent a genuine turning point toward ending the escalating nuclear arms race. Until an arms reduction agreement is reached, we must, of course, continue to maintain a strong nuclear deterrent. Unfortunately, the MX in the presently proposed basing mode will not be such a deterrent. For this reason, I must register my dissent by voting against it.

Moreover, I am informed that the Department of Defense has thus far refused to supply to the Appropriations Committee information as to the amount of unobligated funds it has for MX research and development leftover from prior fiscal years. The clear implication of this is that there is a sizable carryover, and that enactment of the Addabbo amendment will not halt continued research and development work on MX.

Mr. ADDABBO. Mr. Chairman, it may appear that I am not supporting the President, but I am. I have always in the past supported the funding for the MX. As I stated earlier, I have supported the MX R. & D. in previous years. As a result of that support, the Department of Defense does have money in their program to do R. & D. on the MX program; but have we learned nothing in this House as far as DOD is concerned?

You have heard the gentleman from Florida (Mr. CHAPPELL) say how far ahead the Russians are. Well, whether we can kill them 10 times and they can kill us 9 makes no difference. You are dead after the first or second shot.

Where are they going to put this multibillion-dollar missile? Are they going to put it into a silo, a silo in States other than Utah or Nevada? Are those States now sacred? Will other States now take this new missile in silos which are vulnerable now and will be more vulnerable as time passes.

But you can still build a missile and put it in these vulnerable silos. What missiles? What size? Do we know? No.

So that is why I am saying, Why provide $1.9 billion which will probably end up as unobligated balances? That unobligated balance account right now has over $31 billion in it, moneys this House has appropriated in previous years which sits there unobligated.

They have in hand also $140 billion in unexpended moneys that still will be spent for new programs, but we also know those new programs change as we go down the line and get reprogramed out before they get to that money.

So what are we saying to the Pentagon? "You have $31 billion, so take another $1.9 billion we are giving you until you decide how you are going to base it.

Now if we fund the MX, are we giving the President any bargaining chips? What is a bargaining chip? A bargaining chip is something that can be used. The Russians know what can be used and what cannot be used. An MX for which we have no basing mode cannot be used and is therefore not much of a bargaining chip.

So what I am saying is keep this $1.9 billion out of the wasteful hands of the Defense Department. As Mr. Stockman says, there is $20, $30, and possibly $40 billion worth of waste down there. Keep this $1.9 billion out of their hands until they come back to the keeper of the taxpayers' dollars, the body that should be protecting our national security, the Congress, and tell us how and when they are going to use this $1.9 billion.

Do we stop our missile programs? No, we do not stop our missile programs. We have got missiles. We have got the Titans. Yes, they are still in service, and they can be fired. We have the Minuteman III, and we have increased the funds for the Minuteman III updating.

In addition to that, we have funded in this bill a new missile, the D-5 Trident. I would point out that the D-5 need not be carried only in submarines. That same missile can easily be used on land; if only we can convince the Air Force to use something in common with another service.

I am saying, look at the D-5. This is a new missile. It is new money, a new program, a new capability, a new weapon that will enhance our national security. The Pentagon should examine the D-5 for possible use by the Air Force, and report back. Following such a report, the Congress can be asked to appropriate funds. We have read 1,000 times over about the waste that has come out of the Defense Department because of programs such as this. When they are given money which is not earmarked, and this $1.9 billion is unmarked, to do R. & D. on an MX without a basing mode, we are giving them funds they do not need. We are cutting it out, because they do have millions of dollars in this program which they are unable to disclose to our committee or to anyone else.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from New York (Mr. ADDABBO).

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. EDWARDS of Alabama. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 139, noes 264, not voting 30, as follows:

[Roll No. 317]

AYES—139

Addabbo	Gejdenson	Pease

NOT VOTING—30

Bedell	Florio	Martin (NY)
Bolling	Forsythe	Mattox
Breaux	Garcia	McCloskey
Chisholm	Goldwater	McDonald
Dixon	Grisham	Moakley
Donnelly	Hagedorn	Paul
Dorgan	Johnston	Pepper
Dornan	Jones (NC)	Pritchard
Duncan	Madigan	Reuss
Dymally	Marlenee	Rhodes

□ 1900

The Clerk announced the following pairs:

On this vote:

Mr. Reuss for, with Mr. Pepper against.

Mr. Moakley for, with Mr. Breaux against.

Mr. Dixon for, with Mr. McDonald against.

Mrs. Chisholm for, with Mr. Rhodes against.

Mr. RAILSBACK and Mr. HALL of Ohio changed their votes from "aye" to "no."

Mrs. SMITH of Nebraska changed her vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

PERSONAL EXPLANATION

Mr. CROCKETT. Mr. Chairman, on rollcall No. 316, the vote on the Addabbo amendment to strike funds for the B-1 bomber, I inadvertently voted "no." I in fact supported the Addabbo amendment.

Mr. WRIGHT. Mr. Chairman, I move to strike the last word.

I take this time, Mr. Chairman, simply to announce what we plan to do for remainder of the evening. We made very good progress. We have disposed of the two most controversial of all the amendments, in all probability.

The chairman of the subcommittee, Mr. ADDABBO, earnestly entertains the hope that we might be able to complete this bill tonight. With the cooperation on both sides of the aisle, quite probably we can do that, but we shall not go beyond 9 o'clock.

□ 1910

We had planned to try to get some general agreement—and I shall leave that in the capable hands of the gentleman from New York (Mr. ADDABBO)—on both sides of the aisle, and perhaps with enough cooperation we can finish this bill and get out of here by 9 o'clock tonight.

Whether or not we finish this bill tonight, the first order or business tomorrow will be a bipartisan House concurrent resolution commending the President of the United States on the peace initiative which he announced today, making it clear to the world that when the President of the United States, be he of whatever political party, speaks in the councils of the world for this Nation, he speaks for a united people who are not torn apart by internal divisions, and that we join him in the hope for a peaceful Europe and we—all of us, I hope—support this important initiative.

That will be our first order of business tomorrow, and, Mr. Chairman, without further ado, I shall simply implore all Members to cooperate to the maximum extent possible in the hope that we can complete this bill by 9 o'clock tonight.

AMENDMENT OFFERED BY MR. SKELTON

Mr. SKELTON. Mr. Chairman, I offer an amendment.

The Clerk proceeded to read the amendment.

Mr. SKELTON (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

Mr. EDWARDS of Alabama. Mr. Chairman, reserving the right to object, this is only a one-line amendment. I do not know why we should not have it read.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. SKELTON: Title V, page 27, line 1, strike the figure "$8,501,210,000" and insert in lieu thereof the figure "$8,505,210,000".

Mr. SKELTON. Mr. Chairman, this is an amendment that adds $4 million to the research and development for the Air Force for the over-the-horizon backscatter radar system.

I think we might be able to proceed more expeditiously if I engage the distinguished subcommittee chairman in a colloquy at this point. I ask the gentleman from New York (Mr. ADDABBO) if he will speak with me about this matter.

Mr. Chairman, as the gentleman knows, I had an earlier amendment which I did not offer for some additional $19 million for the continued upgrading of the DEW line system and the Pine Tree line system, which is, as the Members know, the early warning system against any enemy aircraft flying from the North Pole area.

This particular amendment adds $4 million to the over-the-horizon backscatter, which is a sophisticated type of radar system that is being tested at the present time in the Northeast, in the Northwest, and also in the North against possible enemy aircraft encroachments.

Now, it is my understanding that both of these items are included in the Senate version of this bill; is that not correct?

Mr. ADDABBO. Mr. Chairman, if the gentleman will yield, that is my understanding at the present time.

Mr. SKELTON. Mr. Chairman, it is my hope that they would be included in the final version of this bill, and I have also received a report on this matter. However, there are conflicting reports, but one is that this amount, this $4 million which I seek now under this amendment, was actually included in the supplemental of 1981.

I would appreciate the gentleman's expanding on this, because I do not want the Air Force to come up short when it comes to air defense.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. SKELTON. I yield to the subcommittee chairman.

Mr. ADDABBO. Mr. Chairman, I thank the gentleman for yielding.

In our 1981 supplemental, $4 million was included for this program, and we

believe that the money is still available.

If the gentleman will withdraw his amendment, I can assure him that this program is supported by the committee, and that if it is included in the Senate version, and is not a duplication, we will make sure the money is restored.

Mr. SKELTON. Mr. Chairman, with the gentleman's agreement that this will continue on, and that, should it not be a duplication, he will support this particular item of $4 million in the Senate version, with that understanding and knowing of the great importance of our air defense system, I will happily withdraw the amendment.

Mr. Chairman, I ask unanimous consent that I may be permitted to withdraw the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk continued the reading of the bill.

Mr. ADDABBO (during the reading). Mr. Chairman, I ask unanimous consent that the balance of the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. The Chair will inquire, are there any points of order against any portion of the bill?

POINTS OF ORDER

Mr. BONIOR of Michigan. Mr. Chairman, I make a point of order against section 784 and against 785, which legislate under an appropriation bill and violate clause 2 of rule XXI.

The portion of the bill to which the points of order relate is as follows:

SEC. 784. None of the funds provided in this Act may be obligated or expended to transfer the Defense Departments' Schools to the Department of Education, or to fund the activities of the Advisory Council on Dependents' Education until legislative proposals to repeal such transfer of the dependents' schools are considered and acted upon by Congress.

SEC. 785. Notwithstanding the provisions of section 505(c) of the Omnibus Budget Reconciliation Act of 1981, funds made available to the Department of Defense by this Act for payments and arrangements authorized by section 505(c) shall be administered by the Secretary of Defense who shall be responsible for the conduct of programs with such funds and who shall not delegate such responsibility outside of the Department of Defense.

The CHAIRMAN. Does the gentleman from New York (Mr. ADDABBO) desire to be heard on the points of order?

Mr. ADDABBO. Mr. Chairman, we will concede both points of order.

The CHAIRMAN. The points of order are conceded and sustained.

The Chair will inquire, are there any other points of order against the legislation?

If not, the Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

AMENDMENT OFFERED BY MRS. SCHROEDER

Mrs. SCHROEDER. Mr. Chairman, I offer an amendment.

The portion of the bill to which the amendment relates is as follows:

SEC. 702. No part of any appropriation contained in this Act shall be used for publicity or propaganda purposes not authorized by the Congress.

The Clerk read as follows:

Amendment offered by Mrs. SCHROEDER: Page 29, after line 4, insert the following new section:

SEC. 702. Of the total amount appropriated by this Act, not more than 95 percent may be obligated or expended.

Renumber the succeeding sections accordingly.

Mrs. SCHROEDER. Mr. Chairman, I am offering an amendment which might be known as the Michel-Reagan amendment. The amendment would reduce this bill by 5 percent across the board. In doing so, it follows the concept developed by the distinguished minority leader on Monday during our consideration of the continuing resolution. At that time, the minority leader offered a motion to recommit with an instruction to chop 5 percent off of virtually every budget account. He lost, in part, because he excluded the defense budget and, thereby, lost the support of many of us who want to cut the Federal budget but want to do it in a fair way.

Nevertheless, I believe that Federal spending has to be cut this year. The Federal deficit for fiscal year 1982 may well approach $80 billion, the highest level in American history. We must stop the Federal Government from crowding out the credit market and driving up interest rates in this way. The way to get the Government out of the credit market is to reduce the deficit. The way to reduce the deficit is to cut unnecessary spending. That is what my amendment will do.

My amendment will cut something less than $10 billion out of the budget and out of the deficit. I believe that every penny of this reduction can be achieved through the elimination of waste, fraud, and abuse in the Department of Defense. I will not repeat all the evidence I presented during the debate on the Defense authorization bill. As you may remember, I offered an amendment at that time to cut $8 billion of waste, fraud, and abuse out of the Defense authorization. At that time, I presented stacks of GAO reports and Republican study conference analysis showing over $16 billion of waste which could be eliminated promptly. Since then, the evidence of waste has grown.

My amendment to this bill is actually more modest than the one I offered to the Defense authorization bill. At that time, I proposed cutting about 6 percent from the defense authorization. Because of the excellent work done by the Defense Appropriations Subcommittee, I have reduced my cut to 5 percent of the total.

I must point out that, with the adoption of my amendment, this bill will still be 9 percent above the level of fiscal year 1981 defense spending. Real growth will be possible if the Defense Department aggressively eliminates fraud and waste.

Mr. Chairman, I urge my fellow budget cutters in this body to join me in eliminating waste, fraud, and abuse in the Department of Defense.

□ 1920

AMENDMENT OFFERED BY MR. MOFFETT TO THE AMENDMENT OFFERED BY MRS. SCHROEDER

Mr. MOFFETT. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. MOFFETT to the amendment offered by Mrs. SCHROEDER: strike all after the word "Act" and insert: "Not more than 98 percent of the total amount appropriated by this Act for procurement under title IV, and not more than 98 percent of the total amount appropriated by this act for research, development, test, and evaluation under title V, may be obligated or expended. None of the reduction required by the preceding sentence in funds available for procurement may be taken from amounts appropriated for procurement of spare parts."

Mr. MOFFETT. Mr. Chairman, although I think the amendment offered by the gentlewoman from Colorado is an appropriate amendment, I think it is much more likely that a 2-percent cut across the board would be accepted by this body and that is precisely what this amendment seeks to do.

I have been reading and rereading the remarks of the distinguished minority leader, Mr. MICHEL, during the time that he was arguing for his 5-percent across-the-board cut. He made some very, very important remarks, it seems to me. He indicated he did not like the idea of doing it in a recommittal motion and he felt he had to do it, had to use that avenue. But if you go over his remarks and analyze what he said with regard to the deficit and the relationship of spending to the deficit, I think it is obvious that we are here with a massive defense budget, the highest in the history, and we can afford to cut back just 2 percent on it.

I will bet there is not a Member in this body who has not sat with a CEO, a chief executive officer, back home or elsewhere who has not said "Gee, I do not know if all of this defense spending is so wise." We all know that many, many businessmen feel that defense spending will compete with productive investment for scarce capital,

for technicians, for engineers, et cetera, driving up the cost of consumer goods and leading possibly to cost overruns.

I think we can afford a 2-percent cut, Mr. Chairman. I think it should be deeper, but I do not think it would be approved.

I urge support for this amendment.

Mr. VENTO. Mr. Chairman, will the gentleman yield?

Mr. MOFFETT. I yield to the gentleman from Minnesota.

Mr. VENTO. Mr. Chairman, I have serious problems with the committee form of H.R. 4495. However, after reviewing the bill, it is apparent that, as currently drafted, I must oppose this measure. H.R. 4495, despite the good faith efforts of the committee, represents too much a response to the Pentagon whims and desires, rather than a critical analysis of the defense needs of our country.

In the procurement section of this bill, one sees Congress acceding to the self-vested interests of particular Pentagon pressure groups rather than weeding our inefficient costly programs.

Since the beginning of the Carter buildup in our defense strength, a more critical approach is mandated. Today, our extravagant defense purchasing policies detract from our efforts to minimize inflation and to balance the budget. It is essential that we bring defense waste under congressional control. This bill does not accomplish that goal. We still find in H.R. 4495 vestiges of attitudes protective of programs which we can no longer afford. We must judge programs on the criteria of national security and efficient purchase rates. We cannot tolerate those programs which bleed money away from our economic well-being.

Unfortunately, our largest weapons procurement program, the F/A-18, is one such program draining our limited funds. If the F/A-18 contributed to our national security, this would be one thing. Unfortunately, the F/A-18 does not make the requisite contribution to justify its soaring costs. The F/A-18 was supposed to be an affordable aircraft. A multifunctional fighter and attack capacity in which the Navy sacrificed quality in favor of quantity. The F/A-18 still does sacrifice quality. Its lack of quality, its lack of sophistication does show in some marginal advantages in operational availability. These, however, are far overshadowed by its sheer lack of combat capability, and its immense drain on the public purse. The advantages of Marine V/STOL are no longer too costly compared to the F/A-18. The need to counter the Backfire bomber can no longer be put aside in favor of cost. The Navy now recognizes its need for two F-14 squadrons per carrier. What is left for the F/A-18 is to absorb $35 billion in providing the Navy light attack and Marine fighter programs. The Defense Resources Board states that "the additional capability offered by the F/A-18 is not a requirement for Marine TACAIR." As far as light attack is concerned, our current A-7E force has a lifespan extending to the year 2000.

The chairman of the Senate Appropriations Committee has pointed out that the continued production of the A-7E would save a billion dollars a year in outlays over each of the next 3 years and many analysts even question the continued viability of a light attack role that far into the future.

The Navy itself knows that the real F/A-18 program is no longer 1,366 aircraft. The unit cost of the F/A-18 is far beyond what they admit. The F/A-18 is, in fact, maintained as it is, simply to avoid congressional criticism of the soaring unit costs inevitable with the small program that is left.

While I will not offer an amendment to this bill to delete funding today for this wasteful program, I believe, however, that this will be our inevitable choice. I only hope that this decision is made before too much more money is wasted.

Reference was made yesterday to a statement I gave on the House floor pointing out the latest accident involving the F/A-18. The information which I received from the base of the F/A-18 and from the Office of Legislative Affairs was that no blame was to be attached to the pilot of the A-4 chase plane. This is what I would expect. The pilot not only has his wings of gold as a naval aviator, he is also a highly skilled product of the naval test pilot's school.

Even before an investigation of the accident is completed, the defenders of the F/A-18 are claiming that their aircraft does not make mistakes, pilots do. This is most regrettable. The pilot of the aircraft has a fine record but in the rush to protect the F/A-18, the presumption of pilot innocence is cast aside and the pilot's reputation is besmirched.

Mr. Chairman, despite this bill's progress in reining in unbridled defense spending, it does not go far enough. Congress must reassert tight control over the Department of Defense. I urge the defeat of H.R. 4495 and the adoption of a bill to accomplish that goal.

Mr. MOFFETT. I might add that I think it is important to remind ourselves that the Carter figure was somewhere around $154 billion. This is not just a minor addition to that Carter figure. This is a massive addition in the bill and cutting back 2 percent, it seems to me, will send a signal to the American people that we think that the Pentagon can find somewhere to cut back 2 percent on what they expected to get out of this bill.

I yield back the balance of my time.

AMENDMENT OFFERED BY MRS. ROUKEMA AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MRS. SCHROEDER

Mrs. ROUKEMA. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mrs. ROUKEMA as a substitute for the amendment offered by Mrs. SCHROEDER: Page 29, after line 4, insert the following new section:

SEC. . Not more than 98 percent of the total amount appropriated by this Act for procurement under title IV, and not more than 98 percent of the total amount appropriated by this Act for research, development, test, and evaluation under title V, may be obligated or expended. None of the reduction required by the preceding sentence in funds available for procurement may be taken from amounts appropriated for procurement of spare parts, repair parts, or ammunition.

Renumber the succeeding sections accordingly.

Mrs. ROUKEMA. Mr. Chairman, I am today offering an amendment that would require a 2-percent across-the-board reduction in defense spending for titles IV and V, which authorize expenditures for procurement and research and development, respectively. This will save an additional $1.65 billion in budget authority for fiscal year 1982.

The amendment is selective and limited. For example, it would not cut expenditures for spare parts, repair parts, and ammunition. It would not cut spending for maintenance, nor would it cut spending for operation of military bases or operation of existing weaponry. It would not cut military pay, military personnel, military training, flight or steaming hours. In short, it does not affect our readiness capability. These categories fall under titles that would not be affected by the amendment or they have been specifically exempted.

The amendment is very small and modest and realistic. It is hard to understand suggestions that such a modest reduction could be construed as undermining our national defense. In a very large defense budget—$196.6 billion—this is a very small $1.65 billion reduction, and it is aimed entirely at improving efficiency and cost-effectiveness.

Mr. Chairman, to make the case it is useful to look at some numbers. The committee bill is actually $36.8 billion—or 23 percent—higher than the amount originally appropriated in fiscal year 1981. We must not overlook the fact that we have already added $11.6 billion in a supplemental appropriation in June. This brought the defense budget authority up from $160 billion to $171.6 billion for fiscal year 1981. The committee recommends an additional $25 billion above that, for a total of $196.6 billion. Clearly, I am

suggesting a very modest decrease after a very large 1-year increase.

Many have argued that defense reductions have already occurred since the committee bill is $4.2 billion below the $200.8 billion in authority requested by the President. The committee is to be commended for its careful and detailed attention, but its recommendations are comparatively small for this—the largest sum ever included in one bill for military purposes in the history of the United States. And this in a year when we have required reductions of up to 30 percent in domestic programs.

There are three compelling reasons for mandating additional reductions in defense spending. The first reason is the reality of the current budget situation. We have seen new deficit projections for fiscal year 1982 ranging from $60 to $100 billion. Clearly, the defense budget, which has been relatively unscathed during the budgetary process, must be held to the same accountability and management standards we are requiring from other departments.

Second, we have seen continuing evidence of excessive and wasteful spending in the Defense Department. In addition to countless GAO reports, there is evidence of major cost overruns on weapons systems that is contained in the 1981 Selected Acquisition Report from DOD. In 1972, the F-18 was supposed to cost $4.8 billion; today it is estimated to cost $18.6 billion. The cost for nine Trident submarines and missiles has skyrocketed from $12.4 billion in 1974 to $30.3 billion today.

Equally important should be the continuing concern about the inflationary impact of a precipitous, 1-year rise in defense spending as now proposed. The increase will severely tax our industrial capacity at the same time we are trying to increase industrial productivity, compete with foreign imports, and create new jobs through a new economic program.

Given these economic realities, let me emphasize what my amendment is intended to do. It is not our position, in this amendment, to specifically dictate where additional cuts will occur in the defense budget. Rather, we are seeking to force economies and improved cost-effectiveness in those areas where it is most needed, and we are seeking to give Defense Department officials—those who work in the field with these programs and numbers every day—the chance to use their own best judgment in determining priorities for additional economies.

Second, we are dealing with those titles which have shown the greatest potential for wasteful spending. Expenditures for procurement are up 23 percent in real dollars over last year's budget, and funds for research and development are up 9 percent in real dollars over last year.

What we are trying to do with this amendment, Mr. Chairman, is bring the Defense Department into line with budget realities. All my amendment does is require a stronger effort by the Pentagon to reduce waste and mismanagement—this is no less than we are currently asking from the rest of the Federal Government. This can in no way be construed as weakening our defense posture or doing any damage to major weapons systems or affecting our readiness. I urge my colleagues to support this amendment as a step towards greater accountability and sound management within the Defense Department.

Mr. ADDABBO. Mr. Chairman, will the gentlewoman yield?

Mrs. ROUKEMA. I yield to the gentleman from New York.

Mr. ADDABBO. I thank the gentlewoman for yielding.

I fully support this amendment. I had offered a similar amendment in the subcommittee and it failed.

Our colleague, Mr. MICHEL said that he was not reducing the defense bill in the continuing resolution because we had already made reductions, we have now added back most of those reductions today, and the fact that we have not cut the B-1 or the MX.

□ 1930

Well, I can point out that just in procurement alone there is a 25-percent increase from 1981 to 1982, in R. & D. there is almost $3 billion increase, and they can easily afford the small decrease in the amendment.

The Appropriations Committee's surveys and investigations staff recently issued a report detailing and documenting waste, fraud, and abuse in the procurement programs of the Department of Defense. There is plenty of room for savings which could accommodate at least a 2-percent reduction.

The CHAIRMAN. The time of the gentlewoman from New Jersey (Mrs. ROUKEMA) has expired.

(On the request of Mr. MOFFETT and by unanimous consent, Mrs. ROUKEMA was allowed to proceed for 1 additional minute.)

Mr. MOFFETT. Mr. Chairman, will the gentlewoman yield?

Mrs. ROUKEMA. I yield to the gentleman from Connecticut.

Mr. MOFFETT. The gentlewoman was a strong supporter of something called Gramm-Latta which, as I recall, if I am not mistaken, locked us in at the time to $200 billion.

Is the gentlewoman saying now that she feels differently about Gramm-Latta and thinks we should back off that?

Mrs. ROUKEMA. I am saying that, under the requirements of the appropriations process and the requirements of the economic realities now, this is the time that we make those spending decisions. And on this particular bill, I do agree that 2 percent is a modest reduction to require.

Mr. MOFFETT. I thank the gentlewoman for her flexibility.

Mr. GREEN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the substitute offered by the gentlewoman from New Jersey.

I had inserted in the CONGRESSIONAL RECORD an amendment which would have done the same thing at 3 percent. However, I am a realist, and I am happy to support the substitute.

I think this amendment is different from the usual across-the-board amendment in important respects. We are not applying a meat ax to the Defense Department with this kind of proposal. We are not saying that the money can come from anywhere or any program but limiting it to procurement and research and development.

We are ensuring that we preserve the readiness of our conventional forces, and that is why the exemption for spare parts, repair parts and ammunition occurs. It does not affect the number of people we can have under arms. It is targeted at procurement and R. & D. because it is those areas of the defense budget where we have seen the greatest overruns. In the past, at the same time that we have stinted on adequate pay for our military, at the same time we have stinted on training and readiness we have been willing to pour untold sums into those very badly managed defense R. & D. and procurement programs.

And let no one here think that those two issues are unrelated, because if you really want strong defense, one of the things you want is for the United States to have the capacity to project conventional force anywhere in the world that our strategic interests are threatened. There is no question, as one looks at the history of the defense budgets that have been passed by recent Congresses, that we have been denying ourselves that capacity because we are continually overspending on the glamorous procurement programs and not providing the nuts and bolts that we need so that the military can function.

We have our forces in Europe keeping their planes and tanks going by cannibalizing parts. This amendment protects us against that. This amendment is designed to see that we protect our readiness but says, "Let us go after the waste and the abuse that we all know has occurred in these very glamorous procurement programs."

Everyone loves to come down here in the well of the House and display a model of some airplane or some new missile and tell us how wonderful it is and how it is going to solve all of our

defense problems. It is not very impressive to come down here and display a bullet, and there is no way you can display an extra man or an extra 10,000 or 100,000 men. But those are the kinds of things we have been denying ourselves in order to display those fancy rockets and those fancy airplanes. I think it is time we got back to the basics of our defense. I think this amendment protects the effort to achieve increased readiness in our Armed Forces while acknowledging that in the procurement and R. & D. functions the defense budget never gets the kind of scrutiny from OMB that the rest of the budget does. We all know that that certainly has been true this year.

I urge my colleagues to support the substitute offered by the gentlewoman from New Jersey.

Mr. DICKINSON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman and ladies and gentlemen of the committee, it is so easy to come down and say, "Hey, this is such a big piece of pie, nobody is going to feel 2 percent less."

Following the gentleman from New York who just spoke, he says, "Hey, we got a big thing here, and we are going to get their attention. Everybody knows that OMB does not take an adequate look at research and development or procurement."

Let me tell you something, ladies and gentlemen of this committee. I am the ranking minority member on the Armed Services Authorization Committee—not appropriations—and I speak from that position. We heard over 100 witnesses. We had over 50 hearings. We met day after day. We looked at over 3,000 projects. The books that we go through, if you stood them on this desk, would be 3-feet high. They are looked at meticulously, scrupulously. We cut over a billion and a half out of the request that came from this administration, out of R. & D. We did not do it with a meat-ax approach. We did it as surgically as possible. Our staff, if you question them, they know every project, every weapon system. When we go to conference with the other body, we do pretty well because we do our homework and we know where the fat is and we know where the lean is.

We have just finished a very arduous session with the other body in conference, and we just approved the conference report yesterday. And to come in here and blithely say, "Well, now, after all of that, they do not know what they are doing, let us take another 2 percent," I am telling you it would be counterproductive, after what we do and being as conscientious as we are, to try to surgically cut those things that we think we can afford—and we did more than a billion dollars worth of cuts—to come in and say, "That is not enough, let us just take a meat-ax approach and cut 2 percent more."

□ 1940

I think it is irresponsible and it is also an affront to the committees that have to deal with this to say that all of your time is not worth anything, that you do not really look at it, we are just going to take another round figure, 5 percent, 2 percent, 10 percent, it does not make any difference.

So I think that we do a disservice to those ladies and gentlemen on the various committees that sit day after day in what quite obviously is a very boring and tedious exercise, asking questions, working with staff, examining line items, going back and trying to adjust figures.

Then we go with the other body, we have to justify our position, their staff and then the other Members of the other body have done the same thing.

Now if we had add-ons, if we added on to the budget that we had presented, one could say, "OK, they did not look at it good enough." As a matter of fact, they were looking at it with a parochial interest, some of them, and there are add-ons here so they put in a little fat.

We did not add on. We were the only committee of the armed services that came out a billion dollars under the request.

Then to blithely trip in here and say, "Hey, it sounds good, they can certainly stand another 2 percent."

We cannot stand another 2 percent. If we get into that mentality, the Members are going to tell us that we do not do our work and whatever we do we are going to cut it some more, we are just going to start a reverse trend so that the committees will then start saying, "Hey, we know they are going to cut us so we might as well add some fat back in, to absorb the cut that they gave us, the across-the-board cut."

I for one resent it. We have a hard working committee, a knowledgeable committee. We do the best we can. And to say that after a billion and a half dollar reduction over what was requested was not enough, we are going to have another 2 percent.

The CHAIRMAN. The time of the gentleman from Alabama (Mr. DICKINSON) has expired.

(At the request of Mr. STRATTON and by unanimous consent. Mr. DICKINSON was allowed to proceed for 2 additional minutes.)

Mr. STRATTON. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from New York.

Mr. STRATTON. I want to congratulate the gentleman from Alabama on what he said and verify what he had said. Not only did we bring in a bill that was under the budget initially, but as the gentleman knows, we spent something like 2 or 3 tedious weeks working with the Senate conferees to adapt the $2.1 billion that the President wanted to reduce the budget. We took it out of very valuable programs, many of them affecting the Guard and the Reserves and I, too, join in resenting this kind of last minute effort to try to cut out what we have very patiently tailored to meet the needs of our national defense forces.

Mr. DICKINSON. I know that the gentlewoman is sincere and I know the gentlewoman is well meaning, but I also know that the gentlewoman is uninformed when she starts talking about we do not know what we are doing in the research and development subcommittee.

Mrs. ROUKEMA. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentlewoman from New Jersey.

Mrs. ROUKEMA. Mr. Chairman, if I have indicated in any way that I think the gentleman was uninformed or not very complete in his work, I would suggest to the gentleman that he read the record. I have in fact commended the committee for its attention to detail.

However, I think we must stick to a few facts. The facts are that other departments in the domestic area have been subjected to careful scrutiny and required to absorb up to 30-percent reductions in this given year, whereas the Defense Department is having a 23-percent increase.

Mr. DICKINSON. This is not in research and development.

Mrs. ROUKEMA. No; it is a total 23 percent.

Mr. DICKINSON. Do not blame us for that.

Mrs. ROUKEMA. It is a 9-percent real increase after inflation, and in procurement it is a 23-percent increase after inflation.

Mr. DICKINSON. Would the gentlewoman tell me how much increase there is in research and development after inflation?

Mrs. ROUKEMA. Nine percent, according to the figures we have.

Mrs. HOLT. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentlewoman from Maryland.

The CHAIRMAN. The time of the gentleman from Alabama (Mr. DICKINSON) has again expired.

(At the request of Mr. LEVITAS and by unanimous consent, Mr. DICKINSON was allowed to proceed for 3 additional minutes.)

Mrs. HOLT. Is it not true that over the past 10 years that I have served on the committee, that the defense portion of the budget has not kept pace with inflation, it has not increased? This is why we are in the desperate

situation that we are in. We are behind with O. & M., in our personnel area, spare parts, flight time, all of the things that we have to do, research and development, procurement, all of those things, while the other side of the budget has gone up 200, 300 percent every year?

Mr. DICKINSON. The gentlewoman is exactly right. When we talk about 5 percent real growth, 10 percent real growth, we mean that much over inflation, and we have not done that yet.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from Georgia.

Mr. LEVITAS. I thank the gentleman for yielding.

I want to say in all sincerity I have the greatest respect for the gentleman's knowledge and expertise on this subject and that of his committee and the Appropriations Committee, but I do not believe that really is the issue here.

As the gentleman has said, they have studied it carefully, just as other appropriations committees have studied their work and other authorizing committees have studied. I have voted for across-the-board cuts offered by the gentleman from Ohio (Mr. MILLER). I voted for the 5-percent across-the-board cut offered by the gentleman from Illinois (Mr. MICHEL) the other day. I believe that there is not a department in the Government of the United States that is not wasting money, including the Pentagon. This is one way to place a check on that.

Let me read some figures to the gentleman. According to the conference report of the defense authorization, the original budget request was $20,322,471,000. The House, as the gentleman points out, came in under that not as much as he had indicated, but under that at $20,189,000,000. But the conference report, the conference report, according to this document is $20,405,000,000 over the request and over the House amount that was originally approved.

It seems to me there are other ways in which we can control wasteful expenditures. Just as any other department of Government, this is one which could stand an across-the-board cut.

Mr. DICKINSON. Let me reply to the gentleman from Georgia by saying I do not doubt, I admit readily that we spend more on defense than we need to. We spend much more on defense than we need to. And why is this? Because we are required to, not because of the Department of Defense, we are required to by OMB, and the way we do business up here on the Hill. Why do I say that? How can this possibly be so?

The CHAIRMAN. The time of the gentleman from Alabama (Mr. DICKINSON) has again expired.

(At the request of Mr. LEVITAS and by unanimous consent, Mr. DICKINSON was allowed to proceed for 3 additional minutes.)

Mr. DICKINSON. When the budget comes over, and we are given the budget for the coming year, and we are given the project costs for weapon systems, included in that is a figure for inflation.

Now, how do we get this figure? DOD gives this to us as the cost of a weapon system. How do we get this? OMB directs DOD to use this figure in saying what a weapon system will cost. So when they come to us, on the authorizing committee, or come to the gentleman over here on the appropriating committee, this is what is proposed as the weapon system cost based on inflation.

So when we get halfway through or three-quarters of the way through the year we find out we are out of money. Why are we out of money? Because we underestimated inflation. They have said to us a 5.5-percent factor when in fact it is 10 percent. So we are out of money. What do we do? We stretch out the production rate. We slow down production. The F-15 aircraft alone costs $1 million per plane more because of the stretchout of production than it would have if we had bought it at the same economical rate it was proposed to be bought at.

So this is one among many.

There is not one major weapon system in the entire inventory of the United States that is being bought at a most economical rate—not one.

□ 1950

This is admitted by the Secretary of Defense, by anyone you want to ask, Bill Perry, who is Assistant Secretary of Defense for R. & D.

So, yes, there is waste, but it is not all on the part of the military. We mandate it over here in the way we do business. We do not give them enough money. OMB requires that they use false inflation factors, so this is just a part of the problem.

Now, I do not say there is not waste; but getting back around to the problem at hand, talking about research and development, the waste is not there. We do not have enough money; so when we find a program is not justified, we eliminate it up to about $1.5 billion.

Mr. GREEN. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from New York.

Mr. GREEN. I thank the gentleman for yielding.

I think there is a great deal of validity in his explanation of why we get some of these cost overruns as the years go on in these programs; but I would like to suggest that the way to deal with that problem is by not biting off more than we know we are going to be able to chew.

I would say to the gentleman that the history of these programs is that every program that looks good gets started, and we put in the initial money. Then those are sunk costs, and we feel the need to go along with each of the programs that we have started. Then suddenly we find they are costing more than we can afford in any one year and, instead of making choices, we slow them all down and that makes them more expensive, we get all these overruns, and we only get an inadequate number of units per system. If we had made the hard choices earlier on, we might have fewer systems, but those we had would prove less expensive and in adequate numbers.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. EDWARDS of Alabama. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to all the amendments.

This is not Alabama night here, but I feel this is the wrong way to go.

Let me just make a few pertinent points. I will try not to use the 5 minutes, although I may.

The President, in his September change in his own budget, cut some $7½ billion out of his own budget. At the same time he proposed some cuts in other parts of this Government's operations.

We have dealt with that as we put our bill together. We have on top of that $7½ billion cut another $4 billion and so in that context we are here $11 billion under the President's March budget.

Taking the President's September budget at its face value, we are here with a bill that is about $4 billion under that. That is 2 percent across the board, if you will, in dollars from the whole defense budget of $200.8 billion. We have made some changes here on the floor today, but basically we came to you with a bill calling for a $1.2 billion cut in military personnel.

We came with a $1.3 billion cut in O. & M.

We came here with a procurement cut, but some of that got added back in.

We came here with a research and development cut of $1 billion.

I think the committee has done a good day's work. If we talk in terms of a 5-percent cut across the board, which I have not even heard anybody argue about seriously, but that is talking about some $10 billion further cut out of this bill. Where is it going to come from? What are you going to cut out? Are you going to say to the Pentagon that here is a $10 billion cut,

start making cuts. Is that the way to run the Pentagon?

I agree with the gentleman from Alabama (Mr. DICKINSON). His committee has worked and worked on this bill.

I will back up a step further. The Pentagon and the OMB have worked on this bill for a year and the Committee on Armed Services has worked on this bill for well nigh a year. We are here in November having worked on this bill pretty much a whole year.

I want you to come down sometime in that little dungeon we work in on the floor below and spend all day long with us pouring over these figures and listening to witnesses, interrogating people and marking up for weeks at a time, and you will understand why some of us are a little upset about across-the-board cuts of this type.

The only reason that this is being offered here today is that in the whole mandate of the President when he was elected is that there is a need to increase defense. He has tried to do that and we have tried to work on that proposal and we have come up with a $4 billion cut.

Now, what would a 2-percent cut do? In round numbers probably $1.2 billion or $1.3 billion out of procurement. Where are you going to cut it? Have you got any ideas? Sure, we voted on some ideas and those votes went one way or another.

What are you going to say to the Pentagon? Do you want to cut some $400 million over and above the billion we cut out of R. & D.?

We were specific, as the gentleman from Alabama (Mr. DICKINSON) said. We used a scalpel. We did not use an ax and we did make some cuts and we caught the dickens from a lot of people for some of the cuts that we made.

Mrs. ROUKEMA. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. Sure, I yield.

Mrs. ROUKEMA. On that particular point as to where you are going to cut, I have been very careful to avoid making up a laundry list of either somebody's pet peeves or somebody's pet projects. I have deliberately avoided that in this whole budget process on the Defense Department appropriation; but I must say that I think the people at the Pentagon are the best people, particularly those for whom we have the greatest respect in terms of their management skills and their expertise, it is those people who are the only ones that can be authorized to determine the priorities within this bill.

I find it, incredible, to think that our very capable Secretary of Defense in a budget of this size is not able to achieve moderate savings, particularly when we have asked those department heads in the domestic areas to absorb enormous cuts.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

(By unanimous consent, Mr. EDWARDS of Alabama was allowed to proceed for 2 additional minutes.)

Mr. EDWARDS of Alabama. The gentlewoman misses the point, I think. The President sends his budget over here for us to deal with and if we just are going to simply send the budget back to him or to the Secretary of Defense or to some department head to deal with, we have not done our job. Why should we need the Congress if we are not going to do anything except to bounce it back to him with a total figure cut and say work with all these programs.

I think there is a misconception that somehow all these thousands and thousands of items that we deal with are somebody's projects. These are very serious projects that we deal with. We pore over them for days and weeks and months. I think it would be a terrible mistake in view of the action of the subcommittee and in view of the action of the authorizing committee that we would take any of these across the board cuts in this bill.

Mr. MITCHELL of New York. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment.

I would like to associate myself with the remarks of both gentlemen from Alabama.

I think we give excellent perspective to the overall defense picture when we point out that this budget is $4 billion under the second Presidential request.

I am sympathetic with those who offer the amendments in an effort to cut defense spending to help social programs, but I would point out that what we spend on defense is really not relevant at all to social programs. We have been spending over the past few years far less for defense until very recently.

In 1955, Mr. Chairman, we spent about 55 percent of our budget on defense.

In 1965 it dropped to 45 percent.

In 1975 it was down to 25 percent.

In 1978 it was down to 22 percent.

Finally this year we raised it again about 25 percent.

Most all of the money we have not been spending on defense we have been spending for social programs. Maybe it is not enough, but it is a very, very large contribution to these social programs. The only relevant comparison for defense spending is what your potential adversary is spending, what they are doing.

For the last 8 years the Soviets have been outspending us by about $40 billion a year and it really shows.

Let me just go over some of the categories that are important in winning a war to show how far behind we are the Soviet Union. Following is a list of comparisons:

	U.S.S.R.	U.S.
Military investment, includes procurement, R.D.T. & E. military construction	1.85	1.0
ICBM's	1.3	1.0
SLBM's	1.5	1.0
ICBM reentry vehicles	2.0	1.0
ICBM—MIRV's warheads	2.0	1.0
Throw weight	2.8	1.0
Equivalent megatonnage	1.4	1.0
Tanks, heavy and medium	4.6	1.0
Personnel carriers	4.2	1.0
Artillery	5.0	1.0
Bombers, strategic	1.0	1.8
Planes other than strategic, land oriented (no Navy)	1.7	1.0
Attack submarines	4.0	1.0
Major combatant ships	1.4	1.0
Helicopters gunships	1.0	1.1
Strategic spending	3.0	1.0
Research, development, test, and evaluation	2.0	1.0
CIVIL DEFENSE COMPARISONS		
Money spent on civil defense	10.0	1.0
People involved in civil defense	11.0	1.0
Nuclear war casualties	1.0	10.0
NATO FORCE COMPARISONS ALSO FAVOR THE SOVIETS QUANTITATIVELY		
Manpower	1.2	1.0
Airpower	2.0	1.0
Tanks	2.5	1.0
Artillery	2.0	1.0

Mr. Chairman, I have submitted the entire list for the record.

I would like to point out that in 25 categories, we are behind in 23. Now, I admit that sheer quantification does not determine who is going to win our war. Our allies are more loyal. We are a wealthier Nation. Our technology is superior, but they are ahead of us in 23 of 25 categories and we used to be ahead in most categories before this House and the other body kept cutting defense budgets to give more money for social programs.

Mr. Chairman, I think that the trend is alarming. We have got to do something about spending more on defense and not siphoning it off to spend on social programs worthy as they may be. These amendments will just contribute to that trend that has done so much to lessen our position in the world as far as defense is concerned.

I would urge my colleagues to vote against the amendments.

□ 2000

Mr. ADDABBO. Mr. Chairman, I rise to the possibility of asking unanimous consent to limit debate.

I would ask unanimous consent that all debate on this amendment and all amendments thereto end in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. WEISS. Mr. Chairman, reserving the right to object, recognizing the diligence and the hard work the gentleman has put into this, and his reason for wanting to move this thing expeditiously, there are a number of Members who are not privileged to be members of either the gentleman's committee or the Armed Services

Committee who have had some difficulty in receiving time.

So I wonder if we could have assurance that those of us who would like recognition, who do not have the privilege of serving on those committees, could be recognized first for our 5-minute period, and then perhaps we could move to curtail debate.

Mr. ADDABBO. Mr. Chairman, I withdraw my previous unanimous-consent request, and I ask unanimous consent that all debate on this amendment and all amendments thereto end in 20 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. WEISS. Mr. Chairman, reserving the right to object——

Mr. ADDABBO. I cannot reserve for any Member.

Mr. WEISS. Then I will object, Mr. Chairman.

Mr. EDWARDS of Alabama. Mr. Chairman, I yield the gentleman my time.

Mr. CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. WEISS. Mr. Chairman, reserving the right to object, with the assurance I just received from the gentleman. I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. Members standing at the time the unanimous-consent request was agreed to will be recognized for 1 minute each.

(By unanimous consent, Messrs. EDWARDS of Alabama, ADDABBO, BADHAM, and DELLUMS yielded their time to Mr. WEISS.)

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. WEISS).

Mr. WEISS. I thank the Chairman very much.

May I express my very sincere appreciation to the gentlemen on both sides of the aisle for yielding time to me.

Mr. Chairman, this has been a strange debate. Here we are on the day when the President of the United States is engaging in a peace offensive and in justification of that peace offensive we are asked or have been asked all day to adopt every worthless, counterproductive, obsolete program in the books costing tens of billions of dollars.

Here we are at a time when the projections from the Treasury Department are that by fiscal 1984 there is going to be a deficit for that single fiscal year of $169 billion, and we have people in this House of the President's own party, who are telling us that when it comes to the Department of Defense budget, even though we have $196.6 billion in it, $25.2 billion above last year, we cannot, must not, cut $1.2 or $1.3 billion because in some strange way we are going to be upsetting the balance and endangering our national security.

The fact is, Mr. Chairman, that the rate of increase proposed for the military budget, the Department of Defense budget, for the next 5 fiscal years is projected to be at three times the rate at what it was during the Vietnam war and that at the same time that we have just gotten through cutting taxes by three-quarters of a trillion dollars.

Everybody says inflation is our worst problem. And it is said that Lyndon Johnson started us on that path because during the Vietnam war he would not raise taxes to pay for that war. Yet what we are doing is cutting taxes, while increasing military appropriations, and expect to achieve the nirvana of a balanced budget. How? I do not know.

We have a chance at this point, perhaps, through the adoption of the amendment of the gentleman from Connecticut to that of the distinguished gentlewoman from Colorado, a chance perhaps to indicate that we really meant it when we said that no department was going to escape the scrutiny of this Congress, because it is not just the members of the Armed Services Committee who toiled in their dungeons. Having toiled they came back with billions upon billions of increases for their budget. The committee on which I serve, the Committee on Education and Labor, for example, struggled in those dungeons and not increased but cut back—between $10 and $12 billion of a program totaling only $30 billion. We cut those billions in programs for children and pregnant women and the elderly, and just about every needy group and community in this country.

So it seems to me that we ought to have some sense of decency and some sense of balance about what we are doing. We ought to have the courage to cut this a meager 2 or 5 percent.

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. WEISS. I yield to the gentlewoman from Colorado.

Mrs. SCHROEDER. Mr. Chairman, I want to compliment the gentleman.

I know, I hope, that the gentleman would like to cut 5 percent, as I would, but understands 2 percent may be the only thing we can get out of here. Many people said where would we cut? I would like to refer them to yesterday's RECORD, where Hon. JAMIE WHITTEN did an excellent RECORD insert on wasteful defense spending to a tremendous sum.

I would like remind the Members that on August 22, 1980, the Republican study group documented $34.5 billion worth of waste.

There are many places to cut, and the gentleman is exactly right.

The CHAIRMAN. The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER)

Mrs. SCHROEDER. Mr. Chairman, I remember standing here last July 16, offering an amendment I thought was a reasonable attempt to solve the problem of waste, fraud, and abuse in the Department of Defense. My amendment, if you recall, would have directed the President to specify to Congress by January 15, 1982, $8 billion worth of waste, fraud, and abuse he finds in that Department and to make recommendations for changes in the law that he considers necessary to achieve that $8 billion.

You would have thought I was trying to outlaw sliced bread. I was accused of simply trying to reduce the defense budget with a meat ax, sabotaging our military readiness, and tying the President's hands on budgetary matters. For these crimes, my amendment lost 142 to 276.

But remember I was not without substantiation in my efforts. I hauled up here 44 GAO studies which, in an 18-month period (January 1979 to July 1980) found $16 billion worth of waste in DOD. These reports ranged from weapon procurement to personnel management. In addition, the Republican study group, on August 22, 1980, released a report listing $34.5 billion in Government waste, $16 billion from DOD.

The boil of prodigal defense spending has not disappeared since then either. On November 17, Hon. JAMIE WHITTEN remarked on a study presented to the Secretary of Defense on waste found in the defense procurement policies.

The small but hardy band of Members who spoke for my amendment knew they were right. Those who voted against my amendment then I think realize the seriousness of the problem. This time, I hope they overcome their shyness to stand up to the Department of Defense.

□ 2010

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. STRATTON).

Mr. STRATTON. Mr. Chairman, I think the important thing to remember in this discussion that if we undertake to cut defense where nobody can say where exactly to cut, that the basic factor involving the defense budget of 1982 is the shape of the military threat that we face. We are $240 billion behind the Soviet Union because over the last 10 years, as the gentlewoman from Maryland (Mrs. HOLT) has said, Congress has been cutting every single defense budget. The only way in which we can establish any type of credibility in our deterrent

capability and have any impact on arms limitations agreements, is for us to match the Soviet Union in military capability and get ourselves back to a position of equality and parity.

Every 1 percent, every 2 percent, every nickel or dime, in fact, that we take out of the President's defense budget is weakening our ability to match the Soviet Union and thereby to deter them from further aggressive actions.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Chairman, I do not know how much is in this bill for public relations. We have heard $100 million I am told there is $102 million in this bill for military bands. I wonder what kind of a threat the Russians bands will be to this country and whether it is necessary for us to compete and make sure they do not get ahead of us in the number of bands that they have.

It seems to me that with that kind of expenditure at a time when we are cutting food stamps, cutting school lunches, cutting aid to the elderly and handicapped, it is almost obscene. I certainly think a 2-percent cut or something on that order is the least we can do to force the Pentagon to practice a little austerity in its own house.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. ECKART).

Mr. ECKART. Mr. Chairman, I wonder if we all realize what we are talking about on this amendment—2 cents out of every budget dollar. That is all. And we do this at a time when we are asking all other Americans to sacrifice as well. I think what we are seeing is the same thing going on in the Department of Defense—filet mignon lunches for our generals at $2; military bands traveling which cost millions; military bowling teams traveling around the world; chauffeured limousines for every general; lieutenants opening doors for majors, majors opening doors for colonels, and colonels holding doors for generals.

Do we really believe that we cannot save 2 cents out of every defense dollar?

Mr. Chairman, I think if we are really serious about what we are doing, we will realize that a cost-effective defense really strengthens our defense in the long run, by delivering systems at the lowest expense to our taxpayers.

The test of our defense system should not be how much money we can cram down the throats of the Pentagon.

Two cents out of every dollar is not much to ask.

I support the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Washington (Mr. DICKS).

Mr. DICKS. Mr. Chairman, I have sympathy for this amendment except that I worry about one of the other implications of it. This committee has made some important add-ons for items such as diesel submarines, AV-8-B-plus, which is a V/STOL fighter, remotely piloted vehicles, and most importantly, the advanced technology bomber.

My concern with this amendment is that if we give the Pentagon the right to make the cuts, they are going to cut out the very things the committees have added to the budget that makes some sense from a military reform viewpoint.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi (Mr. MONTGOMERY).

Mr. MONTGOMERY. Mr. Chairman, I rise in opposition to the amendment and the two amendments. I know 2 percent or 5 percent does not sound like much on a $196 billion appropriations bill, but I have figured up here that on the National Guard and Reserves we do not have much money in this bill, but taking 2-percent reduction in the National Guard funds would reduce 50 trucks going to the National Guard, 1 helicopter, 5 personnel carriers. We did not have under this bill but eight helicopters, and it certainly does not make sense to take this type of approach. It does hurt the small units that are trying to get some equipment.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. SIMON).

Mr. SIMON. Mr. Chairman, my colleagues of the House, we are talking not just about fiscal year 1982. Secretary Weinberger testified before the Budget Committee that we are in a balloon process, and in 1985 and 1986, those fiscal years, that balloon will be upon us.

It is in the security interests of this country that we deflate that balloon just a little bit right now.

One other point I would make: We did not have an inflation after the Korean war because the President at that time, Harry Truman, at the beginning of the war said, "We are going to have to increase taxes to pay for it."

The Vietnam war we increased from 65 to 70, the expenditure.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I rise in opposition to the Schroeder amendment, the Moffett amendment, and in support of the Roukema amendment. I believe it is more carefully crafted.

I remind my colleagues on this side of the aisle that we supported the Latter budget on May 6. The outlays for defense in that bill were $188 billion. The appropriation bill takes it up to $198 billion. Do not tell me that there has not been an adequate increase to cover the support that most of us give to the B-1 bomber and other weapon systems. It does.

I have great confidence that President Reagan and Cap Weinberger will make the proper judgments on this issue of the 2-percent reduction therefore I rise in support of the substitute because I think it is well crafted. It does not eliminate or reduce the B-1 bomber or the MX missile program. Those remain in place, and I believe it is properly crafted. I urge my colleagues to support the substitute amendment by the gentlewoman from New Jersey.

The CHAIRMAN. The Chairman recognizes the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, the Investigations Subcommittee of the Armed Services Committee has been carefully finding where the waste in government has been. We are little by little doing this. We find that they are ingrained in many aspects of the Defense Department, but to make across-the-board cuts will do some real injustice and danger and damage to essential programs.

On the conference committee of the Armed Services Committee we tried to effectuate savings, which we did do, but it is very difficult. If we have across-the-board cuts in this appropriations bill Members are going to see essential programs which are trying to cope with the growing threat of the Soviet Union fall by the wayside, and will not be effective enough to respond to any threat.

● Mr. FRENZEL. Mr. Chairman, I rise in support of the Roukema substitute. I think this body should reject the Shroeder amendment. At 5 percent, it is Draconian. I think the Moffett amendment should also be rejected, because it is a deeper, less flexible cut than that of the distinguished gentlewoman from New Jersey.

All of us are frustrated by the size of the defense budget, but most of us are willing to make sacrifices for the strong defense posture we support. In my personal ambivalence, I am seeking a way to warn the Defense Department that unless it demonstrates a real commitment to reduce wasteful, unnecessary spending it will lose the strong coalition that now supports the strengthening of our defense.

I believe the Roukema substitute will save the taxpayers a few dollars and the Defense Department some long-term grief, although I note in conclusion that the Senate bill will be billions of dollars over the House version so I have no illusions about the size of the final appropriations.●

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Chairman, this refugee from the dungeon downstairs is opposed to the amendment, the amendment to the amendment, and the substitute amendment, but I was going to yield my time to the gentleman from New York (Mr. WEISS) if he wanted it.

Mr. WEISS. I very much appreciate it, but I do not wish to use the time.

Mr. YOUNG of Florida. I thank the gentleman, so I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentlewoman from New Jersey (Mrs. ROUKEMA).

Mrs. ROUKEMA. Mr. Chairman, I urge the Members careful attention and support for this amendment. Surely there is no one who can credibly claim that $1.65 billion out of this total increase is going to seriously or in any way jeopardize our national security position. In my opinion, when we are facing a budget deficit of over $60 billion, we must have cost-effective management, and that includes the Defense Department. There should be no sacred cows in this administration.

The CHAIRMAN. The Chair recognizes the gentleman from Connecticut (Mr. MOFFETT).

Mr. MOFFETT. Mr. Chairman, it is great to have the support of the gentleman from California (Mr. ROUSSELOT) for the idea of a 2-percent cut, even though he would prefer the Republican version.

Second, with regard to Mr. WHITE, there are a lot of people here that supported, strongly supported, the amendment not that long ago—I guess about a year ago—of the gentleman from Texas (Mr. WHITE) to strengthen our Armed Forces. So, I do not think an across-the-board cut is going to harm that in any way.

But let us listen to the words of the Atlantic Monthly.

The only cabinet officer Stockman did not challenge was, of course, the secretary of defense. In the frantic preparation of the Reagan budget message, delivered in broad outline to Congress on February 18, the OMB review officers did not give even their usual scrutiny to the new budget projections from Defense.

So why are we worshiping OMB? Why are we bowing down in homage to their figures which they admit were not that carefully scrutinized?

The CHAIRMAN. The time of the gentleman from Connecticut (Mr. MOFFETT) has expired.

All time has expired.

PARLIAMENTARY INQUIRY

Mr. MICHEL. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MICHEL. Mr. Chairman, is it not true that we are at that juncture where pending is the Schroeder amendment to cut 5 percent across the board, the amendment offered by the gentleman from Connecticut (Mr. MOFFETT) to cut 2 percent across the board, and a substitute amendment offered by the gentlewoman from New Jersey (Mrs. ROUKEMA) to modify the 2-percent cut?

The CHAIRMAN. The gentleman is correct.

Mr. MICHEL. Is it true also, Mr. Chairman, that on the order of votes, the first vote would be on the Moffett amendment?

The CHAIRMAN. The gentleman is correct.

Mr. MICHEL. And regardless of whether that amendment is voted up or down, the next vote will occur on the substitute amendment offered by the gentlewoman from New Jersey (Mrs. ROUKEMA)?

The CHAIRMAN. The gentleman is parliamentarily, absolutely correct.

Mr. MICHEL. Mr. Chairman, I just wanted to clarify the situation because there are a number of amendments and substitutes pending and I wanted to expedite the matter.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Connecticut (Mr. MOFFETT) to the amendment offered by the gentlewoman from Colorado (Mrs. SCHROEDER).

The question was taken; and the chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. MOFFETT. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 140, noes 256, not voting 37, as follows:

[Roll No. 318]

AYES—140

Addabbo	Eckart	Leach

□ 2030

The Clerk announced the following pairs:

On this vote:

Mr. Reuss for, with Mr. Pepper against.

Mr. Dixon for, with Mr. McDonald against.

Mrs. Chisholm for, with Mr. Breaux against.

Mr. Garcia for, with Mr. Dornan against.

Mr. Forsythe for, with Mr. Hagedorn against.

Mr. Paul for, with Mr. Rhodes against.

Mr. Pritchard for, with Mr. Madigan against.

Mrs. FENWICK and Mr. BENNETT changed their votes from "aye" to "no."

Mr. PETRI and Mr. O'BRIEN changed their votes from "no" to "aye."

So the amendment to the amendment was rejected.

The result of the vote was announced as above recorded.

PARLIAMENTARY INQUIRIES

Mr. MOFFETT. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. MOFFETT. Mr. Chairman, my parliamentary inquiry is: Is it correct that what we are now voting on is exactly the same amendment plus repair parts and ammunition?

The CHAIRMAN. The amendment is not exactly the same.

Mr. MOFFETT. My understanding is the amendment is exactly the same wording except the gentlewoman from New Jersey, who just opposed this amendment, has added repair parts and ammunition. Is that correct?

Mr. STRATTON. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. STRATTON. Is it the case that the Roukema amendment, as a result of the vote just cast, is being offered against the Schroeder amendment originally; is that correct?

The CHAIRMAN. The Roukema amendment is a substitute.

Mr. STRATTON. If the Roukema amendment prevails, there will be no further vote; is that correct?

The CHAIRMAN. There would be a vote on the amendment, as amended.

Mr. STRATTON. A further parliamentary inquiry: If the Roukema amendment is defeated, then the Schroeder amendment would be the order of the day, and that is 5 percent instead of 2 percent; is that correct?

The CHAIRMAN. The gentleman is correct.

The question is on the amendment offered by the gentlewoman from New Jersey (Mrs. ROUKEMA) as a substitute for the amendment offered by the gentlewoman from Colorado (Mrs. SCHROEDER).

The question was taken; and the chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mrs. ROUKEMA. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 197, noes 202, not voting 34, as follows:

[Roll No. 319]

□ 2050

The Clerk announced the following pairs:

On this vote:

Mr. Reuss for, with Mr. Pepper against.

Mr. Dixon for, with Mr. McDonald against.

Mrs. Chisholm for, with Mr. Breaux against.

Mr. Garcia for, with Mr. Rhodes against.

Mr. Forsythe for, with Mr. Martin of New York against.

Mr. Paul for, with Mr. Johnston against.

Mr. Pritchard for, with Mr. Duncan against.

Messrs. ARCHER, RITTER, and WALKER changed their votes from "aye" to "no."

Mr. WILLIAMS of Montana and Mr. WAXMAN changed their votes from "no" to "aye."

So the amendment offered as a substitute for the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from Colorado (Mrs. SCHROEDER).

The amendment was rejected.

Mr. ADDABBO. Mr. Chairman, there are about nine amendments at the desk. I have looked at those amendments. The committee will be accepting at least six or seven of them. There are only two or three that may be slightly controversial and subject to some slight debate.

I would therefore believe that we can finish this bill tonight and not be burdened with it tomorrow because I know full well if we come in tomorrow, we will be using a whole day for what can be completed in approximately half an hour here tonight.

Mr. Chairman, I ask unanimous consent that all debate on this bill and all amendments thereto end at 9:30 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

□ 2100

The CHAIRMAN. Members standing at the time the unanimous consent request was agreed to will be recognized for 1 minute each.

The Chair will recognize first those Members who have amendments.

AMENDMENT OFFERED BY MR. STRATTON

Mr. STRATTON. Mr. Chairman, I offer an amendment.

The portion of the bill to which the amendment relates is as follows:

SEC. 788. None of the funds in this Act may be used to transfer any article of military equipment or data related to the manufacture of such equipment to a foreign country prior to the approval in writing of such transfer by the Secretary of the military service involved.

The Clerk read as follows:

Amendment offered by Mr. STRATTON: On page 67, after line 20, add the following new subsection to section 788: No funds appropriated by this Act may be used for the transfer of a technical data package from any Government-owned and operated defense plant to any foreign government, nor for assisting any such government in producing any defense item currently being manufactured in a United States Government-owned, Government-operated defense plant.

Mr. STRATTON. Mr. Chairman, this amendment is designed to protect America's defense mobilization base as a result of unwise Department of Defense policies which permit the turning over of important and highly sensitive technical data packages for weapons currently being introduced in U.S. Government-owned and Government operated defense installations. For example at the Watervliet Arsenal, which is the sole facility in the United States for producing large guns and cannon and is the finest cannon producing facility in the free world.

However, Mr. Chairman, every time the Department of Defense turns over a technical data package for these big guns to a foreign government, it not only enables that government to produce our cannon in their plant—thereby cutting down the number of trained personnel employed at Watervliet.

Remember, Mr. Chairman, our defense mobilization base is primarily made up of a cadre of highly trained technical personnel. If we deny them the opportunity to work on cannon production, we will find ourselves unable to expand our trained production base in time of war or emergency.

At the Watervliet Arsenal, for example, over 50 percent of the work scheduled in fiscal year 1983 will result from foreign military sales. If we allow these foreign governments to build their own cannon, with our technical data packages, and with the aid and assistance of our trained personnel, then those production jobs will not be available in our arsenal, and their trained personnel will be laid off.

Even more disturbing, many of these countries may end up producing not only for their own very limited needs; they may also go into the business of selling these tanks to third countries, thereby ever more seriously reducing the workload and the necessary training opportunities essential to maintaining our defense mobilization base.

Congress is not consulted on these transfers, and most people are unaware of the skills and the job opportunities we are losing as a result of these uncontrolled and unreported transfers.

My amendment will bring this practice to an end. Money is expended every time a data package is transferred, and often considerable use of the services of Federal employees, as well as travel is involved. Under this amendment such actions will have to cease.

Let us protect our defense mobilization base. Heaven knows we barely have an adequate base in most areas. But we must not allow ill-advised and ill-considered actions to erode those cases where very capable mobilization bases do exist, as is the case at Watervliet Arsenal.

I urge the adoption of my amendment, which is directly in keeping with the spirit of section 788 of page 67 of the bill, and I urge the committee to accept the amendment.

Mr. ADDABBO. Mr. Chairman, if the gentleman will yield, I have reviewed the amendment and it is acceptable to the majority.

Mr. EDWARDS of Alabama. Mr. Chairman, if the gentleman will yield, we have no objection to the amendment. We accept it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. STRATTON).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. NICHOLS

Mr. NICHOLS. Mr. Chairman, I offer an amendment.

The portion of the bill to which the amendment relates is as follows:

SEC. 777. None of the funds appropriated by this Act shall be available to pay the retired pay or retainer pay of a member of the Armed Forces who, on or after January 1, 1982, becomes entitled to retired or retainer pay, in an amount that is greater than 94.8 percent of the amount to which that member would otherwise be entitled.

The Clerk read as follows:

Amendment offered by Mr. NICHOLS: On page 64, beginning on line 5, strike section 777.

Mr. NICHOLS. Mr. Chairman, the amendment I am cosponsoring, with the gentleman from New York (Mr. MITCHELL) would delete from the appropriation bill section 777. This section would reduce the retired pay for service members retiring on or after the first of next year by 5.2 percent.

The report of the Appropriations Committee indicates that no savings were included in the bill as a result of this provision. But let me assure you that the costs of this provision could be substantial. The costs arise primarily in the direct and immediate loss of senior, experienced personnel and in the indirect and longer range loss of mid career highly trained personnel.

In the first category are those service members who are retirement eligible. They have over 20 years of service; they possess decades of accumulative experience; and, perhaps most importantly, they influence their subordinates to serve for a military career. Let us look at this first category in more detail.

Some of these service members can put in their retirement papers and retire before January 1, 1982. For some, there will be a strong incentive to do this. These are the same individ-

uals who have served during the recent period of benign neglect and erosion of benefits felt by military personnel. They will conclude that this is one more erosion of benefits and say "Enough."

On the other hand, some individuals will not be able to retire on such short notice. These individuals, after having served a full career in the military, could very well have extended beyond their desired retirement date for the convenience of the Government. For example, over 150 chief master sergeants in the Air Force are currently serving beyond 30 years of service. This is a highly select group. Most chief master sergeants are required to retire upon completing 30 years of service. Over 60 of these individuals are in the critical field of aircraft maintenance management. The provision in the appropriation bill would reduce the retired pay of individuals retiring after January 1 by 5.2 percent. They will have had their retired pay arbitrarily cut because they had the special skills and unique backgrounds needed by the Air Force, and they volunteered to remain in the Air Force beyond 30 years of service. Not much of a reward.

Some individuals may remain on active duty longer than they originally desired because of the appropriation bill. But how will they convey their feelings to the midcareer officers and NCO's whom they supervise. These senior leaders are role models, looked up to by their subordinates; and if these highly skilled and experienced individuals do not convey a feeling of dismay and hostility, certainly their subordinates will observe how the Congress has treated these respected individuals and draw their own conclusions.

The other category that will be affected by the provision in the appropriation bill are those individuals not yet eligible to retire: Midcareer personnel who are in the process of making decisions to remain in the military or to seek employment in the private sector. Throughout their career they have seen and heard on numerous occasions of piecemeal actions affecting the military retirement system. This action by the Appropriations Committee will reinforce the uncertainty about the security of future military benefits and have a substantial effect on their career decisions.

These costs are difficult, if not impossible, to quantify in dollars; but I think, based simply on the number of calls our offices have received over the last several days regarding this provision, that the cost is high. Yet there is no savings attributable to this provision.

The Appropriations Committee argues that the 5.2 percent portion of the pay increase effective this October was a catchup increase and should not be reflected in the retired pay of those who retire after January 1. Let me remind the Members that the catchup raise is just that: An increase to reflect the fact that military pay has been understated since 1975. This is not a windfall. Members on active duty since 1975 have not received pay at the levels they should have. And now the Appropriations Committee wants to preclude them from including this increase in their retired pay. I see no justice in this perspective.

Mr. Chairman, piecemeal legislation to change military retired pay and other military benefits has always cost more than it has pretended to save. This is another case in point. I urge the Members to support my amendment to delete the section in the appropriation bill that would impose an arbitrary 5.2 percent reduction in retired pay of future retirees.

The CHAIRMAN. Does anyone on the list wish to be heard on the amendment?

Mr. MITCHELL of New York. Mr. Chairman, I rise in strong support of the amendment offered by the chairman of the Military Personnel and Compensation Subcommittee of the Committee on Armed Services. This amendment would strike from the appropriation bill the provision that would require service members who retire after January 1, 1982, to incur an arbitrary reduction of 5.2 percent in retired pay.

It is unfortunate that such a provision is even suggested at this time when recent positive action in the compensation arena has shown such favorable results. The effect will be decidedly negative, and the provision will cost considerably more than any perceived savings.

I find it quite difficult to understand the rationale of the Committee on Appropriations in proposing this provision. Just 2 months ago we were engaged in debate on the floor of the House as to the appropriate levels of military pay. The Appropriations Committee, at that time, offered an amendment to the pay bill that would have provided increases of up to 22 percent to certain senior enlisted personnel. They believed these increases were necessary to retain the talented and experienced personnel needed to support our Armed Forces. They lost that amendment, and the conference report on the pay bill provided increases for these senior enlisted personnel of up to 17 percent. Thus, compared to the original Appropriations Committee recommended pay raise, the final pay increase already reflected a 5-percent reduction. That 5-percent reduction, of course, will be reflected in retired pay. Yet the Appropriations Committee is now proposing an additional 5.2 percent reduction—below what they originally recommended.

I am also unclear as to why the Appropriations Committee has apparently fallen off its objective of retaining senior experienced personnel. The provision in the appropriation bill provides a strong incentive for retirement-eligible members to retire before January 1. These are the most experienced and most highly trained of any of our personnel. And for those who do not have 20 years of service or who because of the needs of the service can not retire, the arbitrary cuts imposed by the Appropriations Committee can only generate uncertainty in their minds as to how much faith they can have in the future in promised retirement benefits.

Several years ago the Congress adopted the so-called Tower amendment. As the members recall, the Tower amendment guaranteed that an individual service member would not be financially penalized by his choice to remain on active duty if he is retirement eligible. In other words, a service member is guaranteed as much retired pay whenever he elects to retire as he would have been eligible to receive if he retired earlier in his career and received retired pay and COLA adjustments from that time. The arbitrary 5.2-percent reduction will result in many service members receiving less retired pay because they elected to stay on active duty longer than they needed to. On the other hand, in some cases they will be penalized because they are required to retire from active duty after the first of the year because of nonselection for promotion or because of disability. How will service members in the middle of their career view these guarantees?

Mr. Chairman, we must delete this provision, and I urge all members to strongly support the amendment of the gentleman from Alabama.

Mr. PARRIS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of the amendment by Mr. NICHOLS which would delete section 777 of the defense appropriations bill, which reduces military retirement pay. Last month, the Congress passed and the President signed into law, the Uniformed Services Pay Act of 1981. The purpose of this act was to correct an unfair and precarious situation by giving military personnel a well-deserved pay increase. There was much discussion in both the House and Senate on the financial hardships which military personnel and their families have been required to endure. The common theme which ran through committee and floor debate was that military pay had been neglected for too many years. Military basic pay has been so inadequate that we have heard stories about how American military families must depend on food stamps in order to survive. This coupled with the in-

stability caused by frequent moves and other facets of military life has made the armed services even less attractive. The highly trained, skilled, personnel which are so vital to the armed services, have not been making the military a career. In fact, they have been leaving in droves because pay in the military has fallen far behind the rate of pay in the private sector. This situation has had an adverse effect on our military preparedness and has endangered our national security.

I feel that passage of the Uniformed Services Pay Act adequately addressed this serious problem, but sections 775 and 777 of the DOD appropriations bill again present another financial problem for military personnel.

Sections 775 and 777 would limit retired pay to 94.8 percent of the amount that a retiree would otherwise be entitled to receive and would eliminate the 6-month rounding provision in current law. This provision is a serious breach of faith by the Federal Government. In 1975, the Tower amendment was enacted to insure that military people would receive no less retired pay from continued active service than they would have received had they retired at an earlier date after attaining retirement eligibility. The proposal contained in H.R. 4995 would break the commitment made by the Tower amendment because thousands of individuals who continued faithful military service would suffer a loss in retired pay.

Younger officers and enlisted personnel that are facing career decisions will view this appropriations bill as weakening the retirement system and opening the door for future cuts. We must keep in mind that our armed services are suffering from severe shortages of skilled officers and enlisted personnel in critical combat and operational positions. Those individuals with skills in great demand in the private sector would be encouraged to leave the military. This would affect great numbers of military people who work in the fields of aerospace, electronics, aviation, and computers.

The provisions of section 777 would also apply to our Reserve Forces. This would make it even more difficult to recruit and retain qualified Guard and Reserve units.

There are a great number of reasons why this language should be deleted from the appropriations bill and I have only mentioned a few of them. I am in strong support of Mr. NICHOLS' amendment and I urge my colleagues to vote for its acceptance.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama (Mr. NICHOLS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. WEBER OF OHIO

Mr. WEBER of Ohio. Mr. Chairman, I offer an amendment.

The portion of the bill to which the amendment relates is as follows:

SEC. 778. None of the funds appropriated by this Act for the pay of Reserve and National Guard technicians based upon their employment as technicians and their performance of duty as members of the Reserve components of the Armed Forces shall be available to pay such technicians a combined compensation in excess of the rate payable for level V of the Executive Schedule.

The Clerk read as follows:

Amendment offered by Mr. WEBER of Ohio: Page 64, strike out line 11 and all that follows through line 17 (and redesignate succeeding sections accordingly).

(By unanimous consent, Mr. DAVIS yielded his time to Mr. WEBER of Ohio.)

Mr. WEBER of Ohio. Mr. Chairman, if we pass this bill in its present form we are signing a notice of discharge to about 1,100 of the best people we have in the Reserves and the National Guard. The people are the most experienced and most qualified technicians in these units, the very men and women we are having so much trouble retaining. This bill contains an unfair and discriminatory pay ceiling. It caps the pay of all members of the Reserve and the National Guard if they are also employed by these units as civilian technicians.

This bill says that if Mr. A and Mr. B are both serving as weekend warriors, as we want them to, in the Guard and Mr. A is a technician who work during the week as a civilian technician in a Guard unit while Mr. B works in some other job, then Mr. A and Mr. B are not paid the same amount for their work on Guard duty because Mr. A's pay is going to be subject to a pay ceiling. That is not right. What is right is equal pay for equal work.

These people are all working two jobs. They are being paid for services performed during the week as technicians and they ought to be paid full value for the services performed as weekend warriors in the Reserve or the National Guard.

Unless we amend this bill by striking out the pay cap, we will make it harder and harder for our Reserve and our Guard units to meet their manpower requirements. We will also make it harder for our Reserves to retain experienced technicians in the Reserve and in the Guard.

Mr. ADDABBO. Mr. Chairman, I rise in opposition to this amendment.

There is no reason why these technicians should not be covered by the pay cap that covers everyone else. There is no shortage in these technicians. There are people waiting for the jobs.

As far as the matter of holding two jobs goes, they cannot be a weekend warrior unless they are a technician. The two jobs go together. The amendment would allow technicians, if we accept this amendment, to continue to make more than the highest ranking generals and senior civilians.

Mr. MONTGOMERY. Mr. Chairman, I rise in support of the amendment.

I just would like to say briefly that what we are doing, no other Federal employees have this restriction on them and certainly I do not think it is fair for the technicians in the Reserve and National Guard to be penalized.

I would support the amendment.

□ 2110

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. WEBER).

The question was taken; and on a division (demanded by Mr. WEBER of Ohio) there were—ayes 55, noes 76.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. DUNN

Mr. DUNN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DUNN: Page 68 after line 15, insert the following:

SEC. 792. None of the funds appropriated in this Act may be available for the procurement of any item manufactured in a foreign country unless, during manufacture, the inspection of such item for quality assurance uses the same standards of inspection during manufacture which would be required by the Department of Defense if such item were manufactured domestically.

Mr. DUNN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

POINT OF ORDER

Mr. FRENZEL. Mr. Chairman, I rise to make a point of order against the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. FRENZEL) on his point of order.

Mr. FRENZEL. Mr. Chairman, in my judgment the amendment is contrary to rule XXI, clause 2, which provides that no amendment changing existing law can be made on an appropriation bill. The amendment clearly gives the Secretary additional duties, to determine what kind of quality assurance or inspection is required under the terms of the amendment and, therefore, the amendment constitutes legislation on an appropriation bill.

Mr. Chairman, I believe the point of order should be sustained.

The CHAIRMAN. Does the gentleman from Michigan wish to be heard on the point of order?

Mr. DUNN. Mr. Chairman, the gentleman, I believe, is incorrect. The Secretary already has that discretion. We are simply, in this amendment, trying to make certain that the powers that he uses for national companies are the

same as for international companies. He already has that power. It does not change his power.

The CHAIRMAN. As the Chair reads the amendment, there is clearly a mandatory authority imposing additional duties absent any showing that existing law already requires such inspection of items produced in foreign countries, the Chair sustains the point of order made by the gentleman from Minnesota (Mr. FRENZEL).

AMENDMENT OFFERED BY MR. ERTEL

Mr. ERTEL. Mr. Chairman, I offer an amendment, and I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. EDWARDS of Alabama. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. ERTEL: Page 68, after line 15, insert the following new sections:

SEC. 792. None of the funds provided in this Act to any Department or Agency shall be obligated or expended to provide a personal cook, chauffeur, or personal servants to any officer or employee of such Department of Agency.

SEC. 793. None of the funds provided in this Act to any Department or Agency shall be obligated or expended to procure passenger automobiles as defined in 15 U.S.C. 2001 with an EPA estimated miles per gallon average of less that 22 miles per gallon. This section does not apply to security or special mission automobiles.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. ERTEL) for 1 minute.

Mr. ERTEL. I thank the Chairman.

Mr. Chairman, this amendment is strictly the same amendment offered on other appropriations bills. What it does is provide that one cannot have a personal chef or chauffeur or any other personal servant which is used exclusively for one person's utilization.

In addition to that, it provides that all vehicles other than special-use vehicles or security vehicles must be rated at 22 miles per gallon EPA standards. That would provide an upgrading of the vehicles in the military.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. ERTEL. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, the majority accepts the amendment.

Mr. ERTEL. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania.

The amendment was agreed to.

AMENDMENTS OFFERED BY MR. FORD OF MICHIGAN

Mr. FORD of Michigan. Mr. Chairman, I offer three amendments, and I ask unanimous consent that they be considered as read, printed in the RECORD, and considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The portion of the bill to which the amendments relates is as follows:

SEC. 769. None of the funds provided in this Act may be obligated or expended to pay a person whose pay is determined pursuant to section 903 of title 20, United States Code (section 5 of Public Law 86-91, as amended), any increase in pay as the result of the establishment of any new category of pay that was not in effect prior to the school year 1979-1980.

SEC. 770. None of the funds provided in this Act shall be available to pay a person whose pay is determined pursuant to section 903 of title 20, United States Code (section 5 of Public Law 86-91, as amended), any increase in basic compensation as the result of adjustments pursuant to section 903(c) of title 20, United States Code, in excess of 4.8 percent of the amount such person was entitled to receive for the school year 1980-1981.

SEC. 771. None of the funds available to the Department of Defense by this or any other Act shall be available to pay a person whose pay is determined pursuant to section 903 of title 20, United States Code (section 5 of Public Law 86-91, as amended), any increase in pay in excess of 4.8 percent for the months of August through December 1981 as a result of adjustments in pay made thereafter.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Amendments offered by Mr. FORD of Michigan: On page 61, beginning on line 1 and continuing through line 7, strike section 769 in its entirety and renumber the following sections accordingly.

On page 61, beginning on line 8 and continuing through line 15, strike section 770 in its entirety and renumber the following sections accordingly.

On page 61, beginning on line 16, strike section 771 in its entirety and renumber the following sections accordingly.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. FORD) for 1 minute in support of his amendments.

Mr. FORD of Michigan. Mr. Chairman, I am offering these amendments on behalf of myself and Mr. UDALL who was instrumental in the enactment of the Defense Department Overseas Teachers Pay and Personnel Practices Act.

My first amendment would delete section 769 of the bill.

Section 769 is designed to overrule an agreement between DODDS and the organizations representing teachers. This agreement was to establish a new pay lane for DODDS teachers with a bachelor's degree.

As many Members know, many teachers in the DODDS system are hired overseas either as local hires or as dependents of military personnel. In addition, because of the high cost of travel and transportation, many teachers hired in the United States are urged to stay on. Since teachers do stay overseas, many are at the maximum for a bachelor's degree.

An agreement has been made between DODDS and the organizations representing teachers to create a new lane—promotion—for those willing to go back to school and improve their capabilities by taking some additional courses.

Section 769 undoes this incentive in the name of cutting defense. Believe it or not, this section is part of President Reagan's plan to trim the Defense budget.

Section 769 should be eliminated; incentive to improve the readiness of our overseas teachers is as important as an incentive to improve our economy. The children of our servicemen will benefit, and teachers will improve their skills. This is a practice well established in education; we should not contemplate such a false economy.

The clause affected by this section simply requires DODDS to pay teachers for graduate credits above a B.A DODDS has contested this requirement; grievances have been filed and are currently at an arbitration stage.

If section 769 is enacted, DODDS will be enabled to ignore the requirements of section 903, title 20, United States Code and any eventual arbitrator's decision.

My remaining two amendments would strike sections 770 and 771 which deny funds to pay any increase in basic compensation of overseas teachers in excess of 4.8 percent.

Mr. Chairman, the effect of these sections is to change substantive provisions of existing law, specifically, Public Law 86-91, the Defense Department Overseas Teachers Pay and Personnel Practices Act. Under the act, the rates of pay for DOD teachers are to be fixed at rates equal to the average of the range of rates of basic compensation for similar positions of a comparable level of duties in U.S. urban school jurisdictions of 100,000 or more population. The effect of these sections is to supersede the provisions of Public Law 86-91 by imposing a 4.8-percent limit on the increase in the rates of pay for DOD teachers.

Under the Defense Department Overseas Teachers Pay and Personnel Practices Act, the teachers are entitled to an 11-percent pay increase.

Mr. Chairman, there is absolutely no justification for limiting these teachers to a 4.8-percent increase. Their pay is fixed under an entirely different pay system than other Federal employees and the survey shows that they clearly are entitled to 11 percent. Bear in mind that many of these teachers are dependents of military personnel stationed overseas who have been granted pay increases in excess of 14 percent.

Mr. Chairman, these teachers play a vital role in the support of our military personnel stationed overseas. They deserve to be compensated at a level no lower than that of teachers in comparable school jurisdictions in the United States.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, I know the gentleman was not given proper warning when we opened the bill for amendments at any point, and I know he would have raised a point of order at that time, which would have been in order. So in view of the fact that these would be subject to a point of order, we accept the amendment.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Chairman, these are very sound amendments. I urge support of the amendments.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Michigan (Mr. FORD).

The amendments were agreed to.

AMENDMENT OFFERED BY MR. FOGLIETTA

Mr. FOGLIETTA. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FOGLIETTA: On page 68, after line 15 insert the following new section:

SEC. 7. None of the funds appropriated by this Act may be used for the purpose of converting to performance by contractor personnel any firefighting functions or base-security functions that are currently performed by Department of Defense personnel.

The CHAIRMAN. The gentleman from Pennsylvania (Mr. FOGLIETTA) is recognized for 1 minute in support of his amendment.

Mr. FOGLIETTA. Mr. Chairman, my amendment would create a 1-year moratorium on the contracting out of firefighting and security services at military installations.

I rise today to address a serious issue which must be of concern to all of us: The question of the safety and security of our military installations. On every base, every airfield, every shipyard, we have millions, if not billions of dollars invested in military equipment. On every base, we have tens, to hundreds, to thousands of lives that depend for their safety and security on the services of base firefighters and base security personnel. Those people the firefighters and security guards, have a very heavy responsibility: They have to insure that the stuff of which America's defense is made, is not lost to the ravages of fire, or the consequences of theft or vandalism. As we debate today the merits of spending $1 billion here, or $500 million there, we would do well to ask always: What good is the stuff we buy with this money if we do not take the time to make sure that it will be safeguarded from fire and theft?

The Congress has an obligation to preserve and protect our security, and because of this, it has an obligation to examine the situation surrounding contracting out of firefighters and base security. I ask for a 1-year moratorium to allow us to investigate the information that has been presented to me and to many of colleagues. This amendment allows us the time to do that.

I bring this issue before the Congress because there are many problems with contracting out Federal firefighters and base security. For example: Federal firefighters do not have the right to strike. That is not the case with contracted-out employees. Many of you have military installations in your districts. In deciding how to vote, I ask you to consider the case of Hunters Point Naval Shipyard in California. At Hunters Point, the shipyard went contract—and the contract employees struck the base, closing it for 2 weeks. I suggest to you that this is a threat to our national security. I suggest to you also that we cannot afford to have any of our military installations closed down for monetary reasons—the whole reason that contracting out has been advocated is to save money. . . . This seems a backhanded way to go about achieving that aim. We cannot keep our bases open if we do not have fire protection services for them. But we can ill afford to close them.

Further, Federal firefighters do not just fight fires—they prevent them. Contract bidding in the past has demonstrated that there are tremendous problems in establishing job descriptions: contractors seem to cost less, at least partly because they think that they are being hired just to fight fires. I submit to you that the equipment we house on our bases is too valuable and too expensive to have firefighters around to put out a blaze on an F-18 hangar after it has started—the point, the emphasis, must be on prevention. In case after case, contract costs have gone up as the job description has expanded. Federal firefighters work more than 40 hours a week—without overtime. Contracted workers are not allowed by law to do that. When they work overtime, they get time and a half.

Federal firefighters supervise the moving of nuclear ordnance, stand by operations for nonaviation activities, oversee aircraft landings and arresting gear, and more. Before we let contracts and lost the in-house services, we must see that contracts are let with consistent rules. I have been presented with material for a base that shows that, if arresting gear support costs were taken into account in contract bidding, it would be more than four times as expensive to contract out as it would be to keep it in-house. And yet those costs were not brought in, although those duties are a part of the job description of Federal firefighters.

Mr. Chairman, the list of issues involved here go on and on, I believe that it is essential that we pass this amendment and give ourselves the time that we must have to review this situation. The safety and security of our military installations is far too important an issue to allow to fall to pressure from any source. This amendment will not cost the taxpayers or slow the progress of Government if it is passed. But if we deny ourselves the opportunity to undertake this study, it may well be that it is the taxpayers who lose when fire takes military equipment that could have been saved by better qualified or more experienced people. Before we go any futher, let us make that determination. I urge the passage of this amendment.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. FOGLIETTA. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Chairman, we have examined the amendment. We have no objection.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. FOGLIETTA. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Chairman, I rise in support of the amendment of my colleague from Pennsylvania, Mr. FOGLIETTA.

Mr. Chairman, it has come to my attention in my congressional district that many long-time employees at the Great Lakes Naval Training Center and at the Veterans' Administration Hospital in North Chicago are threatened with loss of their jobs by reason of a proposal to contract out the duties which they now perform.

Services relating to base security, fire protection and dietary facilities now operated in-house have resulted in a high level of proficiency and individual benefit to the military and veteran personnel at these Federal facilities in my congressional district.

Mr. Chairman, I do not claim to have all of the information upon which relative costs of such services could be determined. However, from my meetings with both service and supervisory personnel, I am convinced that excellent services are now being rendered by career civilian personnel who serve under the direction of the base commander or the hospital director.

Mr. Chairman, I feel that the precipitate dismissal of career civilian personnel and the substitution of unknown persons who might be engaged by some outside independent contractors would be a mistake. It might not lead to net savings and it could indeed

result in elimination of vital services to which our military and veteran citizens are entitled.

Mr. Chairman, it seems to me a very modest step to defer any such contracting out programs for a period of 1 year, such as the amendment of my colleague from Pennsylvania (Mr. FOGLIETTA) would accomplish. I am going to support this amendment and will hope that it is adopted.

While this amendment could not reach veterans institutions, it is expected that a comparable amendment could be adopted with would be applicable to them.

Mr. DYSON. Mr. Chairman, will the gentleman yield?

Mr. FOGLIETTA. I yield to the gentleman from Maryland.

Mr. DYSON. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Pennsylvania. The contracting out of firefighting and security duties on military installations is a shortsighted and irreversible mistake. Contracting out is neither prudent nor cost effective, and is a matter appropriate for detailed congressional review.

In recent years the Defense Department has been the target of considerable pressure from the Office of Management and Budget to contract out services in an effort to reduce the Federal payroll. Like other Federal agencies, the DOD reacted to this pressure in a hurried and indiscriminate manner. Congress recognized this in the past, and imposed a variety of statutory restrictions to allow for a more thorough review of new contracts with the private sector. Unfortunately, Executive pressure has intensified in the last year, and imprudent contracting out is a major problem that we must face today.

One part of this problem is that only short-term costs are being considered. OMB guidelines have been set to approve contracting out if an immediate 10-percent savings can be achieved. Important considerations such as the costs of new supervisory positions and the private sector's right to strike are being ignored. Up to 4 percent of the 10-percent savings has been used, in some recent examples, to establish additional administrative and supervisory personnel. Striking firefighters have already proven their ability to use up the remaining 6 percent of initial savings.

Even more important is that contracting firefighters and security personnel can endanger the smooth operations of a military installation. A strike during a national emergency could prove disastrous at a military base critical to the defense of our Nation. Striking firefighters have already closed a naval shipyard for over a week. Any adverse effect on our military's mobilization capability should be viewed with alarm.

Perhaps worst of all, any decision to contract out is irreversible. When a service has been approved for private contracting, it can never be brought back in-house, regardless of the quality of service the contractor renders.

Mr. Chairman, I am sure my colleagues will agree that an immediate and through examination of current contracting out practices is critical. The responsibility has fallen on Congress to insure that smooth functioning and emergency preparedness of our Armed Services are not sacrificed for a tenuous reduction in personnel costs. I strongly urge my colleagues to support the amendment offered by the gentleman from Pennsylvania.

Mr. WHITEHURST. Mr. Chairman, will the gentleman yield?

Mr. FOGLIETTA. I yield to the gentleman from Virginia.

Mr. WHITEHURST. Mr. Chairman, I rise in support of Mr. FOGLIETTA's amendment. During our Readiness Subcommittee and full Armed Services Committee hearings this past year, we heard numerous examples of the adverse readiness impact of attempts to contract out various DOD activities.

Some of these potential contracts are a judgment call, and only time would tell whether we could live with performance under contract rather than by in-house personnel.

But the situation identified and addressed by Mr. FOGLIETTA is literally mind boggling. The fact that events have gotten to the point where his amendment is even remotely necessary is mind boggling.

Our Federal firefighters' function is the most hazardous profession in this country. And in addition to the normal skills necessary to function in a complex urban environment, the firefighters on our military and naval installations have increased skill requirements only dimly understood outside.

They must be prepared to provide fire security around enormous quantities of ordnance materials, not the least of which are nuclear weapons. They must be prepared to handle and work in a chemical toxic environment for which there is literally no civilian counterpart.

The thought that the Navy proposes to contract out these functions alone is unbelievable.

But these unique firefighting skills, in a unique environment, are only a small part of the story—how do we compensate for those other things that will not get done under contract?

Who will provide the fire prevention and inspection services which give us such an enviable record on our bases and installations? Who will provide, or can provide, as cheaply, the other corollary duties which will have to be assigned elsewhere—and which represent additional costs not even being considered?

Until we know the answers to those questions, we should not be embarked on a virtually irrevocable course to strip out our Federal firefighting capability. Mr. FOGLIETTA's amendment gives us the necessary time to get those answers, and to allow the Congress to establish a rational policy regarding contracting out these defense functions.

I support the amendment, and urge that my colleagues do the same.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. FOGLIETTA. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Chairman, I rise in opposition to this amendment, which is nothing more than another effort to prevent DOD's management from getting the best possible firefighting and security services at the best possible price.

As ranking Republican member of the House Post Office and Civil Service Committee, I have witnessed, year after year, not only the sporadic attempts to tamper with the Government's legitimate contracting operations, but also the routine introduction of a bill to shorten the workweek of Defense Department firefighters without reducing their premium pay. This measure mandated a raise in hourly pay so great that neither the Ford nor the Carter administrations could acccept it even when times were better than they are today. President Ford vetoed the bill and was not overridden; President Carter insisted that it be detached from the body of the Civil Service Reform Act and he properly won that fight.

Here is an amendment requiring that our largest agency ignore any prospect of deferring to the private sector for vital services. Here is a plan to forbid our largest Government employer from even the slightest option of complying with OMB circular A-76, a document which has been endorsed by administrations of both parties and which requires that agencies seek efficiency and cost effectiveness within the competition of the private sector.

By voting down this amendment, we can assert the principles of A-76 as well as commonsense itself: Federal firefighters and security officers are dedicated and hard working in most cases, but they enjoy no monopoly on ability to perform vital services such as firefighting and security on our military installations.

By rejecting this amendment we will simply be assuring that for any given task in the Defense Department which is properly subject to contracting out under the law, the voice of the private sector will be heard.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. FOGLIETTA).

The question was taken; and on a division (demanded by Mr. DERWINSKI) there were—ayes 83, noes 85.

So the amendment was rejected.

□ 2120

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. FRENZEL).

(By unanimous consent, Mr. FRENZEL yielded his time to Mr. EDWARDS of Alabama.)

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. CHAPPELL).

Mr. CHAPPELL. Mr. Chairman, I use my time to engage to colloquy with the chairman to clarify an issue in the bill. I believe Mr. GINN wants to engage in the same colloquy.

Mr. Chairman, last year we instructed the Air Force to phase out the five C-140 aircraft stationed in Europe, primarily because of their prohibitive operating cost. The Air Force chose to ignore the committee's recommendation which was agreed to by the Senate.

This year we have once again recommended the phaseout of the C-140's, and to insure their retirement, we have reduced their operating account by $5.5 million.

We have added section 787 to the bill which allows the Air Force to lease under applicable law and regulation, up to six aircraft to be used to fly the missions currently conducted by the C-140's.

Mr. Chairman, I wish you to conform my understanding that we are supporting a program to replace the aging and operationally expensive C-140's and not a program geared to the sole use and specifications for White House use.

Mr. ADDABBO. Mr. Chairman, I have discussed the matter and I fully agree.

The CHAIRMAN. The Chair recognizes the gentleman from Georgia (Mr. GINN).

Mr. GINN. Mr. Chairman, for further clarification, was it not the committee's intent that when we specified six aircraft to replace the aging C-140's, that those aircraft would operate out of Andrews Air Force Base and were not intended for deployment in Europe?

Mr. ADDABBO. That is correct.

Mr. GINN. I thank the gentleman.

The CHAIRMAN. The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

AMENDMENT OFFERED BY MRS. SCHROEDER

Mrs. SCHROEDER. Mr. Chairman, I offer an amendment, and I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there is objection to the request of the gentlewoman from Colorado?

Mr. EDWARDS of Alabama. Mr. Chairman, I object. I have not seen the amendment.

The CHAIRMAN. Objection is heard.

The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mrs. SCHROEDER: Page 68, after line 15, insert the following new section:

SEC. . None of the funds appropriated by this Act may be used to appoint or compensate more than 33 individuals in the Department of Defense in positions in the Executive Schedule (as provided in sections 5312-5316 of title 5, United States Code).

Mrs. SCHROEDER. Mr. Chairman, I am offering an amendment to cap the number of bigwigs we can fund in the Department of Defense. Currently, there are 30 DOD officials in executive level positions. These positions require Presidential appointment and Senate confirmation. They pay salaries higher than those enjoyed by career senior executives and, with these jobs, come all the perks of being Under Secretary or Assistant Secretary.

The Pentagon has, obviously, not got the word from the White House that we are trying to cut down on the size of Government, because it is currently pushing a plan to create six new Assistant Secretary positions in DOD. To be fair, I ought to say that the original DOD bill only asked for five additional positions and the Armed Services Committee added a sixth for Communications, Command, and Control (C^3) and Intelligence (I). I think the sixth position for C^3I has been justified and my amendment allows it. Indeed, it used to exist until the Reagan administration stole it to use it for Congressional Relations Assistant Secretary, knowing that Congress would be much more likely to approve a new Assistant Secretary for C^3I than one for congressional relations.

This morning, the Department of Defense sent David Cooke, the Deputy Assistant Secretary for Administration, to the Committee on Post Office and Civil Service to justify these new positions. Mr. Cooke, the witness, made essentially three arguments in favor of the establishment of these new positions. His first argument was that these positions used to exist before the last administration abolished them as unnecessary. So, what we have here is a situation where the big-spending Carter administration reduced the size of Government and the budget-cutting Reagan administration is fighting for a 20-percent increase in the number of executive level positions in the Department of Defense. I did not see anything in Mr. Cooke's statement to suggest that the elimination of these positions by Secretary Brown was a mistake or anything specific on the changed circumstances which now require these new positions.

Mr. Cooke's second argument was that there is something special about an executive level position which makes recruitment easier, provides greater clout, and provides "a vital link between the administration and the career bureaucracy." Surely Presidential appointment and Senate confirmation are quite flattering to a new appointee in Government. Nevertheless, in reality, these symbols of power are fig leafs to cover the nakedness of the incompetent. The truly competent, whether they are executive level, senior executive service, uniformed, or whatever, stand out and have all the clout, respect, and influence they need. The "vital link" of which Mr. Cooke spoke is hard to see. Indeed, as he conceded in his statement, the appointments to these positions will be political. Historically, I do not believe that large campaign contributors, Heritage Foundation alumni, and associates of powerful Senators have served as much of a bridge to the career service.

Mr. Cooke's third argument was simple: these new positions won't cost much money. I cannot say how much they will cost, but I can say that it will be far more than the $2,637.50 in salary difference between a capped senior executive and an executive level IV. Senior executives can and often are treated as just other bureaucrats. Assistant Secretaries, on the other hand, think of themselves and are treated as princes in the royal court. They get big offices with windows facing the river. They get first claim on cars and drivers. They get secretaries, and military assistants, and special assistants, and deputies. In DOD, the workload does not determine the staffing. Rather, for each muckety-muck, whether military or civilian, there has to be the appropriate complement of workers. It is kind of top-down workforce planning.

The fact of the matter is that the real work of the Defense Department is done by soldiers guarding against enemy movements, by the mechanics who rebuild ships and airplanes, by the scientists who push back the frontiers of science looking for more accurate and more powerful weapons, by the lonely sailors sitting aboard ship in the Indian Ocean, and by the millions of other rank-and-file workers, civilian and military, who keep our military machine ready. We should concentrate our efforts on helping these people do their jobs, not in creating more layers of bureaucracy which drain resources from those who actually do the work and make their work more difficult to perform.

My amendment would permit one additional Assistant Secretary for Communications, Command, and Con-

trol and Intelligence, but would disallow any additional ones beyond that. I urge its adoption.

Mr. ADDABBO. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield.

Mr. ADDABBO. Mr. Chairman, we have discussed this with the pending legislation before the gentlewoman's committee, and I think 33 is an acceptable limit.

Mrs. SCHROEDER. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from Colorado (Mrs. SCHROEDER).

The amendment was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. FRANK).

Mr. FRANK. Mr. Chairman, unfortunately, the actions of the House today have made it impossible for me to support the defense appropriation. Of course, we need a sound defense in a dangerous world—but we make that world far more dangerous rather than less when we pass a defense appropriation which takes scarce dollars and pledges them to the development and construction of expensive and destabilizing weapons which are not only unnecessary from the defense standpoint, but which in fact contribute to the level of peril which an unrestrained arms race brings.

It is particularly sad—and frustrating—that so soon after a large number of thoughtful Americans called attention to the folly of the current arms race escalation in teach-ins around the Nation, and at a time when a far larger number of concerned Americans have asked the two superpowers to abide by a bilateral nuclear freeze, the U.S. House of Representatives refuses to pay any serious attention to their eloquent, passionate, and well-documented arguments.

Today, we have gone ahead with a multibillion-dollar MX missile plan despite the fact that no one here knows what it really means—and despite the fact that the President can offer neither a plan, nor a rationale, for such a missile. We have gone ahead with a new installment on a $40 billion—or more—B–1 bomber, which at best will have a shorter necessary life than a new family car.

Not only are we spending billions on these and similar weapons at a time when fundamental human needs go unmet because of budget cuts; we are spending them on weapons which make sense only to those committed to an all-out arms race; to those who scorn the arguments for sensible arms control which millions of our fellow citizens now put forth.

This bill is passed in a time warp. All around us, people talk of the need for reducing wasteful Government spending, and for making hard choices about ways to achieve objectives in an efficient, cost-conscious manner. Yet, after partisan maneuvering and Republican leadership pressure, a majority of the House votes down even a bare 2 percent cut in a department which OMB Director Stockman admits is bloated with inefficiency.

And while the public insistence on a rational defense strategy that keeps America strong, but simultaneously works in a genuine way toward arms reductions, and avoids destabilizing weapons and strategies, the House votes for every weapons system proposed regardless of its merit, or of the extent to which it puts us further from the goal of a truly safe and peaceful world.

I favor a strong America in a peaceful and safe world, and because I do, I must vote against this bill.

The CHAIRMAN. The Chair recognizes the gentleman from Alabama (Mr. EDWARDS) to conclude debate.

Mr. EDWARDS of Alabama. Mr. Chairman, I thank the Members of the House for their attendance today, for their attention to the debate, for their willingness to move along with it so that we can get on to the continuing resolution and other things such as that this week. I think we have a good bill. I would urge that the Members support the bill on final passage.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to my chairman, Mr. ADDABBO.

Mr. ADDABBO. Mr. Chairman, I thank the gentleman for yielding, and thank him for his cooperation, and the Members of the House for their cooperation.

Section 776 would limit the payment of standard level user charges [SLUC] to GSA to 50 percent of the fiscal year 1982 DOD SLUC bill. Enactment of this provision would result in the loss of approximately $107,000,000 in income to the Federal buildings fund. According to GSA, this loss of resources would result in the reduction of the fiscal year 1982 construction program, as contained in H.R. 4121 as reported by the Senate Committee on Appropriations, and also a reduction in the proposed fiscal year 1983 construction program.

My distinguished colleague, Mr. ROYBAL, is concerned that this proposal, if approved, would obviate one of the basic objectives of the Congress in establishing the FBF, to reflect in each agency's budget their share of the cost of providing Federal space, and thus, require each agency to justify its total program costs to its appropriation subcommittees. He believes that arbitrarily reducing the payment of SLUC distorts these legitimate program costs of the agency.

I can assure my colleague that I will work with him, DOD, and GSA prior to conference with the Senate to insure that none of the projects previously approved by his subcommittee will be canceled. I can also assure Mr. ROYBAL that the final defense bill will contain sufficient funding to provide the full reimbursement due to GSA under existing law for the services and space that GSA provides. Furthermore, I fully agree with the concept that each activity should reflect in its budget its share of the costs of providing Federal space. I thank him for his concerns and for bringing this problem to my attention.

Mr. CHAIRMAN. Are there any further amendments?

The Chair hears none.

Mr. ADDABBO. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. WRIGHT) having assumed the chair, Mr. ROSTENKOWSKI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4995) making appropriations for the Department of Defense for the fiscal year ending September 30, 1982, and for other purposes, had directed him to report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER pro tempore. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER pro tempore. Is a separate vote demanded on any amendment? If not, the Chair will put them en gross.

The amendments were agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

□ 2130

MOTION TO RECOMMIT OFFERED BY MR. BROWN OF COLORADO

Mr. BROWN of Colorado. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the bill?

Mr. BROWN of Colorado. I am, Mr. Speaker.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. BROWN of Colorado moves to recommit the bill, H.R. 4995, to the Committee on Appropriations.

The SPEAKER pro tempore. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER pro tempore. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER pro tempore. The question is on the passage of the bill.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. EDWARDS of Alabama. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 335, nays 61, not voting 37, as follows:

[Roll No. 320]

□ 2140

The Clerk announced the following pairs:

On this vote:

Mr. Pepper for, with Mr. Beilenson, against.

Mr. McDonald for, with Mr. Phillip Burton, against.

Until further notice:

Mr. Rosenthal with Mr. Duncan.

Mr. Patterson with Mr. Pritchard.

Mr. Bedell with Mr. McCloskey.

Mr. Moakley with Mr. Rhodes.

Mr. Reuss with Mr. Paul.

Mr. Weaver with Mr. Goldwater.

Mr. Alexander with Mr. Dornan of California.

Mr. Biaggi with Mr. Hagedorn.

Mr. Donnelly with Mr. Martin of New York.

Mrs. Chisholm with Mr. Forsythe.

Mr. Dymally with Mr. Grisham.

Mr. Florio with Mr. Madigan.

Mr. Jones of North Carolina with Mr. Garcia.

Mr. Mattox with Mr. Breaux.

Mr. Andrews with Mr. Dixon.

Mr. Dorgan of North Dakota with Mr. Johnston.

Mr. BLANCHARD and Mr. JOHN L. BURTON changed their votes from "aye" to "no."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 3046, AMENDING THE OLDER AMERICANS ACT OF 1965

Mr. ZEFERETTI, from the Committee on Rules, submitted a privileged report (Rept. No. 97-343), on the resolution (H. Res. 279) providing for the consideration of H.R. 3046, to amend the Older Americans Act of 1965 to extend the authorizations of appropriations contained in such act, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 3663, REGULATION OF MOTOR CARRIERS OF PASSENGERS

Mr. ZEFERETTI, from the Committee on Rules, submitted a privileged report (Rept. No. 97-344) on the resolution (H. Res. 280) providing for the consideration of the bill (H.R. 3663) to amend subtitle IV of title 49, United States Code, to provide for more effective regulation of motor carriers of passengers, which was referred to the House Calendar and ordered to be printed.

THE HUMAN MEANING OF THE AGGREGATE NUMBERS ON HOUSING STARTS

(Mr. ST GERMAIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ST GERMAIN. Mr. Speaker, today, once again the Federal experts have told us what the people in this

Nation have known for a long time—that the housing and construction industry is in a deep depression.

Housing starts, we are told by the Commerce Department, were down to an annual rate of 857,000 in October—the second lowest number since records have been kept on this area of the economy. Only in October of 1966, when starts dipped below the 850,000 mark, was housing construction at a lower ebb. These numbers are disastrous when the Nation is in need of at least 2 to 2½ million new starts annually just to keep up with basic needs.

These aggregate numbers speak loudly, but they do not begin to explain to the Nation the severe hardships, the pain, the suffering, the dashed hopes that flow from the failure of the Reagan administration policies on housing.

The Banking, Finance and Urban Affairs Committee has been in the field, talking directly to the people—to carpenters, electricians, plumbers, contractors, lumber mill operators, copper miners, steelworkers, the people who fell the trees, the people who sell paint, appliances, and building supplies. These people have all been hit so hard by the double whammy of high interest rates and sharply curtailed Federal housing programs under this administration.

Mr. Speaker, we are not dependent on the aggregate numbers of the Commerce Department. We have seen the depression up close, face to face with workers and small business people who are quickly losing hope and faith.

We have volumes of testimony, but let me quote from just one witness—Gene Brehmeyer of Shelton, Wash.—who came to the Federal building in Seattle, Wash., on November 6 and told the committee about his job experiences as a timber feller in the Northwest:

> This is the 24th week since the first of the year I am off. I am now treading water until 1 January, really until March.
>
> I don't want any of you to get the idea that we need welfare, some type of thing like that. I don't want welfare. I will never take welfare. I will steal from you first. What I want is my job I want to work.
>
> I have got six kids, trying to put food on the table. It is difficult. My son wants a six dollar sweatshirt, turning out for football. I am a proud man, I want my job.
>
> When you go into the winter, you try to have $1,500, $2,000 in the bank, plus your share you are going to get. This gets your utility bills paid, and takes care of emergencies. I have gone through my winter money this summer. I really don't know what the hell I am going to do. It is difficult to eat spaghetti all the time. I would assume it is going to be like this for the rest of the fellers.
>
> The Fish and Game Commission is going to catch hell this year. As long as I can afford 22 shells, my kids are going to eat. I am dismayed—I would like to see someone rise to the occasion, keep me working, keep interest rates down, and keep us busy. Otherwise, we have real problems, and I think you are looking at an upheaval that I think we are all going to regret.

Mr. Speaker, Mr. Brehmeyer is at the beginning of the long chain of people that are impacted when national policies crush the building industry. Unlike the fantasies of OMB, as revealed in the Atlantic Monthly, these are real situations, real people, facing real problems.

As one of the witnesses told the Committee in Tucson, Ariz., this administration has adopted an antihousing attitude. It must be changed.

PERMISSION FOR SUBCOMMITTEE ON NATURAL RESOURCES, AGRICULTURE RESEARCH AND ENVIRONMENT OF THE COMMITTEE ON SCIENCE AND TECHNOLOGY TO SIT TOMORROW DURING 5-MINUTE RULE

Mr. SCHEUER. Mr. Speaker, I ask unanimous consent that the Subcommittee on Natural Resources, Agriculture Research and Environment of the Committee on Science and Technology be permitted to sit tomorrow, Thursday, November 19, 1981, while the House is in session.

The SPEAKER pro tempore (Mr. ECKART). Is there objection to the request of the gentleman from New York?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, can the gentleman tell me if he has consulted the minority members at all?

Mr. CARNEY. Mr. Speaker, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from New York.

Mr. CARNEY. As the ranking minority member of the committee, I have polled all of the members of the committee and we are in full agreement with the chairman. We will meet, but we will not be marking up a bill.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

EDUCATING OUR CHILDREN

(Mr. SMITH of Alabama asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SMITH of Alabama. Mr. Speaker, rather than leave the education of our children to the wishes of Washington, it is time we return this traditional function to the level it belongs and insure that local needs are met rather than the needs of a billion-dollar bureaucracy.

Education is a responsibility that belongs to parents, teachers, local school systems, and our State governments. It is not Congress responsibility and certainly not the responsibility of a billion-dollar bureaucracy in many cases more than 700 miles removed from the needs and preferences of children and parents.

At issue is a God-given right that parents must have: The fundamental right to decide for themselves what type of education their children will receive.

It is time the Federal Government was reminded that children belong to parents and are not wards of the Federal Government or its creation, the Department of Education. Are our children better off today than they were 2 years ago when the Department of Education was created by President Carter? The Department of Education has not improved our children's education. It has only meant that in 2 years' time parents, many who are struggling financially to survive, have had to support 7,000 bureaucrats at a cost of $15 billion to issue more than 1,400 pages of regulations that force schools to fill out hundreds of reports and change directives from year to year.

Somehow we have lost sight of our goal. Need we be reminded that our goal is the education of our children? This means gearing our resources to provide the highest quality of education for every student. And I just happen to believe that this comes about through consultation with parents and local educators rather than Washington.

□ 2150

LATVIAN INDEPENDENCE DAY

(Mr. ANDERSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON. Mr. Speaker, today I join my colleagues in saluting the 63d anniversary of the independence of the Republic of Latvia. Unfortunately, this day remains a bittersweet celebration for millions of Latvians and other freedom-loving peoples throughout the world, because ever since Soviet troops occupied Latvia during the Second World War, the area has been illegally incorporated into the U.S.S.R.

The 40 years that have followed this invasion have been extremely trying for the native population of this small Baltic republic and its two neighbors, Estonia and Lithuania, who also suffer under the Soviet yoke. Displays of Latvian national sentiment have been ruthlessly suppressed. Thousands of Latvians were deported to northern Russia and Siberia in the years following the war. In spite of these deportations and other brutalities inflicted upon them, the Latvian people's desire for freedom has remained strong.

At present the Latvian nation is facing a new and even more ominous challenge from their occupiers. There has been an increased number of Russian colonists settling permanently in Latvia in recent years. The percentage of native Latvians comprising Latvia's population has declined to a little over 50 percent of the total. Thus Latvians today face the danger of becoming a minority in their own land. This present day colonialism must be condemned. The Latvians must not be robbed of their homeland forever.

In the past, the Latvian nation has faced and triumphed over many challenges to its independence. It will survive the present colonialist policy of Russification. Let us all celebrate Latvian Independence Day with the hope that this nation's right of self-determination will be speedily restored, and she will once again be free from Soviet bondage.

AMERICAN DREAM TURNED TO NIGHTMARE

(Mr. VENTO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VENTO. Mr. Speaker, the American housing industry is in a shambles. Housing starts are the lowest in recent memory, unemployment in the construction trades and bankruptcies in housing related firms are rampant. This depression in one of our most basic industries—an industry which provides Americans with one of their most important, cherished, and traditional dreams—has been greeted by the Reagan administration with callous disregard.

More than 6 months ago I questioned Reagan administration officials on how they were going to deal with the impending crisis in housing. The Reagan response has been to establish a Presidential commission to study the problem. The blue ribbon study commission has produced a lot of rhetoric, few new ideas, but perhaps its most important characteristic is to provide a political shield to take the heat.

The Reagan administration has done much more to the housing industry than just create a study commission. First, they eliminated 120,000 assisted housing units from the budget and they sought to further restrict the Federal programs which direct capital toward housing. Then they rammed through a tax bill which has the effect of skewing investment incentives away from housing. That same Reagan supply side tax bill will be a principal contributor to the third ill that affects the housing industry, high interest rates. Reaganomics, increased capital intensive defense spending, and the February 1981 Presidentially mandated tight monetary policy combined with the added steam of the business tax cut which forces corporate borrowing and therefore increases pressure on money market, has kept interest rates at unprecedented levels and will likely result in continued inflation.

Mr. Speaker, during the last few weeks we have heard the incredible boasting by our colleagues from the other side of the aisle about the drop in the prime rate. Let me point out to my colleagues who are boasting of this progress that to achieve this drop, America has entered a very serious recession, and added millions of workers to the unemployment rolls. In my judgment, this is nothing to boast about. It is important to note that the mortgage interest rate has not tracked the drop of the artificially high prime rate. In the real world you would get little credit for achieving a drop in interest or inflation rates by creating a recession and increasing unemployment.

The real tragedy is that we need to build more than 20 million units of housing in the 1980's and at current rates we will build less than half that. The real tragedy is that millions of Americans who could build those homes are out of work. The real tragedy is that millions of Americans cannot hope to purchase a home. A way of life that strengthens communities and families and provides stability for generations is going to disappear. The real tragedy is that there is a crisis out there and the administration is doing nothing about it. Indeed the American dream has turned into the American nightmare.

A TRIBUTE TO LEONARD A. USINA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

● Mr. PEPPER. Mr. Speaker, on October 26, 1981, a Mass was held on the occasion of the burial of the Honorable Leonard A. Usina at Gesu Church in Miami. Mr. Usina, one of my late wife's and my longtime and dearest friends, was 93 when he passed away. He had a great career as a businessman and especially as a banker. He left a group of banks known as the Peoples' Banks, which bear testimony to the kind of a man—the kind of banker—Mr. Usina was. He was a man who put first emphasis, even in respect to security for loans, upon the character of the borrower. He was the kind of a banker to whom the minority groups—little people—could go for legitimate help. He was the sponsor of innumerable worthy causes. He was a symbol of nobility of character, charm, and compassion for his fellowman. Like the Master, he went about doing good in his life. We who loved him know we will never see his like again. He stood out not only in the charm of his person, always beautifully dressed in a white linen suit with his shock of beautiful white hair, but as a gentleman, as we say, "of the old school."

On the occasion of his Mass, to which I refer, I was privileged to read the first lesson, a privilege which I will always cherish. The eulogy for Mr. Usina was delivered by Chaplain Ignatius Fabacher of the Lafayette General Hospital, Lafayette, La., a longtime friend of Mr. Usina's. The eulogy was that of a devoted friend and spiritual brother, truly eloquent in words and delivered with tender reverence for Mr. Usina. All who heard this beautiful eulogy were warmed in their hearts and pleased to hear one so knowledgeable of Mr. Usina speak of him in such moving and tender words.

Mr. Speaker, Mr. Usina was a great American, I ask that this moving eulogy of him given by Father Fabacher appear in the body of the RECORD following these remarks.

EULOGY AT THE MASS ON THE OCCASION OF THE BURIAL OF MR. LEONARD A. USINA, AT GESU CHURCH, MIAMI, FLA., OCTOBER 26, 1981

". . . go to my brothers and tell them, 'I am ascending to my Father and your Father, to my God and your God.'" (John. 20:17)

Archbishop McCarthy, Bishop Nevins, Family of Mr. Leonard Usina—by family is meant not only blood relatives, but all who are members of his banking family—reverend members of the clergy, dear religious and friends.

My own association with a member of the Usina Family began in 1944, with Patrick Usina who had just recently entered the Jesuit Order. Later it was my great pleasure to work together with Pat to help balance the income with the expenses at the Jesuit Novitiate, Grand Coteau, Louisiana. And when I came to Miami, Pat introduced me to his Uncle Leonard. And after that Mr. Leonard Usina helped with every financial decision made during my tenure at Gesu Church.

Today, we are silently aware that we are in the presence of the mortal remains of this great American—a Miamian who believed in the people of his own city—a Floridian with great vision—an American who really believed in God.

Leonard A. Usina was born in St. Augustine, Florida, November 29, 1888—nearly a century ago. He said his father made some friends during the Civil War, and one of them gave his father a job in a St. Augustine Bank, at $16.00 a month—this meant that his father was not the owner of the bank.

Mr. Usina witnessed the effects of the Yellow Fever in this area. Mr. Claude Pepper, here today, can also relate accounts concerning the Yellow Fever epidemic. Mr. Usina experience the World War in the early part of the century—a war that was supposed to end all wars; then he went through the Great Depression of the thirties; and a Second World War in the forties. After the second World War he witnessed a period of great material growth for America and at the same time a period of spiritual poverty among the people of America. Amid all these "ups and downs" Leonard Usina

kept his Faith in God, Faith in himself, and Faith in people.

RESULT OF THIS THREEFOLD FAITH

The wisdom of this man who brings us together today, could appreciate the profundity of the following poem which was his favorite:

So live that when thy summons comes to join
The innumerable caravan that moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry-slave at night,
Scourged to his dungeon, but, sustained and soothed
By an unfaltering trust, approach thy grave
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams."

—WILLIAM CULLEN BRYANT.

But Leonard Usian's life goes further than the grave; and today as we gather in his presence, he speaks to each of us using the words of Jesus Christ after His Death and Ressurrection:

"Go to my brothers and tell them, 'I am ascending to my Father and your Father, to my God and your God.' " (John 20:17)

". . . And indeed, I am going to prepare a place for you that where I am, you also may be." (JOHN 14:15)

FAITH IN GOD

God came first in awareness of the priorities of his Life. He told me once that he would have dedicated his life to the service of God as a priest, but circumstances did not permit him to fulfill this desire. In my answer to him, I said, Mr. Usina you would have made a wonderful bishop.

Born of staunch Catholic parents, spiritual leaders in his church always received the greatest respect; although he might not always agree with some of their financial policies. In his relationship to God he could not go along with any type of "fly by night" expression of religious beliefs. His own relationship to God was solid. Once, at a gathering of men, I heard him address the speaker, "I am not going to sit here and let you criticise our spiritual leaders. Leonard Usina's loyalty to lawful authority admitted of no degrees; it was always 100 percent.

FAITH IN HIMSELF

In the 1940's Leonard Usina was president of the Florida National Bank. At age 62, in the 1950's he broke away from the BallduPont interests and opened his own Peoples Bank in Miami Shores. His philosophy of banking was summed up briefly at a stockholders meeting: "We remain interested in the greater Miami area. We think there is a lot to be done here without expanding to Jacksonville or Orlando."

FAITH IN PEOPLE

Mr. Usina once asked the question: "How can you love people—children, women, blacks or whatever—if you don't love persons first?"

His priority in dealing with others was, people come before things. He was greatly aware of the fact that persons make things; things do not make people.

He was instrumental in making women presidents of banks, long before an Equal Rights Amendment was ever thought of. One of his Vice-Presidents, possibly more than one, are black. Wherever he saw ability and integrity in a person he allowed that person's potential to develop. This principle came before anything else when he placed someone's name on the list for a position.

Finally, Mr. Usina had Faith in the elderly too. He was instrumental in helping Gesu Church to establish the Senior Citizen Center here. He was informed by Sister Maura who directs the Center that the elderly were losing some of the value of their Government checks. He said tell them to deposit their checks in Peoples Bank; they can draw through their checking account any amount they need at the time; and no minimum amount need be kept in the bank; just do not overdraw. He did this just to help these Senior Americans who helped to make America great in the past. He fulfilled the commandment: "honor thy father and thy mother."—the only commandment for which the reward of old age is promised. He received his reward even in this life by being given a long life here below, almost a century.

And now from where he is, Leonard Usina speaks out to you and to me, "Go to my brothers and tell them, 'I am ascending to my Father and to your Father, to my God and your God. . . . indeed, I am going to prepare a place for you that where I am, you also may be.' "—Rev. IGNATIUS FABACHER, S.J.●

CHICAGO SPORTS BROADCASTER JACK BRICKHOUSE HONORED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

● Mr. ANNUNZIO. Mr. Speaker, today in our great city of Chicago, hundreds of civic leaders as well as leaders from Chicago's sports and entertainment communities, are paying tribute to the legendary dean of Chicago sportscasters—Jack Brickhouse. The luncheon in tribute to Jack is being held at the Regency Ballroom of Chicago's Hyatt Regency Hotel under the auspices of the Variety Club of Illinois, Tent No. 26.

More than 1,000 fans and friends are honoring Jack for his many contributions—not only for his 40 years of broadcasting on WGN radio and WGN television, located in the 11th District I am honored to represent, but also for his humanitarian efforts in helping handicapped and underprivileged children.

A blue-ribbon group of Chicago's leading citizens is heading the committee for this "Tribute to Jack Brickhouse" luncheon. Philanthropist W. Clement Stone is the general chairman, with Joe Meegan, Andy McKenna, Joe Kellman, and Howard Johnson serving as cochairmen. Illinois Governor James Thompson and Chicago Mayor Jane Byrne are serving as honorary cochairpersons.

The nationally known newspaper and television personality Irv Kupcinet and WGN radio's top personality Wally Phillips are serving as comasters of ceremonies and will head an exciting program featuring outstanding sports personalities, including Baseball Commissioner Bowie Kuhn.

Jack "Hey! Hey!" Brickhouse, who has been announcing baseball for WGN-TV ever since they went on the air in 1948, announced his retirement from WGN last month. He holds a record not ever likely to be broken—more than 5,200 major league baseball games announced—and all for the same station. He did play-by-play broadcasting of Chicago Bears games on WGN radio for 24 consecutive years.

Although this legend in our time has retired from doing play by play of regular baseball telecasts, Jack will remain in Chicago for many years to come, doing selected broadcasts and special events. His broadcasting career is one of versatility, and one of the highlights was his broadcast of a Papal audience with Pope Paul VI.

To the good wishes and tributes today pouring in for this beloved man, I add my personal tribute to Jack Brickhouse, and my best wishes for many more years of success in devotion to high ideals.●

VENGEANCE HAS BEEN CARRIED FAR ENOUGH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. FORD) is recognized for 5 minutes.

● Mr. FORD of Michigan. Mr. Speaker, it has come to my attention that the Department of Defense, as a matter of policy, is barring dismissed air traffic controllers from enlisting or being appointed to the armed services.

This appears to be an extension of the administration's overly harsh policy that bars the fired air traffic controllers from all Federal employment.

To me it seems a shocking example of military overkill. What is more, the directive, which the Committee on Post Office and Civil Service had to pry from a reluctant military, appears to contradict a legal opinion from the DOD itself.

The Department of Defense has been experiencing difficulty in retaining military air traffic controllers and has gone so far as to offer bonuses for reenlistment. In light of this, the Department's Office of General Counsel last August concluded that 5 U.S.C. 7311, which requires removal of individuals who strike against the United States, does not apply to the military. It based its findings on a number of factors, including a position that "military service is not a job, it is a calling."

I would like to quote the General Counsel's peroration:

In summary, section 7311 appears in a portion of the U.S. Code dealing with civilian employees; there is nothing in the legislative history suggesting applicability to service in the armed forces; DOD and congressional treatment of the military unionization issue suggest that the statute does

not apply to service in the armed forces; there are substantial policy reasons for not applying section 7311 to such service; and there are no overriding reasons for applying it to such service. Accordingly, there is no reason to change past interpretations and apply this statute to service in the armed forces.

Mr. Speaker, that statement is persuasively clear to me. What is less clear is how the Department of Defense in a little less than 3 months reversed this position without providing any legal rationale. On November 5, it simply circulated this directive:

Effective immediately, individuals who have been dismissed from Federal employment because of their participation in a strike against the Government of the United States or the Government of the District of Columbia will not be enlisted or appointed as members of the armed forces.

As a lawyer, I find this inconsistency offensive.

I have felt all along that punishment meted out to the controllers was far too severe and that it guarantees enormous future problems in returning airline operations to prestrike levels. Now it seems that the military, hard pressed to fill its own ranks which have been reduced as a result of civilian borrowing, is now cutting off its nose to spite its face. Recently an internal Air Force memo, leaked to the press, acknowledged that the civilian borrowing is having an adverse impact on military air traffic control.

It makes one wonder how far the administration intends to carry this vendetta.

And it raises a number of thorny questions for the future.

At some point will the Department of Defense deny entrance into the military to other classes of Americans?

What would happen if we find it necessary to reactivate the draft? Would the dismissed air traffic controllers be exempt or become the hapless victims of a double standard that would deny them an opportunity to enlist but retain the right to conscript them?

We have carried vengeance far enough. It is time to replace it with commonsense and a spirit of fair play.

The Department of Defense should rescind its order at once.●

MORTGAGE WAREHOUSING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LAFALCE) is recognized for 20 minutes.

● Mr. LAFALCE. Mr. Speaker, during recent weeks, the House of Representatives has moved prompty to address the critical problems facing the American thrift industry. We passed the Regulatory Flexibility Act on October 28, thus giving Federal deposit insurance regulators broad new authority to arrange mergers of failing institutions. Yesterday, we passed a second bill to facilitate swaps by which thrifts improve their immediate liquidity problems. This legislation removes limitations on the number of mortgages over 1 year old that can be purchased by the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association. Thrift institutions will be able to exchange old mortgages for mortgage participation certificates, which can then be used as collateral when the thrifts borrow.

Taken together, the bills are helpful, but they are not nearly enough to solve the problems of the thrifts. We have not addressed the more fundamental issue of low-yielding mortgage portfolios. These loans were mandated by Federal lending restrictions, and it will be years before the burden of their low yields is lifted by natural turnover.

Today, I am introducing legislation which will assist mortgage lending institutions survive that transition. My bill is identical to legislation introduced in the Senate by Senator MOYNIHAN. Titled the "Mortgage Warehousing Facility Act," the bill would authorize FDIC and FSLIC to exchange variable rate debentures, backed by them, for a share of the low-yielding mortgages held by troubled institutions.

The program established by this bill would focus specifically on those institutions with net operating losses for two consecutive quarters or more. Only loans made prior to December 1, 1979, with rates lower than 7½ percent would be accepted for exchange. A formula would determine the proportion of such loans that an institution could exchange, but in no case would it exceed 75 percent. The variable-rate debentures would pay market rates, with FDIC and FSLIC absorbing the cost differential between mortgage yields and the interest paid on the debentures. Federal outlays under the program would be limited to $700 million per year.

An important element of this program is provision for recapture of future profits of participating institutions in order to speed up repayment. Beginning in the third year after exchange, institutions would allocate 50 percent of the increase in net operating income above the previous year for the purpose of retiring the debentures. In all cases, the debentures would be fully retired by the end of the 10th year.

The mortgage warehousing program offers a reasonable, affordable, and temporary mechanism for assisting mortgage lending institutions who otherwise might not survive. The problem of low-yielding mortgage portfolios is the direct result of Federal regulation; it does not reflect poor management. The immediate prospect of widespread industry failure threatens not just these institutions themselves, but also the financial industry as a whole. It makes good sense to take this simple step to help them survive the transition and continue to provide future financing for the housing industry.●

EXPORT-IMPORT BANK FINANCING NOTIFICATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from South Carolina (Mr. NEAL) is recognized for 5 minutes.

● Mr. NEAL. Mr. Speaker, I wish to inform the House today of a proposal by the U.S. Export-Import Bank to extend a credit of more that $109 million to the Government of Mexico to buy equipment in the United States for electrifying the Mexico City-Queretaro-Irapuato railroad line.

The Eximbank loan would enable the Mexican Government's transportation department to purchase 39 locomotives from General Electric and other equipment from Westinghouse International Co. for the railroad project. Other U.S. companies are expected to sell another $14.5 million worth of goods and services without Eximbank guarantees. The total U.S. export value is expected to be nearly $145.5 million.

This Eximbank notification was referred to me as chairman of the Banking Committee's Subcommittee on International Trade, Investment and Monetary Policy. Under section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, the Eximbank must notify Congress of proposed loans or financial guarantees, or combinations thereof, of $100 million or more. Unless the Congress determines otherwise, the Eximbank may give final approval to the transaction after 25 days of continuous session of the Congress after notification.

I am submitting for the RECORD copies of the Eximbank notification, which includes details about this transaction. I would welcome any comments or questions my colleagues might have on this proposal. The Eximbank material follows:

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., November 4, 1981.

Hon. STEPHEN L. NEAL,
Chairman, Subcommittee on International Trade, Investment and Monetary Policy, House Banking Committee, U.S. House of Representatives, 2463 Rayburn House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Eximbank has submitted a statement to the Speaker of the House of Representatives and the President of the Senate in accordance with the provisions of section 2(b)(3)(i) of the Export-Import Bank Act of 1945. I am taking the

liberty of providing you with a copy of this statement.

Sincerely,

NANCY S. PIGMAN,
Congressional Relations Officer.

Enclosure.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., November 4, 1981.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES,
The Speaker's Rooms, H-209, U.S. Capitol, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to Section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, Eximbank hereby submits a statement to the United States House of Representatives with respect to the following transaction involving U.S. exports to the United Mexican States.

A. DESCRIPTION OF TRANSACTION

1. Purpose

Eximbank is prepared to authorize a direct credit of $109,111,233 to Nacional Financiera, S.A. (Nafinsa) to assist it in the purchase in the United States of 39 G.E. locomotives and of WABCO Westinghouse International Company signaling and control equipment for use in Mexico. In addition, it is contemplated that there will be U.S. supplier participation in the transaction in the amount of $14,548,164, without Eximbank guarantee. The total U.S. export value for this transaction is estimated to be $145,481,644. This proposed credit and its terms and conditions are based on a preliminary commitment which was issued by Eximbank on November 6, 1980.

2. Identity of the parties

Nafinsa is a National Credit institution and financing agent of the Federal Government of Mexico, and its obligations commit the full faith and credit of the Federal Government. Nafinsa is a long standing customer of Eximbank with no repayment difficulties.

3. Nature and use of goods and services

The goods and services to be financed under the credits will be used by the Secretaria de Communications y Transportes (a department of the Federal Government) in the electrification of the Mexico City/Queretaro/Irapuato railroad line.

B. EXPLANATION OF EXIMBANK FINANCING

1. Reasons

The Eximbank direct credit of $109,111,233 will facilitate the export of approximately $145,481,644 of United States goods and services.

The transaction will have a favorable impact on employment for substantial numbers of United States workers, as well as on the United States balance of trade. Eximbank perceives no adverse impact on the United States economy from this transaction.

Manufacturers in nearly all the industrial countries are capable of supplying the goods and services to be purchased by Nafinsa. Eximbank has received information that the official export credit agencies in Europe and Japan are offering financing for this equipment. Accordingly, in view of the amount of financing required for the proposed purchases of goods and services by Nafinsa, the repayment term and the existence of foreign competition, Eximbank's direct credit is necessary to secure these sales for United States suppliers.

2. The financing plan

The financing plan for the total U.S. procurement supported by the Eximbank direct credit is as follows:

	Amount	Percent of U.S. costs
Cash	$21,822,247	15
Eximbank credit	109,111,233	75
Supplier participation not guaranteed by Eximbank	14,548,164	10
Total	$145,481,644	100

(a) Eximbank Charges

The Eximbank direct credit will bear interest at the rate of 8¾ percent per annum, payable semiannually. A commitment fee of 0.5 percent per annum will be charged on the undisbursed portion of the Eximbank direct credit.

(b) Repayment Terms

The total credits of $123,659,397 will be repaid by Nafinsa in 44 semiannual installments, commencing June 10, 1983. The early installments will be applied to repayment of the U.S. supplier loans, and the later installments will be applied to repayment of the Eximbank direct credit.

Attached is certain additional information on Eximbank activity in and economic data on the country involved in this transaction.

Sincerely,

WILLIAM H. DRAPER III.

PROVIDING FOR HOSPICE CARE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. PANETTA) is recognized for 5 minutes.

● Mr. PANETTA. Mr. Speaker, I recently had the honor and privilege of addressing the National Hospice Organization at its national convention. The dedication and commitment to serving the terminally ill which was shown by the persons in attendance at this convention was very impressive. Because of these individuals, the growth and development of the hospice movement has flourished over the past decade. From one hospice in America 8 years ago, today, there are more than 200 operating hospices. Mr. Speaker, I am inserting the text of my remarks at this convention for the attention of my colleagues:

REMARKS BY HON. LEON E. PANETTA, NATIONAL HOSPICE ORGANIZATION, NOVEMBER 12, 1981, ST. LOUIS, MO.

"The moral test of government is how it treats those who are in the dawn of life—the children; those who are in the twilight of life—the aged; and those who are in the shadows of life—the sick, the needy and the handicapped." These words were spoken by a great humanitarian—a victim of terminal illness himself—U.S. Senator Hubert H. Humphrey in 1977. They were true then, and they are true today.

Members of the National Hospice Organization, let me express to you my deep appreciation for this opportunity to address you and be with you at your national convention. The hospice movement is the very embodiment of the commitment and dedication of thousands of hospice pioneers in hundreds of communities across this country—all working on behalf of those in the twilight and shadows of life—the terminally ill.

This convention is a living tribute to the countless personal stories and triumphs that have made the hospice movement a reality today. Look around you and listen for a moment to what draws each of you here today.

A psychiatrist who saw the pain of dying in the eyes of his patients and their families. He took their pain personally and resolved to do something personally about it. Hospice of Marin County is here today.

Two nurses, with no money and no organization, but who, out of their own lives, saw the need and found the inspiration to create a better way of caring for patients they saw being neglected and abandoned. Hospice of Southeast Texas is here today.

An aggressive city manager and community organizer who had helped build service networks for the young and old, the disabled and the delinquent and the indigent in his own New England town . . . and how then looked around him and saw that a group which cuts across the socio-economic line had not been responded to . . . the terminally ill. He had a vision and he and others took the leap of faith and action. The Connecticut Hospice is here today.

A Methodist minister from the south, forced to stand outside the glass windows of an intensive care unit, and watch his father die painfully and cruelly . . . the memory of unwanted and costly medical heroics seared into his memory. The young minister vowed he would not let that happen to anyone else he loved. He left the safety of the sanctuary for the risk of hospice. And Hospice, Inc. of Miami-Ft. Lauderdale is here today.

For every Bill Lamers, every Mary and Peggy McKenna, every Dennis Rezendes, and every Hugh Westbrook, there are a thousand more hospice pioneers in a hundred communities throughout America who each have a personal story and who are each living out a personal commitment to hospice.

Eight years ago there was one hospice in America. Five years later there was a handful. Today there are more than two hundred operating, functioning hospices and at least as many more developing in all fifty states.

The story of the Hospice Movement is the story of what America is all about—of conscience, of concern, of commitment not of

the dollar but of the heart. This is less a trade organization and more of a movement, less a profession and more of a calling, less an industry and more of a ministry, less a concept and more of a concrete alternative form of care that performs on its promises.

It is that unique quality about that which brings me here today, as your supporter and your friend in the Congress of the United States. Yet, just as with many of you, there is something else that brings me here. There is a personal side. A deeply personal story of a mother dying of cancer, and a father who made a commitment that he would care for her in the comfort of our family home until her final breath—and he did. There is also another personal story of the pain and suffering, the needs and problems of . . . a hospice, in my own district in California . . . a hospice that came into existence a few years after my mother's death.

Several years ago a group of dedicated, idealistic people in my district came to a decision not unlike decisions made by similar groups all over the country . . . a decision to take the hospice concept out of the literature and into the homes of the terminally ill in the Monterey Peninsula area.

With the great zeal and commitment, this community group formed a hospice team, established a comprehensive program, began delivering home care, created a bereavement follow-up effort, and opened a hospice inpatient unit. They kept me informed about their progress and their dreams. In a special way, as their Congressman, I felt a part of what they were doing. Those who started the hospice in my district were no less committed, no less organized, and no less talented than any other member of hospice of the National Hospice Organization. I was and am proud of the people back home and the hospice back home. But that, unfortunately, is not the end of the story.

Despite enthusiastic community support and a fine record of service their hospice was in dire straits, perhaps mortally wounded, perhaps terminal, Dying patients who needed help and were appropriate for hospice care had to be turned away. They had to close the inpatient unit and curtail home care and bereavement services. The problem wasn't with the care being rendered. The problem wasn't with the community. The problem was in Washington, D.C.

Most patients being cared for and wanted to be cared for by the Hospice of the Monterey Peninsula were Medicare-eligible. Yet, they couldn't use their Medicare benefits to obtain hospice services . . . because hospice, per se, was not a covered benefit under the Medicare program. The effect of the existing Medicare program and its service definitions was to provide an economic disincentive to the use of the hospice and an economic incentive favoring the use of higher-cost, less appropriate care, which these patients and their families didn't want. Caught in the trap was not only the dying patient and family, but the hospice itself.

The current Medicare reimbursement system and guidelines tend to reward and encourage high health care costs for the terminally ill while discouraging and punishing more appropriate, cost-effective hospice alternatives. I was most interested in the President's observation at his press conference of the inequities of federal policy that favors institutionalization over home health care. There are the exact same inequities that impacting on hospice care—the kind of government policy that is bad business and bad medicine. We will give him and his administration the opportunity to some positive reform.

The Hospice of the Monterey Peninsula is struggling very hard to stay alive. Three other hospices in my district are also experiencing serious difficulties keeping their home care programs operating. The hospice crisis in my district is not one of the quality of care or of cost of need, but is rather a crisis of financial inequality and reimbursement injustice. This is not just a California crisis. Of the three original National Cancer Institute hospices, two have either folded down or scaled back when the grant funds ran out.

Just before this convention convened, one of the strongest hospices in Florida, Hospice of Palm Beach County, held a news conference announcing they would have to go out of business by April due to financial problems and lack of reimbursement. In less than a year, the twenty-six Health Care Financing Administration demonstration hospices will lose their waivers. What will happen to them?

Your President, Dr. Hadlock, has said that if nothing is done to correct the injustices in the reimbursement system which discriminates against the unique characteristics of hospice care that, in his judgement, seventy-five operating hospices in this country will close within the next eighteen months. What will happen to the patients and the families that these hospices are serving and could serve? If we do nothing, if we wait, we may well find that the terminally ill in many communities in America will have the hospice alternative taken from them.

The founder of the National Hospice Organization, Dennis Rezendes, stated it best when he said, "the greatest single obstacle to the progress of and even the survival of the hospice movement in America is the current health insurance and reimbursement system. For the sake of the movement and for the sake of those for whom we care, there must be an immediate forthcoming change."

For the past year, Mr. Rezendes, Reverend Hugh Westbrook, and Don Gaetz have worked closely with me and key congressional leaders in both Houses of Congress. They have been joined by more than 200 hospice leaders from 40 states in laying the groundwork and building the foundation to answer the most pressing need of the hospice movement and the most prevalent unmet need of the hospice patient and family. These leaders of the hospice movement, supported by many of you, have joined those of us in Congress in making an historic event possible.

Within the next few days, in Washington, a rare, bipartisan coalition of key members of the United States Congress will introduce legislation providing for comprehensive Medicare reimbursement for hospice programs of care across the nation. This legislation will firmly establish hospice in the American health care delivery and financing system. As the primary sponsor of this bill in the House, I expect to be joined by the following key members: Representative Claude Pepper of Florida, Chairman of the House Select Committee on Aging; Representative Barber Conable of New York, ranking Republican on the House Ways and Means Committee; Representative Bill Gradison of Ohio, ranking Republican of the Subcommittee on Health; Representative Henry Waxman of California, Chairman of the Subcommittee on Health and the Environment; Representative Ed Madigan of Illinois, ranking Republican of the Subcommittee on Health and the Environment; Representative Charlie Rangel of New York, Democrat on the Health Subcommittee; and Representative Richard Gephardt of St. Louis, Missouri, a key Democrat on the Ways and Means Committee. These prime sponsors are being joined by what we expect to be some sixty other Democrats and Republicans.

Our hope is that an equally prestigious bipartisan coalition in the Senate, led by the Chairman of the Senate Finance Committee, Bob Dole of Kansas, and the ranking Democrat on that Committee, Russell Long, will also be behind this bill. The bill is a good bill not only because it has strong support, but because it was written through the efforts of hospice leaders. The bill provides that persons who are Medicare-eligible and who have a terminal prognosis of six months or less will be able to use their Medicare benefits to obtain comprehensive hospice services including home care, respite care, short-term inpatient care, counseling, drugs and medications on both an inpatient and outpatient basis, as well as family bereavement care. Under the terms of this bill, hospices may become Medicare-reimbursed without regard to whether the hospice is based in a hospital or nursing home or home health agency or whether it is a free-standing, community organization unaffiliated with any other provider. Eligible participants are people who are qualified for Medicare. Upwards of 70 percent of the hospice candidates in the country are of an age or circumstances which makes them Medicare eligible.

Those individuals who might feel that hospice reimbursement under Medicare will dilute the hospice concept of volunteerism and philanthropy should have no fear, whatsoever. Hospices certified under this legislation will be fully reimbursed for their services to Medicare patients but will still have to look to the private charity sector and the private insurance sector for the rest of the funds needed to provide hospice care to the community.

This bill is a partnership effort between the government, on the one hand, and the hospice program, on the other. Both sides have a funding responsibility. The community must still make hospice happen.

Unlike any other part of the Medicare program, this legislation requires that the caregiving team must include volunteers. The heart of the hospice movement, the caregiving volunteer, is at the heart of this bill. Along with volunteers, the other members of the interdisciplinary team required by the bill are a physician, a registered nurse, a social worker, and a pastoral or other counselor.

Aside from appropriateness of care, the other promise of hospice is cost-effectiveness of care. In the Congress, I tend to be most often identified with budget matters. Let me assure you that no matter how attractive hospice might be as a concept, in your eyes or in mine, if it would add significantly to the Medicare budget, there is no chance for passage.

That's why this bill does not treat hospice as an add-on layer to an already costly health care system; but rather treats hospice as a substitute, an alternative form of care, consistent with the Standards and Principles of the National Hospice Organization, allowing care to be given on the basis of patient-family need.

Before the bipartisan coalition hospice bill was finalized, we in the Congress insisted on hard, factual cost analysis. We looked at the

results of the National Cancer Institute study; we looked at the California Medicaid Study; we looked at the Methodist Hospital and Florida studies. This bill has been specifically studied for cost impact by a private, independent analysis funded by the Warner-Lambert Foundation.

Currently, the Warner-Lambert study indicates that it is costing more than $7,000 in Medicare Part A and Part B benefits to provide health care for a terminally ill cancer victim in the last six months of life. In other words, if there are 200,000 Medicare-eligible people dying of cancer in America this year, we're talking about an existing cost to the Medicare program, just in the last six months of life, of nearly a billion and a half dollars nation-wide.

The most expensive combination inpatient, outpatient, home care and bereavement care hospice program studied by the National Cancer Institute reports total costs, including all modes of care, of about $4,500 per patient-family. An average day of hospice care of all types tends to be one fourth to one fifth the average cost of hospital care for cancer patients, according to the Warner-Lambert analysis.

The cost analysis of this bill which reimburses one hundred percent of the reasonable costs of home, inpatient care, bereavement care, counseling, and drugs and medications, is that, at minimum it will actually save the federal government at least $15 million the first year and, owing to what we believe will be the continued growth of the hospice movement, a net savings is projected for the fifth year of as much as $130 million.

As a member of House Budget Committee, that is the kind of hospice benefit that all of us can go back to Washington and fight for.

To provide for the growth and development of hospice services and to avoid stifling creativity at the patient-family care level, we have defined, in general terms, a reimbursement formula which would be indexed regionally and annually and is pegged to the overall costs of caring for the terminally ill in the Medicare system. Based on the data we have, not one single currently operating hospice has costs which exceed the reimbursement formula in the bill. What I am saying is that this bill should not hurt anyone and will help nearly everyone operating a hospice program.

Finally, while the hospice benefit in this bill is for patients with six months or less to live, we in Congress have been persuaded by people like Dr. Hadlock that there needs to be some mechanism to respond to the patient who still is terminally ill but who lives beyond the six months. The bill, therefore, provides that a patient who is still under care of a hospice is able to be re-certified by the hospice medical director for up to four ninety-day periods or a total of 360 days of care.

I know all of you are interested in more of the specific details and I understand that sessions are being set up later in the day to go over the bill section-by-section.

I don't want to in any way dampen what I hope and trust will be your enthusiasm and advocacy for this major step forward in appropriate care for the hospice patient/family.

But I do want to sound a note of caution.

I consider today, this year, and this Congress to be the right time to proceed with hospice reimbursement legislation. Today, in this audience are the people who have created hospice programs in rural settings and urban areas, in hospitals and nursing homes and home health agencies, and in free-standing community groups. You who are here today have come up the hard way. You have fought the battles of unceasing demands for services against finite and diminishing resources . . . and you are still here. You have done it by yourselves, without a just reimbursement system. Your hospices are built on your own sweat equity.

I don't want to wait three or five or ten years to enact this bill. I don't know who will be sitting in conventions like this by that time. I do know who is here today. I have been convinced by your leaders who have worked with me on this bill that you are the people who deserve a just reimbursement system because you are the people who have earned it.

I want your hospices to be the ones that don't go out of business. I want your hospices to be the ones who are here ten years from now.

And, none of us in the Congress want to have happen to hospice what has happened in some areas in health care. We don't want hospice to become just a federally-funded business venture with no conscience and no commitment to its reason for being.

I am asking you today to take up your share of the burden and make certain that doesn't happen.

There was considerable debate on mandating an accreditation system in this bill. We took a risk and didn't make accreditation of hospices a federal mandate. We left it to you, instead. The people who have pioneered hospice in America must take the responsibility to police hospice in America.

It is not the warmth of your words that has brought together this bipartisan coalition in the Congress. . . . it is the standards and principles you have established which we respect and which we count on you to uphold.

The Congress is looking to you to take the leadership in state licensure and in professional standards and accreditation. We have a long journey until this bill is finally adopted. For one thing, it has to be signed by a President who says he wants to save money. Well, with this bill we're going to give him that opportunity. Also, we will give him a chance to do something good for the people. And, even when this bill is passed, the process of fine-tuning the reimbursement system and the regulations will require the input and involvement of the National Hospice Organization. If this bill passes, and I believe with your help it will, it will be because of the diligent and unique leadership which has come forth from the hospice movement to persuade and convince the Congress; it will be because of the quality of the care you are rendering in your programs back home; it will be because the hospice movement, itself, has finally come of age and because maybe America has come of age, too, in recognizing and meeting the needs of the dying and their families without resort to medical-surgical heroics or artificial life support systems, but through appropriate compassionate hospice care.

In hospice, it is said that there is a meaning that can be found in suffering, that there is a sense that can be made out of pain. Then, we can accept and make use of what's happening to us. That's what the Hospice Team is supposed to do for others. Can this national Hospice Team perform the same support for itself?

Let us begin to end the artificial pain and unnecessary suffering brought upon the hospices in my district and hospices throughout America by the current reimbursement system. The legislation that will be before the Congress is a beginning, a good solid beginning. The terminally ill and their families, and the hospices of America deserve no less.

There is the story of the rabbi and the priest—"doesn't mean a damn thing unless he can fight"—So it is with each of us—we can bless ourselves with the hope that the government and people will recognize the importance of hospice care but unless we are willing to fight for what we believe in—it won't mean a damn thing.

So I ask each of you to join with me. Strengthened by your support as a National Hospice Team stretching across the land with caring and competence. We can make the hospice story a reality—a fulfillment of the moral test of a nation dedicated to serving those in need. That is our bond. That is our pledge. That is our commitment. For all of those who have been, are and will be a part of hospice care, we can do no less. Thank you.●

THE PRESIDENT'S PROPOSED REFUGEE ADMISSIONS PROGRAM FOR FISCAL YEAR 1982

(Mr. RODINO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. RODINO. Mr. Speaker, prior to the beginning of each fiscal year, the Refugee Act of 1980 (Public Law 96-212) requires that the President consult with the Congress on his proposals for refugee admissions for the coming year.

The President's letter of September 21, 1981, to the Judiciary Committee, which I will insert in the RECORD at this point, initiated the consultative process.

THE WHITE HOUSE,
Washington, September 21, 1981.

Hon. PETER W. RODINO, Jr.,
Chairman, Committee on the Judiciary, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I am pleased to transmit the information required by the Refugee Act of 1980 in preparation for the consultations on refugee admissions for Fiscal Year 1982. As noted in my July 30 statement, immigration and refugee policy is an important part of our past and fundamental to our national interest. With other countries, we will continue to share in the responsibility of welcoming and resettling those who flee oppression. At the same time, we will seek new ways to integrate refugees into our society without nurturing their dependence on welfare.

The documents transmitted today include proposed admission levels and allocations among groups of special humanitarian concern to the United States or whose admission is otherwise in the national interest. My final determination on admission levels and allocations will be made after taking Congressional and other views expressed at the consultations into consideration.

Sincerely,

RONALD REAGAN.

The following is an edited summary of the Report to Congress on Refugee Admissions and Allocations for Fiscal Year 1981 and the President's propos-

al for refugee admissions and funding for fiscal year 1982.

Proposed refugee admissions, fiscal year 1982

Area or origin:	Proposed Admissions
Asia	120,000
Soviet Union and Eastern Europe	42,500
Soviet Union	33,000
Eastern Europe	9,500
Near East	5,500
Africa	3,000
Latin America and the Caribbean	2,000
Total	[1] 173,000

[1] It is understood that this is a ceiling and not a goal and that to the extent possible, consistent with needs and objectives, the program will be managed to admit fewer than the authorized ceiling.

BACKGROUND

This is a summary of the Report to the Congress on Refugee Admissions and Allocations for Fiscal Year 1981 which initiates the "appropriate consultation" set out in Section 207(e) of the Refugee Act of 1980. The Report, which embodies the President's proposals for refugee admissions for Fiscal Year 1982, provides a unique opportunity for the Congress and the Administration to focus on the domestic and international concerns which influence the complex decision-making process of determining refugee admissions levels.

The hearings on refugee admissions, which include discussions in person by designated cabinet-level representatives of the President, are intended to review the refugee situation, to project the extent of possible participation of the United States and to discuss the reasons for believing that the proposed admission of refugees is justified by humanitarian concerns or is otherwise in the national interest. The President's proposal has been developed with regard to the views expressed by state and local governments, private voluntary organizations and public interest groups. Refugee reports received from U.S. embassies throughout the world, the Special Refugee Advisory Panel report, and studies done and views expressed by concerned persons have also been considered in developing proposed admissions levels. After receiving the responses from the members of the Committees on the Judiciary of the Senate and the House of Representatives, the President will make his final determination on refugee admissions levels and allocations for Fiscal Year 1982.

U.S. REFUGEE POLICY

The United States emphasizes the use of diplomatic means to minimize the underlying causes of refugee flows and supports the principal of international responses to refugee problems by encouraging the broadest possible participation of other countries.

The U.S. response to worldwide refugee problems consists of two major components—relief and resettlement. Within these categories, our basic policy is: (1) to emphasize emergency relief assistance to refugees in place; (2) to support voluntary repatriation whenever possible; (3) to facilitate resettlement in country of asylum or in a third country (4) and in the case of those for whom U.S. resettlement is the only alternative, to admit refugees who are of special humanitarian concern to the United States, or otherwise in the national interest. To carry out these policy objectives, the United States places maximum reliance on appropriate international organizations, including the United Nations High Commissioner for Refugees (UNHCR), the International Committee of the Red Cross (ICRC), the United Nations Children's Fund (UNICEF), the United Nations Relief and Works Agency for Palestine Refugees (UNRWA) and the Intergovernmental Committee for Migration (ICM).

Refugee relief

During fiscal year 1981, U.S. support for international relief programs which are often more humane and less costly than resettlement in the United States, included major relief programs in Kampuchea, Pakistan, Somalia, and for Palestinian refugees in the Middle East.

Voluntary repatriation

In addition to providing humanitarian relief for refugees overseas during fiscal year 1981, the United States participated through international organizations and with other governments to support voluntary repatriation. Large-scale repatriation of Africans in 1979 and 1980 resulted in the return of approximately 500,000 refugees. In recent years, the UNHCR successfully completed the voluntary repatriation of refugees in Bangladesh to Burma. Despite difficulties, the UNHCR continues to work for possible voluntary repatriation of Lao and Khmer.

Resettlement in third countries

The United States encourages the international community to provide resettlement opportunities for refugees. Countries which have resettled significant numbers of Indochinese refugees since 1975 include China, France, Canada, Australia, the Federal Republic of Germany, the United Kingdom, and Hong Kong. As part of this effort, the United States is working closely with UNHCR and voluntary agencies in exploring resettlement possibilities for Indochinese refugees in Suriname and Belize.

U.S. refugee admissions

The U.S. refugee admissions program strives to insure that refugees admitted to the United States have appropriate sponsorships, receive adequate services upon arrival, and that Federal resources available for refugee resettlement are effectively utilized.

In fiscal year 1981 an admissions ceiling of 217,000 refugees was established. Approximately 155,000 will have been admitted by September 30. The difference between the ceiling and actual admissions numbers reflects increasingly restrictive emigration policies of the Soviet Union and the management decision to delay admission of significant numbers of Indochinese to permit overseas English-language training and orientation.

Because of the increasing numbers of refugee applicants for U.S. admission and the limited resources for absorbing refugees, we have developed and are continuing to refine criteria for refugee admissions and have established a priority system for applicants with special ties to the United States for groups determined to be of special humanitarian concern.

PROPOSED FISCAL YEAR 1982 ADMISSIONS

In response to urgent humanitarian needs together with domestic and foreign policy concerns, the President proposes to admit up to 173,000 refugees to the United States during FY 1982, dependent upon the continuing need for refugee resettlement at anticipated levels throughout the twelve month period.

The 173,000 projected admissions include 120,000 refugees from Asia, 42,500 refugees from the Soviet Union and Eastern Europe, 5,500 refugees from the Near East, 3,000 refugees from Africa and 2,000 refugees from Latin America and the Caribbean.

In addition, consideration will be given to the adjustment to permanent resident alien status of up to 5,000 persons who were previously granted asylum in the United States and have been in the United States as refugees for at least one year, pursuant to Title II, Section 209(b) of the Refugee Act of 1980.

Asia

The proposed admissions ceiling for Asian refugees for FY 1982 is 120,000. Of the proposed admissions, 200 will be reserved for Asians other than Indochinese.

The situation in Southeast Asia continues to present a major threat to the safety of refugees and the stability of the region. By the end of September 1981, the refugee population will be approximately 300,000, but at least another 120,000 are projected to arrive during FY 1982. Countries in the region granting temporary asylum do so in the expectation that their existing refugee populations will continue to decrease and that the world community, with the United States in the lead, will provide resettlement for new arrivals. An inadequate resettlement effort could signal a change in U.S. refugee policy, with a resultant surge in the flight of refugees, and could lead to forcible repatriation or push-offs of boats back to sea. There is need to continue a U.S. policy which will maintain the principle of first asylum, save lives and reduce political instability in the region.

Soviet Union and Eastern Europe

The proposed admissions ceiling for the Soviet Union and Eastern Europe is 42,500. Although continuing restrictive Soviet emigration policies are likely to result in lower admissions numbers, the proposed admissions manifest the clear commitment of the United States to the principles of freedom of emigration. Eastern Europeans, on the other hand, are fleeing to the West in increasing numbers. There is substantial domestic support for the admissions programs from this region for reasons of ethnic and religious ties and as a means of assisting those fleeing the consequences of the communist systems.

Near East

The proposed admissions ceiling to meet resettlement needs for refugees from the Near East is 5,500 and is in response to, but not limited to, situations in Afghanistan and Iraq.

Africa

The proposed admissions number for refugees from Africa is 3,000. This projection is based on a best estimate of the numbers who may qualify for refugee status and may wish to apply. Despite the turbulance in a number of African countries, many refugees have been granted asylum within the region where the U.S. provides a major portion of funding for care and maintenance through international organizations.

Latin America and the Caribbean

The proposed admissions number for refugees from Latin America and the Caribbean is 2,000 and will be used primarily for political prisoners and their families, persons under life-threatening conditions and for family reunification. Current and former political prisoners and other cases of special humanitarian concern within their county of nationality or habitual residence will be

considered for admission pursuant to Section 102(a)(42)B of the INA as amended.

The refugee resettlement program historically has enjoyed broad public support in the United States. During Fiscal Years 1980 and 1981, an estimated 373,000 refugees (excluding Cuban and Haitian entrants) have been resettled in U.S. communities, generating unprecedented levels of commitment and involvement on the part of U.S. citizens, private agencies, ethnic communities and state and local governments. Resettling refugees in these numbers has caused some strain on state, community and private resources.

Many of the new refugee arrivals tend to have less education, fewer transferable job skills and less knowledge of English than earlier arrivals. Consequently they have a greater need for transitional assistance once they arrive in the United States. Due in large part to the demographic characteristics of the new refugee arrivals combined with prevailing economic conditions, there has been a sharp rise in the use of cash assistance by refugees. Available data, however, show that refugee employment and self-sufficiency increase with the length of time a refugee is in the country.

To help ease the transition before a refugee arrives in the United States, a program of English-language training and cultural orientation has been implemented in the overseas Refugee Processing Centers in Southeast Asia during the last year.

High concentrations of refugees in certain localities have had substantial impacts on community resources, particularly low cost housing and education. Therefore, efforts are being made to coordinate refugee resettlement planning among state and local officials, private voluntary resettlement agencies and the Federal Government, and to alleviate the impact in communities where many refugees live. While problems in resettling large numbers of refugees are genuine, so is the commitment to the American tradition of providing a homeland to those fleeing persecution at all levels (Table VII). It is anticipated that consultations with regard to the resettlement process will increase in the coming year.

ESTIMATED COST OF REFUGEE MOVEMENT AND RESETTLEMENT

Cost associated with the care and maintenance, processing, transportation and initial reception and placement of refugees are borne by the Department of State. Once refugees arrive in this country, they are eligible for many of the same services available to disadvantaged Americans. Costs associated with these services are borne by many other federal agencies, but primarily by the Department of Health and Human Services (HHS).

This estimate includes expenditures for programs which directly assist refugees. Significant expenditures for refugee assistance are also made through job training, programs, public housing activities and various other federal and state programs which assist refugees as part of a broader population of needy Americans.

ESTIMATED COSTS OF REFUGEE MOVEMENT AND RESETTLEMENT IN THE UNITED STATES

[In millions]

Agency	Fiscal year 1981, program total cost	Fiscal year 1982		
		Arrivals	Prior arrivals	Total
DEPARTMENT OF STATE

Food and Nutrition Service	168.0	28.1	114.2	142.3
Grand total	1,179.9	486.2	645.6	1,131.8

The Committee on the Judiciary adhered to the two-tier procedure established in previous consultations under the Refugee Act, i.e. a closed meeting between designated consultative Members and Cabinet-level Administration officials followed by a public hearing before the full Committee.

On September 24, 1981, the designated consultative Members, Chairman Peter W. Rodino, Jr. and Ranking Member Robert McClory, Immigration Subcommittee Chairman Romano L. Mazzoli and Ranking Member Hamilton Fish, Jr., met with Attorney General William French Smith and Under Secretary of State for Political Affairs Walter J. Stoessel.

The President's proposal as summarized above was presented to the Congressional representatives. The Attorney General gave assurances that the Administration was looking upon the consultation process as an earnest effort to solicit the opinions and viewpoints of the Congress on each aspect of the proposed program of refugee admissions and funding for fiscal year 1982.

On September 29, 1981, the full Committee held a hearing on the President's proposal. Appearing as witnesses from the Department of State were Under Secretary Walter J. Stoessel; Ambassador Harvey Feldman, Office of U.S. Representative to the U.N.; John H. Holdridge, Assistant Secretary for East Asian and Pacific Affairs and Acting Director of the Bureau for Refugee Programs, James N. Purcell; from the Department of Justice, Acting Commissioner Doris Meissner of the Immigration and Naturalization Service; and from the Department of Health and Human Services, Director Phillip Hawkes, Office of Refugee Resettlement.

The Consultative Members met in private session to consider the information received during the formal consultation process, as well as the various materials submitted by the Administration.

Two letters were sent to the President on September 30, 1981 expressing the views of the Consultative Members:

The transcript of the full Committee hearing and various pertinent documents entered into the record during the hearing will be published by the Committee in the near future.

I wish to insert at this point in the Record a copy of the aforementioned letters and the Presidential determination signed by the President on October 10, 1981, which established the fiscal year 1982 admission levels:

COMMITTEE ON THE JUDICIARY,
Washington, D.C., September 30, 1981.

Hon. RONALD REAGAN,
The President, The White House, Washington, D.C.

DEAR MR. PRESIDENT: The undersigned consultative Members of the House Judiciary Committee wish to advise you that the consultative process required by the Refugee Act has been completed.

As the result of our detailed consideration of the proposed refugee admissions program for fiscal year 1982, we present the follow-

ing observations and recommendations in connection with your proposal.

At the outset, we are concerned by your decision to maintain a high level of refugee admissions, because it is not accompanied by a request for adequate funding to meet their resettlement needs. At a time when we are sharply cutting social programs urgently needed by the disadvantaged and needy members of our society, it becomes more difficult to justify an annual Federal expenditure in excess of one billion dollars for refugees. Further, this growing competition for reduced federal resources will undoubtedly produce increasing resentment toward refugees in general.

For this reason, we strongly recommend a worldwide level of refugee admissions for the next fiscal year not to exceed 140,000. In testimony before our Committee, Under Secretary of State Walter J. Stoessel stated that "we expect to be able to limit actual admissions in fiscal year 1982 to a worldwide total of about 140,000."

We believe that this level is reasonable and will fully satisfy our humanitarian responsibility to respond to worldwide refugee problems. If refugee conditions deteriorate or if emergencies arise, we are prepared to consult on the need for additional numbers under the emergency provisions of the Refugee Act.

It is our position that a level of 140,000, which we view as a ceiling not a target to be reached, will: preserve the principle of first asylum in Southeast Asia; advance the objective of internationalizing refugee problems, particularly with reference to Indochinese refugees; and facilitate the proper resettlement of refugees admitted to the United States.

While we do not recommend a specific allocation of refugee numbers, we believe the various sub-ceilings should be adjusted proportionately (based on the requested allocation) to reflect the recommended reduction from 173,000 to 140,000.

We are concerned by the differing legal interpretations of the term "refugee" as defined in the Refugee Act. We are of the opinion that these interpretations must be re-examined with the objective of insuring that persons who leave their countries for purely economic reasons are not considered for admission under the U.S. program.

We also agree with several of the witnesses who testified during the course of the consultative process that the costs of resettling refugees can and should be substantially reduced. Likewise, we must seek to minimize the financial impact of refugees on states and localities. One method of accomplishing these objectives is to place greater emphasis on language training and employment counseling, together with increased refugee case-management control on the part of voluntary agencies. We recommend that this matter be explored carefully in an effort to bring down the cost of resettling refugees.

There are also other specific matters of concern to the consultative members. These matters, along with specific programmatic recommendations, will be brought to your attention in a separate letter.

We trust that you will give our recommendations careful consideration in preparing your final determination. We also hope that the views and concerns expressed by the consultative members during the private meeting and by our Committee Members during the hearing yesterday will also be taken into consideration in the development and implementation of our refugee program for fiscal year 1982.

Sincerely,

ROBERT MCCLORY,
Ranking Minority Member, Committee on the Judiciary.
HAMILTON FISH, JR.,
Ranking Minority Member, Subcommittee on Immigration, Refugees, and International Law.
PETER W. RODINO, JR.,
Chairman, Committee on the Judiciary.

COMMITTEE ON THE JUDICIARY,
Washington, D.C., September 30, 1981.

The PRESIDENT,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: The House Committee on the Judiciary has completed its consultation as required by the Refugee Act of 1980. Chairman Peter W. Rodino, Jr., and the other consultative members of the committee are sending you a separate letter expressing their views. I generally endorse their letter, but have elected to send you this separate set of views.

Based on extensive testimony, discussion, and investigative trips conducted by my Subcommittee, I make the following recommendations concerning the refugee admissions program for Fiscal Year 1982:

A total refugee admissions ceiling of 120,000.

The consideration as refugees only of those who flee their country because of persecution or a fear of persecution.

Intensified efforts to internationalize all refugee problems, particularly the Indochinese refugee situation. An international conference to discuss internationalization should be considered.

The domestic effects of refugee resettlement must be accorded greater attention. Funding levels for refugee resettlement must be adequate. There must be closer consultation between state and local governments and federal resettlement officials. Sponsors of refugees should make special efforts to ensure that their charges do not become welfare-dependents.

The medical screening procedures for incoming refugees and the medical monitoring of refugees once they arrive in our country need to be re-examined in light of public health considerations.

In order to administer the refugee programs properly, the Office of the U.S. Coordinator for Refugee Affairs should be transferred to the White House from the State Department. Also, the Office of Refugee Resettlement should be re-established within the Office of the Secretary of Health and Human Services from the Social Security Administration.

I make these recommendations with an appreciation of the difficulty of these issues, and with a strong humanitarian commitment to maintaining America's refugee program.

I believe the admissions level you have proposed—173,000—is excessive, especially because it is not accompanied by adequate domestic funding.

In particular, the refugee situation in Indochina is stabilizing. Camp populations have been reduced substantially since the spring of 1979. Boat arrivals in asylum countries are down considerably. And, fewer land refugees are seeking third country resettlement. For these reasons, I believe an annual ceiling of 84,000 is sufficient to meet our obligations, and those of the first-asylum nations and sufficient to meet the needs of refugees in that region of the world.

I believe that the level recommended for Latin America and the Caribbean should be reconsidered in view of the conditions now prevailing in this region.

I trust my views and recommendations will be seriously considered before you arrive at a final determination on refugee admissions. The consultative process, established by the Refugee Act of 1980, requires that full consideration be given to the views and comments of the Legislative Branch.

My colleagues on the Subcommittee and I have other concerns about the refugee program which we will communicate to you in due course.

All best wishes and warmest regards.

Sincerely,

ROMANO L. MAZZOLI,
Chairman, Subcommittee on Immigration, Refugees, and International Law.

[From the Federal Register, Vol. 46, No. 216, Nov. 9, 1981]

PRESIDENTIAL DOCUMENTS

Title 3—Presidential Determination No. 82-1 of October 10, 1981

The President—Determination on FY 1982 Refugee Ceilings

Memorandum for the Secretary of State, the Attorney General, the Secretary of Health and Human Services

Pursuant to Section 207(a) of the Immigration and Naturalization Act (INA), and in accordance with Section 204(d)(1) of Public Law 96-212 (94 Stat. 109), I hereby determine, after appropriate Congressional consultation, that the admission of up to 140,000 refugees to the United States during FY 1982 is justified by humanitarian concerns or is otherwise in the national interest. I also determine that providing an additional 5,000 refugee admission numbers to be available for the adjustment to permanent residence status of aliens who have been physically present in the United States for at least one year after being granted asylum, in accordance with Section 209(b) of the INA, is justified by humanitarian concerns or is otherwise in the national interest.

Pursuant to Section 208(a)(3) of the INA, I determine, after appropriate Congressional consultation, that the 140,000 refugee admission ceiling shall be allocated as follows:

Asia	100,000
Soviet Union	20,000
Eastern Europe	9,000
Near East	5,000
Latin America and Caribbean	3,000
Africa	3,000
Total	140,000

Pursuant to Section 101(a)(42)(B) of the INA, I hereby specify, after appropriate Congressional consultation, that special circumstances exist such that, for the purposes of admission under the limits established herein, the following persons, if they otherwise qualify for admission, may be considered refugees of special humanitarian concern to the United States even though they are still within their countries of nationality or habitual residence: persons in Vietnam with past or present ties to the United States; and present and former political prisoners, and persons in imminent danger of loss of life, and their family members, in countries of Latin America and the Caribbean.

The Secretary of State is requested to inform the appropriate committees of the Congress of these determinations.

This memorandum shall be published in the Federal Register.

RONALD REAGAN.

THE WHITE HOUSE, *Washington, October 10, 1981.*●

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. MADIGAN (at the request of Mr. MICHEL), for today, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. KILDEE) to revise and extend their remarks and include extraneous material:)

Mr. PEPPER, for 5 minutes, today.
Mr. ANNUNZIO, for 5 minutes, today.
Mr. CROCKETT, for 10 minutes, today.
Mr. FORD of Michigan, for 5 minutes, today.
Mr. LAFALCE, for 20 minutes, today.
Mr. NEAL, for 5 minutes, today.
Mr. PANETTA, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. RODINO, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost $1,440.

Mrs. SCHROEDER, on the conference report on H.R. 3454, today.

Mr. BROWN of Ohio, immediately prior to vote on the Murtha substitute amendment to H.R. 4995 in the Committee of the Whole today.

Mr. THOMAS, prior to the vote on the Addabbo amendment to H.R. 4995 in the Committee of the Whole today.

Mrs. SCHNEIDER, following Mr. BENNETT's remarks on the Bennett amendment to H.R. 4995 in the Committee of the Whole today.

(The following Members (at the request of Mr. SMITH of Alabama) and to include extraneous matter:)

Mr. MCCOLLUM.
Mr. ROUSSELOT.
Mr. CARMAN in four instances.
Mr. GRISHAM.
Mr. YOUNG of Alaska.
Mr. PARRIS.
Mr. LEBOUTILLIER.
Mr. ROTH.
Mr. SCHULZE.
Mr. PURSELL.
Mr. DAUB.
Mr. BETHUNE.
Mr. CHENEY.
Mr. HILLIS.
Mr. DORNAN of California in two instances.
Mr. GILMAN in two instances.
Mr. BEREUTER.
Mr. WOLF.
Mr. PORTER.
Mr. DENARDIS.

(The following Members (at the request of Mr. KILDEE) and to include extraneous matter:)

Mr. REUSS in two instances.
Mr. YATRON.
Mr. SIMON.
Mr. EDWARDS of California.
Mr. HAMILTON.
Mr. VENTO in two instances.
Mr. ROE in two instances.
Mr. HOLLAND.
Ms. MIKULSKI.
Mr. GUARINI in five instances.
Mr. LANTOS.
Mr. RODINO.
Mr. OBEY in three instances.
Mr. LAFALCE in two instances.
Mr. EDGAR.
Mr. FOUNTAIN.
Mr. LONG of Maryland in two instances.
Mr. CLAY.
Mr. ANDERSON in 10 instances.
Mr. GONZALEZ in 10 instances.
Mr. ROSENTHAL in 10 instances.
Mrs. BOUQUARD in five instances.
Mr. BROWN of California in 10 instances.
Mr. ANNUNZIO in six instances.
Mr. JONES of Tennessee in 10 instances.
Mr. BONER of Tennessee in five instances.
Mr. MAZZOLI.
Mr. WAXMAN.
Mr. ASPIN.
Mr. SANTINI.
Mr. HUBBARD.
Ms. OAKAR.
Mr. DIXON.
Mr. JONES of North Carolina.
Mr. COELHO.
Mr. PANETTA.

ADJOURNMENT

Mr. KILDEE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 9 o'clock and 55 minutes p.m.), the House adjourned until tomorrow, Thursday, November 19, 1981, at 10 a.m.

EXECUTIVE COMMUNICATIONS, ETC

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2537. A letter from the Assistant Secretary of the Air Force (Research, Development and Logistics), transmitting notice of the proposed conversion to contractor performance of the Base Information Transfer Center function at Hill Air Force Base, Utah, pursuant to section 502(b) of Public Law 96-342; to the Committee on Armed Services.

2538. A letter from the Assistant Secretary of the Air Force (Research, Development and Logistics), transmitting notice of the proposed conversion to contractor performance of the Publishing Distribution Office function at Hill Air Force Base, Utah, pursuant to section 502(b) of Public Law 96-342; to the Committee on Armed Services.

2539. A letter from the Clerk, U.S. House of Representatives, transmitting his quarterly report of receipts and expenditures for the period July 1 through September 30, 1981, pursuant to section 105(a) of Public Law 88-454, as amended (H. Doc. No. 97-113); to the Committee on House Administration and ordered to be printed.

2540. A letter from the Attorney General, transmitting a draft of proposed legislation to provide for seabed boundary agreements between the United States and any coastal State and the immobilization of the seabed boundary of any State; to the Committee on the Judiciary.

2541. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to implement the Inter-American Convention on International Commercial Arbitration; to the Committee on the Judiciary.

2542. A letter from the Secretary of Transportation, transmitting a report on an investigation into allegations of misconduct by an official of the Federal Highway Administration, pursuant to 5 U.S.C. 1206(b)(4); to the Committee on Post Office and Civil Service.

2543 A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend the General Bridge Act of 1946, as amended, to eliminate the requirements of review and approval of the location and plans for bridges and causeway over certain navigable waters of the United States, and for other purposes; to the Committee on Public Works and Transportation.

2544. A letter from the Assistant Attorney General for Legislative Affairs, transmitting a report on the disposition of health care cases referred to the Justice Department by the Inspector General of the Department of Health and Human Services during calendar year 1980, pursuant to section 204(a) of Public Law 94-505, as amended; jointly, to the Committees on Energy and Commerce and Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. UDALL: Committee on Interior and Insular Affairs H.R. 3731. A bill to amend the Act of October 19, 1973 (87 Stat. 466), relating to the use or distribution of certain judgment funds awarded by the Indian Claims Commission or the Court of Claims; with an amendment (Rept. No. 97-340). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. S. 478. An act to provide for the partitioning of certain restricted Indian land in the State of Kansas; with an amendment (Rept. No. 97-341). Referred to the Committee of the Whole House on the State of the Union.

Mr. STRATTON: Committee of Conference. Conference report on H.R. 3413 (Rept. No. 97-342). And ordered to be printed.

Mr. PEPPER: Committee on Rules. House Resolution 279. Resolution providing for the consideration of H.R. 3046, a bill to amend the Older Americans Act of 1965 to extend the authorizations of appropriations contained in such act, and for other purposes (Rept. No. 97-343). Referred to the House Calendar.

Mr. MOAKLEY: Committee on Rules. House Resolution 280. Resolution providing for the consideration of H.R. 3663, a bill to amend subtitle IV of title 49, United States Code, to provide for more effective regulation of motor carriers of passengers (Rept. No. 97-344). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. GRADISON:

H.R. 5011. A bill to amend the effective date provision of section 403(b)(3) of the Windfall Profit Tax Act of 1980 (Public Law 96-223) to further defer the effective date of certain provisions providing for the recognition as income of LIFO inventory amounts; to the Committee on Ways and Means.

By Mr. WEAVER:

H.R. 5012. A bill entitled "Emergency Timber Sale Act of 1981"; jointly, to the Committees on Agriculture and Interior and Insular Affairs.

By Mr. ROSTENKOWSKI (for himself and Mr. CONABLE):

H.R. 5013. A bill to amend the Internal Revenue Code of 1954 to conform the net operating loss carryback and carryforward treatment of the Federal National Mortgage Association to that of other financial institutions; to the Committee on Ways and Means.

By Mr. BINGHAM:

H.R. 5014. A bill to extend the life of the Gateway National Recreation Area Advisory Commission, which is presently due to expire October 27, 1982; to the Committee on Interior and Insular Affairs.

By Mr. BINGHAM (for himself, Mr. SOLARZ, Mr. DYMALLY, and Mrs. FENWICK):

H.R. 5015. A bill with respect to the prohibitions in the Foreign Assistance Act of 1961 relating to nuclear enrichment and reprocessing transfers and nuclear detonations; to the Committee on Foreign Affairs.

By Mrs. BOUQUARD (for herself, Mr. LUJAN, Mr. FUQUA, Mr. GOLDWATER, Mr. LUNDINE, Mr. WINN, Mr. ROE, Mr. WALKER, Mr. SCHEUER, Mr. CARNEY, Mr. WALGREN, Mr. GREGG, Mr. FLIPPO, Mr. SKEEN, Mr. YOUNG of Missouri, Mr. LOWERY, of California, Mr. GORE, Mr. WHITE, Mr. VOLKMER, and Mr. RALPH M. HALL):

H.R. 5016. A bill to establish a Federal policy with respect to the disposal of high-level radioactive waste from civilian nuclear activities, to provide for the construction, operation, and maintenance of waste disposal facilities, to provide for a program of nuclear waste and spent fuel research and development, and for other purposes; jointly, to the Committees on Energy and Commerce, Interior and Insular Affairs, Science and Technology, and Rules.

By Mr. CONABLE:

H.R. 5017. A bill to amend the Internal Revenue Code of 1954 to provide an additional 3 years to amend governing instruments to meet the requirements for gifts of split interests to charity, and for other purposes; to the Committee on Ways and Means.

By Mr. EDWARDS of Oklahoma:

H.R. 5018. A bill to amend title 18 of the United States Code to prohibit certain noncustodial parental transportation and detentions of children, and for other purposes; to the Committee on the Judiciary.

By Mr. HUGHES (for himself, Mrs. SCHROEDER, Mr. SAWYER, Mr. FISH, Mr. SENSENBRENNER, and Mr. HYDE):

H.R. 5019. A bill to amend the Parental Kidnaping Prevention Act of 1980 to clarify congressional intent regarding the application of section 1073 of title 18, United States Code, to cases involving parental kidnaping, and for other purposes; to the Committee on the Judiciary.

By Mr. JONES of North Carolina (for himself, Mr. SNYDER, Mr. BOWEN, Mr. DAVIS, Mr. DONNELLY, Mrs. SCHNEIDER, and Mr. HERTEL):

H.R. 5020. A bill to strengthen the shipbuilding mobilization base and protect strategic supply sources; to the Committee on Merchant Marine and Fisheries.

By Mr. MATSUI (for himself, Mr. LUNGREN, Mr. MINETA, Mr. DANIELSON, and Mr. MOORHEAD):

H.R. 5021. A bill to extend the date for the submission to the Congress of the report of the Commission on Wartime Relocation and Internment of Civilians; to the Committee on the Judiciary.

By Mr. MITCHELL of Maryland:

H.R. 5022. A bill to amend section 305 of the Federal Property and Administrative Services Act of 1949 pertaining to contract progress payments made by agencies of the Federal Government, to provide for the elimination of retainage in certain instances, and for other purposes; to the Committee on Government Operations.

By Mr. PASHAYAN:

H.R. 5023. A bill to authorize the use of community development block grant funds for the construction of residential housing; to the Committee on Banking, Finance and Urban Affairs.

By Mr. ROSENTHAL:

H.R. 5024. A bill to repeal the limitation on the number of families with incomes between 50 and 80 percent of median income who may receive assistance under the U.S. Housing Act of 1937, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SIMON:

H.R. 5025. A bill to amend title 39, United States Code, to allow the U.S. Postal Service to lease certain excess office space to units of State or local government; to the Committee on Post Office and Civil Service.

By Mr. SUNIA (for himself, Mr. AKAKA, Mr. CORRADA, Mr. SEIBERLING, and Mr. WON PAT):

H.R. 5026. A bill to amend the National Housing Act to extend certain loan and mortgage insurance programs to American Samoa; to the Committee on Banking, Finance and Urban Affairs.

By Mr. WHITEHURST:

H.R. 5027. A bill to designate the building known as the U.S. Post Office and Courthouse in Norfolk, Va., as the "Walter E. Hoffman U.S. Courthouse"; to the Committee on Public Works and Transportation.

By Mr. BOWEN:

H.R. 5028. A bill to amend the Internal Revenue Code of 1954 to exempt from taxation the pay received by members of the National Guard or of Reserve components of the Armed Forces to the extent that such pay does not exceed $5,000; to the Committee on Ways and Means.

By Mr. COELHO:

H.R. 5029. A bill to designate the Federal Building in Fresno, Calif., as the "B. F. Sisk Federal Building"; to the Committee on Public Works and Transportation.

By Mr. LAFALCE:

H.R. 5030. A bill to authorize the issuance of variable-rate debentures by the Federal Deposit Insurance Corporation and Federal Savings and Loan Insurance Corporation; to the Committee on Banking, Finance and Urban Affairs.

By Mr. VENTO:

H.R. 5031. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income a certain portion of governmental pensions based on services not covered under the social security system; to the Committee on Ways and Means.

By Mr. VOLKMER:

H.R. 5032. A bill to eliminate the new eligibility requirements for receipt of unemployment compensation by ex-service members which were added by the Omnibus Budget Reconciliation Act of 1981 and to provide certain limitations on the amount of unemployment compensation payable to ex-service members; to the Committee on Ways and Means.

By Mr. NICHOLS:

H. Con. Res. 223. Concurrent resolution directing the Secretary of Health and Human Services and the Commissioner of Social Security to immediately develop and present to the Congress a plan to correct the social security benefit disparity which has become known as the notch problem; to the Committee on Ways and Means.

MEMORIALS

Under clause 4 of rule XXII,

224. The SPEAKER presented a memorial of the House of Representatives of the Commonwealth of the Northern Mariana Islands, relative to compensation for lands taken by the U.S. Government between 1944 and 1963; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. LOEFFLER:

H.R. 5033. A bill to provide for the reinstatement and validation of U.S. oil and gas leases numbered NM 25447 and NM 25452 Acq.; to the Committee on Interior and Insular Affairs.

By Mr. WHITE:

H.R. 5034. A bill for the relief of Robert Garcia; to the Committee on the Judiciary.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 27: Mr. PETRI.

H.R. 450: Mr. ANDREWS, Mr. EDWARDS of Alabama, Mr. CORCORAN, Mr. OXLEY, Mr. WON PAT, and Mr. ROBERTS of Kansas.

H.R. 637: Mr. DREIER and Mr. ROBINSON.

H.R. 808: Mr. GINN, Mr. BARNARD, Mr. ALBOSTA, Mr. JENKINS, and Mr. FOLEY.

H.R. 1313: Mr. PATMAN, Mr. GONZALEZ, and Mr. HIGHTOWER.

H.R. 1325: Mr. SAWYER, Mr. GOODLING, and Mr. DREIER.

H.R. 2022: Ms. FIEDLER.

H.R. 2255: Mr. WOLPE.

H.R. 2389: Ms. FIEDLER.

H.R. 2640: Mr. BLANCHARD.

H.R. 3269: Mr. CARMAN, Mr. BAFALIS, Mr. NELSON, Mr. MARLENEE, Mr. LOWRY of Washington, Mr. DYSON, Mr. SKEEN, Mr. HUCKABY, and Mr. PETRI.

H.R. 3274: Mr. ROUSSELOT.

H.R. 3281: Mrs. FENWICK, Mr. FOGLIETTA, Mr. MOAKLEY, Mr. MITCHELL of Maryland, Mr. SUNIA, Mr. RAHALL, Mr. DYMALLY, Mr. FORSYTHE, Mr. EDGAR, Mr. LEHMAN, Mr. DE LUGO, Mr. TRAXLER, Mr. WYDEN, and Mr. GRAY.

H.R. 4002: Mr. DICKS.

H.R. 4547: Mr. MOFFETT and Mr. RATCHFORD.

H.R. 4681: Mr. SMITH of Alabama, Mr. BAILEY of Missouri, Mr. CORCORAN, Mr. PATMAN, Mr. BOWEN, and Mr. WORTLEY.

H.R. 4709: Mr. SMITH of New Jersey.

H.R. 4728: Mr. MOTTL, Mr. DYSON, Mr. CHAPPELL, Mr. GUNDERSON, Mr. GEJDENSON, Mr. ERDAHL, and Mr. MCDADE.

H.R. 4738: Mr. LOEFFLER.

H.R. 4751: Mr. JONES of Tennessee, Mr. DANIEL B. CRANE, Mr. DAVIS, Mr. FISH, Mr. DENARDIS, Mr. MORRISON, and Mr. DREIER.

H.R. 4775: Mr. ROBINSON, Mr. HOLLENBECK, Mr. GARCIA, and Mr. BEDELL.

H.R. 4810: Mr. DOUGHERTY, Mr. BAILEY of Pennsylvania, Mr. BUTLER, Mr. DERWINSKI, Mr. MURPHY, and Mr. WON PAT.

H.R. 4885: Mr. WHITEHURST.

H.R. 4999: Mr. SMITH of Oregon and Mr. SMITH of New Jersey.

H. J. Res. 197: Mr. BLANCHARD, Mr. BOWEN, Mr. BROOMFIELD, Mr. JOHN L. BURTON, Mr. CHAPPIE, Mr. DELLUMS, Mr. FIELDS, Mr. FORD of Tennessee, Mr. GINN, Mr. GRAY, Mr. SAM B. HALL, JR., Mr. HAMMERSCHMIDT, Mr. KAZEN, Mr. LEHMAN, Mr. MCCOLLUM, Ms. MIKULSKI, Mr. NEAL, Mr. OBERSTAR, Mr. PARRIS, Mr. PATTERSON, Mr. RUDD, Mr. SHELBY, Mrs. SNOWE, Mr. TRIBLE, Mr. WEBER of Ohio, Mr. WEBER of Minnesota, Mr. WHITEHURST, Mr. WHITLEY, Mr. PHILLIP BURTON, Mr. D'AMOURS, Mr. DREIER, Mr. GOLDWATER, Mr. HYDE, Mr. MAVROULES, Mr. MOLLOHAN, Mr. MORRISON, and Mr. YATES.

H.J. Res. 293: Mr. PASHAYAN, Mr. DOWNEY, Mr. MYERS, Mr. LOTT, and Mr. DORNAN of California.

H.J. Res. 294: Mr. O'BRIEN, Mr. SHELBY, and Mr. PARRIS.

H.J. Res. 323: Mr. FROST and Mr. ANDERSON.

H.J. Res. 354: Mr. BAILEY of Missouri, Mr. PEYSER, Mr. WAMPLER, Mr. MAZZOLI, Mr. FAZIO, Mr. DWYER, Mr. MITCHELL of New York, and Mr. GEPHARDT.

H.J. Res. 360: Mr. WOLPE, Mr. DWYER, Mr. DYSON, Mr. EDGAR, and Mr. FAZIO.

H. Con. Res. 178: Mr. HUCKABY, Mr. JEFFORDS, Mr. LOEFFLER, and Mrs. ROUKEMA.

H. Con. Res. 195: Mr. TAUKE.

H. Res. 101: Mr. JOHN L. BURTON, Mr. ADDABBO, and Mr. JACOBS.

H. Res. 211: Mr. DUNCAN and Mr. SEIBERLING.

H. Res. 264: Mr. BURGENER, Mr. DUNCAN, and Mr. HILER.

PETITIONS, ETC.

Under clause 1 of rule XXII,

278. The SPEAKER presented a petition of Alpha A. Diallo, Budapest, Hungary, relative to support for the publication of American literature translated into major African languages; which was referred to the Committee on Foreign Affairs.

AMENDMENTS

Under clause 6 of rule XXII, proposed amendments were submitted as follows:

H.R. 3046

By Mr. PETRI:

—Page 7, strike out line 15 and all that follows through page 8, line 10, and insert in lieu thereof the following:

SEC. 13. (a) Section 303(a) of the Older Americans Act of 1965 (42 U.S.C. 3023(a)) is amended to read as follows:

SEC. 303. (a) There are authorized to be appropriated $685,100,000 for fiscal year 1982, for such sums as may be necessary for each of the two succeeding fiscal years, for the purpose of making grants under this title.".

(b) Section 303 of the Older Americans Act of 1965 (42 U.S.C. 3023) is amended by striking out subsection (b), and by redesignating subsection (c) as subsection (b).

(c) Section 303(b) of the Older Americans Act of 1965, as so redesignated in subsection (b), is amended by striking out "parts B and C of".

Page 8, strike out line 12 through line 15, and insert in lieu thereof the following:

SEC. 14. (a) The first sentence of section 304(a)(1) of the Older Americans Act of 1965 (42 U.S.C. 3024(a)(1)) is amended by striking out "parts B and C for fiscal years 1979, 1980, and 1981" and inserting in lieu thereof "this title for each fiscal year".

(b) Section 304(b) of the Older Americans Act of 1965 (42 U.S.C. 3024(b)) is amended by striking out "part B or C" and inserting in lieu thereof "this title".

Page 8, line 16, strike out "(b)" and insert in lieu thereof "(c)".

Page 8, line 19, insert before the period the following: ", and by striking out 'parts B and C' and inserting in lieu thereof 'this title'."

Page 11, strike out line 3 through line 14 (and redesignate the subsequent sections, and any references to such sections, accordingly).

EXTENSIONS OF REMARKS

INSIDE LEBANON

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 17, 1981

● Mr. DERWINSKI. Mr. Speaker, with Congress preoccupation with the budget, Dave Stockman's press relations, and administration and State Department differences, too often newsworthy stories are relegated to the inner pages of our metropolitan publications.

Therefore, I would like to direct the special attention of the Members to a press release issued by the Lebanese Information and Research Center which gives a detailed and up-to-date report on the tragic situation in Lebanon. It is obvious from this report that the Syrian militants and the PLO are continuing their anti-Western, anti-Lebanese-Christian, and anti-Israeli actions. The press release follows:

[Press release, Nov. 13, 1981]

INSIDE LEBANON

On April 2, 1981, Syria began an assault on the Christian city of Zahle and on East Beirut. The siege of Zahle lasted almost three months. Many innocent people became the victims of the devastating shelling. Over 500 persons were killed and 1,000 injured. The world community was moved to act against this barbaric attack which could have broadened into a regional conflict. Therefore, President Reagan sent special envoy Ambassador Philip Habib to the region to try to end the crisis.

One of the results of the efforts of Ambassador Habib was the revival of the Committee of Four, established five years ago under Lebanese President Sarkis and made up of the Foreign Ministers of Saudi Arabia, Kuwait, Syria and Lebanon. The work of this Committee centered on finding a solution to the whole Lebanese problem and to enforce the withdrawal of Syria from Lebanon before the Presidential elections scheduled for summer 1982.

At the fifth meeting held on September 4, 1981, the Committee, with the approval of the Syrians, agreed to stop the flow of arms to all parties in Lebanon as a necessary measure to end the fighting in Lebanon. In spite of the agreement, Syria soon after engaged in transporting massive amounts of weapons and ammunition through their borders to the different PLO and Lebanese leftist organizations.

It is important to note the following four facts:

1. The Habib mission and the work of the Committee of Four have been and still are jeopardized by the actions of Syria. It is not in the interest of the Soviet Union or its satellite Syria to see Lebanon a free, independent and sovereign state once again.

2. These weapons originate from the radical pro-Soviet countries of Libya, South Yemen, Algeria and Syria.

3. Taking into consideration the location and range of the artillery, the imported weapons could easily reach Israel.

4. The different PLO and Lebanese leftist organizations which received the weapons include: the Murabitoun, the Arab Socialist Union, the Organization of Communist Action, the Lebanese branch of the Syrian Ba'ath Party, the Popular Front for the Liberation of Palestine (PFLP) led by George Habash, the pro-Syrian Saiqa, the PFLP-General Command led by Ahmed Jibril, and the Popular Democratic Front for the Liberation of Palestine led by Naef Hawatmeh.

Below you will find a list of recent incidents and the amount of weaponry imported.

October 22, 1981—A ship under the name of VERA-VENI carrying a load of TNT/plastic explosives (each piece 250 kg.) unloaded in the El Mina section of Tripoli, North Lebanon.

October 27, 1981—A ship under the name of SAMIR brought 16 Bulgarian TNT experts into Tripoli, North Lebanon.

A number of ships arrived at Sarafand in PLO-controlled South Lebanon, carrying 3,000 Pakistani mercenaries:

October 12, 1981—1,500 of them are now in the Bir Hassan district of West Beirut.

October 26, 1981—500 of them are at the PLO camp of Bourj Barajni, West Beirut.

October 27, 1981—1,000 of them are along the Damour coastal highway, all under PLO control and in PLO camps.

November 3, 1981—Around two months ago, the Fatah faction of the PLO received 5 helicopters. They were assembled in a PLO camp in West Beirut. The helicopters are now at an airport built by the PLO in the Chouf district of Mount Lebanon.

Heavy weapons were delivered by Syria to their allies in Lebanon. The distribution is shown below.

BEIRUT AREA

6 130 mm cannons.
15 122 mm Stalin organs.
49 small armored vehicles.
6 75 mm cannons.
12 120 mm "Hawn".
30 anti-aircraft defense cannons.
50 SAM-7 missiles.
150 small vehicles.
4 bulldozers.
4 tank-trucks.
55 light vehicles.

SOUTH LEBANON

15 130 mm cannons placed at Jarmaq, Aaichiye, Maghdouche, Tanbourit, Roumine.
10 122 mm cannons placed at Qraiye.
24 122 mm Stalin organs placed at Aaichiye, Rihane, Jarmaq, Houmine el Faouqa.
4 180 mm cannons.
20 anti-aircraft defense cannons.
14 ammunition trucks.
12 75 mm cannons.

BEKAA

18 Soviet tanks stationed at Barr Elias.
18 130 mm cannons placed at Ain Arab, Rachaiya al Ouadi, Kamed el Laouz.
14 122 mm cannons.
12 Stalin organs.
15 122 mm Stalin organs.
9 130 mm cannons.●

FRED (SKIP) GARRETSON

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. EDWARDS of California. Mr. Speaker, today we seem to have forgotten the reasons for the environmental movement, and the progress made in the last decade in saving the lands, waters, and seas, which are the only ones we have.

For those of us who were part of the hard battles of the 1960's and 1970's to save what was about to be destroyed, the current ignorance of those spoilable resources and the current silence about continuing spoilage are tragic.

Not everyone, however, has forgotten.

I rise today to speak about a man who fought such ignorance in many an environmental battle, and won more than a few, Fred (Skip) Garretson of the Oakland Tribune.

Skip's voice was silenced by death on July 10, 1981, at age 47, too soon, but he had accomplished much, leaving a generous inheritance for his fellow citizens of this planet, and his colleagues in the journalistic trade.

I knew Skip's work well, and I along with the other citizens of San Francisco Bay benefited from it.

In 1968, along with my Republican colleague, Charles Gubser, I introduced legislation to create the South San Francisco Bay Wildlife Refuge. It seemed a hopeless dream then that this stretch of polluted San Francisco Bay could be saved from extremely dangerous development.

Skip was one of the first to understand the troubles of the bay. He explored the earthquake hazards of building on soft bay muds, the increased problems of water pollution from the further restriction of the currents of the South Bay and the additional air pollution which would have been created by development there.

In addition Skip covered the problems of pollution throughout San Francisco Bay. He spread his enthusiasm for protecting the bay from unrestricted and foolish bay area development, reaching out to community leaders and the press corps alike. His efforts aided in the formation of a coalition which did what many said could not be done—saved San Francisco Bay, and created a wildlife refuge in South San Francisco Bay.

He did more.

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

Skip's career in journalism was unique. He created his own specialties, explored new fields and provided his reading public with priceless information that helped change the shape of our environment.

An old friend and colleague of Skip's, Gil Bailey, now of the Seattle Post-Intelligencer, has attempted to evaluate Skip's career from a journalistic and a historical point of view, and from the point of view of shared battles. I would ask that his memorial be included in this RECORD.

But there is another point of reference for Skip, and for his career, one which can only be understood in such places as the Southbay Wildlife Refuge. Today a smell of fresh salt air rises from where once was the stench of filth. Healthy marine and bird life have returned to what was a marine desert. San Francisco Bay has come back, although much remains to be done.

Fred Garretson helped keep San Francisco Bay alive.

A REPORTER WHO MARCHED TO A DIFFERENT DRUMMER

On a hot 1960 day on Point Richmond in a yard overlooking the Golden Gate, the Bay and the San Rafael bridges a young Oakland Tribune reporter, portly even then, bubbled with a new enthusiasm.

Frederick Von Hon Garretson, "Skip" to almost all who knew him, hauled out the first of what are the thousands of maps he acquired over the next 21 years.

He had served his apprenticeship as a copyboy on the Oakland Tribune on night cops in the legendary old press room in the Oakland police, waiting for that ever present wail of "Jesus Christ kid, where the hell you been," from the city desk.

Now Garretson was about to make journalistic history, and history around San Francisco Bay.

The then mayor of Alameda, Bill McCall, exasperated because no one would pay any attention to his and his city's problems, had waded the Oakland Estuary to demonstrate silting conditions.

Garretson, assigned to the city of Alameda beat, watched.

In those days the Port of Oakland was divine, and the Army Corps of Engineers was doing the Lord's work.

Development was the name of the game, the bigger the better, and the California Water Plan was the blue print of the future.

This reporter started writing about a shrinking San Francisco Bay.

"Garretson was an environmentalist before most of us could spell the word," Roy Grimm, now managing editor of the Oakland Tribune, and one of the few survivors on the Trib from those days, said in a eulogy at Garretson's funeral this July.

Garretson marched to a different drummer than the journalism of the 1950s, the 1960s, or any year. He started his own orchestra and his own movement.

He wrote, and the Tribune published, a series on the islands of the Bay.

Garretson accumulated more maps, and more information.

It was he who discovered what the maps, when put together, actually said.

Combined, they showed that local, state and federal governments planned to fill 60 percent of the San Francisco Bay.

Even the Army Corps of Engineers was impressed, its chief calling from Hawaii to find out what Garretson had discovered.

There were stirrings in the hills, and on other newspapers, and the radio. The "Save the Bay" movement was born. It was not all Garretson's doing, both the public and the press joined in, and the honor roll is long.

The San Francisco Bay Conservation and Development Commission was created, a delicate political compromise that worked. The Bay was spared, at least for a time.

These were the years of conflicts in the Bay Area, the state and the nation, the rise of the civil rights and then the anti-Vietnam War movements, of campus unrest, starting in Berkeley and spreading across the nation, of Black rage and riots, of great social dislocation. The cities too were changing with the growth of the suburbs and the death of the downtowns.

Other newspapers reacted. The Los Angeles Times became a great metropolitan daily. The Trib's neighbor, the San Jose Mercury & News became one of the nation's richest newspapers.

The Trib didn't change to reflect the change in seasons. It cut back its suburban coverage to go "metropolitan." The move saved money but lost the Trib much of its rich suburbs.

And the Trib in spite of Oakland's growing Black population failed to change to reflect the views of the minorities.

The Tribune shrank.

Garretson did not.

He began his coverage of public power issues. He ranged up into the Delta to write about the peripheral canal, and the giant water plan built by the first Gov. Edmund G. Brown with the help of the Metropolitan Water District of Southern California, and the Los Angeles Times.

His stories were often critical of the water planners of the state, once the sacred cow of all sacred cows in California.

He wrote about earthquake faults, and to his delight discovered one minor fault of his own, named for him by a geologist as "the Garretson creep zone."

He exposed the peril of fire among the eucalyptus trees after a freeze killed many and damaged more in the huge groves in the Berkeley hills. The dead and dying trees were a immense fire hazard in an area that had burned on more than one occasion. His stories spurred a massive drive to cut down the trees to protect Berkeley and portions of Oakland from the fire hazard.

And he flew into Vietnam at the end of the war to cover the rescue of the children, taking his chances amid the chaos of defeat, as he did again this last year, as he circled over an erupting Mount St. Helens.

Finally, the Trib began to change but not always for the best. Eventually the paper was sold, ending the era of the Knowland family, the publishers of the Tribune and state and national political powers.

The Trib's circulation and its advertising continued to shrink under the new owners.

One of the regular sweeps in the Tribune city room swept Garretson out to Berkeley where he served a period of exile.

He commented mildly, on such occasion muttering, "Sigh," one of his strongest expressions, but remained at what most in the newspaper world considered a sinking ship.

In exile he sought out the unusual and the important, tracing the social trends that change a nation recorded in the fine print the U.S. census data. At the same time he made contacts among scientists and students at U.C. Berkeley which paid off.

The Trib was sold again, this time as part of a package deal to Gannett, the nation's largest newspaper chain. Gannett brought new life to the Trib, pumping in money, much needed intelligence and some would say sanity, creating Eastbay Today, a dime newspaper that sent circulation soaring.

And Gannett brought Garretson back to the city room. He once more could look for the disastrous mixes of man and nature he wrote about so well. He chased nuclear dumping off the coast of California, checked on the safety of highway overpasses and bridges in case of earthquakes, and followed the shadowy trail of the Iranian students at U.C., who either died or became leaders in the Iranian revolution.

He watched the tide tables, spotting the conjunction of tides and winds which spelled destruction for a huge Delta Island. Garretson was there, flying over the island with a photographer as the dike gave way.

The new Trib/Eastbay Today had one further assignment for Garretson, one he relished. He and political writer Gayle Montgomery were told to dig deep into the California Water Plan, and its effect on the Delta—the salts building up in the San Joaquin Valley farms, the dropping away of the earth because of the shrinking of underground water tables, the advance of salt water into rich agriculture areas, and the peripheral canal, that proposed huge, leaky garden hose circling the Delta replacing the natural flow of streams.

There was an interruption. Some routine medical tests produced non-routine results.

Garretson risked an operation on a cancer despite a heart weakened by an auto accident in years past.

On the night before the operation he talked with enthusiasm of the projected water plan stories and then commented on the tests he had undergone, noting how he had been pumped full of Strontium 90 so that his various organs could be shown on a screen.

"They were sparkling like the stars," he said. "There is Garretson's liver rising, there comes the spleen. They want to do some more looking at the spleen. I can get along without a spleen."

The surgery was long and difficult. The heart problem too serious.

Garretson died shortly before 1:30 p.m. July 10.

He was buried, at his own request, lying perpendicular to the Hayward Earthquake Fault.

Grimm of the Tribune-Eastbay Today vowed the water plan story would go forward.

Skip Garretson is survived by his wife, Maureen, his son, Cornelius, two brothers, Gilbert and William, and the San Francisco Bay, its islands and its cleaner waters, the green hills of Berkeley, and the Sacramento-San Joaquin Delta, although the Delta's condition is still grave.●

FINANCIAL REPORT OF THE CONGRESSIONAL TEXTILE CAUCUS, QUARTERLY STATEMENT OF EXPENSES AND FUND BALANCE

HON. KEN HOLLAND

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. HOLLAND. Mr. Speaker, the chairman, vice chairman, and secretary-treasurer of the Congressional Textile Caucus have approved the quarterly financial statement of the caucus for the quarter ending September 30, 1981. I am herewith submitting the statement for the CONGRESSIONAL RECORD so that all Members of Congress may review it.

The statement follows:

Financial report of the congressional textile caucus, quarterly statement of expenses and fund balance

[For the period ending Sept. 30, 1981]

Expenditures:	*Amount*
Telephone	$104.55
Do	99.15
Do	112.18
Total	315.88
Office supplies	18.72
Do	32.96
Total	51.68
Typewriter	174.00
Do	150.00
Do	174.00
Total	498.00
Copy machine	9.40
Postage	18.00
Subscriptions	30.00
Do	22.75
Do	166.50
Total	219.25
Total, expenditures	1,112.21
Fund balance:	
Fund balance on June 30, 1981	13,773.76
Total dues deposited this quarter	200.00
Interest on account	100.84
Total	14,074.60
Less expenditures	1,112.21
Balance, Sept. 30, 1981	12,962.39

●

NICK LATSIOS

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. YATRON. Mr. Speaker, Friday will be a very special day for an outstanding American and personal friend, Nick Latsios. On this day, Nick will be inducted into the Washington, D.C., Boxing Hall of Fame.

As a seventh-ranked welterweight fighter, recipient of the Fred A. Hartley Trophy in 1941, and the local Golden Gloves champion in 1940–41, Nick Latsios more than qualifies for, and deserves, this award.

Nick was remembered for his speed and quickness in the ring and these assets contributed significantly to his tremendous boxing success. Those famous Latsios moves intimidated his opponents and kept them off balance. As a fellow boxer, I can appreciate how difficult it must have been to get close to Nick in the ring.

It was that quickness, I think, which enabled Nick to almost defeat Henry Armstrong for the championship. This was Nick's greatest fight. His valiant and superlative effort led many who witnessed the bout to believe that he had won. When the tabulations were completed, however, Nick suffered an extremely close, heartbreaking, split decision.

It is truly a remarkable achievement that out of some 60 amateur fights, Nick won all but 2. This success continued into the professional ranks as was evidence by 48 victories, with 36 knockouts, against just 3 defeats. Moreover, I think it is a testimony to his determination, courage, and spirit that he was able to win back two of those three losses.

What makes Nick Latsios unique is that boxing was only one dimension of his multifaceted life. Talented as he was in the ring, the fact that he built and still operates a successful business, as well as having raised a close-knit family, is quite an accomplishment.

Nick Latsios was distinguished as a man of character with the way he handled himself under adversity. While engaged in a highly competitive, grueling, and at times brutal sport, he always exhibited a sense of dignity and fair play. Nick was respected by his fellow fighters not only for his boxing ability, but for his qualities as a person as well. His steadfast religious convictions were widely known and admired. Before every fight he prayed that no one would be seriously hurt. The way he conducted himself in and out of the ring should serve as an example and inspiration to us all.

As a fellow American, I am elated that he is receiving such an honor.●

SOIL EROSION SERIOUS THREAT TO FARMLAND

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for Wednesday, November 18, 1981, into the CONGRESSIONAL RECORD:

SOIL EROSION

Every year, the United States loses millions of acres of farmland to urban expansion. This loss is highly visible, and has rightly caused much concern. However, an even greater threat to farmland is the loss of topsoil through erosion. Unlike the Great Dust Bowl days of the 1930's when huge clouds of topsoil blew across the country and heavy runoff gouged deep gullies in the land, the problem today is less visible. However, it is every bit as serious.

Today, America is losing about five billion tons of topsoil every year through water and wind erosion. The "permissible" level of yearly erosion is roughly five tons per acre (a layer of soil the thickness of five sheets of paper over an acre) since that amount is added each year by natural processes. If the rate of erosion is higher, the productivity of the land begins to decline. It takes nature at least 100 years to produce an inch of topsoil, yet on much farmland the topsoil is being lost at a rate of one inch every fifteen years. Iowa, for example, once had 14 inches of topsoil, but today the layer is only six inches thick in many parts of the state. Currently, erosion on about one-quarter of our cropland exceeds the permissible rate. In Indiana, erosion on about nearly 6 million of some 13.3 million acres was estimated to exceed the acceptable rate in 1981. This gradual depletion would eventually mean lower yields, higher consumer prices, increased water pollution, and sharp reductions in exports. Soil scientists warn that if action is not taken soon, erosion may surpass energy as our major resource problem before the turn of the century.

Today's problem has escalated mainly within the last few years. After the Great Dust Bowl days, millions of dollars were spent on terracing, planting windbreaks, stripcropping, and crop rotation. The programs were successful, and they led to marked improvement in the condition of the topsoil. However, the rate of erosion has recently climbed alarmingly for several reasons.

First, foreign markets for our farms products have expanded rapidly, and the U.S. Department of Agriculture (USDA) told farmers to plant "fence post to fence post." To do this many farmers plowed under pasture and removed windbreaks. Second, much foreign demand has been for "soil-depleting" crops such as corn and soybeans, not for "soil-conserving" crops such as grass and clover. Third, new and larger farm equipment made it difficult to work hillsides on the contour or to maneuver around terraces, so these techniques of conservation were often discontinued. Fourth, the higher costs of production and land have encouraged farmers to recover these costs by increasing the amount of land in production. Fifth, there has been a rise in the number of absentee landlords, many of whom are unwilling to make large investments to save the topsoil. Sixth, certain federal programs of conservation were not run as efficiently as they had been earlier. Moreover, capital investment in conservation throughout the U.S., as measured in constant dollars, has declined each year since 1970. Federal funding for conservation has declined as well.

There are many tried and tested methods of controlling erosion. However, the question is whether they are economical for farmers to use. Many of the traditional conservation practices are expensive, take land out of production, and require several years to show results. The federal government freely demonstrates how to employ such practices, and it spent about $250 million in 1981 to share the costs of implementation. Furthermore, several states (not including Indiana) have established their own state-

wide cost-sharing programs. Yet, erosion is getting worse. Some $1 billion is now being spent on conservation by all parties, public and private, but this is just a fraction of what may be necessary.

One of the most promising developments is the use of conservation tillage in which the new crop is planted directly over the previous year's residue. The residue protects the topsoil, holds it in place during spring storms, and helps to conserve moisture as it rebuilds fertility and depth. Conservation tillage may cut erosion from 50 percent to 90 percent below that which occurs with conventional farming practices. Its drawbacks are the costly equipment it may require and the heavier use of chemicals needed to control weeds and insects, but on balance conservation tillage may cost less than conventional methods of farming. It is estimated that in 1979 more than one quarter of all cropland harvested in the U.S. was in conservation tillage, and that by the year 2000 one-half will be. A combination of conservation tillage and usual conservation practices is a possible answer to erosion.

It is generally agreed that continuation of present levels of federal, state, and local funding for voluntary programs of conservation will not suffice. As to the future, several proposals have been offered: large increases in federal funding both to provide assistance to more farmers and to pick up a higher percentage of cost-sharing; more state and local funding for conservation or block grants to the states so that they can tailor programs to local conditions; new tax breaks for farmers who practice conservation; mandatory programs involving regulation and penalties if farmers do not cut erosion; requiring that farmers meet standards of conservation in order to qualify for federal subsidies; a "natural resource contract" under which the public would pay the landowner for each ton of topsoil saved until erosion was reduced to tolerable levels; and a "conservation tariff" on farm exports to make foreign customers finance part of our conservation effort.

Although it is uncertain which of these proposals we will pursue, we must act now to get a grip on the problem of topsoil erosion. A new conservation effort is difficult to fund at a time when social programs are being cut, but if it is not funded we may soon discover that our farmland, a primary source of the nation's strength, has been damaged beyond repair.●

WOODBURY HEALTH FACILITIES

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CARMAN. Mr. Speaker, the Woodbury health related facilities have been providing skilled nursing care and intermediate care to the residents of Nassau and Suffolk Counties since 1967. These facilities have earned a reputation for excellence and community service throughout the Long Island area. I am proud to bring their efforts to the attention of my fellow Members of Congress.

Established in 1967, the Woodbury Nursing Home provides skilled nursing care to 123 residents in excellent surroundings designed to give maximum comfort and care. In 1972 the Woodbury health related facility was established to provide intermediate care for 200 residents. The kind of service provided is reflected in a motto of the facility: "Dedicated to those in need of an environment that will assure the comfort and well-being of residents entrusted to our care." That dedication has been appreciated by all of us who have come in contact with Woodbury.

In addition to providing excellent health care, the residents of Woodbury are active in community involvement. Annually, the residents participate in fundraising for the American Heart Association, the March of Dimes, the American Cancer Society, and the Jerry Lewis Muscular Dystrophy Telethon. The residents are also active in numerous volunteer activities throughout the community. Residents serve the Plainview Cancer Research Center by providing administrative and office support. Others volunteer their talents, knowledge, and skill to such diverse organizations as the Lions Club, the Plainview Reformed Church, the Suffolk Development Center, Old Bethpage School, and numerous senior citizens centers and organizations.

Two activities are particularly noteworthy. Ring-A-Day is a resident action program where homebound neighbors are called daily. This daily phone call provides support and contact for people who are unable to get up and about. In this way the Woodbury residents express their concern and love for the people around them. There is also the Plainview homebound resident program. Residents visit daily homebound elderly to provide arts and crafts and service projects. In addition, a nutritious hot meal is provided. This is a very concrete expression of compassion and caring.

As you can see, Mr. Speaker, the Woodbury health related facilities provide a valuable contribution to their friends and neighbors on Long Island. I commend their fine efforts and applaud their selfless activity for the improvement of life to all with whom they come in contact.●

WISCONSIN HIGH SCHOOL STUDENTS SURVEYED ON NATIONAL ISSUES

HON. TOBY ROTH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. ROTH. Mr. Speaker, during the Veterans Day recess, I polled high school students in two locations in my congressional district, one urban, the other rural. Approximately 500 students from each high school responded to the survey: Premontre High School, Green Bay, Wis., and Hortonville High School, Hortonville, Wis.

The results were strikingly similar. Almost 60 percent of the students felt that the social security system would not be solvent by the time they face retirement if present trends continue. More than 80 percent said Congress should take action to insure the financial integrity of social security.

Over 70 percent favor a mandatory minimum sentence for those convicted of committing a felony with a dangerous weapon. Better than half of the respondents favor the death penalty for certain crimes. Asked if community service work should be required as a penalty for vandalism, more than 67 percent answered yes. Over 50 percent of the students also said they favor registration of handguns.

As a member of the Foreign Affairs Committee, I was interested to learn people's opinions on this very complex subject. Almost three-fourths of the students said the United States should take a tougher foreign policy stance toward aggressors. Less than one-fourth favored a 2-year military draft.

Students overwhelmingly agreed that welfare eligibility requirements should be tightened to improve the system. A full two-thirds of the respondents said that clean air and water regulations have been successful in preserving and improving the quality of the environment. Nearly one-third of these students also said that some of those regulations could be relaxed in order to stimulate the economy.

Young people were pretty well split on their feelings about the administration tax and budget cuts. When asked if these actions would strengthen the economy, 41 percent said yes, 13 percent said no, and 46 percent said maybe.

Here are the actual results from both high school surveys:

	Percentages			
	Yes	No	Maybe	
Economy:				
Will the Reagan Tax and budget cuts strengthen the economy?	47.8	14	38.2	Premontre.
	34.2	12	53.8	Hortonville.
Social security:				
Will the social security program be financially sound when you retire if present trends continue?	9.9	59.7	30.4	Premontre.
	5.7	59.3	35.0	Hortonville.
Welfare:				
Should welfare eligibility requirements be tightened to improve the system?	80.3	10.5	9.2	Premontre.
	69.4	9.4	21.7	Hortonville.
Foreign policy:				
Should the United States be tougher in its foreign policy toward aggressors?	77.3	9.7	13.0	Premontre.
	65.6	10.5	23.9	Hortonville.
Draft:				
Do you favor a 2-year military draft? ...	19.9	64.5	15.6	Premontre.
	25.3	55.4	19.3	Hortonville.
Environment:				
Have the clean air and water regulations helped our environment?	67.5	14.2	18.3	Premontre.
	63.8	15.4	20.8	Hortonville.
Should some of those regulations be relaxed to stimulate the economy and provide more jobs?	35.1	43.1	21.8	Premontre.
	39.9	36.4	23.7	Hortonville.
Crime:—Do you support:				
Community service work as a penalty for vandalism?	67.8	22.5	9.7	Premontre.
	67.1	20.2	12.7	Hortonville.

	Percentages			
	Yes	No	Maybe	
Registration of handguns?	57.3	33.7	9.0	Premontre.
	58.8	27.2	14.0	Hortonville.
Mandatory minimum sentences for felonies committed with a dangerous weapon?	70.7	16.9	12.4	Premontre.
	72.1	16.8	11.2	Hortonville.
The death penalty for certain crimes?	58.0	25.7	16.3	Premontre.
	53.2	28.6	18.2	Hortonville.

I hope my colleagues will gain from these results some insight into the attitudes of our Nation's young people today.●

ST. ANDREW'S TO "BURN THE MORTGAGE"

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. ANDERSON. Mr. Speaker, in these days when all too often we hear distressing tales of bankruptcies, people forced to go in debt over their heads, and grave concern over the high rates of interest, it is indeed heartening to learn of at least one group of people who, by hard work and sacrifice, will shortly be out of debt. I refer to St. Andrew's Episcopal Church in Torrance, Calif., where the Reverend George A. Detor, S.T.M., is the rector.

On Sunday, November 29, the Right Reverend Robert C. Rusack, the bishop of Los Angeles, will consecrate St. Andrew's Episcopal Church. Episcopal services were held in Torrance in the early 1920's, when the parish went by the name of Christ Church. After a short time, this name was changed to St. Andrew's to avoid confusion with the parish in Redondo Beach bearing the Christ Church name. St. Andrew's was admitted into union with the convention of the diocese of Los Angeles as a mission in 1927, and the following year, the cornerstone of the church was laid. St. Andrew's became a full parish in 1944.

As the parish expanded and grew, so did the church. The original church building was expanded, and a religious education building and portico were built. Next, work was commenced on the parish hall, which also houses a modern kitchen. In 1973, the bishop loaned St. Andrew's $30,000 for the purpose of completing the kitchen and the parish hall.

Mr. Speaker, those of you who are active in a church know that while $30,000 may not seem like a tremendous sum to those working with the Federal budget, it is to a parish when it is placed on top of the other normal expenses of operating a church. And to repay such a sum in a relatively short period of time, can only be accomplished with a lot of effort and a lot of sacrifice by members of that congregation. It means banding together in various fundraising activities, and encouraging communicants to pledge just a little more toward paying off the loan. And, the fact that this has been accomplished in only 6 years is certainly a high tribute to the parishioners of Father Detor's parish.

I think that the ritual service of consecration is a highly meaningful one, and one that those present and participating in will remember for the rest of their lives. At 3 p.m. on Sunday, November 29, members of the congregation will gather in the patio, at which time Bob Bowker, the senior warden, assisted by Robert Brown, the junior warden, and former senior wardens, will perform the ceremony of "burning the mortgage." Then the congregation will proceed into the church, being led by the cross and torches, to await the bishop, who will knock on the front door with his pastoral staff and ask admittance into the church. Upon receiving a hearty welcome, he will trace the sign of the cross on the threshold of the church with his pastoral staff. The bishop will then proceed to bless the pulpit, lectern, font, and altar. The Reverend Canon Oliver B. Garver, Jr., the executive assistant to the bishop of Los Angeles, will preach after the completion of the service of the Ministry of the Word. The bishop will then celebrate the Holy Eucharist.

Mr. Speaker, I wish to congratulate those members of St. Andrew's Episcopal Church of Torrance who have done so much to make their church a mortgage-free, self-sustaining institution. In this Nation of ours, we recognize and respect the necessity for separation of church and state, and have as one of our principal tenets the freedom of religion which we hold so dear. Many lands are not so fortunate, and I believe we should stop and reflect that much of the moral fiber which has made our Nation great is based upon the worship of God, regardless of which manner or under the doctrine of which faith this is accomplished. I hope you will join me in wishing St. Andrew's Episcopal Church many, many years of continuing service to the spiritual needs of the community.●

ALASKA NATURAL GAS PIPELINE IS IN NATIONAL INTEREST

HON. DON YOUNG

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. YOUNG of Alaska. Mr. Speaker, the most important energy legislation facing the Congress this session is the proposed waiver of law for the Alaska Natural Gas Pipeline. This waiver package would remove obstacles to private financing of the pipeline and allow construction of the pipeline to continue. Without this waiver, financing for the project will not be available and natural gas consumers will be deprived of the only feasible means of access to the Nation's largest source of natural gas.

On November 16, the Washington Post published an editorial which states that the construction of this project would serve the interest of both the consumer and national security. In endorsing the waiver proposal, the editorial noted that rejection of the waiver would kill the project and constitute a gross betrayal of commitments made to the Canadian Government. The Post is not known as a close ally of energy producers or as an enemy of consumers, yet it came to the same conclusion that the Congress should. The Alaska Natural Gas Transportation System will provide American consumers with clean, safe, dependable fuel for many years and we in Congress would be shirking our duty if we fail to allow this to be built.

[From the Washington Post, Nov. 16, 1981]

THAT GIGANTIC PIPELINE

We want to talk to you this morning about your gas bill—not the one you got this month, but the one you'll begin getting in the late 1980s. There's a lot of gas underneath Alaska's North Slope, and getting it down here to customers in Washington and through the country is going to require the longest, most expensive pipeline ever built.

You need to be aware that the cost will be in the range of $40 billion and that it will ultimately be paid by the consumers who use the gas. But to get this assured supply at a stable price far into the future will be worth the money.

Congress now has to vote on it once again. The original legislation five years ago contained restrictions that turn out to make the financing impossible, and President Reagan has asked Congress to waive them. These waivers are a reasonable compromise with the realities of current conditions in the financial markets, and if Congress were to reject them it would, as a practical matter, kill the whole undertaking.

Rejection would also constitute a gross betrayal of the Canadian government, which has permitted the construction of the line south from Calgary into this country on the explicit promise by the United States that the rest of it would proceed promptly. That line is already in operation.

The effect of the waivers is to shift more of the financial risks of this enormous investment from the lenders to the consumers. But those risks are pretty small. The greater issue is the cost of the gas, compared with that of other fuels. At first, that price is likely to be substantially higher. But as time passes, with inflation and the higher oil prices that most people expect, the balance will change. An analysis for the House Energy Committee concludes that, over 20 years, on average, the Alaskan gas would cost slightly less than the alternative fuels. But it's necessary to acknowledge that there are many uncertainties in the calculation. Should consumers have to bear the brunt of those uncertainties?

The greater threat now is further rapid escalation of oil prices—and the higher they go, the better deal the Alaskan gas will be. If the gas at first is expensive and raises your gas bill, you ought to regard it as an insurance premium for the longer future. Whatever happens abroad, the prices of the Alaskan gas will continue to be set by law and by long-term contract. The shorter Alaskan oil pipeline seeemed extravagantly expensive when it was finished, in 1977, at $9 billion. But since then it has saved this country $50 billion in the foreign exchange that it would otherwise have paid for more oil from OPEC. For the same reasons, the gas line serves the interest of both the consumer and national security.●

DOWNEY'S QUARTER CENTURY OF GROWTH

HON. WAYNE GRISHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. GRISHAM. Mr. Speaker, Monday, December 7, the city of Downey, Calif., will be celebrating its 25th year of incorporation at an anniversary party to be held at the Downey Theater. I am pleased to make my colleagues aware of this historic event and wish to share with you some of the heritage of one of the finest cities in California.

Downey was named after former Civil War Gov. John Gately Downey. Governor Downey led the State of California from 1860 to 1862 with firm leadership through one of the most trying times in our country.

After almost 100 years of growth as a community, the citizens in the area now known as Downey decided to incorporate. December 4, 1956, marked the big day. Two weeks later the first city council sat down to plan the future of Downey, Calif. The members of that first council were Carroll M. Dunnum, Edwin W. Giddings, Hollis M. Peavey, James L. Stamps and Scott E. Temple.

As the council began work they selected James L. Stamps as Downey's first mayor. Mayor Stamps and the council, as one of its first actions, created the major city departments. Through these departments all the vital services necessary for the city to operate could be established.

Only 1 year later, in 1957, over 3,000 people turned out for an open house to celebrate the first anniversary of Downey. That turnout of interested citizens was to become the hallmark of a city whose residents take an active and involved role in city government.

The citizens of Downey were justifiably proud of their city. The organizational pattern set to govern Downey was working well and by 1965 the residents overwhelmingly voted for a city charter.

Downey, the home of the Apollo space program, has continued its pattern of growth. With over 82,000 citizens the community has developed into an area that is noted for its industrial development and scientific exploration. The space division of Rockwell International is located in Downey on the site where, in 1929, the E. M. Smith Co., built the Emsco, Downey's first airplane. When the first orbital flight of the unmanned Apollo vehicle, built by Rockwell in Downey, was launched in 1966 the residents of Downey had a feeling of pride unmatched in the country.

Under the present capable leadership of Mayor Milton R. Mackaig and Mayor Pro Tem Lyell W. Swearingen along with city councilmen Robert G. Cormack, Theodore H. Jackman and James T. Quinn, Downey will continue to distinguish itself as a leader among California cities. I am proud to represent Downey in Congress and look forward to sharing with all of Downey's citizens their proud motto, "Future Unlimited."●

SMALL BUSINESS CONTRACT PAYMENT PROCEDURES ACT

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. MITCHELL of Maryland. Mr. Speaker, today, I am proposing legislation that will benefit more than 100,000 primarily small businesses and will put more than $4 billion directly into the hands of the private sector—making these moneys, which now sit idle in the ledgers of Federal bureaucrats, available for investment in business growth and job creation—without appropriating a single penny from the U.S. Treasury.

The Small Business Contract Payment Procedures Act will end a practice in Government construction called retainage which, in effect, amounts to a 10-percent withholding tax on Federal contractors and subcontractors.

Retainage is the practice of withholding a portion from each of the monthly payments made by an agency to a prime contractor for work performed, holding back the funds as leverage against the project's completion. When the practice began long ago, the agency was dealing with a single general contractor who performed nearly all the work himself with craftsmen and tradesmen directly on his payroll. And because the work was performed on a single level, retainage worked.

But in 1981, the construction industry is a vastly different establishment than it was a half century ago. Technological advances and economic reality have forced the general contractor to subcontract most of the work performed—so that it is routine to see 50 or more subcontractors on a jobsite performing 80 percent or more of the actual construction. The prime contractor naturally passes along his own retainage to these subs, so that funds are slow in filtering down to that level. This situation gives rise to a host of problems:

First, by slowing the flow of money to those performing the work, retainage delays construction and thus drives up costs due to inflation.

Second, contractors and subcontractors must borrow money—at today's high rates of interest—to cover outstanding retainages and maintain an adequate cash flow, a cost which they must factor into their bids and pass along to the end user.

Third, because funds must travel down so many levels today—owner, prime contractor, subcontractor, lower tier subcontractor, supplier—each party along the way is encouraged by the high interest rates to delay the release of retained moneys as long as possible.

Fourth, nonpayment of retainage is one of the single largest causes for disputes on Government construction projects.

In fact, it is a curious paradox that retainage today achieves the exact opposite effect that it was initially intended to gain. Begun as a "club" to get contractors to finish the job quickly, today retainage actually encourages delay. With construction being performed by so many different subcontractors, the ones who complete the bulk of their work before the project is done have no incentive to finish the final details quickly because retainages are not released until the owner accepts the building. These subcontractors will instead commit their resources to concurrent projects where payment can be expected.

Unfortunately, this irony is no laughing matter for the contractors and subcontractors involved. A study by the American Subcontractors Association shows that the average specialty contractor—who is usually a small businessman—is covering $200,000 in outstanding retainages. And, as the record number of contractor failures reported in recent years by agencies like Dun & Bradstreet indicates, many firms find the financial burden too much to bear.

For many years now, contractors and subcontractors have been required to take out performance bonds to guarantee completion of their work. Retainage then, is an unneeded double protection which hurts contractors and subcontractors but which affords no extra assurance to the Government's interests.

The Small Business Contract Payment Procedures Act would amend the Federal Property and Administrative

Services Act of 1949 to prohibit all civilian executive agencies from withholding any retainages from any Federal contractor unless performance is unsatisfactory or behind schedule. The act would likewise bar—for any reason—the withholding of retainages from small business concerns, provided the firm posts a performance bond.

This measure will help Federal contractors and subcontractors, who have a desperate need for more capital to finance improved productivity and increased growth. And the measure is needed by the Government to speed construction and to reap the savings realized when contractors lower their bids in anticipation of no retainage. Therefore, I urge your adoption of the Small Business Contract Payment Procedures Act at the earliest opportunity.●

WNVT BEGINS BROADCASTING HOUSE PROCEEDINGS TO NORTHERN VIRGINIA RESIDENTS

HON. STAN PARRIS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. PARRIS. Mr. Speaker, I am pleased to announce that WNVT television, northern Virginia's public television station, has recently begun televising the proceedings of the House of Representatives. I have been working with my colleague from northern Virginia, FRANK WOLF, in an effort to obtain permission from the House of Representatives so that WNVT could begin broadcasting. Now that the transmissions from the Capitol to WNVT's studios are underway, northern Virginia residents will be able to view this House at work.

WNVT operates on channel 53 and also has a transmitter station, channel 14, in Arlington, which repeats the WNVT programing. Channel 14 is being used as a low-powered station during the hours that the House is in session, and channel 53 for broadcasting classroom programs for the Arlington-Fairfax school systems. Once the school programs are over for the day, channel 53 picks up the House broadcasts.

This station should be commended for providing northern Virginia with informative and educational programing. We all benefit when our communities are made more aware of advances in science and technology and kept abreast of important issues before Congress. I congratulate WNVT on its insight and the initiative it has taken in providing a valuable public service.●

FIRE CHIEF SERVES COMMUNITY FOR 39 YEARS

HON. BILL McCOLLUM

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. McCOLLUM. MR. SPEAKER, TODAY A MAN IS RETIRING FROM PUBLIC SERVICE WHO HAS DEDICATED 39 YEARS OF HIS LIFE TO SAVING AND PROTECTING HUMAN LIVES.

This man is Leroy F. Gilliam, and he is retiring as fire chief of the city of Apopka in Florida. I wanted to share the story of Leroy Gilliam with my colleagues since there are all too few men and women today who can equal his contribution to his community.

Mr. Gilliam has been involved in firefighting since 1942, when he joined the Orlando Fire Department. Even while serving in the Navy from 1943 to 1945 during World War II, he was called on to train firefighters and supervise rescue operations. After leaving the service, Mr. Gilliam rejoined the Orlando Fire Department, where he worked his way up to being named a lieutenant in the unit.

In 1955, he retired to go into private business—though this turned out to be the beginning of an even longer career in firefighting. Still deeply concerned with public safety, Mr. Gilliam became active in the Apopka Volunteer Fire Department—which grew more and more capable as a result of his expertise and experience. Five years later, when the position of volunteer fire chief became vacant, he accepted the post—and the responsibility for the safety of his community.

In the ensuing years, Leroy Gilliam continued to increase the size, skills, and proficiency of the Apopka fire unit. In 1971, when the department shifted from being a volunteer to a professional unit, there was a strong ambulance operation, and emergency medical technician program and a significant increase in available emergency equipment. Since that time, the department has earned the respect of neighboring fire units as well as the gratitude of those in Apopka and the surrounding community.

In honor of Leroy Gilliam, a training center—which will bear his name—is being built to educate men and women on the skills of firefighting and emergency medical treatment. This center will perpetuate forever what Leroy Gilliam has expressed to his community for almost 40 years—that the preservation of human life depends on knowledge, training, and dedication.

Chief Gilliam's leadership will be greatly missed, but all of us whose lives he touched offer him our best wishes for the future—as well as our deepest thanks.●

CALL TO CONSCIENCE VIGIL FOR ALEXANDER PARITSKY

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. LANTOS. Mr. Speaker, as part of the Congressional Call to Conscience Vigil for Soviet Jewry, I rise to express my outrage at the recent sentencing of Alexander Paritsky. I would like to pay public tribute to the Union of Council for Soviet Jews and the Bay Area Council on Soviet Jewry for their tremendous efforts on behalf of Paritsky and Soviet Jewry. I also would like to thank my friend, Mr. BARNES, for his sponsorship of the vigil this year.

Mr. Speaker, Alexander Paritsky was tried, convicted, and sentenced to 3 years of prison last week in a Soviet court on charges of slander against the Soviet state. The Paritsky family has long been a target of Soviet KGB harassment. Paritsky was a leader in the Jewish community of Kharkov in the Ukraine where his only real "crime" was his desire to emigrate with his family to Israel.

Since 1976, when Paritsky first applied to emigrate to Israel, he and his family have been subjected to persistent harassment from KGB officials. In 1977, he was taken to KGB headquarters, interrogated, and threatened, and told to end his involvement in the Kharkov Jewish University, an institution which he helped found. Alexander's professional credentials as a doctor of ocean electronics were then stripped from him and the Soviet Government began publishing articles in the Kharkov newspaper accusing him of black marketeering, racism, and propagandizing against the Soviet Union.

Other members of the Paritsky family have been harassed as well. Dorina, 15, was harshly interrogated by Soviet investigators at her school and told to denounce her family. Paulina, Alexander's wife, has been repeatedly threatened with arrest. In an unprecedented move, Soviet authorities have told Paulina that she may lose custody of her two daughters. When Paulina attempted to obtain independent legal counsel for her husband, she was forcefully detained.

Mr. Speaker, I demand that the Soviets release Paritsky from prison, halt all further harassment of his family, and permit the entire family to emigrate to Israel in accordance with international agreements promoting family reunification. I have cabled the procurator in Kharkov in regard to Paritsky, and urge my colleagues to join me in cosponsoring House Concurrent Resolution 215, which protests Paritsky's imprisonment.●

EDMUND HENNEBORN—NEW YORK FIREFIGHTER

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CARMAN. Mr. Speaker, on Friday, November 20, 1981, the Huntington Manor Fire Department will honor one of its most distinguished and devoted firefighters, Mr. Edmund Henneborn. For 50 years now, Mr. Henneborn has served the people of Long Island and the community of Huntington with a devotion to duty and professional excellence that has won him the respect of his fellow firefighters as well as his friends and neighbors throughout New York.

Mr. Henneborn joined hose company No. 1 of the Huntington Manor Fire Department in November of 1931. In 1935 he qualified as a motor pump operator, and today at the age of 71 he is still an active fireman in his own hometown. In 1976, Mr. Henneborn received the F. & M. Schaefer Brewing Co., Fireman of the Year Award for his consistently outstanding fire record.

Mr. Speaker, the people of Long Island are proud of Edmund Henneborn and his exemplary record of service and performance of duty. The people of America can be proud of this man who has voluntarily given of his time and effort to keep his community safe and prosperous. And I am proud to play a small part in bringing to the attention of my fellow Members of Congress this courageous, selfless, and noble American. I congratulate Mr. Henneborn and commend him for his outstanding contribution to Long Island, N.Y., and the Nation.●

LANGUAGE STUDY PUSH

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. SIMON. Mr. Speaker, an increasing number of people around this Nation are becoming aware of our foreign language deficiencies and what it is costing us as a nation.

And it is not just in the metropolitan areas of this Nation.

The Covington Virginian of Covington, Va., recently had an editorial which I am inserting in the RECORD at this point, calling it to the attention of my colleagues.

[From the Covington Virginian, Aug. 4, 1981]

LANGUAGE STUDY PUSH

The deputy director of the Central Intelligence Agency has made some disquieting observations about the CIA's foreign language problems. What he said can be applied also to the general problem of language deficiencies among Americans. These deficiencies affect our society in many ways.

What Adm. Bobby R. Inman told a House panel considering important remedial legislation is that "the foreign language capability of our country is poor and growing worse." There is nothing new about that, so far as the public is concerned, except the context in which it was said—that is, how this affects the work of gathering intelligence.

Unwilling for security reasons to cite statistics showing how badly the decline in foreign language ability hurts the agency's operations, Inman told the Congressman, "Suffice it to say that we have been impacted severely." He did elaborate to this extent: "Although we have a great many analysts and intelligence officers who have some foreign language ability, many do not have the professional level of competence needed to conduct their jobs."

That is the old, familiar phenomenon—a smattering of French, a bit of German and Spanish, but no secure command of any language but English. It is found in millions of Americans who have studied foreign languages, but not long or intensively enough, and have forgotten much of what they once learned.

The CIA and the Pentagon have joined in urging passage of a measure introduced by Rep. Paul Simon of Illinois whereby public schools and colleges would receive grants to promote foreign language programs. Considering the potential benefits, not only for the military and intelligence communities but also in business and the professions, the $80 million the bill proposes for this purpose would be money very well spent.●

GILBERT GUDE ON "POSITIVE LIBRARIANSHIP"

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. REUSS. Mr. Speaker, on October 9, 1981, Gilbert Gude, our distinguished former colleague who is now the Director of the Congressional Research Service at the Library of Congress, spoke at the dedication of the Patrick and Beatrice Haggerty Library at Mount Mary College in Milwaukee. His remarks are an eloquent tribute to the many individuals who made that excellent facility possible, and a timely reminder of the importance of positive librarianship in a free society. The text of his remarks follows:

His Excellency Bishop Brust, Sister Jacqueline Buckley, Sister Ellen Lorenz, Sister Anne Lucy Hoffman, Beatrice Haggerty, Chairman Bob Christiansen, and all good friends of Mount Mary College: This is a great day for you—a culmination of all the activities associated with the enhancement and enlargement of Mount Mary College, with both a modern and handsome library building. I'm sure that Jane White and Nick Lesselyoung—and all those who have given so much, appreciate that today a corner has really been turned, a goal has been reached. And we know that it was not brought together for Mount Mary in just a month or a year. Amanda Evans and Roland Evans—a life long member of the board—these are the friends who exemplify the persistent and consistent work that made a library dream come true. One of the close connections which I feel with this fine project is through the involvement of the Walter Schroeder and Tod Wehr Foundations. The Schroeders and the Wehrs were Germans who came to a growing Milwaukee in the mid-1800's, much as my father's German family came to Washington in the 1800's and became a part of growing Washington.

This fine library is another significant addition to the institution of free and open libraries integral to the democratic tradition. It is part of the continuing effort of free people to insure ready access for all citizens to ideas and information, writings, and research. The institution of the library is a cornerstone of our community, indeed our way of life—the sine qua non of a healthy democratic system. For this and several reasons it is also a nice occasion for me. And I can say this without being accused of parochialism: Although my Congressional Research Service is within the Library of Congress, I am not a librarian nor are the majority of the researchers and analysts in our service librarians—but the service does have a very substantial cadre of professional librarians who are so important in our work in support of Congress.

But another factor that makes this occasion a "hardcover" rather than a "paperback" event for me—and I know Governor Knowles appreciates this—is that this new library is in Wisconsin, a State which has played a key role in the development of information, research, and library support for State legislatures throughout the United States. It was in 1901 at the turn of the century that Wisconsin led all of the States of the Union when it by law enlarged the scope of its own library and information services and provided for the collection and timely distribution of a broad range of informational and research material to the membership of the Wisconsin legislature. The support was not to be in the form of partisan or biased material, but was to be the result of the best standards of librarianship and research so that legislators could utilize these materials to make decisions or judgments without fear of prejudice or bias. Prior to that time several State legislatures have had library support, but Wisconsin's development was a significant breakthrough. And today, of our fifty State legislatures, Wisconsin's legislative reference bureau continues in a top leadership role and continues to receive national recognition in this field.

Political scientists have noted that the individual State governments in our Federal system provide the mechanism for innovation and a testing ground for better systems of government, and Wisconsin's new development provided Senator Bob La Follette the opportunity to bring an important new concept to the national congress. Although the Library of Congress was established in 1800 and provided some reference support to members in the following century, it remained for Bob La Follette along with Senator Bob Owen of Oklahoma in 1913 to introduce a bill into the U.S. Senate, which would establish in the Library of Congress a specific reference agency to support Congress—the legislative reference service, which today is our Congressional Research Service.

And Bob La Follette pushed the bill through the Senate—and again, significant for the badger State—it was a legislator from Wisconsin in the House of Representa-

tives, Congressman Irvine Luther Lenroot of Superior, who led the House in concurring in the Senate amendment. Now we have not researched all of the legislative history of this endeavor, but it is obvious that many reluctant members were badgered to support this effort by persistent and effective Wisconsin leadership.

So the traditions of librarianship in our system have an important congruence here, but what brings the bricks and mortar of this new library building even more alive is the warm and communicative character of Beatrice and Patrick Haggerty. After all, the role of libraries in a free and open society is indeed one of communication. Positive librarianship goes to systematic ready access to books—and all the other evolving materials of communication such as microfiche, audio tapes, video disks—loaded with facts, research ideas, concepts, materials readily available to a democratic citizenry to use for better living and better governance.

The record shows how Beatrice Haggerty uses the talents of communication in so many good works in Dallas: The Community Relations Commission, the Dallas United Way, and the Boards of the University of Dallas, Ursuline Academy, and the Dallas Museum of Fine Arts.

And Patrick Haggerty's brilliant work as an engineer and visionary in the development of transistors and in Texas Instruments by itself would be enough to guarantee recognition of his contributions to the field of communications and matters which relate to the transmission of ideas. I know well—I served on a technology council in Washington with a Texas Instrument Company officer—that company's leadership in communication technology is a real and accepted fact of life.

Texas Instrument terminals play a key role in my Congressional Research Service, where they provide a compatible communication link to vast libraries of knowledge in sophisticated data bases which go by such names as Medline, Lockheed, and Cancerline. These are the data base chests which contain the treasures of the humanities, business world, and the sciences.

And recognition of Patrick Haggerty in another arena: Nuclear safety. It came in a Presidential appointment to the Nuclear Safety Committee to monitor nuclear power activities in the wake of the Three Mile Island accident—recognition of professional excellence. And the Catholic University of America, with which I have a close association, was one of seven academic institutions which awarded him honorary doctorates.

But Patrick Haggerty's success in the engineering world would never have been so great if he had not had a tremendous talent for communication. He was skilled in motivating people and arousing their enthusiasm. Like all good leaders and communicators, he did not talk to his design engineers; he listened and advised, offered solutions to their problems, and always discussed plans for future developments of their projects.

He was involved with people; he was involved with people at all levels of his work; he was interested and concerned in all phases of company activities, so we are not surprised that he set policies in human terms and worked to have an understanding with all in order that there would be a sharing of purpose—and not a dictatorship. It is not at all surprising that he was known, among those with whom he worked, as a man of compassion and humility.

So, indeed, the bricks and mortar of the Patrick and Beatrice Haggerty Library speak of the traditional qualities of librarianship in the free world—free and open access to information, research, and ideas so that citizens may learn how to better themselves materially, and how to govern themselves wisely—and this library at Mount Mary College speaks also of Wisconsin, a State of great pioneering ideas in democratic government, and the dedicated leaders of Mount Mary College—such as the Evans—Amanda and Ronald Evans--people who give of themselves and work to make such good ideas come true.●

CONGRESSIONAL STEEL CAUCUS FINANCIAL REPORT

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Ms. MIKULSKI. Mr. Speaker, in accordance with Executive Committee Order No. 1, I am respectfully submitting herewith the quarterly financial report of the Congressional Steel Caucus for insertion in the RECORD. The report is as follows:

QUARTERLY REPORTS

Fund balance statement—U.S. House of Representatives, Congressional Steel Caucus

Balance forward: (As of June 30, 1981)	$10,510.95
Total revenues: (Clerk hire, dues, and donations)	11,551.40
Total	22,062.35
Less Expenses:	
July 1981	3,848.84
August 1981	4,446.39
September 1981	3,908.47
Total	12,203.70
Remainder	9,858.65
Plus interest deposit	236.10
Balance as of Sept. 30, 1981	10,094.75

Cumulative statement of expenses—U.S. House of Representatives, Congressional Steel Caucus

Salaries	$32.095.22
Postage	159.92
Stationery: (Donations—Mr. Bevill	354.92
Telephone	444.31
Publications	398.75
Equipment	1,428.60
Printing	471.10
Miscellaneous	6,859.62
Total expenses through Sept. 1981	42,212.44

CONGRESSIONAL STEEL CAUCUS DUES PAID AS OF NOVEMBER 6, 1981

Joseph Addabbo, Douglas Applegate, Eugene Atkinson, Don Bailey, Adam Benjamin, Tom Bevill, William Brodhead, Clarence Brown, George Brown, Don Clausen, William Clinger, Cardiss Collins, John Conyers, Lawrence Coughlin, William J. Coyne, Dan Daniel, Robert Davis, Edward Derwinski, John Dingell, Dennis E. Eckart, Allen Ertel, David Evans, John G. Fary, Vic Fazio, William Ford, Joseph Gaydos, Sam Gejdenson, Benjamin Gilman, Sam B. Hall, Jr., James V. Hansen, John Hiler, Elwood Hillis, and Ron Wyden.

Also Ken Holland, Thomas Kindness, Ray Kogovsek, Tom Lantos, John LeBoutillier, James K. Coyne, Gary Lee, Jerry Lewis, Clarence Long, Thomas Luken, Stanley Lundine, Robert McClory, Joseph McDade, Bob McEwen, Marc Marks, Dan Marriott, James Martin, Robert Michel, Clarence Miller, George Miller, Barbara Mikulski, Donald Mitchell, Robert Mollohan, Ronald Mottl, Austin Murphy, John Murtha, John Napier, James Nelligan, Bill Nichols, Henry Nowak, Mary Rose Oakar, James Oberstar, and Joe Smith.

Also George O'Brien, Thomas P. O'Neill, Jr., Donald Pease, Carl Perkins, Melvin Price, Carl Pursell, Nick Joe Rahall, Ralph Regula, Don Ritter, Robert Roe, Marty Russo, Gus Savage, James Scheuer, Richard Schulze, John Seiberling, Richard Shelby, Bud Shuster, Paul Simon, Albert Lee Smith, J. William Stanton, David M. Staton, Louis Stokes, Gene Taylor, Bruce Vento, Doug Walgren, Robert Walker, Richard White, Lyle Williams, Charles Wilson, Gus Yatron, Clement Zablocki, and Leo Zeferetti.●

"AZURE SEAS" CELEBRATES 100TH ENTRY INTO PORT OF LOS ANGELES

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. ANDERSON. Mr. Speaker, this past Monday, November 9, the passenger cruise ship *Azure Seas*, operated by Western Cruise Lines, marked its 100th arrival in the Port of Los Angeles. Her first voyage out of Los Angeles was on November 28, 1980. This is the only large commercial passenger or cargo vessel that has ever achieved this number of entries into the port in 1 year.

That the ship must be meeting a demand is evident by the fact that she is sailing with heavy passenger loads twice a week. She makes 3- and 4-day cruises from the Port of Los Angeles to Ensenada, Mexico, and return. And the fact that she has chosen the Port of Los Angeles as her home trip speaks extremely well of the service and facilities made available to her by the port.

I will not bore you with numerous details about this 730-passenger ship, other than to say that I am indeed proud and happy to have this fine ship sailing from the port that I am privileged to represent. And as she moves into her second hundred voyages from the Port of Los Angeles, my wife, Lee, and I wish the passengers and crew of the *Azure Seas*, her operator—the Western Cruise Lines—and her owners, Gotaas, Larsen, Ltd., of

London, the best of luck and smooth sailing in the future.●

DOD APPROPRIATIONS BILL

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. MARKEY. Mr. Speaker, in discussing the level of funding for the Department of Defense, it is critical that we engage in a serious, confrontational analysis of cost versus effectiveness. Is the cost of a weapons system, in actual and perceived terms worth its effectiveness and longevity?

I, as much as any one of my colleagues, am vehement in my desire to establish a strong, ready, and effective military capability for the United States. The strongest defense a country has is its ability to show that an attack on it, or one of its allies, could or would lead to devastating retribution to the offender.

And consistent with these remarks, I state emphatically that the B-1 bomber will play no significant role in strengthening American military capability. At a cost of $20.5 billion—which is the administration's figure—to close to $40 billion—a figure cited by the Congressional Budget Office—this bomber may only have a useful life of 1 to 4 years. The B-1 bomber is most strongly promoted as a "gap-filler." It is incomprehensible that this gap cannot be filled with a more responsible, economical, and militarily sound measure than one which carries a $20 to $40 billion price tag.

Instead of the B-1 bomber, the administration should promote a plan to upgrade and improve the defensive and offensive capabilities of our fleet of B-52's. Of course, the B-52 is not adequate alone. But, in conjunction with the Titan and Minuteman ICBM's and our submarine-launched ballistic missiles, it is a viable leg of our powerful and feared triad. In the meantime, our advanced technology bomber—the Stealth—should be developed as quickly as practicable. It is estimated that it could be ready by 1989 or 1990. The Stealth is a formidable bomber, virtually invisible to radar. This bomber will restore the United States to an enviable and respected military capability position.

In conclusion, I reiterate my desire that the United States achieve a strong and ready military capability. This capability would be best achieved if the B-1 bomber was put to its final rest.

Thank you.●

NATIONAL EMPLOYER AWARD

HON. HAL DAUB

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. DAUB. Mr. Speaker, the National Employer Award, presented by the American Legion, is a prestigious recognition of a company's achievements in the hiring of veterans. I am proud that this year's winner in Nebraska is Inland Manufacturing Co. of Omaha.

Daniel and Beatrice Langfeld, board chairman and president of Inland Manufacturing, are the proud recipients of this well-deserved award. Their accomplishments in the hiring of service veterans exhibit their strong commitment to the men and women who have served in our Nation's Armed Forces.

The transition from military service to civilian life is sometimes a difficult one; yet, it is critical that our Nation's veterans be guaranteed a productive place in the American economic mainstream and the full benefits of the freedom they have fought to preserve.

Daniel and Beatrice Langfeld have made a significant contribution in moving us toward that vital goal.●

WE REMEMBER THE VIETNAM VETERAN

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. PURSELL. Mr. Speaker, 9 million American men and women courageously served in our armed services during the Vietnam war. Many, too many, never returned. Many more returned to a nation torn apart by the moral issues surrounding this undeclared war, and an America seemingly indifferent to the needs and feelings of those who served, sacrificed, and survived.

There were no flag-waving receptions, ticker tape parades, or newspaper headlines welcoming these Americans home. They fought in a war we all wished we could forget, and thus they became the forgotten veterans.

The 97th Congress, in passing legislation addressing the unique problems and concerns of the Vietnam veteran, has taken an important step toward recognizing and assisting the forgotten veteran. I join my colleagues in expressing my support of this historic step.

With this step, the Vietnam veteran exposed to agent orange will finally be eligible for medical treatment and hospital care. With this step, the counseling storefront centers will continue in their efforts to help the Vietnam veteran cope with his war experience as it affects life back home. With this step, it will be easier for former POW's to receive VA compensation and health benefits. With this step, small business loans, additional education, and training will be guaranteed the Vietnam veteran.

On November 3, the President's signature made this legislation law and the Nation took a significant step. But it is only the first step. We must continue to reach out in recognition and appreciation to all men and women, and especially our once forgotten Vietnam veterans, who have selflessly served in the armed services.●

UKRAINIAN INDEPENDENCE

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. DORNAN of California. Mr. Speaker, we in the United States are aware of the contributions that all ethnic groups have made toward the building of our Nation. Americans also recognize that the rich diversity of our people is not a weakness but a strength in our democracy. Recognition of a citizen's cultural heritage is a strength when an individual is allowed to join with others of common ancestry and faith to increase personal awareness of ancestors' cultural heritage and background. While we take this right for granted, there are some nations which are reluctant to grant the right of free association to their citizens.

Among groups that monitor the rights of citizens to freely associate in the Ukraine is the Ukrainian Public Group to Promote the Implementation of the Helsinki accords. This group has worked for 5 years to see that the Helsinki accords are implemented. At this time I would like to insert into the CONGRESSIONAL RECORD the introduction to their book "The Ukrainian Helsinki Group: Five Years of Struggle in the Defense of Rights:"

November 9, 1981, marks the fifth anniversary of the creation of the Ukrainian Public Group to Promote the Implementation of the Helsinki Accords. Formed in Kiev by ten individuals as one of several citizens' groups in the Soviet Union that based their legitimacy on the accords recently signed by their government, the Ukrainian Helsinki Group ended up experiencing the most tragic fate of all. For attempting, through peaceful activity, to exercise their rights under the Helsinki Accords, all of the thirty-seven individuals who joined the Ukrainian Helsinki Group in these five years have undergone persecution by the state, ranging from police surveillance to exile to maximum terms of imprisonment.

In this brochure, we want to point out the ideas for which the Group has been struggling. In a sentence, the Group's members

strove to bring the Soviet government into compliance with an international agreement it had signed, guaranteeing its citizens certain rights in the national, cultural, civil, political and religious spheres; and to have Ukraine, as a European state of 50 million people and a founding member of the U.N. included in the Helsinki process.

These stated goals, obviously, have not been realized. Instead, the Soviet government initiated the most brutal campaign in many years aimed at suppressing even the enunciation of these rights. This is evidenced by the fate of the Group. But this does not mean that its activity has been meaningless. Through their personal sacrifice, the members of the Group have shown the world how the Soviet Union ignores its international agreements: five years after signing the Helsinki Accords, the USSR has no government-sanctioned enforcement mechanism; it disregards monitoring of an international agreement by other nations as intrusion into its "internal affairs;" and it labels the monitoring efforts of its own citizens as "anti-Soviet agitation and propaganda." And they have eloquently made a case for Ukraine's inclusion in the process begun at Helsinki in August 1975. In its documents, many of which have reached the West, the Ukrainian Helsinki Group has shown us where the Soviet Union falls short in adhering to an agreement it signed. If this activity is "anti-Soviet," then the USSR is saying that "Soviet" and "human rights" are mutually exclusive. Yet at this very moment, it is still negotiating on the human-rights oriented Helsinki Accords in Madrid.

This publication includes the photographs of all members of the Ukrainian Helsinki Group (except Oleksa Tykhy and Bohdan Rebryk, for whom one is unavailable), as well as a list containing brief biographies and the current status of each member.●

SUICIDE IN THE STREETS

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CLAY. Mr. Speaker, today's world is brimming full of tragedy. As elected officials, we are often expected to solve today, problems which were unheard of yesterday. In tackling these ever changing problems which surround us, we must have only one true goal, to improve the lives of ordinary men. Toward this end, the President and his "Reaganomics" is truly failing. Below is the story of one man who could no longer live with the alienation and degradation in this industrialized, impersonalized system we call order. I commend this sad story to my colleagues and I pray that we realize our responsibility to help put an end to this kind of fate.

MAN KILLS HIMSELF AT AID OFFICE AFTER DISABILITY BENEFITS STOP

LANSING, Mich.—A man who committed suicide outside a Social Security office left a haunting note at his home accusing welfare officials of "playing God" by cutting off disability benefits that he had been getting for 14 years. Police said Friday that Hubert Tuttle, 46, a father of three and a respected community leader, shot himself with a 16-gauge shotgun outside the south side office early Thursday.

Tuttle, who had been receiving disability benefits since 1967 for a back injury, recently had been dropped from disability rolls as part of an economy drive, officials said.

Police said he left a note at his home that said: "They cut my Social Security. They are playing God."

Tuttle, a former machine shop foreman, received his last check Oct. 3. He had appealed the cutoff, but the case was unresolved, Manning said.

Sidney Manning, district Social Service manager, said that although they did not see the shooting, many office employees were so shaken they were sent home for the day.

"It is sad and the facets of it are sometimes hidden and we don't really know nor can we appreciate how deeply some people react to this," Manning said.

Tuttle, who is survived by a wife and three daughters, was a past president of an elementary school Parent-Teachers Association and the Lansing Council PTA.●

DALEVIEW NURSING HOME AND MANOR

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CARMAN. Mr. Speaker, I wish to commend and bring to the attention of the entire Congress the contribution of the Daleview Nursing Home and Manor to the people of Long Island. Residents of the Daleview Nursing Home and their families have accumulated a long record of commitment and service to their friends and neighbors in the surrounding communities. It is a record of which they can be proud and a record which I am sure will inspire my fellow Members of Congress.

Selfless voluntary activity has become the hallmark of the Daleview family. Their patience and love have touched the lives of students in the local junior high school and have touched the lives of the poor in Nigeria, Zimbabwe, and Tanzania. This energetic group of citizens has truly had an international impact.

The Weldon E. Howitt Junior High School has officially adopted Daleview and its residents, citing them as their student council representatives. The residents are invited yearly to a special program on their behalf and the entire school devotes the day to honor these special guests. The students practice for months for the program, cook a special meal, and conduct entertainment. The entire school participates with posters, banners, and gifts for the Daleview residents. The students, in turn, are invited to the nursing home and an annual gift is donated to the student council. As you can see, this is a unique sharing experience.

Daleview residents also participate in a unique program called ring-a-day. Residents of Daleview offer a telephone reassurance program to their community homebound elderly. The participants have a special phone to make daily calls to talk and offer assistance to people who live alone and possibly have no other social outlets. On several occassions Daleview was able to assist in emergency situations by calling the Nassau County Police when an impending cardiac arrest was evident. In these incidents, lives were saved and disaster avoided. In this way the senior citizens provide a vital contribution to those people around them.

In addition, Daleview volunteers participate in a host of other activities. They have participated in the March of Dimes, the American Cancer Society, reciprocal free nutrition program for community seniors, the Hardscrabble Fair, Kiwanis, Rotary, senior citizen centers, and a host of community-related services. In 1977 Daleview received the national award for the outstanding volunteer program of the year for their in-service program for youths aged 14 to 16. And two of the participants have received Volunteer of the Year Awards for the State of New York.

In 1981 Daleview patients and residents raised the third highest amount of donations in the State of New York on behalf of the Heart Association. Ms. Joan Brodowski, program director of Daleview, was the fundraising chairman for the New York State health facilities and Nassau County health facilities. Her efforts with 20 different health facilities resulted in the highest amount raised by anyone in the State of New York. I commend Joan for her excellent work.

Last but not least, the Daleview community has participated in the Farmingdale Rotary Club's hunger program for African nations. Patients and residents sort and collate valuable seeds that are shipped to several African nations. The people of these countries are taught to plant, cultivate, and harvest their crops by local Rotary representatives. In this way the Daleview volunteers contribute to the reduction of world hunger thousands of miles from their own home.

Mr. Speaker, I am sure that you join me in high praise for these wonderful people of Long Island, who have given of themselves in such a marvelous way. I am proud to be a part of this group, to represent them here in Washington, and to wish them every success in their future endeavors. Our best wishes and our prayers are with each of the Daleview community.●

ST. MARK'S A.M.E. CHURCH

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. RODINO. Mr. Speaker, St. Mark's A.M.E. Church in my congressional district has reached an important milestone that I would like to share with my colleagues. The church, under the devoted leadership of pastor Rev. Arthur S. Jones, has paid off its long-held mortgage, and this past Saturday the members of St. Mark's held a glorious mortgage-burning celebration.

The mortgage-burning symbolized the spiritual light and guidance which St. Mark's has given the city of East Orange since 1922. It was at that time when the first A.M.E. mission in East Orange was started on Main Street. Since then the church moved to Sterling Street and then to its current location on Springdale Avenue. Throughout its history, St. Mark's has been a vital part of East Orange's growth as a community, and the mortgage-burning celebration was a tribute to that history: to St. Mark's founders, John and Bessie Allen, Lonnie Harrell, Elizabeth and John Harris, Dr. Stanley Simmonds and John Warlow; to the Reverend James C. Choice and the Reverend Spurgeon Harmon who moved the church forward to acquire its sites; and to Bishop Richard Hildebrand, Reverend and Mrs. Arthur S. Jones, the St. Mark's trustees and all its hard-working members who helped liquidate the mortgage debt.

But mostly we celebrate St. Mark's future in East Orange, as it carries on its tradition of meaningful worship and community involvement.●

GIMME SHELTER

HON. ED BETHUNE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. BETHUNE. Mr. Speaker, the following article from the November 17, 1981, Wall Street Journal provides some excellent fodder for thought as we, here in the Congress, look for ways to solve the current housing and high interest rate crisis.

GIMME SHELTER

"Hey buddy, wanna buy a house?" That may sound like a sleazy California real estate shark, but it's a message that the federal government has been sending out for over 50 years. And the government has stood behind its word: Thanks to federal policies—tax and credit—a home of one's own is the American way. Although these policies were once as acceptable as apple pie at a church social, recent economic woes have prompted a fresh look.

The most powerful government subsidy comes through credit allocation. Decades and decades ago, when mortgages were rare, short-lived events, few Americans owned homes. New Deal policies changed all that by using the thrift industry to accommodate homebuyers with long-term, fixed-rate, cheap mortgages. The whole purpose of the thrifts, after all, is to lend the nation's savings to the nation's homebuyers.

The Feds offered the thrifts a deal too sweet to refuse—large tax breaks for maintaining portfolios devoted almost exclusively to mortgages. The Feds also created various ways to encourage a steady, fulsome stream of mortgage financing: Regulation Q to keep the cost of funds low; FSLIC to insure deposits; the Federal Home Loan Banks to loan money; the Federal Reserve to stand by in an emergency. As for the mortgages themselves, there were the FHA and VA to subsidize and insure them; Fannie Mae and Ginnie Mae to make secondary markets.

Federal intervention, then, directed credit into housing and offered it out at below market rates—that is, what the housing industry calls "affordable" rates. No surprise that the government has been responsible for almost half of the mortgage credit extended in recent years. But like all attempts to circumvent the market, federal mortgage financing has its downside.

It's not been at all optimal for small savers who have seen their return on savings constrained by deposit rate ceilings. Nor has it worked out so well for taxpayers who watched their payments go into agencies which fund low-yield instruments and whose debt pushed up average interest rates on everything, including the federal debt.

It hasn't worked out so well for the economy, either. The inflation speedup of the 1970s increased the return on homeowning while penalizing other types of investment. Thus, between 1975 and 1977, the percentage of disposable income going to net financial investment plummeted over 75% while the portion going to homeowning zoomed more than 50%. In other words, investment in business capital languished while government credit policies shoveled money into housing. Economists grumbled about this distortion, but politicians, ever mindful that their constituents were either actual or aspiring homeowners, ignored those grumblings.

But now high interest rates have ruined the arrangements which sent credit flowing into housing finance; in particular, high interest rates have destroyed the marriage between housing and the thrifts. The thrifts are stuck with their low-yielding mortgages on the one hand, and with the choice of allowing disintermediation or paying the high cost of funds on the other hand. Either way, they can no longer afford—literally—to make "affordable" mortgages.

Of course the government could heap on some more regulations and devices to allocate credit into housing and to keep the thrifts in the housing biz—witness the All Savers Certificates. Mercifully, however, concern over the rising impact of federal credit activities on interest rates rules that out. A sensible course would be to use the current crisis to ask whether we ought to continue tilting credit policies toward housing at the expense of other investment. The Reagan administration proposal to prune $16 billion from Ginnie Mae's funding authority is made out of the right stuff. We'd like to see some more.●

U.S. BUSINESS WOULD BE INJURED BY PROPOSED EUROPEAN LAWS

HON. RICHARD T. SCHULZE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. SCHULZE. Mr. Speaker, the problems faced by U.S. business in the international arena take many forms. Unfair competition, government subsidies, nontariff barriers to trade are a few of the discriminatory actions with which our companies must deal.

The Vredeling proposal now under consideration by the legislative wing of the European Economic Community has the American business community worried—and properly so. The proposal is an attempted extension of extraterritorial jurisdiction that is totally unacceptable and is properly opposed by the administration.

The Congress must take action to strengthen the President's hand in dealing with threats to U.S. direct investment overseas, whether it be from expropriation or from extraterritorial jurisdiction. H.R. 4407 will provide a credible means of retaliation, and I urge interested Members to consider the impact the Vredeling proposal would have on American businesses and the U.S. economy.

A recent article in the Legal Times of Washington, Monday, November 2, 1981, more fully explains the nature and extent of the threat posed by the Vredeling proposal.

[From the Legal Times of Washington, Nov. 2, 1981]

REGULATION IN EUROPE WORRIES U.S. FIRMS

(By Steve Nelson)

Two proposals pending before the legislative wing of the European Economic Community have American business interests concerned about both the EEC's extraterritorial jurisdiction and the possibility that the proposals will conflict with U.S. corporate disclosure requirements.

Of most concern is the "Vredeling" proposal, which would require multinational firms employing 100 or more persons within EEC countries to provide employee representatives with information about corporate decisions that might affect worker interests—perhaps even before those decisions are executed. Multinational firms are also concerned about another proposal, known as the 7th Directive, that would require them to submit to the EEC consolidated balance sheets and other accounting statements for all subsidiary and financially related companies operating with the EEC.

Specifically at issue is Article 6 of the proposed law, which requires that a company planning to take action that may substantially affect the interests of its employees must disclose such plans to the management of each of its subsidiaries within the EEC "not later than 40 days before adopting the decision." Article 6 also requires the management of each subsidiary "to communicate this information without delay to its employees' representatives."

The furor over the proposals of the European Economic Community (now officially known as the European Communities) adds a new aspect to the already controversial subject of extraterritoriality. Previously, most of the controversy involved the alleged extraterritorial application of the U.S. antitrust laws (see Legal Times, April 7, 1980, p. 1). Lawyers following the proposals foresee that in the next few years, U.S. companies will become more concerned with EEC corporate and trade directives, especially since those directives are mandatory for the member nations. "It's only in the past year or so that American companies have started to pay attention to the workings of the Common Market," said one lawyer for a major multinational company.

The Vredeling proposal was the subject of hearings held Oct. 21 in Brussels by a working unit of the European Parliament, the legislative body of the EEC. At those hearings, U.S. representatives, among others, raised concerns that the proposal as now drafted would (1) encourage leaks to corporate competitors about future plans and (2) raise significant "insider trading" problems that might conflict with the policies behind the U.S. securities laws.

RISKS OF LEAKS

According to a discussion paper prepared by the National Foreign Trade Council Inc., the institutional leader of the U.S. opposition to the proposals, "the widespread dissemination to employees and their representatives of such information, often respecting aspects of the business totally unrelated to their own local activities and concerns, would greatly increase the risks of leaks to competitors." The group went on to say that "the dissemination problem is compounded by the fact that U.S. companies subject to [U.S.] stock exchange or securities regulations may be required [under U.S. law] to disclose to the general public any information on future plans which they have imparted to workers so as to avoid possible liability for 'insider' trading or other similar offenses."

Steven Schneebaum of D.C.'s Patton, Boggs & Blow, which represents several corporate clients on the matter, says there is some confusion about the timing of the corporate disclosure required under the Vredeling proposal. "Its unclear whether this means before the effective date of the decision or before the decision is actually approved by management," he said. "If it's the latter," said Schneebaum, "then I think you will have severe disclosure problems for the U.S. companies."

Schneebaum sees two possible ways—both fraught with danger—to comply with both the Vredeling proposal and the U.S. insider trading laws. First, a company could try to ensure that employee representatives would keep the information confidential. But Schneebaum and other lawyers indicate that provisions in the proposal designed to require such confidentiality lack any real teeth. Those provisions allow, but don't require, individual countries to pass legislation to require confidentiality. "Anyway," said one lawyer, "there's no way that employee representatives are going to be able to keep it quiet."

The second option is to make a public disclosure before the disclosure to the employee representatives, or at the same time. Schneebaum says this approach would require a radical alteration in the way major companies do business: "Right now, when management takes top-secret plans to a board of directors meeting, it may well be top-secret information, even to the board members themselves." Moreover, says Schneebaum, advance notice of this type would give competitors a much better chance to respond in the marketplace.

So far, the Securities and Exchange Commission has been conspicuously absent from the proceeding. Schneebaum, through a Freedom of Information Act request to the SEC, did get some material the commission obtained from other sources—such as that the agency was aware of the Vredeling proposal." But Schneebaum suspects the SEC's involvement is merely its normal monitoring, and SEC spokesman Andrew L. Rothman said there was no official commission or staff position on the subject.

MORE ACTIVE

The State Department, on the other hand, has been more active. A representative of its mission to the EEC in Brussels attended the hearings, and according to John T. McCarthy, director of State's Office of Investment, EEC is aware that "in its present form [State has] serious problems with the proposal.

Most observers believe the Vredeling proposal is about two or three years away from adoption. The European Parliament will soon send the proposal, with its recommendations, back to the Commission to the Council of the Economic Communities, which will rewrite the proposal based on suggestions from both the parliament and outside observers. Then, after review by two separate committees composed of civil servants (the "working party group") and diplomats, respectively, it will be voted upon by the Council of Ministers of the organization. Under the Treaty of Rome, signed in 1957, all members must implement and enforce the final legislation within a specified time.

The 7th Directive requiring consolidated accounting statements is much closer to final adoption, as it is currently under reveiw by the working party group. However, this proposal creates less controversy on behalf of U.S. interests, because of its limited scope and the fact that it applies mainly to accounting. In many cases, especially when the parent company had two subsidiaries performing two totally unrelated operations within the EEC—and publication of consolidated statements is deemed impossible by established accounting methods—accounting statements filed under U.S. law would be acceptable as a substitute.

However, this still presents problems for privately held companies (such as Cargill Inc.) that have no responsibility for filing such statements in the United States. Moreover, since the 7th Directive clearly places the responsibility for filing such statements on the parent company (referred to as the "dominant undertaking"), lawyers see the directive as a possible precedent in the area of extraterritoriality.

Another development that lawyers are looking to for precedent on the extraterritoriality issue is an action brought by the EEC against International Business Machines Corp. last December. In its "statement of objections" (similar to a civil complaint), a constituent body of the EEC charged IBM with various uncompetitive practices. IBM responded to the complaint, but at the same time filed an application to the European Court of Justice in Luxembourg (the appellate court for the EEC), claiming that the company's policies were beyond the EEC's jurisdiction. A decision of European court is pending. According to IBM spokesman Edward Nanas, that court is currently considering whether IBM's application—roughly equivalent to an interlocutory appeal—is properly before the appellate court at this time.●

POISONING THE HUNGRY

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CLAY. Mr. Speaker, hunger and starvation are among the most sensitive problems that any government must address. In this Congress, there are several bills pending which attempt to deal with the world hunger problem. I think no one can argue that we are capable of producing enough food to feed all of the hungry people on this Earth; but we have not yet learned how to share the food we have.

Below is an article which recently appeared in the New York Times. I cannot understand how some people would choose to poison the hungry.

[From the New York Times, Oct. 22, 1981]

GARBAGE CONSUMPTION BY HUMANS IRKS RESORT

FORT LAUDERDALE, FLA.—City officials in the resort town of Fort Lauderdale are considering spraying beachfront trash cans with kerosene or chemicals to keep the transients from living off the garbage.

"The way to get rid of roaches or other vermin in the house is to get rid of their food supply," said a city commissioner, Robert Cox, sponsor of the proposal to protect the garbage from being devoured by humans.

Mr. Cox acted after a restaurant owner, Jack Penrod, had complained to the commission that transients along the city's spectacular seven-mile beach "live out of garbage cans and sleep on the streets."

But the City Attorney, Donald Hall, cautioned the city commissioners last night that there might be a few problems. For example, Mr. Hall said, the courts might decide garbage was "abandoned property." Then, he said, anyone who wants it, would have a legal right to eat garbage.

Any transient who got sick from eating garbage sprayed with kerosene or chemicals might sue the city for damages, Mr. Hall told the commissioners.

Nevertheless, Mayor Virginia Young ordered aides to try to find ways of contaminating Fort Lauderdale's garbage. "If I find anybody crawling in my garbage cans, I would spray them," she said.●

NEW YORK STATE SCHOOL MUSIC ASSOCIATION

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CARMAN. Mr. Speaker, on December 1, 1981, the New York State School Music Association All State Concert will be held at the Concord Hotel at Kiamesha Lake, N.Y. Ap-

proximately 850 young men and women from all over New York State will participate. These musicians are to be commended for their excellence and for this great accomplishment.

Selection for the All State Concert marks the crowning achievement to a process that has taken many years for all those chosen. The process begins when a student is in elementary school and either attends an all county program or an all district program and begins to develop musically. It continues into junior high school when he or she attends an evaluation festival where his or her progress is duly noted. By the time a student reaches high school and auditions for All State, there are approximately 50,000 students in the evaluation festivals. Out of this 50,000, only 6,000 audition for All State. Of the 6,000, 850 are selected. This is after a process of elimination by a committee of music educators.

Many factors are taken into consideration during the process, but the most important are: (1) Student rating on the solo. (2) Director's recommendation. (3) Student participation in school groups and other groups. (4) Citizenship of student. (5) Service to the school and community. (6) Written recommendation from the judges.

As you can see, Mr. Speaker, the selection process is long and painstaking. But the reward is well worth the trouble.

It is with a great sense of pride and honor that I will be in attendance at the All State Concert. It is with even greater pride that I have been asked to address the concert participants and audience on December 1. I would also like to commend Mr. Joseph R. Sugar, president of the New York State School Music Association, for this very fine program and the great work that has gone into making this such a worthwhile event.

Mr. Speaker, the following list is the names of the students from Long Island who have been chosen for this great honor.

NASSAU AND SUFFOLK, AND ZONE 13 AND 14

ALL STATE JAZZ ENSEMBLE

Sal Giorgianni, Ellenville; John Brantz, Haldane; Dave Finucane, Sleepy Hollow; Bob Lisi, Valley Stream Central; Jeff Latorre, East Meadow; Vito Sperenza, Amsterdam; Jim O'Conner, Croton-Harmon; David Golden, Ellenville; Pete Giroux, Williamson; Irv Grossman, Barberfields.

Mark Kellog, Whitesboro; Chris Brandhofer, Ellenville; Andy Raskin, Roslyn; Scott Matalon, East Islip; Paul Shelansky, Canandagua; John Riccobono, Scotia-Glenville; Lou Rusinowitz, East Meadow; Joe Pelletier, Nyack; Ted Kumpel, Port Jefferson; Jeff Miller, Ossining.

Alternate list

Denise Fest, Mattituck; Mike Dahn, Marvale; Dave Milne, Rush-Henrietta; Bob Schepis, Ward-Melville; Joe Loyer, Penfield; John Beers, Penfield; Ray Saperstein, Port Washington; Paul Brusiloff, Great Neck South; Mark Deamish, Greece-Olympia; Tony Kadlock, Binghamton. Paul Kocur, Auburn; Russ Pollack, Hastings; Joe Siciliano, Seratoga Springs; Joe DiGiovanna, Potsdan; Tom Killian, Anburn; Tom Zugger, Hanburg; Frank Vignola, Ialip; Jeff Here, Valley St. North.

ALL BAND AND WIND ENSEMBLE

Nassau—Zone 13

Wendy Post, JFK-Bellmore; Frances Cainglet, W. Tresper Clarke; Catherine Starpoli, Elmont; Willa Henigman, Long Beach; Allison Linneman, North Shore; Lia Purpura, Hewlett; Mary McAteer, Farmingdale; Dennis Joseph, East Meadow; David Ciolkowski, Great Neck North; Jon Manasse, Glen Cove.

Neal Bierman, Farmingdale; Elizabeth Dick, Hicksville; Allison Kent, Division; Stacey Bateman, Barbara Siebel, Long Beach; Erick Mandell, Roslyn; Dorene Kelleher, Long Beach; Thomas Halpern, Baldwin; Nancy Baffa, Watagh A.; Jill Suttenberg, Syosset.

Kenneth Sawka, Schreiber—Port Washington; Jeffrey Latorre, East Meadow A.; Robert Corrao, East Meadow; Albert Nigro, Bethpage; Ray Sapirstein, Schreiber-Port Washington; Alan Sturm, JFK-Bellmore; Audrey Epstein, Lawrence; Paul Brusiloff, Great Neck, North; Andrew Fishman, Hewlett A.; Michael Appel, Baldwin A.

Peter Rubins, Hicksville; Sheryl Epstein, Syosset; James Matthews, North Shore; Joel Flatow, Jericho; Robert Scheinerman, JFK—Plainview; Charles Garone, Mepham A.; John Carman, Farmingdale; Robert Wyle, Valley Stream South; Melvin Thompson, Freeport A.; Andy Raskin, Roslyn A.

Warren Fishman, Syosset; Stephen O'Leary, Baldwin; John Kennedy, W. Tresper Clarke A.; Diane Roberts, Long Beach; Michael Gellman, Baldwin; Craig Levine, Glen Cove; John Olbeter, Farmingdale A.; Any Newman, Syosset.

Suffolk—Zone 14

Kristina Boucher, Sachem; Kathleen Kucza, Brentwood A; Kendaly Meadows, Amityville; Jennifer Arak, Smithtown West; Tara Kazak, Huntington; Leslie Jones, Ward Melville; Lisa Maron, Hampton Bays; Doreen Christiansen, North Babylon; Linda Brady, Half Hollow Hills East; Dana Kissinger, Huntington.

Kathy Potter, Bayport-Blue Point A; Sarah Santoro, Rocky Point; Allen Feinstein, Northport; Sheila Arnesen, Miller Place; Perry Wiseblatt, Kings Park; David Cameron, John Glenn; David Young, Huntington; Kristin Olness, Ward Melville; Daryn Veney, Hauppauge; Robert Ayrovainen, Lindenhurst.

Sara McGinnis, Walt Whitman; Vinccent Calandra, Deer Park; Maureen Bofinger, Newfield A; Amy Prochilo, Vandermeulen—Port Jefferson A; Christopher West, Vandermeulen—Port Jefferson; James Esseks, Riverhead; Gregory Doomany, Commack North; Edward Roberts, Smithtown West; Denise Fest, Mattituck; Robert A. Scheps, Ward Melville.

Dean Hudodoff, Half Hollow Hills East; Kevin Earle, Lindenhurst A; Benjamin Peierls, Bellport A; Fred Napolitano, West Babylon A; Nina Bretner, Harborfields; Jeanne Glaser, Smithtown East; Judith Chinitz, Half Hollow Hills East A; Irene Curren, Northport A; Douglas Abt, Half Hollow Hills East; Scott Matalon, East Islip.

Timothy Daisy, Smithtown East; Ed Thieberger, Bellport; James Burns, Huntington; Chuck Huffine, Connetquot; John Lepore, Smithtown West A; Michael Meyer, Walt Whitman; Michael Clark, Sachem North A; Anthony Barbera, Lindenhurst; Stephen Andes, Riverhead; John Petitt, Smithtown West.

Nina DePaola, John Glenn; Kevin Dunne, North Babylon; Janet Pemberton, Amityville; Mark Klafter, Smithtown East; Tom Snyder, Mattituck; Victor Bushell, Islip A; John Flanagan, Miller Place A; Anthony Verderosa, Commack South A.

ALL STATE ORCHESTRA

Nassau—Zone 13

Lloyd Frank, Pamela Seiderman, John Buekner, Baldwin; Wendy Post, Bellmore-Merrick; Debbie Fisch, East Meadow—W. T. Clark; Shanni Reine, Anthony D'Amico, Farmingdale; Karen Busehman, Garden City; Amy Brusiloff, Pamela Slass, Emmanuel Feldman, David Gielkewski, Great Neck North; Jennifer Miletta, Great Neck South; Margret Pols, Geraldine Auguliare, Hericks; Lia Purpura, Newlett—Weedmore.

Peter Ragenesi, Diane Alessi, Tracy Roberts, Jericho; Denise Inciarrane, Richelle Baugh, Levittown—Division Avenue Mac Arthur; Willa Henigman, Long Beach; Shanon Neth, Lynbrook; Nancy Illman, Glenn Coleman, Diane Fusee, Michelle Paciullo, Massapequa; Allison Beseo, John Beebe, Gigi Gundlach, Kathy Marshall, Jacqueline Hunt, Edward Brennan, Massapequa—Berner; Helen Yee, Doris Ann Affrunti, Mepham; Lesley Friedman, Mineola.

Allison Viseosi, Kristen Rademacher, Laura Weickert, David Carbonara, Ronald Doering, Allison Linneman, North Shore; Alison Abrams, Old Westbury-Wheatley; Eric DiGioia, David Sywak, Plainview—JFK; Donna Lee, Fort Washington—Schreiber; Diana Greenberg, Ian Ausubel, Rockville Centre-Southside; Lori Gottlieb, Yvonne Nam, Sheryl Epstein, Amy Newman, Syosset; Kelly Ann Thomas, Uniondale; Demise Coletti, Valley Stream.

Suffolk—Zone 14

Kendaly Meadows, Amityville; Jill DeBona, Babylon; Annette Cohan, Regan Engesser, Bay Shore; John W. Keugel, Bellport; Carole Punturiori, Kim Clasen, Brentwood; Carolyn Gideon, Tania Roberts, Adam Cohen, Diane LaRosa, Commack; Nancy Cellini, Commack North; Pamela Schaefer, Deer Park; Howard Carle, East Islip; Peter Hunger, Cindy Betancourt, Mary Risso, Elwood—J. Glenn.

Vivian Podgainy, Nancy Small, Half Hollow Hills; Douglas Abt, Half Hollow Hills East; Bari Cooper, Half Hollow Hills West, Helena Andreoli, Lisa Catandella, Laila Attar, John McCune, Susanne Marian, Harberfields; Amy Brodsky, Thomas Saeli, Hauppauge; Karine Nerses, Tamar Manuelian, Peter Kerwin, Tara Kasak, Dana Kissinger, Huntington; Laura Buseemi, Lindenhurst; Lynn Marrantine, Jeffrey Bellen, Laura Barrett, Mary Kay Reilly, Mastie—W. Floyd.

Thomas G. Sadle, New Hyde Park; Tina Ann Higgins, North Babylon; Joseph Lee, Dennis Metzler, Christopher West, Port Jefferson—Comsewague; Francesca Manjarres, Sachem North; Paul O'Dell, Sachem South; Alice Campbell, Debbie Backman, Sayville; Shu-Wie Chen, Steven Flanter, Gisele Glover, Jennifer Fessan, Setauket—W. Melville; Timothy Daisy, Mark Klafter, Smithtown; Kathy Whitney, South Huntington—Whitman; Katherine Pusone, West Babylon.

ALL STATE CHORUS

Nassau—Zone 13

Ellen Miklitsch, Levittown Memorial; Christine Watt, A. G. Berner; Patricia Yokasky, Division Ave.; Bernice Wright, Baldwin; Lori Fein, Plainview—Old Bethpage; Amy Cohen, J. F. K. Bellmore; Richard Estes, Garden City; David Schnabel, Mineola; Eric Roberson, J. F. Kennedy; Robert Bronzo, Baldwin.

HOUSE REPUBLICAN POLICY COMMITTEE ENDORSES DEFENSE APPROPRIATION BILL H.R. 4995

HON. DICK CHENEY

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. CHENEY. Mr. Speaker, the House Republican Policy Committee, of which I am chairman, has strongly endorsed the pending defense appropriations bill for fiscal year 1982 including President Reagan's call for funding to develop the B-1B bomber and the MX missile.

We also wholeheartedly endorse his proposals outlined in the major policy address today calling for mutual reduction and elimination of medium-range nuclear weaponry in Europe by the United States and the Soviet Union. After years of unrestrained nuclear missile emplacement by the Soviet Union, President Reagan's precedent-setting call for restraint and an end to this missile race deserves wholehearted support from the American people and our European allies, and acceptance by the Government of the Soviet Union.

After years of bluster, propaganda, and threats on the part of the Soviet Union, the United States had offered that government a chance to show the world its true intentions.

We hope the Soviet Union will accept President Reagan's proposals. But to enter such negotiations, the United States must take all needed steps to insure that it bargains from a position of equality. That equality was wiped away through 4 years of mistaken policy decisions by the Carter administration.

In H.R. 4995, the defense appropriations bill, we have a chance to take the first steps needed to restore that equal bargaining position.

There are four vital elements to the defense package as it relates to that need.

The House Republican Policy Committee endorses President Reagan's call for funding for the development of the B-1B bomber. We support his call for development funding for the MX missile. Equally important, Mr. Speaker, are funding proposals for the Pershing II missile and the land-based cruise launch missile.

All four are essential to the negotiating process that will lead to peace and stability in the world—and to insuring our security in that dangerous period while that settlement is being negotiated.

The House Republican Policy Committee calls on our allies and the Soviet Union to support President Reagan's bid for and easing of tensions in Europe and the world. And we support the President's key proposals in the fiscal year 1982 defense appropriations bill.

The full text of the statement approved by the House Republican Policy Committee follows:

STATEMENT No. 9, NOVEMBER 17, 1981

The House Republican Policy Committee supports adoption of H.R. 4995, the fiscal 1982 defense appropriations bill, and urges full funding as proposed by President Reagan for developmental work on the MX missile and development of the B-1B bomber.

The very first sentence of the Constitution recognizes the need for our government to "provide for the common defense" of the people of the United States of America. The means for so doing have changed from the musket to the intercontinental ballistic missile and sophisticated manned bombers over the past two centuries, but preserving our strength in the world to insure our peace and freedom at home remains the fundamental test of America's government.

Nowhere is that test more challenging today than in dealing with spending plans for defense programs for this fiscal year. Those programs will set the stage for decade-long policies needed to rebuild America's defenses. Immediate steps must be taken to restore recognition in the world of America's resolve to meet those needs, revitalize its defenses and protect its legitimate interests at home and abroad. Four years of misguided and faltering foreign and defense policies left our nation confused about that resolve. Those four years left our allies uncertain about whether we have the manpower needed to carry out our policies once set. And as a result of those four years of "on-again, off-again" foreign and military policies, our enemies came to question whether we had the weaponry required to accomplish even the most basic goals needed to defend our freedoms.

The threat to the United States from the Soviet Union and other unfriendly nations is real. During the past three years, the Soviet Union has put into place one new SS-20 missile every week. The Soviet Union has four other ICBM production lines in operation, while the United States has no ICBM production lines now working. The House Republican Policy Committee strongly supports President Reagan's move to reduce nuclear armaments in Europe and ease tensions throughout the world as a result. But we cannot overlook immediate needs as well.

Less than one year ago, President Reagan came into office and found a shrinking Navy charged with foreign policy doctrines demanding massive naval capabilities. The administration found a strategic weapons system stocked with fast-aging weapons. And the administration found a fighting force on which this burden fell uncertain of the support it would receive in a time of increasing, not decreasing, threat.

The foreign and military policies of the Reagan administration have been forged to halt that decline and reverse that trend. That decline has been halted. Now those trends must be reversed. There should be no doubt in the world today about America's resolve to protect its freedoms and its interests, and those of its friends. Now Congress must do its part by providing the funding needed to put those programs required to put that resolve into clear and unmistakable form.

The House will test that congressional will in consideration of the fiscal 1982 defense appropriations bill. One key challenge of that test concerns President Reagan's proposal for the deployment of long range combat aircraft, the B-1B. An equally important second challenge lies in President Reagan's call on Congress to support basing of the needed MX missile in hardened, existing silos while development work continues on alternative, long-range basing plans and for research on an advanced technology bomber. Other absolutely essential programs include both the Pershing missile and the ground launched cruise missile.

The administration proposal allows for quick basing of vitally needed MX missiles in existing silos while three possible long-range deployment plans are studied. The plan permits immediate action to begin the programs needed to bolster America's defenses, in the face of an expected decade-long challenge to our security, while providing time for orderly consideration of our long term needs as well. The House Republican Policy Committee supports inclusion of funding for this crucial program.

An equally important second part of President Reagan's program to reverse four years' damage to our foreign and military posture calls for deployment of 100 B-1B aircraft while our nation vigorously pursues research on the advanced technology ("stealth") bomber.

Our existing bomber fleet, conceived in the 1950's is straining to meet the increased demands of the 1980s. The end of its useful life is in sight. Hoped-for "stealth" technology remains on the horizon, unavailable until the last years of this decade at the earliest.

We cannot risk years of vulnerability in an era when wars take hours to fight. The House Republican Policy Committee supports inclusion in the fiscal 1982 defense appropriations bill of funding for the deployment of the B-1B bomber and development of advanced technology aircraft as proposed by President Reagan.

America faces hard economic decisions in the months ahead. In voting for change last year, the American people gave their government a mandate to reverse the economic decline caused by four decades of freespending Democratic Congresses. Central to any effort to slow skyrocketing inflation, reduce dizzying interest rates and cut taxes must be the reduction of those four decades of federal government spending programs.

The defense appropriations bill for fiscal 1982 recognizes that need for cuts, the need to wipe out waste, and the need to delay and slow all but absolutely crucial new programs. Those cuts must be made with a scalpel, not an ax, however. We must trim waste and fat without cutting needed muscle.

In today's world, it is impossible for our nation to secure that sound economy if we are weak and insecure in our defenses, unable to defend ourselves and our interests, or if we face enemies who are uncertain about our willingness to do so.

To give America the defense programs it needs to accomplish those goals, the House Republican Policy Committee calls for adoption of the fiscal 1982 defense appropriations bill with funding for development of the B-1B bomber; research and development on basing of the MX missile in upgraded, existing missile silos; the long-range development of the advanced technology aircraft; and development of the Pershing missile and the ground launched cruise missile.●

HON. ALBERT L. SKLAR

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 17, 1981

● Mr. LONG of Maryland. Mr. Speaker, it is with great pleasure that I invite my colleagues to join me in tribute to the Honorable Albert L. Sklar, an outstanding dedicated public servant retiring from the Eighth Judicial Circuit Court after 17 years.

A native of Baltimore, Judge Sklar was graduated from the University of Baltimore Law School in 1932 and was admitted to the Maryland Bar that same year.

He was elected to the Maryland House of Delegates in 1939 and served there until 1955, Judge Sklar's career as a public servant extended beyond his responsibilities as a delegate. He served as counsel to the Junior Association of Commerce from 1935 to 1946, was a member of the Tax Revision Commission of Maryland from 1939 to 1941, and was a member of the postwar Redevelopment Commission from 1941 to 1945.

He later served as the chairman of the Commission to Revise the Public Service Laws of Maryland and with the expertise he developed went on the become a member and chairman of the Public Service Commission from 1958 to 1964.

In addition to his public career, Judge Sklar has been active in religious and social groups. He was president of the University of Baltimore Alumni Association from 1965 to 1972, was president of the Menorah Lodge of the B'nai B'rith and the Histadrut Council, and was a board member of the Chizuk Amuno Congregation. He also served on the board of the Jewish Children Family Services of Associated Jewish Charities, and was a member of the Amicable Lodge and Scottish Rite.

In recognition of his years of outstanding service, he has received the Menorah Lodge's Man-of-the-Year Award, the Dr. Herman Seidel Humanitarian Award, and the Alumnus of the Year Award from the University of Baltimore.

His dedicated service has touched the lives of many people, and his contributions will be truly missed. I am privileged to ask my colleagues to rise with me in commending an outstanding public servant—Judge Sklar, we thank you.●

REINDUSTRIALIZATION: THE BASIC THESIS

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. EDGAR. Mr. Speaker, Dr. Amitai Etzioni, director of the Center for Policy Research at George Washington University, gave an important overview of the basic thesis of reindustrialization. He testifed before the Subcommittee on Economic Development of the Public Works and Transportation Committee. I share his remarks in hope of making a contribution to our thinking on this important subject:

REINDUSTRIALIZATION: THE BASIC THESIS

My thesis is that for America to be able to sustain a high standard of living and set aside the resources needed for national security requires a decade or so of shoring up its productive capacity, of reindustrialization.

The American society has been underdeveloping. Decades of over-consumption and of under-investment in the nationwide economic machine have weakened America's productive capacity. The American industrial machine, with some important exceptions, is run, as it were, like the steel mills, with increases in labor settlements and dividend pay-outs that vastly exceed increases in productivity. Coupled with relatively low investment in new plants and equipment and in research and development, as well as other factors, this has resulted in an aging technology and an inability to compete with Japan and West Germany, which rebuilt their plants after World War II.

In the face of a deteriorating infrastructure and capital goods base, a continued high level of consumption leads to an acceleration in the rate at which these resources are used up, just as a university endowment is used up more rapidly once expenditures exceed the income. This was what happened during our period of mass consumption. Not enough was plowed back into the underlying sectors, the infrastructure and capital goods sectors, to maintain and update them. In that sense, consumption was "excessive."

The terms "reindustrialization," "industrial policy," "revitalization," and "supply side economics," are thrown around at a fast clip, sometimes as synonyms, sometimes as antonyms, and sometimes as both in the same breath. Under the heading "Re-industrialization's Poor Record," a British executive, R. H. Grierson, attacks "industrial revitalization" on the basis of Britain's and others' bad experience in lavishing support

on lame duck industries, a typical failing of "industrial policy," Joel S. Hirschhorn of the Office of Technology Assessment believes that to "re-industrialize America" requires a "Marshall Plan," a "national industrial policy," and so it goes.

The quest for some measure of semantic order, for making definitions and sticking to them, is not a pedantic expression of an academician's need for tidiness; it is a matter of fixing labels long enough to tell what is in each bottle, and the differences among them. I turn to a modest classification shortly; but first I must account for the issue and terms attempt to capture.

At the core of the current important discussion of economic policy are competing conceptions of both what ails the economy and what prescriptions are called for. The advocates of all the varying positions despair, albeit to differing degrees, of the conventional econometric models, Keynesian theories, and policies based on them. All agree that something more is amiss in the American economy than an unduly high reading on some indicators (e.g., inflation, unemployment), poor productivity growth and low savings—that the problem is more severe than just one more downturn of the age-old business cycle, soon to swing up again. All concur that this is not merely or even mainly a demand-driven (or OPEC-caused) inflation, to be curbed if not cured by trading x points of employment for y points of inflation. All agree that the foundation of the American economy has weakened and needs shoring up. There is not a counter-culture, no-growth advocate in the whole lot.

The differences are best viewed as divergent conceptions concerning the proper relations between the polity and the economy, and where the levers for correctives are. The positions taken do not directly parallel those taken by public officials or the political parties or the conservative-liberal dichotomy. They may be arranged, for convenience of presentation, on a continuum from radical conservative to moderate-centrist to left liberal.

At the radical conservative end is the well-known position that what ails the economy is mainly an excessive level of politicization, reflected not merely in an unduly high proportion the GNP being used and allocated by the polity and excessive regulation of private decisions, but also in the revolution of entitlements, of attempts to deal with all social and many personal needs via the polity rather than the market. Daniel Bell and Irving Kristol have articulated this position, as has Milton Friedman.

The remedy which follows is to reduce the scope and intensity of the polity as much as possible, by releasing resources to the private sector, deregulating, and letting the market do its wondrous things. Arthur Laffer and Kemp-Roth are the most radical of the lot; they hold that the revenue lost via monumental tax cuts will be restored by the higher tax yield of a more productive economy. Other radical conservatives, say Milton Friedman, are satisfied to cut back government expenditures and taxation drastically, without assuming a proportionate gain in the economy and tax revenues. Virtue is its own reward.

In terms of the second defining issue, where the levers for change are, this approach is wholly non-targeted. It sees no need to direct, aim, or guide the public resources released to the private sector in any particular way. Indeed, freeing them to go wherever the market will take them is the kernel of the approach. This viewpoint is generally termed supply side economics, the approach which lets private demand work its way, and the private economy respond to it by increasing its capacity to supply what the demand seeks.

At the other end of the spectrum of positions is the notion that, far from being reduced, the polity's role should be intensified. Here the diagnosis is that, compared to other highly successful economies, especially West Germany and above all Japan, American institutions provide insufficient guidance and support for the private economy. The market, it is implied or openly stated, has shown its inability to invest enough in new plants and equipment, to innovate and compete. Executives have grown risk-shy and dividend-happy. Steel mills, auto plants, the textile and rubber industries are crumbling. Computers will soon face a government-orchestrated attack from Japan, while our industries' response will be divided.

According to this left-liberal view, correctives are to be found in emulation of "Japan, Inc.," and above all its MITI (Ministry of International Trade and Industry). In other words, the solution lies in government-guided collaborative efforts, in which business and labor pull together, with government bureaucrats and technologists serving as the task-masters and sources of analysis, tax incentives, capital, and informal if not outright protection. Recent attempts to turn around the U.S. auto and steel industries, following the suggestion of tripartite committees, are viewed as American dry-runs. Beyond this, the advocates of this highly targeted approach see the Department of Commerce transformed into a Department of Trade and Development (or some new agency, the Americanization of MITI) with a desk and a committee for each industry, from ball bearings to industrial diamonds. The trade desk would analyze the industry assigned to it, say, shoes; determine whether it is a winner or a loser, whether it has a promising future, in terms of productivity, export-ability, technology/innovations, labor intensiveness, and other good things in life.

The designated "winners" would be showered with government-provided subsidies, loans, loan guarantees, tax incentives, a measure of protection (as in a trigger price or import quotas), R & D write-offs, and what not. The losers would be buried. (Well, the term used is to "sunset" them.) The government might provide the workers with "trade adjustment assistance" to help move them from parts of the country where the losers congregate (Detroit, Pittsburgh) to where the winners roam (the Sunbelt, coal states). Retraining would also be provided.

This policy might be called "national planning," but as the term tends to raise fears of creeping socialism, most of its advocates avoid the label, at least as long as their defenses are up. Instead, the term "industrial policy" is in favor. It is quite appropriate, because the assumption is that the unit at which levers of policy are to take hold is not "the economy," or a major sector, but specific industries. Also, "industrial policy" is the label used for such detailed government planning and direction of corporate efforts in other countries.

Critics raise three questions: (1) Do we have the analytic capacity to determine correctly who will be a winner, who a loser? Does not our record suggest that we will misidentify industries and sink vast amounts of public resources in tomorrow's Edsels? (2) Will our polity, in which the government tends to be weak compared to business, labor and local communities, especially when these work together for their Chrysler, be able to channel resources to those who merit them by some rational analysis, rather than to those who have political clout? (3) Is the country—both voters and leaders—willing to accept more politicization, less reliance on the marketplace?

At the center of the continuum, between supply side economics on the right and industrial policy on the left, is the conception of reindustrialization, that what ails the country is overconsumption, public and private, and underinvestment, resulting in a weakened productive capacity.

Historically, industrialization is achieved in two main stages: First, an infrastructure is developed, in which nationwide transportation systems are set up (in the United States, it was canals and railroads); cheap power, neither animal nor human, is made available (the mining of coal and drilling of oil wells); technological innovations are advanced (the steam engine, for example; modern communications systems are evolved (e.g., the telegraph); legal and financial institutions are developed (national currency, banks, stock exchanges); and the labor force is prepared (the rise of vocational education, the acculturation of immigrants).

As the infrastructure develops, it becomes time for the second stage of industrialization, the capital goods sector, which builds heavy-duty machinery and plants (steel mills, etc.). These are not consumer goods, but the tools to be used to produce them. When these two stages are well advanced, a society can mass produce consumer goods and services.

Signs of deferred maintenance and lack of adaptation to the new environment of expensive energy can now be seen in most of the elements which make up the infrastructure and in the capital goods sector. There is urgent need, for example, for improvement in the means of transportation of commodities (railroads and bridges, for example); for energy development and conservation, without excessive commitment to any one path; for larger investment in R & D, especially applied R & D; for improvement in the development of human capital, particularly in seeking to bring vocational training and actual jobs closer together. On the capital goods side, greater encouragement to investment is essential.

The suggested cure is semi-targeted: release resources to the private sector, but channel them to the infrastructure and capital goods sectors, away from either public or private consumption. For example, if we cut government revenues by $50 billion through across-the-board tax cuts, the funds released might well be used mainly to spur private demand for consumer goods and services (gasoline, for instance): little rejuvenation of productive capacity would occur. On the other hand, if the resources released are guided to the productive sectors of the economy—not to specific industries—reindustrialization may take place. Thus, if tax revenues are "lost" not just through tax cuts for individuals but in part by allowing accelerated depreciation for those who replace obsolete equipment, or who replace oil-based or energy-inefficient equipment with equipment which is energy-efficient or uses alternative energy resources, the released resources will revitalize, without determining which will benefit: steel or tex-

tiles, rubber or rails. The polity will set the context; the market will target.

Similarly, providing tax incentives for greater R & D expenditures spurs on all such efforts; it does not require any government trade desk or tripartite committee to decide which R & D project is desirable. And if workers are provided with productivity-based incentives, so they can share directly in renewed economic growth, Washington need not be involved in determining which group of workers is eligible; this is best done by the management and the workers within each corporation.

Reindustrialization thus stands between supply side economics and industrial policy; it is semi-targeted, and the context it seeks to advance is a stronger productive capacity.

Critics suggest that such reindustrialization will return the country to the nineteenth century and focus on "basic" rather than post-industrial high-technology industries. The prefix "re-" does point to a return, but it should not be taken too literally. A return to a strong infrastructure and capital goods sector does not require a return to the same mix of specific industries. Thus, communications satellites and data-phones could do the job of the Pony Express and the Morse telegraph, and slurry pipelines instead of barges might carry coal. The return implied is to higher investment and innovation in the productive sectors, not to anachronistic details.

On a second count, though, reindustrialization must plead guilty as charged: it does favor mitigating the criteria of "comparative advantage" with considerations of developmental economics, national security, and social responsiveness. Studies of developmental economics show that a measure of government-provided incentives and support, even short term import limitations, is often essential for developing a new industrial base; the same might hold for renewing one. National security requires us not to grow so dependent on imported coal, steel, and shipbuilding that we are unable to withstand interruptions or boycotts. Social considerations urge us not to export all blue-collar work to Third World countries; we have plenty of unskilled labor of our own. Moreover, social considerations, both ethical and practical, require that reindustrialization be carried out in a much more socially sensitive and responsive manner than America's first industrial development. The call for a national accord on our priorities for the next decade must cut both ways: the various social interest groups will have to moderate their demands, but at the same time, the business community will have to accept a wide sharing of the renewed wealth.●

A SALUTE TO ST. JOSEPH'S ROMAN CATHOLIC CHURCH ON ITS 125TH ANNIVERSARY

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. GUARINI. Mr. Speaker, on Sunday, November 22, 1981, St. Joseph's Roman Catholic Church in Jersey City is marking its 125th anniversary with a special 4 p.m. mass to which I have been invited.

In the evening a dinner dance will be held to mark the occasion with His Excellency Peter L. Gerety, Archbishop of Newark presiding.

With the assistance of church historian Mrs. Barbara Petrick, the background of this outstanding parish, which now has Rev. James V. Pagnotta as its pastor, has been told.

For the edification of all concerned, I am providing the history of St. Joseph's.

This year marks the 125th anniversary of the founding of St. Joseph's parish in Jersey City. St. Joseph's is the city's second oldest parish, founded in 1856 by Father James Coyle to administer to the needs of the hundreds of Irish immigrant workers who had been imported to work on the Erie Railroad tunnel through Bergen Hill. Father Coyle's mission field was a large tract of farmland extending from Hoboken on the north to Bergen Point on the south, and from the Hackensack meadows on the west to the Hill on the east. In years to come more than 20 separate parishes were to be carved from that area.

Father Coyle built a chapel—at first called St. Bridget's—and Bergen's first parochial school on Hopkins Avenue. Coyle's place was taken in 1857 by Rev. Aloysius Venuta, a Sicilian-born priest who had fled Italy after barely escaping imprisonment for his revolutionary activities. He purchased a lot on Baldwin Avenue—the site of the present church—from Peter Bentley and Jacob Van Wagen and built a small brick church, for which he chose the name of the patron saint of the working man, St. Joseph. He also built a house to the right of the church—for the nuns and the school—and a rectory to the left. It was a turbulent time for Venuta and his little congregation. The railroads were changing the social makeup of the city, and deep conflicts developed between the native-born—mostly Protestant—who held political power, and the immigrant workers—mostly Catholic—who arrived in ever-increasing numbers.

Despite poverty, prejudice, and civil disorder, the parish grew steadily, and the small brick building on Baldwin Avenue began to overflow. Venuta prepared to build a magnificient new church right around the old one, leaving the front wall open so that services could be continued without interruption. In 1868, Bishop James Bayley blessed the cornerstone of the present St. Joseph's Church and work was begun. The church was literally carved from the heart of the hill. The blue-gray stone from which it was built was taken from the Erie cut where the railroad workers toiled, and the dirt from the excavation was thrown into the Pennsylvania cut south of Magnolia Avenue. The ambitious building program soon drained the resources of the parish and during the panic of 1873, work on the building came to a halt.

Msgr. Robert Seton, grandson of St. Elizabeth Seton, foundress of the Sisters of Charity, was appointed pastor of St. Joseph's in 1876. He completed the work on the church building, first removing the old brick church through the unfinished front door, then raising the majestic stone tower, and completely finishing the interior. He built a new rectory and a convent, enlarged and landscaped the church grounds, and improved the original school building, which now served as a parish hall as well. Pavonia Hall, as it was called, became a gathering place of local intellectuals, social workers, and professional people during the progressive era of reform in the city. Pavonia Hall stood until 1922, when Msgr. Patrick Smyth, Seton's successor, had it torn down to make room for an addition to the school. By that time St. Joseph's had become the second largest parish in the city, with over 8,000 communicants.

The following year Msgr. James Mooney come to St. Joseph's from Seton Hall, where he had been president and director of Immaculate Conception Seminary. Mooney died in 1928 and was succeeded by Msgr. John Duffy, the first of St. Joseph's pastors to be a native of Jersey City. In 1933 Duffy was appointed bishop of Syracuse, and Father William Carlin, popularly known as the firefighting priest was appointed pastor. Carlin, whose father had been a Newark fire captain, served as fire chaplain in Paterson, and then in Jersey City for 26 years. He was succeeded by Rev. Francis J. Sexton, who had celebrated his first Mass in St. Joseph's and been a young curate there. October 26, 1956, marked the 100th anniversary of St. Joseph's founding, which was celebrated by the consecration of the church by Archbishop Thomas Boland. In preparation for the anniversary, Sexton had overseen the complete renovation of the church, which was repainted cathedral gray to underline its French Gothic style. At the century mark in its history, St. Joseph's had about 15,000 parishioners. Six curates assisted Sexton: Revs. Thomas Mulvaney, Charles Hunter, David McCarthy, George Drexlar, Francis Ballinger, and Walter Debold. Over 800 children were enrolled in the school, which was staffed by 16 Sisters of Charity under the principalship of Sister Clara Rose. In 1961, Rev. Peter Rush, a former Army chaplain, was appointed pastor. Rush, a much decorated veteran of two wars, was promoted to brigadier general in the National Guard in 1963. In the fall of 1966, Rush led an army of his parishioners in a successful protest against the construction of a civic center which would have displaced many of the people in his parish. Rev. Casimir Delimat succeeded Father Rush, but his administration was trag-

ically brief. He was stricken with a heart attack and died on March 3, 1974. Under the administration of Rev. Joseph Derbyshire, a fire gutted the side chapel of the church, but the loyal congregation rallied to the emergency and the church has been fully restored to its original beauty. The present pastor is Rev. James Pagnotta, appointed in 1979.

St. Joseph's, like the tough immigrant workers for whom it was founded, has clung tenaciously to life in a rapidly changing urban environment, and it continues to serve the needs of a multiethnic community, as it has for 125 years.

St. Joseph's has been a driving force in providing the need for religious leadership in our community. It has also nurtured, for well over a century, the cultural, educational, and social needs of the community, which includes hundreds of thousands of new arrivals to this Nation from throughout the world.

Its parishioners have gone forth to become leaders in the city, State, and Nation. It has instilled the necessary faith which St. Augustine said:

Is to believe what we do not see whose reward is to see what we believe.

My office is within the sound of this beautiful church and for many years I have heard its bells toll calling its flock to services especially on the Sabbath.

I am sure my colleagues will agree with Henry Ward Beecher who wrote:

A world without a Sabbath would be like a man without a smile, like a summer without flowers, and like a homestead without a garden. It is the joyous day of the whole week.

I am asking all to join in this grand tribute.●

TWENTY-FOUR MARYLANDERS BECOME U.S. CITIZENS

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. LONG of Maryland. Mr. Speaker, it is with particular pleasure that I congratulate 24 residents of Maryland's Second Congressional District who have chosen to become American citizens, accepting all of the responsibilities that freedom and citizenship entail. I hope that my colleagues will join me in welcoming these new Americans.

They are: Alexandra Rolek, Thelma Inocencio, Peter Taui, Pesala V. Chetty, Neusa D'Angelo, Pietro D'Angelo, Luigina DiNicolo, Rita Paskar, Tsalik Paskar, Mr. and Mrs. William A. Morton, Jr., in behalf of William Alexander Morton III, Mr. and Mrs. John Heimberger in behalf of Koren Soon Duk Heimberger, Cecille Garnett, Teh-Ching Wang, Chul Jang, Rosa Barrueto, Fermin Barrueto, Mary Pereira, Willy Pereira, Anne Grete Klassen, Shyam Dua, Klaus Kutnik, Pearline Burke in behalf of Marlene E. Burke, and Robert Beckey and Florence Fisher in behalf of William Beckey and Anna Beckey.●

GENERAL REVENUE SHARING—AN ENTITLEMENT

HON. L. H. FOUNTAIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. FOUNTAIN. Mr. Speaker, I want to make available to all Members of the House a letter that I have sent to the distinguished chairman of the Appropriations Committee, the gentleman from Mississippi (Mr. WHITTEN). The purpose of my letter is to clarify that general revenue sharing was enacted in 1972 as an entitlement program, and it was twice extended by the Congress, in 1976 and 1980, as an entitlement program, pursuant to a special provision of the Congressional Budget and Impoundment Control Act. As pointed out in my letter, an amendment was offered on the floor in 1980, when the House extended this program for an additional 3 years, to change revenue sharing payments to local governments from an entitlement to a simple authorization. That amendment was defeated by the House, and the Senate agreed to continue local revenue sharing as an entitlement. At the same time, however, the Congress did amend the State and Local Fiscal Assistance Act to discontinue entitlement payments to State governments, making State revenue sharing subject to the regular appropriation process.

In view of this legislative history, it is incorrect to describe revenue sharing as discretionary funds, as the gentleman from Massachusetts (Mr. CONTE) characterized it during Monday's debate on House Joint Resolution 357.

In clarifying that revenue sharing for local governments is indeed an entitlement, I am not taking a position on whether or not the program should retain this privileged position in the future. That is a matter to be decided by this body in the light of changing economic and budgetary conditions. However, if the entitlement status of revenue sharing is to be changed, this should—and must—be accomplished through amendment of the authorizing statute. It would be highly improper and self-defeating, in my opinion, to seek such a change through any other channel.

Mr. Speaker, my letter to Chairman WHITTEN follows:

INTERGOVERNMENTAL RELATIONS AND HUMAN RESOURCES SUBCOMMITTEE,
Washington, D.C., November 17, 1981.

Hon. JAMIE L. WHITTEN,
Chairman, House Appropriations Committee, Washington, D.C.

DEAR MR. CHAIRMAN: During the consideration of H.J.Res. 357 in the House yesterday, general revenue sharing was characterized as a discretionary, nonentitlement program by some members of the Appropriations Committee. Regardless of how individual Members may feel about bringing this program within the regular appropriation process, I believe it is very important that we recognize that Congress did, in fact, reauthorize revenue sharing through fiscal year 1983 as an entitlement program. The legislative history is very clear on this point.

As stated on page 5 of House Report 94-1165, when the program was first reauthorized in 1976:

"The $6.65 billion funding for this program is to be made available through an entitlement procedure in lieu of the authorizations-appropriations procedure followed in the 1972 Act. Under this procedure, the recipient State and local governments will become entitled to the $24.94 billion provided by this legislation.

"The Congressional Budget and Impoundment Control Act of 1974 contains a provision permitting the enactment of spending authority by way of entitlement. Use of the entitlement procedure effectively takes the program out from under the auspices of the concurrent resolution on the budget and the usual appropriations process of Congress."

Again in 1980, when revenue sharing was extended for an additional three years, the Government Operations Committee recommended, and the Congress approved, a continuation of the entitlement payments specifically permitted by the Congressional Budget and Impoundment Control Act of 1974.

The fact that the House intended to continue revenue sharing as an entitlement is evident from two actions taken during Floor consideration of the 1980 amendments:

(1) For the first time, the States were treated differently than local governments in that only the State share was made subject to the annual appropriations process, and

(2) Mr. Boland offered an amendment, which was rejected by the House, to make the local share also subject to the regular appropriations process in fiscal years 1982 and 1983.

I fully appreciate the desire on the part of the Appropriations Committee to discontinue the entitlement protection of selected programs in order to bring the Federal budget under control. While I share that objective, I do not think we can, legally or ethically, abrogate the commitment we made to the local governments in 1980. Most of those governments have already budgeted, or have actually spent, their 1982 entitlements in good faith.

I am aware, as stated by Mr. Boland yesterday, that his subcommittee views revenue sharing as a discretionary account rather than as an entitlement program. Although there may be an honest difference of opinion on this point, it would be inappropriate to seek change in the provisions of this program retroactively or through an appropriations act. Instead, I would urge Members who feel strongly about the entitlement issue to introduce legislation for the purpose of amending the State and Local Fiscal Assistance Act for fiscal 1983. A bill intro-

duced for that purpose would be promptly considered by my subcommittee.

In the final analysis, it is the responsibility of the Congress to decide which programs, if any, should be given entitlement protection. It is evident that we voted in the house in 1980 to continue revenue sharing as an entitlement. While this decision can and should be reexamined if budgetary circumstances have changed, I believe we are obligated to do so through the normal legislative channels.

Kindest regards and best wishes.

Sincerely,

L. H. FOUNTAIN,
Chairman.●

MOBILIZING THE AIRWAVES—FREEDOM'S CHALLENGE TO TOTALITARIANISM

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. LEBOUTILLIER. Mr. Speaker, yesterday I introduced part I of a study entitled "Mobilizing the Airwaves: The Challenge to the Voice of America and RFE/RL" published by the Heritage Foundation. In this study, the author, Mr. Paul Olkovsky, research assistant for the Heritage Foundation, examines the current status of the radios and how to increase their effectiveness. He points out that with the pursuit of détente and the proclamation that America must get over its inordinate fear of communism, the radios have been seriously underfunded and allowed to lapse into technical obsolescence.

I commend this study to my colleagues. Part II is printed below, with the concluding part III to follow tomorrow.

VOICE OF AMERICA

The Voice of America antedates the Cold War. It began broadcasting in German seventy-nine days after the attack on Pearl Harbor. During World War II, the Office of War Information absorbed the VOA. The first broadcast included a statement of purpose: "Daily at this time, we shall speak to you about America and the war—the news may be good or bad—we shall tell you the truth."

After the war, the State Department assumed responsibility to oversee the VOA. With the passage of the Smith-Mundt Act in 1948, the Voice of America became an integral element of American foreign policy. In 1953, responding to a recommendation by the Commission on Organization of the Government (the Hoover Commission), Congress created the United States Information Agency, of which the VOA became a part. In 1978, the Carter Administration merged the Department of State's Bureau of Cultural Information and the United States Information Agency to create the United States International Communication Agency.

At the height of World War II, the VOA broadcast in forty languages; by the end of the Korean War it peaked with forty-six languages. In 1953, twelve languages were dropped, and in 1955 direct shortwave broadcasts to Western Europe in all languages except English ceased. Currently VOA broadcasts regularly scheduled programs in forty languages, with special broadcasts in other languages. It broadcasts 904.75 hours weekly over 101 transmitters located in the United States and around the globe. The current FY 1981 operating budget of $99,087,000 supports a staff of 2,214 including 750 American and foreign national personnel abroad.

PURPOSE OF RFE/RL AND VOA

Though similar in some respects, Radio Free Europe/Radio Liberty and the Voice of America serve very different purposes. The VOA is an agency of the U.S. government, and is headed by the Associate Director of Broadcasting, who reports to the Director of the United States International Communication Agency. Besides reporting accurate, objective, and comprehensive news, its mission is to "present the policies of the United States clearly and effectively and * * * also present responsible discussion and opinion on these policies." VOA is charged to ". . . represent America, not any single segment of American society, and [it] will therefore present a balanced and comprehensive projection of significant American thought and institutions." In other words, it is what the name implies: the "Voice" of America.

Radio Free Europe/Radio Liberty, Incorporated, has never been a part of the United States government. It is an independent entity, registered as a corporation in the state of Delaware. RFE/RL is staffed primarily by East European and Soviet emigres and its broadcasts are specifically designed for audiences behind the Iron Curtain. Like VOA, RFE/RL's mission is to transmit world news accurately and reliably, but RFE/RL are also to "broadcast and critically analyze documents and works of political significance and/or cultural merit which have been produced by citizens of the U.S.S.R. or the Eastern European nations but have been denied official publication by censorship."[3] RFE/RL operates as "home service" radio stations to fill the void created by the lack of free, diverse press. Independence of the official U.S. government is crucial to the operation of the radios. While RFE/RL by law does not make broadcasts "inconsistent with the broad foreign policy objectives of the United States," it can be hardhitting and controversial where this would be inappropriate for a government radio.

EASTERN BLOC INTERNATIONAL BROADCASTING

The Soviet Union expends more resources on international broadcasting than any other nation. The Central Intelligence Agency estimates that the Soviets spend $700 million a year on the operating budget of Radio Moscow, which broadcasts 2,000 hours weekly in eighty-two languages over 285 high-powered transmitters. Radio Moscow does not temper its broadcasts; explosive statements and extreme distortions of the truth form the basis of its programming. These probably played a major part in the sacking of the American Embassy in Pakistan by an angry mob; earlier broadcasts had implied American involvement in the takeover of the Great Mosque in Mecca. The Soviets also operate a "semi-official" station, Radio Peace and Progress—that broadcasts more stridently than Radio Moscow—and several "covert" or "liberation" radios such as the Voice of Free Turkey and the well-known National Voice of Iran, which broadcasted inflammatory and radically anti-American material during the hostage crisis in Iran and continues to do so.[4] The other Eastern bloc nations do a considerable amount of broadcasting, although not as intensively as the U.S.S.R.

An additional sum, estimated some years ago at $300 million, is spent annually by the Soviets to jam incoming Western broadcasts. The Soviets have complained publicly and repeatedly that broadcasts by VOA and Radio Free Europe/Radio Liberty constitute interference in the internal affairs of the Soviet Union. The Soviets even threatened to boycott the 1972 Olympics in Munich, West Germany, unless RFE/RL were shut down. The stations, however, remained on the air and the Soviets attended the games anyway. While Hungary and Romania have not jammed Western broadcasts since the early sixties, Czechoslovakia, Bulgaria, and occasionally Poland continue to jam RFE/RL and VOA intermittently.

TECHNICAL CAPABILITIES OF RFE/RL AND THE VOA

The technical ability to reach a targeted audience with a constantly audible signal is a *sine qua non* of effective broadcasting. RFE/RL is now undertaking a limited program to modernize its transmitters. By 1982, the power RFE/RL uses to transmit will have almost doubled over eight years, from 3,775 kilowatts to 7,500 kilowatts. Even with this upgrading, Radio Liberty will not be able to send a reliable signal to Eastern Europe nor will it be able to reach Soviet Central Asia on a "first hop" basis. (A "hop" is the signal bounce from shortwave transmitters up to the ionisphere and down to the receiver. The "second hop" occurs when the signal goes back up to the ionisphere and then descends a second time. For each hop after the first, there is loss of approximately 90 percent of the signal strength. The "first hop" area of a Radio Liberty broadcast does not go beyond the Ural Mountains.) There are no current plans to remedy this problem. According to planners at RFE/RL, the main problem is finding a host country in the Middle East for RFE/RL transmitting. Countries such as Oman and Pakistan, which are ideally located, are subject to great pressure by the Soviets not to allow RFE/RL facilities. Considering the current situation in Afghanistan, and in light of the growing significance of the Soviet Moslem nationalities, encouraging a host government to allow the construction of RFE/RL transmitters (which takes years), should be a high priority at the BIB and the State Department.

Later this year, the modernization program will make signals transmitted to Eastern Europe meet the minimum technical criteria established by a presidential study of U.S. international broadcast requirements submitted to the Congress in 1977. Yet equipment remains inadequate. For example, VOA still uses a pre-World War II German transmitter. Spare parts are becoming difficult to find and equipment breaks down continually.

There have been a number of specific measures proposed in Congress to strengthen international broadcasting to Eastern Europe and the Soviet Union. In a recent letter to President Reagan, Representative

[3] "The Mission of Radio Free Europe and Radio Liberty," Board for International Broadcasting, 7th Annual Report, 1981, p. 31.

[4] Kenneth L. Adelman, "Speaking of America: Public Diplomacy In Our Times," Foreign Affairs, Spring 1981.

Jim Courter (R-NJ) made several short-term suggestions:

Increase the number of broadcasts by operating transmitters during hours normally unscheduled;

Begin out-of-band broadcasting;

Readjust VOA and RFE/RL transmitter schedules to increase audibility in Soviet languages;

Allocate six to ten transmitter hours at VOA's facility at Kavala, Greece, to relay RL broadcasts to Soviet Central Asia;

Explore the possibility with the British government of increasing BBC broadcasts to Eastern Europe and the U.S.S.R.;

Examine the possibility of cooperation with other allied governments. (Such initiatives might include requesting that U.S. broadcasters temporarily be allowed to use the radio facilities of allied governments); and

Purchase, once again, transmitter time from Taiwan to broadcast RL programs to the Soviet Far East and Eastern Siberia.

These proposals are intended as interim measures until the United States constructs adequate facilities of its own.

PROGRAMING

While the ability to transmit to a specific area is essential for successful broadcasting, the nature of programming determines whether an audience is willing to endure jamming and risk prosecution to tune in to American broadcasts on a regular basis. It is obvious from the reports reaching the West and the tremendous jamming efforts by the Soviets that the programming is successful. Both VOA and RFE/RL broadcast international news, commentaries and "Round Tables," as well as features which include music, history, and human interest stories. Since the missions of the two radios differ, their respective programming must be examined separately.

Radio Free Europe/Radio Liberty has a reputation in Eastern Europe for relevant and timely broadcasts. It has been estimated that during the recent unrest in Poland, more than two-thirds of the adult population tuned in to Radio Free Europe broadcasts each week. In the Soviet Union, those able to receive the broadcasts listen to Radio Liberty frequently. In the large cities, however, Soviet ground wave jamming has made reception nearly impossible most of the time.

RFE/RL first-run broadcasts are 50 percent news and news features, 35 percent political, economic and social-cultural features, and 15 percent other programming, such as music.

Radio Free Europe/Radio Liberty programming has been criticized, particularly for how it deals with the Soviet Union. A recent memorandum prepared by James Critchlow, a programming and research officer with the Board of International Broadcasting, concluded that: "The program Policy Guidelines which are supposed to govern RFE/RL broadcasts are systematically being violated by the RL Russian Service, with detriment not only to the reputation of the radio station in the eyes of its listeners but with an impact damaging to American foreign policy interests."

Relying on very weak evidence, Critchlow alleged violations of Radio Liberty policy such as anti-democratic and anti-Western themes, anti-Catholic programming, and anti-Semitic overtones. Although the BIB took no significant action, this internal memorandum was leaked to Jack Anderson and became the subject of one of his daily columns. The result was a distorted public image of RFE/RL, causing some congressional staffs to reconsider funding and support of the radio.

On the other hand, Vladimir Bukovsky, a well-known Soviet dissident, has expressed legitimate criticism of the entire system of RFE/RL guidelines which serve to hamstring broadcasters and commentators. For example, the radio is directed to avoid: "* * * sweeping generalizations, propagandistic argumentation, gratuitous value judgments, unsupported criticism of the Communist system or its representatives, as well as the use of obsolete or inaccurate terminology such as 'the Communist bloc,' 'Communist satellite countries,' and 'capitalism vs. communism.' " [5]

Bukovsky states that while the guidelines might be of some use, interpretation by some personnel leads to confusion and, more important, to self-censorship. To best serve the Soviet listener, the programs must be hard-hitting, and the news and opinions both diverse and controversial.

Bukovsky suggests that common sense should direct policy. Without well-informed, strategically-based common sense editing, he contends, guidelines are of little use. Bukovsky emphasizes that the radios are the best strategic resource that the United States has.[6]

There has been little criticism of the East European broadcasts of RFE/RL. A recent emigre from Poland has stated that Radio Free Europe is the most popular of the Western radios. Radio Free Europe broadcast hours total more than Voice of America, British Broadcasting Corporation, and Deutsche Welle/Deutschlandfunk combined: 555 hours per week of first-run and repeat transmissions. In light of the current situation in Poland, consideration should be given to increasing the broadcasts to that country from nineteen to twenty-four hours daily.

VOA programming consists of 60 percent news, compiled by a centralized news operations room, and 20 percent commentary describing U.S. foreign policy and coordinated with the State Department. The remaining 20 percent is feature programming such as music. VOA listeners around the world essentially hear the same news broadcasts. After the first several lead stories, the different language services are free to pick news items from a "news menu." Provision is also made on occasion for items of special interest for specific areas that are optional for other services.

VOA policy demands that all news items must have at least two sources. Like RFE/RL, VOA has a reputation for accurate reporting. However, while centralization is effective for accuracy, the standardization which results does not take into account the interests of diverse audiences or their access to alternative information sources. VOA has established priorities for air time among the languages in which it broadcasts. While English language broadcasts are on a twenty-four hour basis and Russian language service is sixteen hours daily, languages such as Swahili or Lao are on the air only one hour daily. the Polish language service broadcasts a mere two hours daily.

The Voice of America Russian language service has its critics. Ludmilla Alexeyeva, a noted Soviet dissident, has been VOA listener for twenty years. She stated that most Soviet citizens listen to VOA more than the other Western services because it is the most audible, not because it is the most favored. In a recent article she states that: "VOA's broadcasts are frequently boring. * * * Politically acute topics, which other radio stations are discussing, are avoided. Very often facts, unpleasant for the Soviet authorities, are either hushed up or smoothed over. * * * Only dissidents have overcome the state monopoly on information, and dissidents constitute the only moral and intellectual opposition. Therefore, no matter how small their numbers and how alienated from the rest of the society they may be, everything they do or say is acutely interesting to the rest of the "silent majority"—even to those who dislike them. Meanwhile, VOA broadcasts on the independent life in Soviet society are far and few between, and they almost never deal with what the dissidents are doing, but only with their arrests and trials." [7]

In a recent television interview with Congressman John LeBoutillier (R-NY), Aleksandr Solzhenitsyn spoke of the inadequate content of Western broadcasts. He pointed out that most of the programming dwells on the material aspects of Western life rather than subjects of intense interest to the Soviet listener, such as ideology, history, and religion.

The VOA can reach more of the Soviet Union than any other Western radio. Until RFE/RL is able to broadcast strong transmissions, VOA should make its programming more diverse. There are many emigres from the Soviet Union who are fully integrated into American society and are capable of writing the politically dynamic material the Soviet listener desires.

VOA Russian Service broadcasts only forty-five minutes of first-run religious programming, fifteen of which is devoted to Judaism. Since there are many indications that there is a Christian revival, an increase of religious programming should be seriously considered. The wisdom of broadcasting music during periods of jamming is also questionable. Although news is distorted, it often is audible through jamming, where music becomes a jumble of noise.●

THE SAD FATE OF THE UKRAINIAN HELSINKI GROUP

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. HUGHES. Mr. Speaker, 5 years ago, on November 9, 1976, the Ukrainian Public Group to Promote the Implementation of the Helsinki Accords was founded to promote compliance with the then nascent Helsinki accords. The accords were intended as a landmark international agreement, guaranteeing the rights and dignity of the citizens of every country which became a signatory.

Unfortunately, the past 5 years have proven the utter insincerity and hypocrisy of the Soviet Union in signing the accords. The fate of the members

of the Ukrainian Helsinki Group bears tragic witness to the Soviet Union's continued abysmal human record.

Thirty-seven courageous Ukrainians joined together to attempt to insure that the civil, cultural, political, and religious freedoms guaranteed at Helsinki would indeed be allowed. All of them have undergone persecution, whether through imprisonment, persecution, exile, or expulsion. Each was punished for the crime of thinking freely and acting as individuals in a society dependent on compliance with a totalitarian regime.

We, as leaders of a nation whose citizens champion liberty, must not allow the spirit and intent of Helsinki to die. We must continue to work for greater freedom of citizens of all nations, taking our inspiration from the courage of the Ukrainian Helsinki Group, who acted with far less hope of success, and far greater loss from failure.●

THE INTRODUCTION OF THE STRATEGIC SHIPBUILDING SECURITY ACT

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. JONES of North Carolina. Mr. Speaker, I have today introduced a bill called the Strategic Shipbuilding Security Act of 1981, a measure which is designed to strengthen the shipbuilding mobilization base and protect strategic supply sources.

The Congress has for a long time recognized the importance of maintaining the capability of our industrial establishment to build the ships which are at the heart of our defense strategy and central to our ability to effectively engage in foreign trade. Shipbuilding in the United States is performed commercially, whether the product is a government warship, privately owned cargo carrier, or a rig used to explore for or exploit our offshore mineral resources. The urgency of maintaining our shipbuilding mobilization base is not a matter of protectionism, it is an integral part of our total mobilization strategy, and each element of its rather complex makeup must be adequately filled or the entire strategy fails.

Joining me in introducing this legislation are Representatives SNYDER, BOWEN, DAVIS, DONNELLY, SCHNEIDER, and HERTEL. We collectively view this bill as another building block necessary for the total defense construction. In its wisdom, this body on November 4, 1981, passed by a vote of 366 to 21, H.R. 3464, the Foreign Shipbuilding Act which prohibits the construction of naval vessels in foreign shipyards. The bill we introduce today adds strength to our announced commitment to guarantee that we never lose our ability to establish and maintain our maritime strength.

Over the years the law has, in recognition of the necessity of maintaining an industrial base, required certain vessels, or portions of vessels to be constructed in the United States. U.S. building requirements have been imposed on vessels which operate in the coast-wise trade of the United States, vessels built with title XI shipbuilding loan guarantee funds, and vessels constructed with construction subsidy funds. In imposing the build America requirements, there was always an assumption that the entire vessel would be of U.S. origin. However, due to variations in statutory language, variations in waiver provisions in the several statutes, and changes in technology unanticipated by the law, entire subassemblies of vessels have been of foreign manufacture, or worse, the rigidity of the requirement has, at times, discouraged the construction of vessels in the United States.

The bill I introduce would provide that whenever any law requires a vessel to be constructed or reconstructed in the United States then all propulsion machinery or other machinery or component assemblies be of manufactured origin of which no more than 50 percent may be foreign. The requirement in this bill does not extend to the hull and superstuctures, nor does it apply to publicly owned vessels not engaged in commercial service.

The 50-percent requirement recognizes that some component parts for vessel construction are not available in the United States. As an example, a significant concern for vessel operator is the cost of fuel, and the type of propulsion machinery in the United States, due in large part, to the depressed price of fuel prior to 1973, makes it most difficult to compete with foreign built vessels which are propelled by modern, fuel-efficient slow-speed diesels. To waive the entire U.S.-origin requirement for the powerplant might improve the competitiveness of our U.S.-flag operators, but it would do nothing for our capability to develop such engines or to manufacture spare parts for their maintenance. Dependence on foreign sources for equipment which is at the heart of maritime capability is a prescription for further deterioration of our position among the family of maritime nations. The requirements of this bill would provide sufficient incentive for U.S. manufacturing to obtain by license, research, or other joint activity the capability of providing the wherewithal for the United States to secure sources of supply and technology which are essential to our future.

I would like to emphasize that this bill does not mandate that vessels be built in the United States. The bill simply asserts the importance of providing a secure source of supply and maintenance of a much-needed industrial base for our shipbuilding requirements both naval and commercial.

The Armed Services Committee on December 31, 1980, issued a report—House Armed Services Committee Print No. 29—in which it found:

> The general condition of the defense industrial base has deteriorated and is in danger of further deterioration in the coming years. The panel specifically finds . . . the United States is becoming increasingly dependent on foreign sources for . . . some specialized components needed in military equipment.

The Strategic Shipbuilding Security Act seeks to halt some of the deterioration which we have experienced in the shipbuilding sector of our defense industrial base, and does so by realistically reestablishing our ability to manufacture and maintain many of the specialized components so necessary for our national security.●

ODESSA FERGUSON: OUR UNSUNG HEROINE

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. MAZZOLI. Mr. Speaker, the House of Representatives has in its midst many unsung heroes—not all of whom are Members of Congress.

One such unsung hero—more precisely, unsung heroine—is Odessa Ferguson, who was the subject of a profile article in the New York Times of November 17, which I ask permission to include in the RECORD.

Odessa—who anchors the serving line at the Longworth Cafeteria—was one of the first people whom I met upon my election to the House in 1971.

In those days, my family still resided in Louisville. I commuted and lived in an apartment on Capitol Hill and took my breakfast in the Longworth Cafeteria.

At first, Odessa's stern command to her customers to walk and talk were a bit undaunting. But, the twinkle in her eyes and the smile, which kept stealing across her face, put this young uncertain Congressman to ease immediately.

Odessa was my mother and my family all rolled into one until my own family joined me in 1973. Even though I don't see Odessa all that much anymore, I think about her often and am delighted to read that she's still at her accustomed grill, still turning out those dozens of eggs—all cooked to perfection—and still acting as counselor and adviser and friend to a new generation of Members of Congress.

Mr. Speaker, I thank Odessa for all her kindnesses over the years and wish her much health and happiness in the years ahead.

[From the New York Times, Nov. 17, 1981]

KEEPING ORDER ON THE EGG LINE

(By Marjorie Hunter)

WASHINGTON, Nov. 16.—John F. Kennedy liked his eggs over light. So did Gerald R. Ford. Odessa Ferguson knows, because for more than 30 years she has been frying and scrambling for a long procession of clients ranging from pages to Presidents.

As high priestess of the grill in the Longworth Cafeteria on Capitol Hill, Odessa Ferguson has become something of a Congressional institution.

"Walk and talk," she commands any laggards in the long breakfast line. "Talk to me. Jesus loves you."

Her customers, including many members of Congress, obey readily, shouting out their orders from behind the stacks of biscuits and cornbread in the warming case, long before they reach her grill.

John Kennedy was a customer in his years as a young Congressman. So was Gerald Ford, then a Representative. Vice President Bush, who was also once in the House, was another.

She knew them all by name, long before they ascended to high office. But many of the other thousands who have passed through her line she knows merely as the man who wants his eggs scrambled or the man who likes them over light.

Mrs. Ferguson was a young bride from the little North Carolina town of Landis (three stoplights), when she came to Washington in the 1940's and got a job in Longworth Cafeteria. She is nearing 60 now, a widow whose three sons are grown, and she has no intention of quitting work anytime soon.

Keeping up with the orders (usually about 60 dozen eggs a day) can be nerve-racking, she says, but she loves the job. Pinned to her uniform is a bright green button: "Smile. Jesus Loves You."

Through the years she has had her favorites. One was David A. Stockman, then in the House and now the director of the Office of Management and Budget.

Morning after morning, Mr. Stockman would pass down the line. His standard breakfast was eggs over medium, bacon and toast.

The morning after he was named budget director, Mr. Stockman seemed preoccupied. He shook his head when Mrs. Ferguson handed him his plate.

"You need your breakfast," she told him sternly. "Jesus loves you."

A little sheepishly, Mr. Stockman took the proferred plate.●

A TRIBUTE TO JOHN W. SHANNON

HON. JULIAN C. DIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. DIXON. Mr. Speaker, on August 4, 1981, Mr. John W. Shannon was sworn in as Deputy Under Secretary of the Army. I want to share with my colleagues a little bit of the background and accomplishments of this remarkable man.

Mr. Shannon grew up in Louisville, Ky. After graduating from the public schools of that city, he continued his education at Central State University in Wilberforce, Ohio, graduating in 1955 with a B.S. degree in industrial education. He received his master of science degree in public administration from Shippensburg State College in Shippensburg, Pa., and pursued additional postgraduate studies at Catholic University and the U.S. Army War College. Mr. Shannon's active duty military career began upon graduation from college, when he was commissioned a regular Army second lieutenant, infantry. For over 23 years he served in various capacities as a commander and staff officer, including two tours in the Republic of Vietnam as an adviser and as an infantry battalion commander.

During Mr. Shannon's illustrious career, he has received numerous awards, including the Combat Infantry Badge Parachutist Wings and the Ranger Tab. He is also the recipient of the Legion of Merit, Defense Superior Service Medal, Defense Meritorious Civilian Service Medal, Bronze Star, Meritorious Service Award with Oak Leaf Cluster, Air Medal, Army Commendation Medal with First Silver Oak Leaf Cluster, Vietnamese Cross of Gallantry with Palm, and four Vietnam battle campaigns.

After retiring with the grade of colonel in 1978, Mr. Shannon further distinguished himself in the areas of military manpower policy and congressional affairs including service as a congressional liaison officer with the Secretary of the Army, Deputy Director for Manpower and Reserve Affairs, and Special Assistant for Manpower, Reserve Affairs, and Logistics, both with the Assistant Secretary for Legislative Affairs.

Together with his devoted wife Jean, his son John, who is presently attending the graduate school of engineering at Northwestern University, Mr. Shannon lives in Temple Hills, Md., where the family is well known and respected in both community and religious circles.

I personnally know Mr. Shannon as a man whose continuing goal is to serve his country and make America a stonger and better place for all. I know that my colleagues in Congress will want to join with me in honoring this giant of a man whose contributions to society are truly noteworthy.●

POSTAL RATE INCREASE

HON. CARROLL HUBBARD, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. HUBBARD. Mr. Speaker, as we all know, the U.S. Postal Service has once again raised the price of a first-class stamp, this time to 20 cents. Mr. Charles Beach, Jr., president of the Peoples Exchange Bank of Beattyville, Ky., has written me an excellent letter on the problem of junk mail and its relation to the latest rate increase. I agree with Charlie Beach's letter and think it should be shared with my colleagues. The letter follows:

DEAR CONGRESSMAN HUBBARD: It appears that all governmental agencies move in defiance of Congress.

Specifically, I refer to the postal department's intention to raise first class rates to 20¢. I have written many letters previously to you complaining about first class mail subsidizing junk mail.

Of course, lobbyists for those interests can provide supporting positions that this is not true. However, if you would visit a local post office you would observe that four-fifths of the mail is advertisements, junk mail, and of such quality that is usually thrown in the wastebasket.

It is a horrendous waste of natural resources, it adds to the burden of garbage disposal and adds significantly to the overall postage costs. Also, it is very time-consuming to sort the first class from the junk mail. In our small business employing 20 people, there will be four catalogs addressed to the same person.

Hopefully, Congress will see fit to demand implementation of efficiency measures which will eliminate the necessity for this increase. This has been done by United Parcel Service while controlling costs without diminishing operational efficiency.

Your opposition to this postage rate increase, which will obviously be passed on to the consumer, should be justifiable. Your consideration of this request will be greatly appreciated.

Kindest regards,

C. BEACH, Jr.●

HIGH-LEVEL RADIOACTIVE WASTE MANAGEMENT BILL INTRODUCED

HON. MARILYN LLOYD BOUQUARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mrs. BOUQUARD. Mr. Speaker, I have today introduced a consensus bill on high-level radioactive waste management. Essentially, the bill establishes the legal and institutional mechanism to permit the safe disposal of high-level radioactive waste in a repository mined deep underground in stable geologic media.

The technical experts have been telling us for a number of years that the barriers to nuclear waste disposal are political and that the most efficient use of funds requires a focused program of research, development and technology demonstration integrated with the mining and construction of a permanent disposal facility. The bill that I have introduced also addresses the only real barriers to nuclear waste disposal: the political ones. It also pro-

vides that the generators of the waste, the utilities, would pay for the costs of the program thus financing it off budget.

The bill is the product of considerable and careful compromise between the members of the Committee on Science and Technology. It was originally proposed in the Science Subcommittee on Energy Research and Production, which I chair, by Mr. LUJAN and myself. The subcommittee majority and Republican staff, under our direction, met frequently with the staff of the Committee on Energy and Commerce and the Committee on Interior and Insular Affairs to understand their perspectives. They then fashioned a bill at the direction of the subcommittee leadership which was adopted by an 11-0 vote.

With the assistance of the members on the full Committee on Science and Technology, we have been able to further improve the bill to the satisfaction of 20 members of the committee, who have agreed to cosponsor the legislation.

I am hopeful that the committee can meet this coming Friday and order the legislation reported to the full House. Of course, three other committees of jurisdiction must act before floor action can be scheduled, These are the Committee on Energy and Commerce, the Committee on Interior and Insular Affairs, and the Committee on Rules. I call upon my colleagues in these committees, especially the leadership, to act upon this legislation at the earliest practical date. It is long past time for the Congress to exercise strong and responsible leadership to resolve this pressing issue.

I am including at the end of this statement a section-by-section analysis in order to aid additional members outside our committee to decide whether they wish to sponsor this important legislation.

SECTION-BY-SECTION ANALYSIS OF THE SCIENCE AND TECHNOLOGY COMMITTEE NUCLEAR WASTE BILL

Section 1. Short title is the "High-Level Radioactive Waste Management and Policy Act".

Section 2. Definitions.

Section 3. Findings—Wastes are a national problem, State participation important, the technology exists, it is in national interest to resolve the issues. Purpose—To establish policy, to accelerate the program and provide direction to Secretary, to authorize construction of facilities, to authorize collection of fees, to improve cooperative role with states, to provide technical and financial assistance to states.

Section 4. Application. the Act does not apply to defense waste repositories.

Section 5. Mission Plan. Secretary shall prepare a mission plan for the authorized programs. It includes an identification of information needed to make determinations on siting and constructing repositories and a Test and Evaluation Facility, an identification of information not available, a schedule for developing information, an evaluation of problems which could impede implementation of the Act, a discussion of the need to build more T&E facilities and comments on the authorized T&E facility, a discussion of significant results of R&D program including impact on geologic media and the advantages and disadvantages of using media, the guidelines issued pursuant to Section 6(b), site characterization research and testing details, identification of waste solidification technologies, an estimate of repository capacity needed through year 2020 including number of repositories needed, a schedule for constructing repositories, an estimate of total costs, and an identification of adverse impacts. Plan submitted to agencies for comment within 15 months after passage of Act. Notice to be published in Federal Register and public comments sought when Secretary submits the plan, when Secretary receives comments, and when and if Secretary doesn't comply with suggestions for change. When the Secretary doesn't comply, he must also publish a detailed statement as to why he won't comply. Plan to be submitted to Congress within 17 months after enactment for a period of thirty days before it becomes effective. Plan to be updated annually. Amendments to the plan to lay before Congress for thirty days.

Section 6. (a) Within 12 months, the Secretary shall complete a final programmatic EIS consistent with NEPA.

(b) Guidelines. Secretary in cooperation with other Government agencies to promulgate guidelines, within 6 months after passage of Act, for the selection of sites. Obligation to promulgate not contingent upon action of other agencies.

(c) Site identification. Secretary to identify at least 3 sites in two geologic media, one of which is other than salt, within 1 year after passage of Act. Other sites may be identified after first year. Each site identified shall be supported by detailed statement. Governors and Tribal Council notified as soon as possible of such identification.

Section 7. Siting Research and Related Activities. (a) Complete siting research, including site characterization, for at least 3 sites within 42 months after identification of the sites pursuant to subsection 6 (b). Preconstruction activities are authorized, however, no on-site T&E construction is permitted until a decision is made on selection for a permanent repository.

(b) Within 6 months after identifying a site, Secretary shall hold at least one public meeting to receive views and prepare an environmental assessment pursuant to NEPA of nonradiological impacts.

(c) Siting research is limited to that necessary to prepare NEPA statements and to make siting decisions

(d) Secretary must use smallest quantity of radioactive materials necessary to achieve desired results. Secretary to ensure that radioactive material is fully retrievable. Such material must be removed at the completion of siting research activities. T&E facility exempt from these restrictions.

Section 8. (a) Secretary to hold at least one legislative-type public hearing after sites are evaluated and before Secretary selects sites. If Secretary determines to select site, he notifies Governor and others and submits a Repository Development Report to President for his decision. If site is disapproved, Secretary proposes another site to President.

(b) If President and Congress don't disapprove site, Secretary shall submit license application to NRC within 30 days after date that Congressional and Presidential review period expires, and give copies to State and Tribe. NRC to consider application only on Atomic Energy Act considerations.

(c) NRC to report to Congress two years after receiving license and annually thereafter on unresolved issues, and NRC actions. Secretary to supply NRC with any needed information.

(d)(1) License application subject to Atomic Energy Act and Reorganization Act, except that NRC must decide on construction authorization within 24 months after application is submitted. A 12 month extension is permitted if: Secretary agrees to extension, a favorable decision likely in that period, and NRC reports to Congress. If license denied, Secretary to select another site ASAP under procedures of Act. NRC to keep itself fully and currently informed on details of repository before it receives application to minimize the time it needs to consider application, Secretary to supply NRC information.

(2) Re NRC hearings: Parties may submit data, view or arguments as hearing board may require. Oral argument may be had at the request of any party. Discovery may be used. Parties must submit a summary of known facts and arguments upon which party proposes to rely at the time the proceeding begins, unless hearing board finds that submittal would unduly delay the proceeding.

(3) Adjudicatory hearing may thereafter be scheduled only if there is genuine and substantial dispute upon which decision of NRC is likely to depend. Hearing board must document these facts.

(4) Commission decision in these proceedings not reviewable by court unless timely objection was made, and the Commission's decision precluded fair consideration of the issue.

(5) Hearing board can consider only issues raised by parties or the Commission except in operating license hearings when board can raise issues *sua sponte* under extraordinary circumstances.

(6) Parties must support contentions with substantial or specific facts.

(7) Secretary must complete repository construction within 6 years after receiving a construction authorization. Secretary to operate repository as soon as possible after receiving license.

(8) Commission may communicate with Secretary at all times to fullest extent of law.

(9) The Secretary's EIS shall satisfy the NRC responsibility under NEPA.

(10) Secretary may petition Commission for interim license while hearings are being conducted. Commission shall grant petition if in all other respects the law had been met and there is reasonable assurance that public health and safety is protected.

(11) Commission to promulgate rules for reviewing applications within 6 months of passage of Act. Promulgation not contingent on EPA issuance of standards according to Section 10.

(12) Secretary may take title to radioactive material to be disposed of in the repository.

Section 9. (a) States and Tribes entitled to participate in consultation and concurrence process as soon as sites are identified and throughout life of the repository. Process is a methodology by which Secretary keeps Governor or Tribal Council informed, solicits their views, resolves their concerns, and allows the State or Tribe to conduct monitoring and testing provided it does not unreasonably interfere with on-site activities.

State, Tribe, and Secretary may enter into agreement to specify the procedures for the above process. Act does not grant States or Tribes authority except as specifically noted.

(b) Secretary must prepare Repository Development Report within 6 months after completing hearing process for a site. This report includes an EIS for site and views and comments of interested parties, Secretary's response to them, license application for repository, and plan for transporting radioactive material to repository.

(c) President has 30 days to review Secretary's site selection. If President approves and State or Tribe does not object then site selection becomes effective 30 days after approval.

(d) If President approves, and State or Tribe files petition with Congress, then Congress has 40 legislative days to pass a resolution of disapproval of site before site selection becomes effective. Rules relating to Congressional consideration are specified.

Section 10. All concerned Government agencies to assist the Secretary in preparing reports and Mission Plan under Act. Except as specified, no agency action prior to site selection is a major Federal action for NEPA purposes. Agencies to avoid duplication of efforts in preparing NEPA statements. EPA to promulgate generally applicable criteria for protection of the environment within 4 months after passage of Act. Secretary to prepare Project Decision Schedule for all concerned agencies. All agencies to comply or report to Congress as to why they can't comply.

Section 11 (a) R&D on Waste Disposal. Eight purposes of the T&E Facility mining of which shall be started within 64 months after passage of Act: (1) to supplement site characterization, integrate components into system, settle licensing issues, validate models, refine and confirm engineering, supplement other site characterization data by determining media-specific geological characteristics, evaluating design concepts and establishing operation capability at low radiation exposures.

(b) Design—T&E Facility must be designed so that Capacity to be from 40 to 300 canisters of solidified waste, or spent fuel if waste not available and wastes or spent fuel shall be fully retrievable and shall be isolated from the biosphere using a system of engineered barriers and geology.

(c) T&E operation to begin 88 months after Act's passage. Testing program shall include in-situ testing of borehole sealing, radionuclide migration, water flow, engineered barriers, waste packages, and various credible failure modes, and such other R&D as appropriate. If the T&E site is not selected for a repository, the testing program is restricted.

(d) The DOE may use existing facilities for generic R&D as long as the Secretary deems appropriate.

(e) Limitations. T&E facility may be used as disposal facility only if authorized by the Commission pursuant to this Act. T&E operation to terminate within five years after initial operation of the repository or sooner if the Secretary determines that it is no longer necessary for RD&D. NRC concurrence required on decommissioning and decontamination if T&E colocated with a repository.

(f) Engineered Barriers. The system for isolating wastes to be designed to last at least as long as the time period required by regulations for repositories.

(g) NRC Role. Secretary and Commission to enter into memorandum of understanding establishing arrangements for consultation and coordination. Memorandum of understanding shall include a decision schedule for NRC's review of the Mission Plan, environmental assessments and reports required by the Commission to evaluate any health and safety concerns. The understanding shall also stipulate conditions under which NRC may enter the facility to assess health and safety concerns. T&E facility and DOE spent fuel R&D facilities not subject to NRC licensing.

(h) Secretary and State or Tribe which hosts T&E site shall enter into written agreement for consultative and cooperative role in construction and operation of T&E Facility.

(i) Secretary shall prepare environmental assessment prior to excavating major shafts for T&E facility and Environmental Impact Statement prior to emplacing radioactive materials. Repository site evaluation not limited by this subsection.

Section 12. Secretary shall establish a demo program for dry storage of spent fuel. The demos shall include cask, caissons, or silo storage technologies with preference given to utilities with a near-term shortage of storage capacity. The Secretary shall enter into agreements for licensed on-site demos and the DOE shall provide up to 50 percent of the funding for such activities. The technical assistance of the DOE may include an R&D program at DOE facilities including up to 300 tonnes of spent fuel.

Section 13. Secretary shall pay $3 million per year to the States or Tribes where a potential site is located, from the date a site is identified to the date a site is selected, provided that such state has entered into a cooperative agreement with DOE. Thereafter, the Secretary shall pay $10 million to the States or Tribe where the site is located, from the date site selection is effective to the date that the repository is full. The State or Indian Tribe may use the payment for whatever purpose they deem necessary, provided that the State must agree to make at least a ten percent payment to the localities where the site is located.

Section 14. (a) Jurisdiction. D.C. Appeals Court jurisdiction only over all civil actions regarding final decisions or actions. No decision or action is considered final prior to effective site selection. Civil actions on constitutional grounds may be brought at any time.

(b) Supreme Court. Supreme Court has exclusive review authority over D.C. Appeals Court decisions, provided that appeals must be filed within 15 days of the decision.

(c) Both courts must exercise their power to expedite their determinations. Appeals Court shall rule within 90 days unless the Constitution requires longer period, or the agency is not enjoined from complying with the Project Decision Schedule.

(d) Actions in the Appeals Court must be brought within 30 days of decision or action, except if party did not have knowledge of the decision or action.

Section 15. (a) Secretary authorized to enter into contracts for disposal services with persons owning waste and persons licensed by the NRC. Fees charged such persons shall provide funds for the entire program. Each person charged no more than his anticipated pro rata share. Secretary shall establish the criteria in writing for such contracts.

(b) NRC precluded from issuing licenses for a production or utilization facility to any person that does not have such a contract unless the Secretary affirms that such person is negotiating with him for a contract. NRC may also condition other licenses on the applicant having such contracts.

(c) All funds received by the Secretary to be deposited in the Treasury in a nuclear waste fund.

(d) Expenditures from the fund as included in the annual budget submitted to Congress but within such directives as in appropriation or authorization Acts.

(e) Secretary can request Treasury to invest excess funds.

(f) Fund assets are not subject to apportionment.●

SAVE OUR INTERNATIONAL EDUCATIONAL PROGRAM

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. LaFALCE. Mr. Speaker, I fear that the budget cuts proposed for our cultural exchange programs are going to cost more than they save.

The Director of the International Communication Agency (ICA), has proposed to absorb the 12-percent cut in its 1982 budget by drastically curtailing one small sector of ICA activities, the educational and cultural exchange program, rather than allocating the cut evenly to all ICA programs. As a result, the successful Fulbright academic exchange and our visitor programs will be cut in half.

The benefits of these programs cannot be measured simply in terms of dollars. Many of the young people who have participated in these grant programs, since 1946, are influential political, business, and educational figures in their own countries. Without a doubt, these highly visible programs serve our national interest above and beyond their cost. If anything, we should be increasing our support for these programs, not drastically curtailing them.

The New York Times, in an editorial, October 28, 1981, discusses the issue in terms of our Nation launching "a policy of unilateral disarmament in the worldwide contest of ideas." The Times states: "The thrashing of these programs proclaims a policy of brawn without brain."

I agree. I encourage my colleagues to read the editorial which follows:

[From the New York Times, Oct. 28, 1981]

AMERICA SURRENDERS

The United States is about to launch a policy of unilateral disarmament in the worldwide contest of ideas. The Administration proposes cuts in the revised State Department authorization bill that would devastate educational and cultural exchange.

Like most departments, the International Communication Agency has been asked to absorb an additional cut of 12 percent in its 1982 budget. But instead of protesting or looking to its bureaucracy, it proposes that

virtually the entire amount come out of educational and cultural programs.

Funds for exchange of students and scholars, for example, would be reduced from an already inadequate $79 million to $22 million. Academic exchanges with 61 countries would be eliminated altogether.

There would be no further support services for the more than 300,000 foreign students who require them to remain enrolled in American universities. The 35-year-old Fulbright fellowships would end except in a few countries with special agreements.

And the number of promising leaders brought here by the International Visitor program would decline from 1,500 to 750, eliminating 75 countries entirely. This is the program that first showed American life in all its variety to 33 current heads of government.

All in all, the cuts would leave the Soviet Union the unrivaled champion of education and culture for most of the poorest nations of the world.

What a travesty for an Administration determined to spread its might and influence abroad. To so shortchange contacts and communication—including the export of books, art, music, theater and drama—will have serious enough consequences in the short term. In the long run, the loss in understanding and human ties would be devastating. The trashing of these programs proclaims a policy of brawn without brain.●

THE F-111B/C

HON. TONY COELHO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. COELHO. Mr. Speaker, the F-111B/C, while providing a near-term capability, is extremely limited and lacks the flexibility and long-term utility required in a new strategic bomber aircraft. It is not suitable as a missile carrier and is thus only a partial, stopgap solution. There is some doubt about the technical feasibility of the proposed modifications and projected delivery schedules. Also, because it is a modification of existing FB-111A's and F-111D's, it is limited to a maximum of 144 aircraft and to the weapon capability inherent in that force.

The tactical F-111 aircraft currently fulfills an essential role in the all-weather, long-range strike force available to our tactical air forces. Diverting the F-111D's from our tactical air inventory and modifying them for service in the strategic forces will create a deficiency in our conventional capability which will require a replacement aircraft.●

UKRAINIAN HELSINKI GROUP DEFENDS BASIC HUMAN RIGHTS AND DIGNITY

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. ANDERSON. Mr. Speaker, November 9 marked the 5th anniversary of the establishment of the Kiev-based Ukrainian group to promote the implementation of the Helsinki accords, also known as the Ukrainian Helsinki Group. This group was founded slightly more than a year after the Soviet Union joined 34 other nations in signing the final act of the conference on security and cooperation in Europe, better known as the Helsinki accords. The accords guarantee the right of individuals to "receive and impart information and ideas through any media and regardless of frontiers." The hopes that the U.S.S.R. would honor the agreement's provisions and that it would respect the individual and national rights of its citizens, proved hollow. Thus the Ukrainian Helsinki Group attempted to monitor the violations.

Ten selfless individuals founded the group, and its membership climbed to 37 over the years. Today not one active member remains in the Ukraine. Twenty-three are in prison, six have been exiled overseas, four are in internal exile, one committed suicide, and two are under police surveillance after completing their prison sentences. One member is no longer active in the group. These individuals tragic situation reflects the Soviet reality where the regime doesn't respect rights guaranteed by law. The group's memorandum No. 5 recognized this situation and stated:

We have a Constitution that is not altogether bad, our country signed the Universal Declaration of Human Rights and the Helsinki Accords . . . But when it comes to reality, then all these rights and opportunities turn not only to mirages but into cruel blows. By demanding that which is declared in Official Documents, a human being dooms himself to endless tortures.

In spite of these dangers the members of the Ukrainian Helsinki Group continued to, in the words of Oles Berdnyk, "assert the primacy of the individual" in relation to the state. Berdnyk stated this meant that: "Law belongs to the individual, not to the state, which should only protect its citizens from usurpation of the law."

The Ukrainian Helsinki Group's members believe that peace and human rights are inseparable. This view is affirmed in the organization's memorandum No. 18 which states:

Peace in Europe cannot be built on lies and the secret designs of the rulers of the individual states. Peace cannot be built upon the oppression of peoples, for such a peace does not mean happiness for the oppressed and disfranchised, and they will strive to destroy it.

In the eyes of these brave souls, national and individual human rights are interrelated as true freedom can only exist in concert with them both. Hence the Ukrainian Helsinki Group has striven to defend Ukrainian national and cultural rights as well as those of the individual. Mykola Rudenko, the group's leader, expressed this view in stating that "we cannot ignore the nationality question: most Ukrainian political prisoners have been sentenced for imagined or real nationalism" Therefore, individuál and national rights are solidly interwined as the suppression of national rights is dependent on the suppression fo individual rights and the suppression of individual rights is a product of the suppression of national rights.

My wife, Lee, joins me in honoring these brave and selfless individuals whose struggle to defend freedom and human dignity is an inspiration to all people of good will throughout the world.●

THE DEPOSITORY INSTITUTIONS DEREGULATION COMMITTEE

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Ms. OAKAR. Mr. Speaker, as one of several Members who has petitioned more than once for a halt to the "runaway DIDC"—Depository Institutions Deregulation Committee—I am pleased that today the Subcommittee on General Oversight of the House Committee on Banking, Finance and Urban Affairs has begun a series of hearings on the activities, policies, and procedures of the DIDC.

It is incredible that, in spite of the crisis in the thrift industry, the DIDC persists in untimely experiments with "wild card" instruments and attempts to raise the passbook savings rates—experiments which threaten to erode the profitability of savings and loan associations even further. At a time when these institutions need to build up an adequate reserve base and make gradual adjustments to deregulation with respect to the market sensitivity of their assets and liabilities, the recent decisions of the DIDC overwhelm the savings and loan associations with added costs and competitive activity. They will be forced into borrowing money at the prevailing interest rates, thus offsetting any gains that might accrue from new depository instruments.

The DIDC is a creature of Congress. Yet the Secretary of the Treasury seems to exert more influence over the decisions of the committee than this

House has exerted since the inception of the committee in March 1980.

The efforts of the DIDC, in moving so precipitously toward deregulation, when caution would be well-advised, seem to run contrary to the intent of Congress. Title II of the Depository Institutions Deregulation and Monetary Control Act of 1980 specifies that the DIDC shall phase out interest ceilings only "as expeditiously as economic conditions and the viability of depository institutions permit," and that it shall be accomplished "with due regard for the financial condition of depository institutions."

The intent of Congress in establishing this committee was clear. It is time that Congress exercised its supervisory responsibility, so that deregulation does not become a synonym for disintegration.●

FRACTIONAL CURRENCY: ARTIST PROPOSES AN IDEA FROM THE PAST

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. ROSENTHAL. Mr. Speaker, it appears that the current trend for curing our ailing economy is to revert to yesterday's programs and ideas. First, we were presented with supply side economics, which we have recently learned is nothing more than the antiquated trickledown theory. Now, the current vogue is to return to the good old days when gold was the standard for our dollars. Since there seems to be such an infatuation with bringing back the past to deal with the present, why do we not go all the way and consider the proposal of artist Lee Haner to return to the days of fractional currency?

Today, the U.S. Treasury is in a financial predicament not unlike that during the Civil War, as the intrinsic value of our coinage rapidly approaches the point when it exceeds its face value. As yesterday's common metals join gold, silver, and copper as an investment speculation in the world bullion market, artist Haner's proposal to discontinue the production of metal coins and to replace them with fractional currency printed on thin, flexible, vinyl acetate seems as viable an idea now as it was in the 1860's when fractional currency was at its heyday in the United States. Mr. Haner has even gone so far as to create actual designs for the new currency, which is one step further than the gold-standard standard barriers have gone. These designs can be seen at his exhibition at the Jack Rasmussen Gallery during the month of December.

I recommend to all my colleagues who are inclined to look to the past for ideas for the present to take a look at this exhibit. Mr. Haner's proposal follows:

1. The Treasury drop the one cent denomination altogether. After all, nothing costs a penny anymore. Financial transactions would simply be rounded off to the nearest five cents. This step in itself would save the Treasury enough money to pay for the first issue of fractional currency.

2. The Treasury abolish coinage and issue 5¢, 10¢, 15¢, 25¢ and 50¢ currency. A substantial savings would be realized with printed fractional currency over the production, transportation and storage of coins.

3. Print fractional currency on thin, flexible vinyl acetate. Vinyl acetate would cost less and last two or three times longer than present paper formulas used for currency.

4. Replace outdated printing techniques with less expensive one step photo/engraving process.

5. Adopt a unit code/anti-counterfeiting symbol to be printed on the back of each piece of fractional currency. This symbol can be used with present scanner/computer checkout systems. The unit code symbol would contain the denomination of the currency, automatically subtract that denomination from the cost of the purchase and ensure the currency is genuine. In addition, each symbol would contain information essential to the treasury: serial numbers, district numbers, plate and series number.

This approach would provide a fool-proof anti-counterfeiting device and eliminate the need for costly inks, papers and printing techniques used to discourage counterfeiting.

6. Fractional currency will be designed by living contemporary American artists. Every five years new fractional currency will be developed and issued by different artists.●

SPENDING REDUCTION

HON. MARILYN LLOYD BOUQUARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mrs. BOUQUARD. Mr. Speaker, the action of the House of Representatives rejecting the administration's request for a 5-percent across-the-board spending reduction to the continuing appropriations bill was reasonable and prudent. Based on Congressional Budget Office estimates, the spending level approved by the House is within $2 billion of the level proposed by the President in his September budget revisions and, when you include the anticipated spending level for the defense budget, we will actually be $4 billion below the President's latest budget. Further testiment to the success of our efforts to make necessary reductions comes from my colleague, the ranking minority member of the Appropriations Committee who provided us with figures estimating a savings of $727 million over the President's September budget.

The administration supported the across-the-board, take-it-or-leave-it proposal that made no effort to judge the merits of individual programs. Like Gramm-Latta II before it, this proposal was both irresponsible and reckless. Obviously, there are programs which could be cut by more than 5 percent, just as there are others, especially in the areas of education, services for the elderly, and defense that could not withstand another round of cuts.

We in the Congress are faced with the difficult job of weighing fiscal responsibility with human needs. What concerned me most was that these cuts were to come on top of the reductions totaling over $35 billion already approved. This proposal would have meant that aging programs, including funding for elderly nutrition and employment programs, would be cut by another $55 million. Community health centers, already cut by $67 million, would have been reduced by another $13 million; Alcohol, Drug Abuse and Mental Health Administration programs, an additional $42 million; handicapped education programs, which were reduced in the continuing resolution by $43 million, would have been reduced another $53 million under the 5-percent cut. Vocational education programs, a critical need with unemployment accelerating, would have been cut an additional $39 million, on top of the $22 million already provided in the bill. Student financial assistance would have been cut by an additional $575 million, depriving thousands of Americans the opportunity to pursue a college education. These are the budgetary facts of this proposal and the list could go on and on.

There were several questions supporters of the administration's proposal left unanswered. Why, for example, was foreign aid to be exempted from the cuts? Why did we not include the spending for the District of Columbia as part of the reduction package? What is the impact on the production of the MX, Trident, and cruise missile warheads as a result of the proposed $235 million reduction in those programs? These are all questions that were not answered. We are, right now, spending less than President Reagan requested in his September budget revisions, according to the Congressional Budget Office. But we cannot fulfill our responsibilities by simply rubberstamping every spending reduction the President proposes. It is our responsibility to consider not only the numbers involved in the budgetary process but also the people those numbers represent and I do not believe the across-the-board 5-percent cut addressed either concern.●

TAX CODE BUNGLING

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. LaFALCE. Mr. Speaker, once again I must speak out against the provision of the Tax Code, enacted this past summer, which permits the "leasing" by one company to another of unusable investment tax credits and depreciation deductions. This costly and ill-conceived provision has been aptly described by conservative economist Alan Greenspan as "food stamps for American business."

This tax-break swapping scheme will cost the U.S. Treasury untold billions of dollars (far greater, I believe, than the administration's acknowledged figure of $27 billion over the next 5 years) at a time when the administration is looking desperately for ways to cut our enormous deficit. Moreover, this leasing provision is bad tax law because it actually rewards business inefficiency by assuring unprofitable companies that they will always be able to sell off normally unusable tax breaks.

Now, recent reports, including one in yesterday's New York Times, indicate that our Nation's all-important smaller firms are not even able to fully avail themselves of the tax breaks. Instead, the tax leasing deals have mostly benefited larger and more profitable companies which already have excess tax shelters.

I really do not have much to say about this leasing provision, and not much at all was said about it before it was pushed through the Congress along with the rest of the tax package. But if there was one redeeming feature of the provision—just one positive way to look at it—it was that the provision was, allegedly, going to permit all companies—not just profitable ones—to share in much-needed tax relief. Now, according to the Times article, the administration's plan never was to help out weaker companies in need of incentives to make equipment and other investments. So those companies which we thought would be helped by this provision, however flawed a method of relief it was, are not even enjoying the benefits of it. A sorrier example of Tax Code bungling would be hard to find.

At this time I insert in the RECORD the column from yesterday's New York Times:

[From the New York Times, Tuesday, Nov. 17, 1981]

TAX LEASE AIDING BIGGER COMPANIES

(By Leslie Wayne)

Under the Reagan Administration's new tax-leasing program, smaller companies and those that are financially weak have so far been less active sellers of unneeded tax benefits than larger and more profitable companies with excess tax shelters.

"The initial view of the bill was that it would help nonprofitable companies," said Donald R. Kendall Jr., a vice president at Morgan Stanley & Company. "Clearly it helped companies that cannot use tax benefits sufficiently. Unfortunately, it has done less well for those nonprofitable companies and those with credit problems. The bill has done what it was supposed to, but not completely."

Peter K. Nevitt, president of BankAmeriLease, the Bank of America's leasing subsidiary, added: "In hindsight, the thing didn't work out the way anyone had intended. Those that didn't benefit were weak credits and a whole host of small-to-medium-sized businesses. Middle-range companies got left out in the cold, and that's the bulk of American industry."

TAX BENEFITS SWAPPED

The tax-leasing program, part of the Administration's 1981 tax-cut package, permits companies with excess investment-tax credits and depreciation deductions to sell them to other companies seeking ways to shield their earnings from Federal taxation. The first group of these deals was completed last Friday, the deadline for the swapping of tax benefits on equipment that had been purchased during the first nine months of 1981. Tax benefits on some $10 billion to $20 billion were said to have changed hands by Friday's deadline.

As of this week, tax benefits can be traded only on newly purchased equipment.

A Treasury official, who declined to be named, said yesterday that the Reagan Administration tax-lease package was intended not as a boon to ailing industries but as a mechanism to aid capital investments by all companies, money-making and money-losing.

"The purpose of the legislation was not to help weak credits or any other class of companies," the Treasury official said, "but to provide benefits of accelerated depreciation to all companies whether in a positive or negative tax position. It was intended to stimulate investment and to reduce the cost of capital to all firms, whether a weaker credit or not. Certainly the goal of the legislation has been realized."

But to date, few small- and medium-range companies have participated in tax-swap deals, largely left out of the rush by investment bankers and lawyers to complete the largest volume of deals by the Friday deadline. And, while some financially troubled companies, such as the Chrysler Corporation and Pan American World Airways, have received a much-needed infusion of cash by selling equipment for tax purposes under the sale/lease-back agreements, prominent among the sellers of tax benefits have been profitable companies with more tax shelter than they needed.

NEW RULES ISSUED

Weaker companies were first hampered by Treasury regulations that did not protect the buyer of the tax credits from possibly losing them if the selling company went bankrupt. On Nov. 10, however, three days before the deadline for deals on equipment put into service in 1981, the Treasury issued new regulations. These regulations allowed purchasers of the tax benefits to keep those benefits in the event of a bankruptcy, if prior consent of lenders with a security interest in the equipment had been obtained.

The mechanics of obtaining these agreements, the reluctance of some secured lenders to give them and the demands of some buyers that bank letters of credit be obtained by sellers with weaker credit standings have so far slowed deals with weak credits and may continue to slow them in the future, tax-leasing specialists say.

Gregory Joseph, a vice president in the corporate finance department at Salomon Brothers, said his firm limited deals to good credits only in trying to process the rush of business before the Nov. 13 deadline. "Our time was spent going after better credit deals," Mr. Joseph said. "This wasn't giving carte blanche to poorer credits. We kept to better credit situations and all our deals got done. We took the position that credit might be a factor. To spend all our time to do a Chrysler would take away from completing better credit deals."

William P. Carey, of the investment firm that bears his name, said that many banks balked at giving weaker credits the necessary agreements, either a letter of credit or a sign-off accord stating that the tax credits stayed with the buyer in the event of a bankruptcy. As a result, "The weaker fared not as well as they should have," he said, asserting that instead of balking at such agreements banks should "joyfully sign them for the good of the economy and the good of their clients."

Among the tax-leasing deals announced yesterday were the sale by Pan Am of tax benefits on four aircraft for $47 million, the sale by Continental Air Lines on some $94.3 million of equipment to Metromedia Inc. for $24 million, the purchase by the Norfolk & Western Railway of tax benefits on some $200 million of equipment for $40 million, the $46 million sale of tax benefits on 1,000 hopper cars owned by the Richmond Leasing Company, and the $20 million sale of tax benefits by the National Steel Corporation to EG&G Inc.●

SOUTHERN NEVADA—PLANNING FOR GROWTH

HON. JIM SANTINI

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. SANTINI. Mr. Speaker, one of the most important ways citizens can become involved in their community is planning for growth. As my colleagues are aware, Nevada will have a second Member of Congress in 1983 and the southern part of the State is rapidly increasing in population.

The American Nevada Corp., in Henderson, Nev., is building an 8,400-acre planned community known as Green Valley. When Green Valley is completed in another 20 years, it will house 100,000 persons in all types of residential units. It will contain 2 million square feet of retail and office space, another 2 million square feet of light industry, recreational facilities, and educational institutions.

Green Valley has been profiled by the Urban Land Institute of Washington, D.C., as an example for other community developers to consider.

About 1,000 acres have been developed so far which include 1,000 single-family dwellings, several townhouses, manufacturing and warehouse facili-

ties, an elementary school, and a 5-acre park. A neighborhood shopping center is currently under construction.

Residents of southern Nevada, American Nevada Corp., VTN of Nevada Engineering Planners, and Willis & Associates of San Francisco deserve much credit for the high quality urban design and environmental standards used in Nevada's largest master-planned community.●

THE UKRAINIAN HELSINKI GROUP

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. WAXMAN. Mr. Speaker, November 9, 1981, marked the fifth anniversary of the creation of the Ukrainian Public Group To Promote the Implementation of the Helsinki accords. We are here today to honor the Helsinki group and to praise the efforts and sacrifices of its 37 courageous members. Through their strong and steadfast commitment to the freedoms and liberties embraced in the Helsinki accords, and through their own personal sacrifice, these individuals are an inspiration to us all. The tragic fate of the Ukrainian group, however, will serve as a constant reminder of the Soviet Union's blatant refusal to abide by the Helsinki Final Act and other international treaties to which it is a signatory.

The self-proclaimed objective of the Ukrainian group was to monitor the Soviet Union's compliance with the Helsinki accords, and to report to the free world any violations of this international covenant. The group was founded on the premise that peace among nations cannot be guaranteed "without free contacts among people and the free exchange of information and ideas." It has sought to familiarize the Ukrainian public with the national, cultural, civil, political, and religious rights guaranteed by the Declaration of Human Rights, and inform the West of any abuses of these freedoms.

The group also sought to insure that the Ukraine—as a European state of 50 million people, and as a founding member of the United Nations—be included in the Helsinki peace process and have a role in the structuring of security and cooperation. To members of the Ukrainian Helsinki group, the issue of Ukrainian national rights is linked to the issue of human rights. Their limited, but successful activities, gave hope to the persecuted people of the Ukraine, signaling that despite KGB attempts in the early seventies to suppress Ukrainian nationalism, the Ukrainian people's movement for national and human rights was still alive.

Ironically, the Ukrainian Helsinki group met its tragic fate by attempting to exercise, through peaceful activity, the very rights that have been sanctioned by the Helsinki accords. From its inception, the group strove to accomplish its objective of gathering and imparting information regarding the human, civil, and national rights in the Ukraine. The repercussions from these activities were immediate and severe. Despite searches, arrests, and continuous harassment, however, the group still managed to continue to compile enough documentation of Soviet abuses of human rights to fill two volumes. Today, of the 37 writers, poets, teachers, economists, engineers, and lawyers that comprised the Ukrainian Helsinki group, 23 are imprisoned, 4 are in internal exile, 6 were forced to exile abroad, and 1 was driven to suicide. Only four are free after completing their sentences, yet are still under continual police surveillance.

Imprisoned group member Oles Berdnyk once asked himself, "What next? What have we achieved? We have secured the relase of no one, but have lost many friends." Despite the terrible setbacks, the Ukrainian group's work has been far from meaningless. Members have succeeded in transmitting to the West memoranda, statements, and manifestos showing Soviet suppression of human rights. They have eloquently made a case for Ukrainian inclusion in the Helsinki peace process. They have succeeded, through their own courageous example, in raising the level of consciousness in the Ukraine. These limited, but far-reaching successes have ignited a spirit of hope throughout the free world.

Mr. Speaker, the members of the Ukrainian Helsinki group must be commended. Their perserverence and their dedication to which they so strongly believe serves as an example for us all. As we pledge our continued support in the fight for human rights, we must look to the Ukrainian Helsinki group for inspiration; despite Soviet attempts to suppress the articulation of their most basic human rights, neither their remarkable spirit nor their undying courage has faltered.●

JOHN McCORMACK HEALTH LECTURE BY REPRESENATATIVE JAMES R. JONES

HON. LES ASPIN

OF WISCONSIN

IN THE HOUSE OF RESPRESENTATIVES

Wednesday, November 18, 1981

● Mr. ASPIN. Mr. Speaker, each year, the Providence Hospital sponsors a health lecture honoring the late Speaker of the House, John W. McCormack. Providence Hospital has been serving the Washington community since 1861 and is the oldest hospital in continuous service in the District of Columbia. Speaker McCormack was a long-time friend of Providence Hospital. In fact, the Speaker actually lived in the hospital for a time when his dear wife was being treated for a prolonged illness. In the early 1950's, Speaker McCormack was instrumental in obtaining legislation which provided financial assistance for the construction of the present hospital in northeast Washington.

This year was the first lecture since Speaker McCormack's death. Providence Hospital asked that Congressman JAMES R. JONES, chairman, House Budget Committee, offer this special address. Congressman JONES had worked with Speaker McCormack while on Capitol Hill as a legislative assistant and later in the Johnson White House. He offered a provocative message on the future of controlling health care costs and providing adequate medical services. The text of the speech follows:

THE JOHN W. MCCORMACK MEMORIAL HEALTH LECTURE, NOVEMBER 16, 1981

TRENDS IN HEALTH CARE EXPENDITURES AT THE FEDERAL LEVEL

(By Congressman JAMES R. JONES, Chairman, House Budget Committee)

Thank you for the introduction, and for inviting me to be with you tonight. I look on this speech as both an honor and an opportunity. It is an honor to address such a distinguished group, a group which meets under the aegis of the late John W. McCormack. I had the opportunity to work with the Speaker in 1962, when I was an assistant to former Congressman Ed Edmondson of Oklahoma. My boss was the head of the Speaker's Bureau, and during the Cuban Missile Crisis, it was my job to arrange telephoned "speeches" for the Leadership. In between calls, Speaker McCormack chatted with us aides, and mentioned the philosophy by which he cast his votes.

There are a lot of ways, he said, to decide how to vote. You can cast your vote on the basis of party, Democrat versus Republican. You can do it according to money, big budget versus small budget. You can do it according to geography, what will be good for my district versus what won't. "But I," he said, "I vote according to the family. I vote for what will strengthen the family, and against what will weaken the family." Those other factors, and many more, are important. But the family is the central core of our society. And almost every vote comes down to that.

The issue I am going to address tonight involves many complicated factors, including the size of the federal budget, demographics, and our national health care policy. But more basically, it involves the family, every American family. The issue is the rising cost of health care, and whether, in the future, these families will be able to afford the health care their members need.

This question must be the concern of all of us, for it affects all of us. It affects our families. And it affects our taxes, because the Federal Government is the primary payor for health care in our nation today.

The message I bring to you tonight is that the federal government must be concerned about rising health care costs. And that eventually, sooner rather than later, there will be strong political pressures to reduce those costs, one way or another. It is up to you and your colleagues, me and my colleagues, to shape these changes. If we try to ignore the issue, the changes will take place nonetheless, and it is unlikely these will be the kinds of changes you and I would prefer.

You may think I am crying wolf. I know you have heard all this before, and yet the wolf has never appeared. In all candor, I must tell you now that the wolf is at the door. The changes in our economy have brought the need for change closer and closer, and it will occur, if not today then tomorrow.

The evidence for this is strong. Think about the current health care situation. Federal, State, and Local Governments purchase 41 percent of the care offered by the Nation's third largest industry—the health industry. The nation's economy is bearing an increased burden from rising health care costs. In 1970, Americans spent $75 billion on health care, with the money coming from both public and private sources. This represented 6.2 percent of the Gross National Product (GNP), and a per capita expenditure of $358. In 1980, that bill rose to $245 billion, which is 9.5 percent of the GNP, and a per capita expenditure of $1,078. Studies indicate that by 1990, we will spend $750 billion on health care. That is more than the entire current federal budget. It will be 11.5 percent of the GNP. It will be a per capita expenditure of $3,057.

The situation with Medicaid and Medicare is even more dire. The cost of Medicare has been rising at a rate of $5 billion annually for the last several years, and will total $48 billion this year.

True, retired workers have paid into Medicare, Medicaid, and other tax-supported programs. They deserve the care they paid for. But what they paid in is pennies compared to the dollars that must be paid out when their claims are filed. At today's ravenous inflation rate, the payroll tax dollar of today will be worth only a few cents by the end of the 1980s. If the benefits promised to and expected by older Americans are to be paid, many new tax dollars must be deducted from employee wages. And it appears that one day soon, we will have too few workers to finance the care retired people need. The statistics are frightening. In 1935, there were 11 workers for every person over age 65. In 1979, there were only three working adults for every person over 65. There will be only two workers for every retired American in 1990, according to Management Consultant Peter Drucker.

Drucker has expressed deep concern about the fiscal and political implications of this change. "Beyond a certain point," he notes, "the proportion of retired people becomes so large as to be economically unsupportable. Conflict arises between the younger producers and the older consumers because old people can exploit young producers because they can outvote them. This seriously damages the economy's capacity to produce, to form capital, to improve productivity."

We will not have to wait for 1990 for these pressures to be felt. Right now, despite our huge government expenditures, gaps in coverage exist. For the elderly, the lack of coverage for long-term and ambulatory care are especially burdensome. In fact, the elderly are not paying more out-of-pocket expenditures than they were when Medicare began in 1965. At that time, Medicare covered 50 percent of all health care costs. Today, the program covers only 40 percent of these costs. Medicare has failed to keep up with cost increases resulting from inflation, high technology, and greater intensity of care. Certain services that were covered are not now covered. Already, the elderly are asking for our help with these bills; further increases in their out-of-pocket payments will force them to demand a change.

There are other gaps in our current health care coverage. No one really knows the number of people who are not covered for catastrophic medical expenses. But a recent study by the Department of Health and Human Services indicates that approximately 34 million Americans, nearly one-sixth of the population, lack full-time, year-round health insurance. This group includes the working poor, the migrant and seasonal worker, the self-employed, the low-wage earners who are not offered a health care benefit package by their employers, and families of individuals who are covered by a work plan, but do not have family coverage. Lack of adequate catastrophic coverage is the only good argument that still can be made by the proponents of a more comprehensive national health insurance program. Individuals need this type of coverage to insure themselves against bankruptcy due to illness. And providers, especially the inner-city, urban hospitals, need protection against bad debts and having to shift costs to the paying patients. As the cost of health care continues to rise, these pressures from those without coverage will increase.

I am sure you are all aware that the costs of health care have been rising faster than inflation. And I have already mentioned the demographic changes that will push those costs up even more. But there are added factors which threaten to escalate this dizzying rate of climbing costs, e.g., the anticipated "doctor glut" in 1990 and the current nursing shortage.

The Bureau of Health Professionals and the Graduate Medical Education National Advisory Committee both predict that in 1990, the supply of doctors will outrun the demand by between 5 and 13 percent, even taking into account the increased number of elderly people who will need care within ten years. Under the normal rules of supply and demand, one would expect that a surplus of doctors would induce physicians to compete by lowering their fees. Unfortunately, however, the health care field seems to take economics "through the looking glass." Current evidence indicates that the more doctors there are, the more services "get ordered" for people. Studies indicate that a sharply expanded supply of doctors could lead to higher prices and provider-generated demand as physicians attempt to maintain or increase their income. The Health Care Financing Administration fears that an increase in the number of doctors will be associated with increases in medical expenditures, especially for services covered by third party payments. This is of great concern to the major third party payor, your government, which pays those bills with your money.

On the other hand, the nursing shortage that currently afflicts our hospitals may also begin to fuel rising costs, if it is not doing so already. There are many people, trained to be nurses, who opt not to do so because of the pay and working conditions. The Washington Post is full of ads each day by hospitals desperate for additional nurses. The pressure to pay more for these skilled services is dramatic. Furthermore, the lack of appropriate skilled care at the nursing level may cause some patients actually to be hospitalized longer than necessary.

Right now, the Federal Government pays most of the health costs in this country, so the Federal Government is most concerned about the dire picture I have painted. That will change, however, very soon. In the Budget Reconciliation bill, the Congress placed restraints on health expenditures. Federal Medicaid payments were reduced by three percent. Penalties were instituted for States with increases of more than nine percent to induce the States to contain costs. Medicare premiums and out-of-pocket deductibles were raised. The elderly who need to be hospitalized will face a 27-percent increase in their out-of-pocket payments. Hospitals lost a portion of their nursing differential, and new signs from the Administration indicate that they hope to eliminate the differential entirely.

Because of the pressures on the Federal budget, it is unlikely that cuts will stop there. Other proposals for reductions could include: postponing the annual increases in Medicare doctors-fees for three months, from July to October; reducing payments for doctors in hospital out-patient departments by 40 percent; reimbursing radiologists and pathologists for only 80 percent of their normal fees, instead of 100 percent; reducing the allowable rate of return on equity for hospitals under Medicare; and changing the rules on funded depreciation.

If the Federal Government reduces its payments, someone must pick up the slack. "Someone" means the State governments and the elderly themselves. Governors are already beginning to voice their complaints about the "new federalism", and the fact that it is going to give them the responsibility for administering programs without providing the resources to pay for them. Many of their complaints focus on health care. Some have already made the decision to reduce services, and horror stories are already beginning to appear in the newspapers about elderly people turned out of their nursing homes. Senior citizens themselves are running scared, and are organizing to make their voices heard. These complaints are only a rumble now. They will turn into a roar when the full effect of Medicare cuts is felt, and when further cuts are made. The people will demand that health care costs be contained. And this is the people's government. One way or the other, something will be done.

I hope you will agree that I am not crying "wolf". Clearly, health care prices are rising too rapidly, and that cannot continue. The question has become how to put on the brakes and yet maintain a quality medical service. In candor, I must tell you that the eventual goal of proposals to limit costs is to put pressure on you, the providers, to make the difficult decisions to determine how this can be done.

The original cost-containment proposal was President Carter's. His measure to impose mandatory hospital cost containment failed with my help. This was not because I, or the Congress, did not recognize the extent of the problem or did not wish to address it. But there were several problems with the proposal. It was criticised as being geographically unfair, penalizing those hospitals which were already efficient, and failing to address the underlying causes of health care inflation. In other words, the

proposal was to put a lid on the rising costs, but nothing was to be done to turn down the flame under the pot.

The primary reason the proposal failed, however, was that the Congress and the country had developed a great distrust of federal regulations. It was believed that hospitals would simply devote themselves to getting around the rules, rather than reducing costs. That is why the so-called "competitive" model of health care became popular.

Since 1979, a number of proposals to restructure the marketplace have been introduced, proposals designed to make the health care market more sensitive to cost. I introduced several such proposals in the 96th Congress, as did my House colleagues Congressmen Gephardt, Stockman, Ullman, and Martin. In the Senate, Schweiker and Durenburger introduced pro-competition bills. While these measures differ in degree, they share several basic principles:

(1) A multiple choice of health plans, which would give employees an option as to how much health insurance they wish to purchase;

(2) Catastrophic coverage to insure against bankruptcy because of excessive medical bills;

(3) A fixed-dollar contribution to each employee's health plan;

(4) A limit on the amount an employer can contribute toward an employee's health plan and still have that amount excluded from the employee's taxable income;

(5) Rebates to employees selecting low cost plans, with the rebates in some cases being tax-free.

Some of the proposals also support the application of the free-choice and fixed contribution principles to Medicare and Medicaid through a health plan voucher program.

These plans are designed to encourage the consumer to shop for his or her health care plan by price and package. This cost-conscious consumer would presumably pressure the insurer for the best package at the lowest price. The consumer might also question the necessity of a certain treatment if he had to pay for all or a portion of the costs himself.

In turn, the theory goes, the insurers would pressure both the consumer and the health care professionals. The consumer would be controlled by the limits of his benefit package and the extras for which he was willing to pay. The provider would be controlled by what the insurer had negotiated to pay for.

Finally, the physicians and professionals, faced with pressures from those who pay the bills, would be forced to adjust services and charges to these demands. The hope is that these circular pressures would bring down the cost of health care, or at least reduce the rate of inflation. The fear is that it could adversely affect the quality of services available to the American public.

There are certainly problems with the competitive approach. Labor strongly opposes the limitation on the tax exclusion, and views this change as a new tax on their hard-won fringe benefits. Insurers fear the effects of what they call adverse selection—the sick would take the high-option plans and the well would take the low-cost plans. Organized consumer groups, particularly the elderly groups, are concerned about what these proposals would do to their out-of-pocket payments. Employers worry about the complication of being forced to offer multiple programs from multiple insurers, as well as the effects this could have on labor agreements. Doctors and hospitals have mixed feelings about these proposals, as do we on Capitol Hill. Clearly, the competitive approach is not perfect. Just as clearly, however, we cannot afford to do nothing.

In 1639, the Colony of Virginia was faced with the problem of rising health care costs. The government decided to institute a license to regulate fees. This was the first instance of government intervention in the health care field; it was by no means to be the last. Many of these regulations have been to the benefit of both physicians and patients. In 1794, the State of Pennsylvania decided to issue licenses for those who were qualified to practice medicine. These licenses, which we continue to have to this day, were designed to ensure the integrity of the physicians and the quality of care to the consumer. So while we all have concerns with too much regulation, none of us really wants to totally dismantle the licensing and regulatory system.

The Constitution guarantees the right to the pursuit of life, and so the government has a responsibility to assure that. The government pays the bills, and so it has a right to control and regulate what it pays for. The question is how that regulation should be done. Should we impose arbitrary cost controls, or should we encourage the market to control costs?

The competitive model offers us an option that would allow the marketplace to set the prices. This approach appeals to me and to many others who are concerned about health care costs. If you look at the list of people I mentioned earlier who introduced pro-competition bills, you will see that they are now in very good positions to affect health policy in the future. Senator Schweiker is now Secretary of Health and Human Services. David Stockman is now director of the Office of Management and Budget. Senator Durenberger is Chairman of the Finance Subcommittee on Health. And I chair the House Budget Committee.

I would like us to move carefully toward a workable solution to the health care cost problem. I would prefer to see us try some demonstration projects before instituting a nationwide program. I believe one of the lessons of the 1960's was that to improve our programs, we need to try new ideas out incrementally. We should experiment with a strong commitment to bettering the system.

We will need your support in this effort. I call on you to study what has already been proposed and to give us your constructive criticisms. Or you can formulate your own ideas and share them with us. But recognize that we cannot stand still, because the budgetary tide is against us. My colleagues and I are willing to work with you and to learn from you. But if you fail or if we fail, I will not be back to cry wolf again. I won't be able to. The wolf will be inside the door. Programs, costs, and health care itself will still be cut, not with a surgeon's scalpel, but with a butcher's axe.●

JOB CREATION: AN INNOVATIVE SOLUTION

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. LaFALCE. Mr. Speaker, job creation is a critical problem facing our Nation. Over the next decade, we will need to create at least 15 million new jobs to employ our expanding population and replace jobs being lost in our declining basic industries. The key question is: Who is going to create these jobs?

The answer is not the large companies. They are no longer the provider of new jobs. The answer is the high-technology small businesses. Numerous studies over the past decade have detailed the critical role played by small businesses in generating new employment. These studies have been conducted by the Massachusetts Institute of Technology, the Canadian Federation of Independent Businesses, the MIT Development Foundation, the American Electronics Association, the National Science Foundation, and Data Resources, Inc.

Not only are the high-technology small businesses prolific job creators, their output has been growing faster than that of mature companies, their productivity and their record of innovation is greater, and their price increases are substantially less than those of older, larger concerns. They are not only job creators; they are inflation fighters.

It is clear that any policy aimed at increasing jobs in the United States must be targeted toward these types of companies. The fall issue of the Public Interest includes a fascinating article entitled "Who Creates Jobs?" by Prof. David L. Birch of the Massachusetts Institute of technology. The article presents important findings that Members of Congress would do well to consider as we frame new job creation and small business policies.

Let me take a few moments to discuss some of his points.

First, the job loss rate is constant throughout the United States. "Every area in the United States seems to lose jobs at about the same rate, regardless of how rapidly the net job pool is expanding or contracting," he writes.

Second, the critical figure is the rate at which new jobs are being created and lost jobs are being replaced. The major difference between the Sun Belt and the Frost Belt is that more new jobs and new businesses are being created in the Sun Belt. "The reality is that our most successful areas are those with the highest rates of innovation and failure, not the lowest," Professor Birch writes. Areas that are declining are not declining because their rates of loss are higher. They are declining because they are not competing effectively for new jobs.

Third, small businesses, not large businesses, are the major providers of new jobs. According to Professor Birch, two-thirds of the new jobs created between 1969 and 1976 were created by firms with 20 or fewer employees, and about 80 percent were created

by firms with 100 or fewer employees. Moreover, he states:

Small businesses more than offset their higher failure rates with their capacity to start up and expand dramatically. Larger businesses, in contrast, appear rather stagnant. They may be expanding output with more capital equipment (although those who study productivity suggest that this has not been the case recently) or they may expand by opening operations abroad.

Fourth, the new jobs are being created by service firms and by high technology, high "thought content" firms. Drawing on historical experience, Professor Birch notes:

Just as we moved in the 1820's and 1830's from being a basically agricultural society to being an industrial one, so now are we rapidly abandoning our heavy industrial base in favor of jobs that demand greater use of our minds and less use of our muscle and dexterity.

The transformation is thus a fundamental and far-reaching one. We are moving from manufacturing to services, from hardware to "thoughtware," from large-scale capital-intensive companies to smaller-scale labor intensive companies, and from a dependence on physical capital to a dependence on human capital.

Taken together, these developments show the direction that small business and job creation policy must take if the U.S. economy is to grow and provide full, productive employment. I found Professor Birch's analysis particularly fascinating because of my involvement in development legislation that would stimulate the growing small science and high-technology sector of our economy. The Small Business General Oversight Subcommittee, which I chair, recently reported out H.R. 4326, the Small Business Innovation Development Act of 1981. The full Small Business Committee reported the bill favorably on October 22. H.R. 4326 would require Federal agencies with large research and development budgets to strengthen small business' tremendous innovative abilities by establishing small business innovation research programs that would be funded by a small set-aside from the agencies' R. & D. budgets.

H.R. 4326 is a key element in the new national small business policy needed over the next decade. This policy must be directed not only toward creating jobs but toward creating jobs in businesses that will be productive and competitive in domestic and international markets. That means that we have to assure the access of small, high-technology business to capital and create a climate that encourages the creation of these small businesses, especially in the areas of our country which are not creating the number of new jobs required to replace jobs being lost. The Small Business Innovation Development Act would do that through the judicious use of Federal funds to help these small firms develop innovative ideas to the point where private capital will step in and fund commercial development and the creation of new jobs.●

REAGAN'S ARMS REDUCTION PROPOSAL TO SOVIETS

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. YOUNG of Florida. Mr. Speaker, today, the President of the United States, in a most sincere way, captured the imagination of every living being who longs for a peaceful world.

President Reagan's historic initiative to not only limit the growth of deadly arms but in fact to reduce the existing number of deadly weapons will hopefully be received by the Soviet Union in the same sincere manner in which it was presented.

I submit the text of President Reagan's statement for all to read.

TEXT OF THE ADDRESS BY THE PRESIDENT TO THE NATIONAL PRESS CLUB

Back in April while in the hospital I had, as you can readily understand, a lot of time for reflection.

One day I decided to send a personal, hand-written letter to Soviet President Leonid Brezhnev reminding him that we had met about 10 years ago in San Clemente, California, as he and President Nixon were concluding a series of meetings that had brought hope to all the world. Never had peace and goodwill seemed closer at hand. I would like to read you a few paragraphs from that letter.

"Mr. President: When we met I asked if you were aware that the hopes and aspirations of millions of people throughout the world were dependent on the decisions that would be reached in your meetings. You took my hand in both of yours and assured me that you were aware of that and that you were dedicated with all your heart and mind to fulfilling those hopes and dreams."

I went on in my letter to say: "The people of the world still share that hope. Indeed, the peoples of the world, despite differences in racial and ethnic origin, have very much in common. They want the dignity of having some control over their individual destiny. They want to work at the craft or trade of their own choosing and to be fairly rewarded. They want to raise their families in peace without harming anyone or suffering harm themselves. Government exists for their convenience, not the other way around."

"If they are incapable, as some would have us believe, of self government, then where among them do we find any who are capable of governing others?"

"Is it possible that we have permitted ideology, political and economic philosophies, and governmental policies to keep us from considering the very real, everyday problems of our peoples? Will the average Soviet family be better off or even aware that the Soviet Union has imposed a government of its own choice on the people of Afghanistan? Is life better for the people of Cuba because the Cuban military dicate who shall govern the people of Angola?"

"It is often implied that such things have been made necessary because of territorial ambitions of the United States; that we have imperialistic designs and thus constitute a threat to your own security and that of the newly emerging nations. There not only is no evidence to support such a charge, there is solid evidence that the United States, when it could have dominated the world with no risk to itself, made no effort whatsoever to do so."

"When World War II ended, the United States had the only undamaged industrial power in the world. Our military might was at its peak—and we alone had the ultimate weapon, the nuclear weapon, with the unquestioned ability to deliver it anywhere in the world. If we had sought world domination then, who could have opposed us?"

"But the United States followed a different course—one unique in all the history of mankind. We used our power and wealth to rebuild the war-ravaged economies of the world, including those nations who had been our enemies. May I say there is absolutely no substance to charges that the United States is guilty of imperialism or attempts to impose its will on other countries by use of force."

I concluded my letter by saying, "Mr. President, should we not be concerned with eliminating the obstacles which prevent our people—those you and I represent—from achieving their most cherished goals?"

It is in the same spirit that I want to speak today to this audience, and the people of the world, about America's program for peace and the coming negotiations which begin November 30 in Geneva, Switzerland. Specifically, I want to present our program for preserving peace in Europe, and our wider program for arms control.

Twice in my lifetime I have seen the peoples of Europe plunged into the tragedy of war. Twice in my lifetime Europe has suffered destruction and military occupation in wars that statesmen proved powerless to prevent, soldiers unable to contain, and ordinary citizens unable to escape. And twice in my lifetime, young Americans have bled their lives into the soil of those battlefields—not to enrich or enlarge our domain—but to restore the peace and independence of our friends and allies.

All of us who lived through those troubled times share a common resolve that they must never come again. And most of us share a common appreciation of the Atlantic Alliance that has made a peaceful, free and prosperous Western Europe in the postwar era possible.

But today a new generation is emerging on both sides of the Atlantic. Its members were not present at the creation of the North Atlantic Alliance. Many of them do not fully understand its roots in defending freedom and rebuilding a war-torn continent. Some young people question why we need weapons—particularly nuclear weapons—to deter war and to assure peaceful development. They fear that the accumulation of weapons itself may lead to conflagration. Some even propose unilateral disarmament.

I understand their concerns. Their questions deserve to be answered.

But we have an obligation to answer their questions on the basis of judgment and reason and experience. Our policies have resulted in the longest European peace in this century. Would not a rash departure from these policies, as some now suggest, endanger that peace?

From its founding, the Atlantic Alliance has preserved the peace through unity, deterrence and dialogue.

First, we and our allies have stood united by the firm commitment that an attack upon any one of us would be considered an attack upon us all;

Second, we and our allies have deterred aggression by maintaining forces strong enough to ensure that any aggressor would lose more from an attack than he could possibly gain; and

Third, we and our allies have engaged the Soviets in a dialogue about mutual restraint and arms limitations, hoping to reduce the risk or war and the burden of armaments, and to lower the barriers that divide East from West.

These three elements of our policy have preserved the peace in Europe for more than a third of a century. They can preserve it for generations to come, so long as we pursue them with sufficient will and vigor.

Today, I wish to reaffirm America's commitment to the Atlantic Alliance and our resolve to sustain the peace. And from my conversations with Allied leaders, I know that they also remain true to this tried and proven course.

NATO's policy of peace is based on restraint and balance. No NATO weapons, conventional or nuclear, will ever be used in Europe except in response to attack. NATO's defense plans have been responsible and restrained. The Allies remain strong, united and resolute. But the momentum of the continuing Soviet military buildup threatens both the conventional and the nuclear balance. Consider the facts. Over the past decade:

The United States reduced the size of its armed forces and decreased the number of men under arms. They now number more than double those of the United States. Over the same period the Soviets expanded their real military spending by about one-third.

The Soviet Union increased its inventory of tanks to some 50,000 compared to our 11,000. Historically a landpower, they transformed their navy from a coastal defense force to an open ocean fleet, while the United States, a sea-power with transoceanic alliances, cut its fleet in half.

During a period when NATO deployed no new intermediate range nuclear missiles, and actually withdrew 1,000 nuclear warheads, the Soviet Union deployed more than 750 nuclear warheads on the new SS-20 missiles alone.

Our response to this relentless build-up of Soviet military power has been restrained but firm. We have made decisions to strengthen all three legs of the strategic triad—sea, land and air-based. We have proposed a defense program in the United States for the next 5 years which will remedy the neglect of the past decade and restore the eroding balance on which our security depends.

I would like to discuss more specifically the growing threat to Western Europe which is posed by the continuing deployment of certain Soviet intermediate range nuclear missiles.

The Soviet Union has three different missile systems—the SS-20, the SS-4, and the SS-5—all with a range capable of reaching virtually all of Western Europe. There are other Soviet weapons systems which also represent a major threat. The only answer to these systems is a comparable threat to Soviet targets. In other words, a deterrent preventing the use of these Soviet weapons by the counter-threat of a like response against their own territory.

At present, however, there is no equivalent deterrent to these Soviet intermediate missiles. And the Soviets continue to add one new SS-20 a week. To counter this the Allies agreed in 1979, as part of a two-track decision, to deploy as a deterrent land-based cruise missiles and Pershing II missiles capable of reaching targets in the Soviet Union. These missiles are to be deployed in several countries of Western Europe.

This relatively limited force in no way serves as a substitute for the much larger strategic umbrella spread over our NATO Allies. Rather, it provides a vital link between conventional, shorter range nuclear forces in Europe and inter-continental forces in the United States. Deployment of these systems will demonstrate to the Soviet Union that this link cannot be broken.

Deterring war depends on the perceived ability of out forces to perform effectively. The more effective our forces are, the less likely it is that we will have to use them. So, we and our Allies are proceeding to modernize NATO's nuclear forces of intermediate range—to meet increased Soviet deployments of nuclear systems threatening Western Europe.

Let me turn now to our hopes for arms control negotiations. There is a tendency to make this entire subject overly complex. I want to be clear and concise.

I told you of the letter I wrote to President Brezhnev last April. Well, I have just sent another message to the Soviet leadership. It's a simple, straight-forward, yet historic message: the United States proposes the mutual reduction of conventional, intermediate range nuclear, and strategic forces.

Specifically, I have proposed a four-point agenda to achieve this objective in my letter to President Brezhnev.

The first, and most important, point concerns the Geneva negotiations. As part of the 1979 two-track decision, NATO made a commitment to seek arms control negotiations with the Soviet Union on intermediate range nuclear forces. The United States has been preparing for these negotiations through close consultation with our NATO partners. We are now ready to set forth our proposal. I have informed President Brezhnev that when our delegation travels to the negotiations on intermediate range land-based nuclear missiles in Geneva on the 30th of this month, my representatives will present the following proposal: the United States is prepared to cancel its deployment of Pershing II and ground launch cruise missiles if the Soviets will dismantle their SS-20, SS-4, and SS-5 missiles. This would be an historic step. With Soviet agreement, we could together substantially reduce the dread threat of nuclear war which hangs over the people of Europe. This, like the first footstep on the moon, would be a giant step for mankind.

We intend to negotiate in good faith and go to Geneva willing to listen to and consider the proposals or our Soviet counterparts. But let me call to your attention the background against which our proposal is made. During the past 6 years, while the United States deployed no new intermediate range missiles and withdrew 1,000 nuclear warheads from Europe, the Soviet Union deployed 750 warheads on mobile, accurate ballistic missiles. As this chart illustrates, they now have 1,100 warheads on the SS-20, SS-4, and SS-5 missiles and the United States has no comparable missiles. Indeed, the United States dismantled the last such missile in Europe over 15 years ago.

As we look to the future of the negotiations, it is also important to address certain Soviet claims which, left unrefuted, could become critical barriers to real progress in arms control.

The Soviets assert that a balance of intermediate range nuclear forces already exists. That assertion is wrong. By any objective measure, as this chart indicates, the Soviet Union has an overwhelming advantage, on the order of six-to-one.

Soviet spokesmen have suggested that moving their SS-20's beyond the Ural mountains will remove the threat to Europe. As this map demonstrates, the SS-20's, even if deployed behind the Urals, will have a range that places almost all of Western Europe, the great cities—Rome, Athens, Paris, London, Brussels, Amsterdam, Berlin and so many more—all within range of these missiles, which incidentally are mobile and can be moved on short notice.

The second proposal I have made to President Brezhnev concerns strategic weapons. The United States proposes to open negotiations on strategic arms as soon as possible next year. I have instructed Secretary Haig to discuss the timing of such meetings with Soviet representatives.

Substance, however, is far more important than timing. As our proposal for the Geneva talks this month illustrates, we can make proposals for genuinely serious reductions but only if we take the time to prepare carefully. The United States has been preparing carefully for resumption of strategic arms negotiations because we do not want a repetition of past disappointments. We do not want an arms control process that sends hopes soaring only to end in dashed expectations.

I have informed President Brezhnev that we will seek to negotiate substantial reductions in nuclear arms which would result in levels that are equal and verifiable. Our approach to verification will be to emphasize openness and creativity—rather than the secrecy and suspicion which have undermined confidence in arms control in the past.

While we can hope to benefit from work done over the past decade in strategic arms negotiations, let us agree to do more than simply begin where these efforts previously left off. We can and should attempt major qualitative and quantitative progress. Only such progress can fulfill the hopes of our own people and the rest of the world. Let us see how far we can go in achieving truly substantial reductions in our strategic arsenals.

To symbolize this fundamental change in direction, we will call these negotiations START—Strategic Arms Reduction Talks.

The third proposal I have made to the Soviet Union is that we act to achieve equality at lower levels of conventional forces in Europe. The defense needs of the Soviet Union hardly call for maintaining more combat divisions in East Germany today than were in the the whole Allied invasion force that landed in Normandy on D-Day. The Soviet Union could make no more convincing contribution to peace in Europe—and in the world—than by agreeing to reduce its conventional forces significantly and constrain the potential for sudden aggression.

Finally, I have pointed out to President Brezhnev that to maintain peace, we must reduce the risks of surprise attack, and the chance of war arising out of uncertainty or miscalculation. I am renewing our proposal for a conference to develop effective measures that would reduce these dangers. At the current Madrid meeting of the Conference on Security and Cooperation in Europe, we are laying the foundation for a

Western-proposed Conference on Disarmament in Europe. This conference would discuss new measures to enhance stability and security in Europe. Agreement on this conference is within reach. I urge the Soviet Union to join us and the many other nations who are ready to launch this important enterprise.

All of these proposals are based on the same fair-minded principles: substantial, militarily-significant reductions in forces; equal ceilings for similar types of forces; and adequate provisions for verification.

My Administration, my country and I are committed to achieving arms reductions agreements based on these principles. Today I have outlined the kinds of bold, equitable proposals which the world expects of us. But we cannot reduce arms unilaterally. Success can only come if the Soviet Union will share our commitment; if it will demonstrate that its often-repeated professions of concern for peace will be matched by positive action.

Preservation of peace in Europe and the pursuit of arms reductions talks are of fundamental importance. But we must also help to bring peace and security to regions now torn by conflict, external intervention and war.

The American concept of peace goes well beyond the absence of war. We foresee a flowering of economic growth and individual liberty in a world at peace.

At the Economic Summit in Cancun, I met with the leaders of 21 nations and sketched out our approach to global economic growth. We want to eliminate the barriers to trade and investment which hinder these critical incentives to growth. And we are working to develop new programs to help the poorest nations achieve self-sustaining growth.

Terms like "peace" and "security" have little meaning for the oppressed and the destitute. They also mean little to the individual whose state has stripped him of human freedom and dignity. Wherever there is oppression, we must strive for the peace and security of individuals as well as states. We must recognize that progress in the pursuit of liberty is a necessary complement to military security. Nowhere has this fundamental truth been more boldly and clearly stated than in the Helsinki Accords of 1975. These Accords have not yet been translated into living reality.

Today I have announced an agenda that can help to achieve peace, security and freedom across the globe. In particular, I have made an important offer to forego entirely deployment of new American missiles in Europe if the Soviet Union is prepared to respond on an equal footing.

There is no reason why people in any part of the world should have to live in permanent fear of war or its specter. I believe the time has come for all nations to act in a responsible spirit that does not threaten other states. I believe the time is right to move forward on arms control and the resolution of critical regional disputes at the conference table.

Nothing will have a higher priority for me and for the American people over the coming months and years.

Addressing the United Nations 20 years ago, another American President described the goal we still pursue today.

"If we all can persevere," he said, "if we can . . . look beyond our own shores and ambitions, then surely the age will dawn in which the strong are just and the weak secure and the peace preserved." He did not live to see that goal achieved.

I invite all nations to join with America today in the quest for such a world.●

NAZISM AND THE HOLOCAUST: NEVER AGAIN, "SKOKIE" REMINDS US

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. PORTER. Mr. Speaker, the people of the village of Skokie, Ill., numbering 70,000, are my constituents. More than 40,000 of them are Jewish, including many survivors of the Holocaust.

Last night the American viewing public had the opportunity to see "Skokie," a CBS television movie of the story of the anguish of the people of Skokie generated when the American Nazi Party attempted to march there.

The performances, in my judgment, were outstanding, particularly that of Danny Kaye, who deserves an Emmy for his portrayal of Max Feldman, a survivor who stands up forcefully against the Nazi threat.

Much of the story centers around the lawsuits and the reactions of the village, the American Civil Liberties Union, and the Jewish and Christian communities when faced with the dilemma of upholding first amendment rights of free expression for those who would deny them to others.

Those who lived through and followed closely the actuality of this drama in 1977 and 1978, as I did, can, perhaps, criticize the historical accuracy of the story that "Skokie" tells.

But no one who watched last night can miss its message of the reality of the suffering of the Jews in the Holocaust and the scars that not only survivors but all Jews carry as a result of this most heinous of the crimes of man against his brother.

And no one, Mr. Speaker, can fail to understand that the anti-Semitism, racism, and elitism for which the Nazis stand lies as an everpresent danger not only to the minorities toward which they are directed but to all who believe in individual freedoms.

"Skokie" poignantly and piercingly reminds us of the Holocaust which so burdens the history of mankind and the conscience of every person, and reinforces the resolve of the American people that never again will this be allowed to happen.●

NATIONAL BIBLE WEEK

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. HILLIS. Mr. Speaker, November 22 marks the beginning of National Bible Week. The Laymen's National Bible Committee, Inc., has published a pamphlet entitled "A Better Chance for a Better Life." I am inserting in the RECORD a portion of that pamphlet which outlines the meaning of National Bible Week. I recommend it to all my colleagues in the House:

NATIONAL BIBLE WEEK

These are days of uncertainty. International tension, inflation, rising crime, and moral confusion surround us. But the Holy Bible remains as it always has, an indestructible foundation of truth. It's a source of inspiration all of us can turn to. Now, more than ever, we need to put the Good Book forward. It's a better chance for a better life.

That's what National Bible Week is all about. Our young people, our civic leaders, our fine religious institutions, and the entire living community of which we are all a part need to know what the Bible offers. The Laymen's National Bible Committee has prepared a provocative and aggressive campaign that includes television, radio, newspaper, magazine, and outdoor advertising. Special materials are provided for the young, for civic groups, and for religious organizations that share in this special week's community activities throughout our land.

It's appropriate that LNBC's major interfaith program coincides with Thanksgiving. It is America's only nonsectarian religious holiday. It is a time when we give thanks to God for His many blessings. And it's the best time to celebrate our most precious heritage, the Bible.

This national effort deserves your support. Your contribution now will help give the Good Book back to America. It's a better chance for a better life. Don't pass it up.●

EMPLOYMENT DISCRIMINATION IN NORTHERN IRELAND

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mr. GILMAN. Mr. Speaker, I am honored to represent here in the House of Representatives a group of knowledgeable and dedicated individuals who have worked diligently to bring to the public's attention the plight of those who suffer discrimination in Northern Ireland. The Political Education Committee (PEC) of the Ancient Order of Hibernians in Rockland County, N.Y., and the Emerald Society of the fire department of the city of New York, which have long struggled with the issues of freedom and justice in Northern Ireland, have called my attention to a brief article

recently authored by David Lowry, professor of law at New York Law School, entitled "Employment Discrimination in Northern Ireland—1980." Professor Lowry points out the inequities and injustices which prevail in that troubled part of the world.

Mr. Speaker, I request that Professor Lowry's article be reprinted at this point in the RECORD, in order to share his views with my colleagues.

EMPLOYMENT DISCRIMINATION IN NORTHERN IRELAND—1980

(David Lowry, Professor of Law, New York Law School)

In 1976 the British belatedly addressed the issue of discrimination against Catholics in Northern Ireland. However, observers were quick to point out that the British approach to discrimination was largely cosmetic. The British Fair Employment Act of 1976 failed to create a proper enforcement machinery whereby discriminating employers could be exposed and prosecuted.

Since 1976 the British approach has been one of "moral persuasion." How the British could hope to adequately deal with entrenched bigotry by mere "moral persuasion" and yet without full prosecutorial powers, was never explained. Consequently discrimination against Catholics has continued unabated as both Employers and Unions realized that a cosmetic piece of legislation advocating "moral persuasion" could not in any way endanger the status quo of Protestants privilege.

Under the 1976 legislation Britain created a Fair Employment Agency (FEA) to watch over allegations of discrimination. The FEA even tried to prosecute a few cases but unsuccessfully as the British law did not provide adequate enforcement machinery.

But the FEA, while toothless, at least has been able to gather statistics and other research data in its short existence. This FEA-sponsored research is most revealing, showing a continuing pattern of discrimination against Catholics in Northern Ireland.

In a survey conducted by researchers of Queens University, Belfast, for the FEA and published in 1980, it was revealed that job opportunities in Northern Ireland still depend on religion and social background. This FEA Report showed that more Protestants than Catholics are still found in top jobs while the opposite is true at the bottom of the employment scale. Furthermore, Catholics experience a lower level of upward mobility than Protestants.

The 1980 FEA study shows conclusively that in the last generation Northern Irish Catholics have tended to move down the social scale relative to Protestants. Moreover, even the British-created FEA has to admit that without "strong and constructive government intervention" the occupational disparities between Catholics and Protestants "will persist and probably widen."

Thus even the British have been forced to openly admit the charge that they have done nothing to eradicate discrimination against Catholics in Northern Ireland and that matters are getting worse.

British diplomats in the U.S. have recently argued that discrimination was perpetrated in the past by Loyalists but under British Direct Rule proper steps have been taken. After the 1980 revelation of the British FEA that matters have been steadily worsening under British Rule in the last few years I wonder what the story British diplomats will not tell Americans?●

INTERNATIONAL TRADE PROSPECTS IN HIGH TECHNOLOGY: WILL WE LEARN OUR LESSON IN TIME?

HON. MARILYN LLOYD BOUQUARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 18, 1981

● Mrs. BOUQUARD. Mr. Speaker, for many months now, we have been hearing about the rapid encroachment by Japan and Western Europe on the U.S. industrial market. Annual sales of Japanese autos in the United States has risen from 800,000 in 1975 to approximately 1,900,000—a growth of 238 percent. Japan now claims 23 percent of the entire U.S. auto market. It has also been determined that even though America pioneered the semiconductor field in the 1960's, Japan now has 30 percent of the world market. Japanese shipments to the United States alone of semiconductors increased fivefold between 1976 and 1979: From $50 million to approximately $260 million. According to a recent report by Quantum Science Corp., a New York consultant, it is predicted that the Japanese will command 85 percent of the world market in semiconductors by 1985. Furthermore, the Japanese have now gained a strong toehold in the power conversion equipment market as well. Hitachi, Ltd., sells most of the motor drives for 20- to 150-horsepower motors in industrial use. It is predicted that additional targets for further Japanese penetration will be television, textiles, steel, calculators, shipbuilding, and, logically, the computer processing market.

Discussions with U.S. industrial leaders regarding the international market situation reveal the severe limitations under which U.S. firms operate in competing against foreign manufacturers. Studies have been and are being undertaken on the reasons for the Japanese success; articles have been written and seminars have been conducted to examine the Japanese techniques that contribute to their prominent position in the world's industrial market. I am sure that most of my colleagues are aware of some of the results of these studies, surveys, and observations, but I would like to take a moment to mention a few of them. I would also like to highlight an area of great concern in the DOE budget, that of electric energy systems where the administration has suggested termination of valuable programs in areas where the United States is in danger of losing vast international markets. Our subcommittee will have a hearing on these potential cuts next month.

EMPHASIS ON R. & D.

Japanese corporations spend an average of 6 percent of total sales on research and development compared to about 1 percent in the Unites States. According to Japanese Economic Journal, Hitachi, Ltd. spent $466 million on R. & D. in 1979—5.8 percent of their sales. In contrast, U.S. manufacturers concentrate their resources on short-term, near-market applications, with few exceptions. The current administration view regarding technology demonstration is resulting in the absence of Federal project money for industry and absence of Federal incentives for industry to conduct R. & D. and demonstration of advanced energy technology power conditioning efforts. Thus, none of the major U.S. manufacturers are currently building any advanced power conditioning or power conversion devices, and Federal funds are drying up.

In general, none of the companies involved in this R. & D. feel that the provisions of the tax bill with 25 percent tax credits for research will be sufficient to fill the gaps left by a precipitous withdrawal of the Federal Government from high leverage intermediate to long-term programs where it has been a source of vital seed money.

OTHER CONTRIBUTING FACTORS—THE UNIQUE JAPANESE PARTNERSHIP

A July 1981 Electronic Business article asserts that, "Dedication to quality assurance and a strong commitment to research and development are giving the Japanese the edge." However, R. & D. emphasis is only one of many areas where the U.S. Government and business need to take long, hard looks on redirecting our efforts in order to regain lost footing in the world's technological market. The referenced article in Electronic Business focuses on this worldwide competition and the many factors involved, such as the unique Japanese business-Government relationship; U.S. antitrust laws that inhibit cooperative efforts at solving environmental and health problems in industry; the spirit of compromise and cooperation prevalent in Japanese business in contrast to the U.S. style of confrontation and concentration on short-term profits rather than long-term advancement of technology.

I would like to share these observations with my colleagues by including the article entitled "The Japanese invasion: chips now, computers next?" in the hope that we, as legislators, will see the urgency to move ahead with actions to aid our industries so that they can compete on more comparable footing in the international market place.

The article follows:

[From the Electronic Business, July 1981]

THE JAPANESE INVASION: CHIPS NOW, COMPUTERS NEXT?

Grim predictions of Japanese domination of the world market for semiconductors by 1985 emerged at a seminar on the subject

conducted Apr. 7 in New York by the American Institute for Professional Education.

The sponsor distributed a report by Quantum Science Corp., a New York consultant, that predicted Japanese companies would command 85 percent of a $24.5 billion world market in semiconductors by 1985. Similar control is expected in 64-kilobit memory chips, according to an unidentified "leading producer" cited by the institute.

The next logical step in the scenario calls for the Japanese to move into computer processing systems, declared Mirek Stevenson, chairman of Quantum Science. Their progress in capturing a significant share of the United States semiconductor market indicates that they are likely to repeat their successes with computers, he added. At stake is the domestic market for systems, processors and peripherals valued this year at $40 million by New York brokerage firm Drexel, Burnham, and Lambert Inc.

At the day-long meeting, which examined the "grave and imminent marketing and production dangers" posed by the computer branch of Japan Inc., U.S. industry representatives complained about Japanese business practices and proposed varying responses to the slow encroachment of overseas equipment and devices on the American market. Two hundred computer executives in attendance heard Stevenson, the lead-off speaker, name mainframes, software and low-cost personal computers as likely additional targets for further Japanese penetration. Stevenson explained that Japanese firms are responding faster, and with state-of-the-art technology, to emerging market segments such as departmental processing, intelligent copiers, teleconferencing and local-area networks. Dedication to quality assurance and a strong commitment to research and development are giving the Japanese the edge. Stevenson reported that a recent Quantum Science survey found that "users perceive Japanese products as more reliable."

SEMICONDUCTOR SKIRMISHES

The Japanese captured the lion's share of the semiconductor market in 1979, said Glen Madland, chairman of Integrated Circuit Engineering Corp., because American suppliers vastly underestimated demand for random-access memories, then turned to Japanese houses with orders to supplement U.S. production. "The Japanese companies performed well with fast deliveries and excellent quality. As a result, they gained a permanent position in the market," he said.

However, Madland took issue with the widely held notion of superiority of Japanese products. He recounted an incident involving Hewlett-Packard Co., which ordered selected integrated circuits from an unidentified Japanese supplier. Although first reports indicated that the chips received from overseas contained far fewer defects than did American units, Madland said that Hewlett-Packard had actually received shipments that had been screened to eliminate less-than-perfect devices which were marketed separately in the Japanese domestic market.

U.S. Representative James M. Shannon, Democrat of Massachusetts, assured the audience that the computer industry could expect trade and tax assistance from the current session of Congress. The key to meeting the Japanese threat, however, is changes in personal business relationships. "The U.S. style is confrontation, not cooperation," Shannon remarked in a luncheon address. "There's every indication that the cooperative style of Japanese corporate planning is more efficient."

Labeling semiconductors the "crude oil of the '80s," Shannon called for formation of a national industrial policy that would encourage use of microprocessor-based systems—computer-aided design/manufacturing, robotics, process engineering and automated production line equipment—by U.S. industry. He also favors increased tax credits for research and development investment. Shannon confirmed that the trade subcommittee of the House Ways and Means Committee is considering revamping the U.S.'s trade tariffs with Japan.

SPEAKING FOR JAPAN

Presenting the Japanese perspective was Hiroyiki Ochi, president of YDK Consultants International specializing in Japanese/American joint ventures. Ochi took the American audience to task for its lack of knowledge about Japanese business practices, language and the intense competitive climate that pervades the Japanese corporate environment. He noted that 10% or so of the audience was Japanese. "If the same program were held in Japan, there would be no Americans present."

Cartels, beneficial tax laws and close union-management relations are an extension of the Japanese cultural trait of "nemawashi," or consultation, Ochi said. Americans are habitually impatient with the slower pace of Japanese decision-making that emphasizes concensus at all business levels and strong loyalty to employers. Another marked difference between the two nations' industries, he noted, is that the Japanese are long-range planners, with none of the quarterly profit pressure placed on American executives.

Ochi acknowledged that extensive government subsidy of private companies is a common practice in Japan. But the U.S. government, he claimed, is doing exactly the same thing in funding its extensive defense electronics program.

The political and economic relationships between industry and government in the two countries are completely dissimilar, countered the seminar's final speaker, Edward Lesnick, assistant to the president at Wang Laboratories Inc. of Lowell, Mass. Tokyo finances half of Japan's domestic research and development programs, he claimed, forms cartels to exploit overseas markets, and willingly pays premium prices to domestic companies for its own computer systems. "You can't tell where Fujitsu begins and the Japanese government leaves off," Lesnick said.

He urged the U.S. government to let the computer industry compete with Japanese firms on an equitable basis, restricting Japanese activities in the U.S. with the same tariff structure and trade regulations Tokyo uses to ensure control of the Japanese domestic market by native companies. "If foreign governments want access to U.S. markets, they must guarantee equal access. The U.S. government must stop negotiating trade rights on the basis of national security and defense considerations."

ONE SET OF PROPOSALS
